PREFACE TO THE FIFTH EDITION

Since its first appearance twenty-five years ago, the ENCYCLOPEDIA OF BANKING AND FINANCE has provided a clear and concise reference work of banking, investment, economic, financial and related legal terms of general and technical interest for financial institutions, business organizations, schools, libraries, teachers, researchers, students, as well as the general public.

In this Fifth Edition, the original plan and design of Mr. Glenn G. Munn have been followed, and the text has been revised or rewritten wherever necessary in order to bring the material up to date to reflect latest developments and changes in these fields. New terms and tabulated data have been added, and the bibliographies have been revised to reflect modern sources.

Every effort has been made to achieve modernity and accuracy, but the reader will appreciate that in such constantly changing and developing fields, there will inevitably occur changes between the date of preparation of the revision and the date of publication. Accordingly, emphasis has been placed on general data not readily subject to change, but specific data where necessary have also been provided as of the date of preparation.

The reviser deeply appreciates the many courtesies extended to him in connection with the preparation of this Edition by Governmental agencies, financial institutions, and business organizations, as well as the valuable suggestions and welcome criticisms made by friends in the banking, investment and legal professions.

F. L. Garcia

October 1, 1949

ABBREVIATIONS

@ . . . . . At
A . . . . . Class A bonds and stocks
A1 . . . . . Highest class; best grade; gilt edged
A&F . . . . . Semi-annual payments of interest in August and February
A & F 15 . . . . . Interest payable on August 15 and February 15; likewise for other combinations, e. g., A & O, J & J, etc.
A&O . . . . . Semi-annual payments of interest in April and October
A. C. . . . . Assistant Cashier
A/c . . . . . Account
Acc. . . . . Accept, accepted
Accrd. Int. . . . . Accrued Interest
Acct. . . . . Account, accountant
Ack. . . . . Acknowledge, acknowledgment
Acpt. . . . . Acceptance
A/cs Pay. . . . . Accounts Payable
A/cs Rec. . . . . Accounts Receivable
a/d . . . . . After date
Adj. . . . . Adjustment
Admstr. . . . . Administrator
Ad Val. . . . . Ad Valorem
Adv. . . . . Advise, advice
Agt. . . . . Agent
Agy. . . . . Agency
A. J. O. J. . . . . Quarterly payments of interest or dividends in April, July, October and January
A. N. F. M. . . . . Quarterly payments of interest or dividends in August, November, February and May
Ann. . . . . Annual, annuity
A/P Authority to purchase, authority to pay
Assmnt. . . . . Assessment
Asst. Cash . . . . . Assistant Cashier
Astd. . . . . Assented
Atchd. . . . . Attached
Atty. . . . . Attorney
Aud. . . . . Auditor, Audit
Avg. . . . . Average

B . . . . . Class B bonds or stocks
B . . . . . Belga in Belgium, Boliviano in Bolivia, Bolboa in Panama, Baht in Siam, Bolivar in Venezuela
Bal. . . . . Balance
B. & L. Assn. . . . . Building and Loan Association
B/D . . . . . Bills discounted
Bd. . . . . Bond, Board
B/E . . . . . Bill of Exchange
Bel. Fcs. . . . . Belgian Francs
Bk. . . . . Bank
Bkg. . . . . Banking

A B C PLAN

In the field of automobile loans by banks, a service developed by the American Installment Credit Corporation, of particular appeal to banks having neither the experience nor facilities for handling this type of paper. The service provides for the installation of operating techniques, forms, systems and rate charts, together with automobile factory contacts and a field supervisory staff, etc. On the resulting paper, the bank is paid a slightly lower rate, to cover the cost of the advantages provided, insurance coverage, and provisions for the automobile dealer "reserves" (allowances).

ABOVE PAR

A price quoted above the face value of a security. (see Par.)

ABRASION

The loss of weight in coins occasioned by friction, i. e., ordinary wear and tear of circulation, as distinguished from loss of weight due to mutilation, debasement, clipping or sweating. Abrasion is of no importance in the case of subsidiary silver and minor coins because they are purposely short in weight, i. e., overvalued, and loss of weight does not affect their value. In the case of gold coins, however, there is a limit to the reduction from the prescribed mint weight, called tolerance, beyond which their money (legal tender) value is measured by weight and not be denomination or face value. (See Debasement, Light Coin, Light Gold, Mutilated Currency, Sweating, Tolerance.)

ABSOLUTE INDORSEMENT

See Indorsement.

ABSOLUTE TITLE

Unqualified ownership of personal property or ownership of land in fee simple. Such a title confers on the owner and his heirs, representatives and assigns absolute right to the property in perpetuity. (See Title.)

ABSORB

When buying orders are in sufficient volume to counterbalance selling orders without a substantial change in prices, the stock or other market is said to absorb or assimilate offerings, e. g., "the market encountered selling in the last hour but absorbed all offerings without appreciable price changes."

ABSORPTION POINT

The saturation point; the point at which a market refused to accept greater offerings without price concessions. (See Absorb, Digested Securities.)

ABSTRACTION OF BANK FUNDS

The Revised Statutes of the United States make the willful abstraction, embezzlement or misapplication of the funds of the Federal Reserve banks or of member banks by its officers, directors or employees a misdemeanor, punishable upon conviction by a fine of not to exceed $5,000, or imprisonment for five years, or both. The willful making of false entries or the unauthorized issue of circulating notes, certificates of de-

posit, drafts, bills of exchange, bonds or mortgages is included under this title. (See Embezzlement.)

ABSTRACT OF TITLE

A document usually prepared by an attorney or conveyancer to trace the history of the ownership of real property to establish the present title. The purchaser of, or lender on, real property usually has the right to require an abstract, tracing the title back to the earliest grant. The history of a title shows how it was originally acquired and all successive changes of ownership as well as all outstanding mortgages, restrictions and incumbrances upon it, and trusts, if any, affecting it.

The abstract of title is a separate document from the title deed, which is evidence of ownership of real property. The validity of the title deed may be guaranteed by a title insurance company which undertakes to indemnify the purchaser against any loss that may arise through defects in the title. (See Deed, Title Deed, Title Insurance, Title Insurance Company.)

ACCELERATION CLAUSE

A clause providing for quickening or advancing date of payment of entire balance due because of breach of some specified condition, such as default in payment of interest or installment of principal when due, insolvency of the debtor, failure to keep mortgaged premises insured, etc.

ACCEPTANCE

This term has three meanings:

(1) One of the essential conditions to a contract in order to be legally binding between parties. Offer and acceptance to a contract are essential to its validity. (See Contract.)

(2) As applied to a time draft or bill of exchange, acceptance means to honor it, i. e., to signify intention to pay it at maturity by the drawee. It is the signification by the drawee of his assent to the order of the drawer. Acceptance consists of writing the word "Accepted," across the face of the instrument, indicating the date, bank where payable, with the signature of the drawee thereunder. Thus, an acceptance is a time draft that has been honored or "accepted" by the party on whom it is drawn. After acceptance, a draft or bill has the same status in law as a promissory note. The acceptor becomes the maker and the drawer becomes the indorser. (See Draft, Negotiable Instruments Law.)

(3) Although, technically, acceptance consists of the act of accepting a time draft or bill of exchange by the drawee, the term is more commonly used to designate the accepted bill itself. Acceptances are of two classes, trade and bankers. (See Bank Acceptance, Draft, Trade Acceptance.)

ACCEPTANCE CORPORATION

See Discount Corporation.

ACCEPTANCE CREDIT

One means of financing import and export (also domestic) transactions is by arranging an acceptance credit with a bank. Commercial banks, including foreign banking corporations organized under the various state laws and Edge Act, are authorized to engage in the acceptance business under the regulations of the Federal Reserve Board.

In an acceptance credit a bank substitutes its credit for that of its customer. Since a bank is better known than an individual, its acceptances enjoy a readier market and lower discount rate than a trade acceptance. It is the highest-grade commercial paper.

The first step in arranging an acceptance is to obtain a Letter of Credit from the issuing bank. Acceptance Credit is the sum which may be drawn under the letter of credit, and bills drawn under the letter of credit, when accepted by the bank, become acceptances. To illustrate the operation of an acceptance credit an example is given: Suppose concern "A" in New York sells merchandise to concern "B" in London. After the letter of credit has been granted, concern "A" will draw two drafts when the shipment to concern "B" is made. The first is upon concern "B", say at 30 or 60 days' sight, to which an ocean bill of lading and other usual shipping documents are attached. The second is drawn on and accepted by the bank from which the letter of credit was secured. Once accepted, the drawer may hold it until maturity, or if in need of cash may discount it at the accepting bank, or elsewhere. The first draft with documents attached, serving as the bank's security, are forwarded to London, addressed to a correspondent or collecting bank for collection. Funds in New York dollars are remitted by draft upon maturity of the acceptance by the London correspondent which collects the proceeds. It will be seen that neither the bank nor the customer puts up any cash unless the customer wishes to have the acceptance discounted. The bank usually charges a commission for accepting bills from one-eighth per cent. to one-quarter per cent., depending upon the amount involved and upon the location of the drawee.

In opening an acceptance credit with a bank, the customer must fill out the following forms—application for acceptance credit, indemnity against all losses which the bank may incur and preparation of shipping documents in accordance with the letter of credit. (See Bank Acceptance, Letters of Credit, Limitations on Acceptance Credits.)

ACCEPTANCE FOR HONOR

A term to denote the acceptance of a draft or bill of exchange by another party when acceptance has been refused by the drawee, and protest for non-acceptance has been made. When the drawee refuses to accept a bill, or to pay it when due, any party may accept or pay it in order to save the honor of the drawer, or of an indorser, by declaring before the notary public who protested it, that he accepts (or pays) the bill for honor, and for whose honor. The notary should indicate for whose honor the instrument is accepted or paid. Acceptance for honor is also called acceptance supra protest. (See Uniform Negotiable Instruments Law, Art. V.; New York Negotiable Instruments Law, Art. XIV.)

ACCEPTANCE HOUSES

See Discount Corporation.

ACCEPTANCE LIABILITY

The total liability which a bank assumes in accepting bills drawn on it by its customers in the financing of export, import and domestic transactions. Although banks accept bills drawn by high-class and well-known risks, they are required to keep a record of the aggre-

gate of the liability created by such acceptances in an account entitled, "Liability on Account of Acceptances." This account is offset by a corresponding asset entitled, "Customers' Liability on Account of Acceptances." If the customers fail to deposit funds to meet the drafts at maturity, the bank has recourse against them. (See Acceptance Credit, Acceptance Line, Letters of Credit, Limitations on Acceptance Credits.)

ACCEPTANCE LIABILITY LEDGER

A ledger in which full particulars of bills accepted for each customer are entered under an account bearing his name. The particulars are usually as follows: name and address of customer (drawer), line, date, letter of credit number, acceptance number, expiry date, amount of bill, total amount accepted or expired, and date of payment.

ACCEPTANCE LINE

The maximum limit in dollars which a bank commits itself to accept for a single customer. This limit is usually fixed by the credit officers of the bank, acting upon recommendation of the manager of the foreign department, in the case of acceptances arising out of import and export transactions. The acceptance line cannot exceed the legal limitation. (See Limitations on Acceptance Credits.)

ACCEPTANCE MATURITY TICKLER

A record in which acceptances are journalized according to maturity dates in order that the amount of daily maturities can be determined at a glance. A single page is usually devoted to the maturities for each date. (See Tickler.)

ACCEPTANCE REGISTER

A journal in which full particulars of all bills accepted by the bank for its customers are chronologically recorded. These particulars are usually as follows: date of acceptance, bank's acceptance number, name of officer sanctioning, signature of officer signing, customer's number of bill, date, tenor, maturity, drawee, payee, for account of, list of documents received, whether original or duplicates attached, number, and date of credit.

ACCEPTOR

See Acceptance, Draft.

ACCESSION

In law, the doctrine that the owner of property is entitled to all that is added or united to it, either naturally or by the labor or materials of another. Not to be confused with Accretion (q. v.).

ACCOMODATION

To be supplied with funds when application is made to a bank. "Brokers had little difficulty in finding accommodation for their needs."

ACCOMMODATION BILL OF LADING

One issued by a railroad company before goods are received by it for shipment. This is a dangerous practice since the instrument may be used as a basis of credit. Under the Uniform and the Federal Bill of Lading Acts, the carrier is liable to a party who has made advances in good faith and in reliance on the order bill of lading. But in the absence of these Statutes, courts generally hold there is no implied authority in the railroad agent to issue bills of lading for merchandise not actually received, so that the railroad is held to be not liable, according to principles of agency.

ACCOMMODATION INDORSEMENT

See Accommodation Paper.

ACCOMMODATION INDORSER

See Accommodation Paper.

ACCOMMODATION NOTE

See Accommodation Paper.

ACCOMMODATION PAPER

A note or bill signed by a party as maker, indorser or acceptor "to accomodate" another whose credit is not strong enough to enable him to borrow on his single name. The accommodation party receives no consideration, except in some cases a commission for lending his credit. The position of the accommodation party is that of a surety or guarantor. Although he does not expect to be called upon to pay the note or bill at maturity and has no obligation to the person accommodated, he is liable to any other holder for value without notice and can be compelled to meet the instrument in full. If there are prior indorsers, however, he has recourse against them.

Courts generally hold that a corporation is not liable as an accommodation to a party on notice, on the grounds that such obligations are based on no consideration, and that the power to make or indorse accommodation paper in not a corporate power conferred by the State, either expressly or impliedly. Similarly, a bank cannot be an accommodation indorser, although banks making acceptances authorized by Sec. 13 of the Federal Reserve Act or similar State statutes are construed to be accommodation acceptors.

ACCOMMODATION PARTY

One who signs a note or bill as maker, drawer, acceptor or indorser, without receiving value thereof, but fully liable, nevertheless, for the purpose of lending his credit to another. (See Accommodation Paper.)

ACCOUNT

A record of financial transaction usually involving debts or credits, or both; an account with a bank or broker means funds deposited as a basis of financial transactions against which checks may be drawn or orders to buy or sell securities may be made.

ACCOUNT ANALYSIS

See Analysis Department, Bank Cost-Accounting.

ACCOUNT AND RISK

All transactions between broker and customer are at the risk of the customer, who is the principal. Statements confirming the execution of buying and selling

orders issued by a broker are stamped, "For the account and risk of _____," the customer.

ACCOUNTANT

See Auditor, Certified Public Account.

ACCOUNT DAY

One of the settlement days on the London Stock Exchange where settlements are made twice a month. The settlement lasts three days, and the account day, also known as pay-day, is the third and last of the settlement, on which delivery and payment are made for the transactions of the preceding half month. (See Settlement Days.)

ACCOUNTING

The organized, systematic recording of all transactions having any bearing on the financial status of a business enterprise. The modern concept of the functions of accounting goes beyond this mechanical function, which is left to the bookkeeper, and according to H. C. Greer, are four in number--financial, historical, analytical and protective. The accounting system must be such as to maintain a correct picture of the financial position of the enterprise; an accurate history of its operations and their results; an informative analysis of the meaning of these results, and their relation to the past, present and future financial position; and an adequate array of safeguards against fraud, error and waste. (See Audit, Bank Bookkeeping, Bank Cost accounting, Certified Public Accountant.)

ACCOUNT SALES

A statement submitted by a consignee, broker, or other commission merchant or agent, showing the proceeds of the sale of goods or securities sold for the account of the owner. This statement shows full particulars, viz., selling price, expenses incurred, such as freight, warehousing, insurance, etc., commission, and finally the net proceeds due to the owner.

ACCOUNTS CURRENT

Same as Statement of Account (q. v.).

ACCOUNTS PAYABLE

Accounts due to creditors as shown by the books of a business, but not evidenced by notes, drafts or acceptances; aggregate sum due to trade creditors; a controlling account in the general ledger to indicate the total of balances due to creditors on open accounts, as shown by the subsidiary (Accounts Payable, Purchases or Creditors) ledgers.

ACCOUNTS RECEIVABLE

Accounts due from customers as shown by the books of a business, but not evidenced by notes, drafts or acceptances; aggregate sum due from trade debtors; a controlling account in the general ledger to indicate the total of balances due from customers on open accounts as shown by the subsidiary (Accounts Receivable, Sales or Customers) ledgers.

ACCOUNT TURNOVER

In analyzing statements as a basis for measuring credit risks, it is important to ascertain how fast the accounts are being turned over, i. e., whether the terms of credit of the concern are being fulfilled as shown by collections. The account turnover is also known among credit men as the Sales to Receivables ratio. It is determined by dividing the annual sales by the average amount of accounts receivable standing on the books at any given time. What the account turnover should be depends upon the terms of credit offered by the concern under analysis. Where sales are fairly constant from month to month, and the terms of credit 30 days net, in an ideal case, the account turnover should be 12—1, meaning that the accounts should be turned over 12 times a year. Sales in any month should be paid in the next succeeding month, i. e., the collections of any one month should equal the sales of the next preceding month. Consequently, the accounts receivable outstanding one month would be one-twelfth of the total sales for the year. If this ratio were twenty to one, it would be evident that the terms of credit were being anticipated and advantage taken of discounts offered, arguing for a favorable condition. If collection lags behind sales, as shown by a ratio of nine to one, one or all of five conclusions might be drawn:

(1) The credit department has overextended credit and allowed customers to over-commit themselves.

(2) A poorer class of customers, who have been unable to pay their bills promptly, has been accommodated.

(3) The credit department has been lax in enforcing collection.

(4) External conditions are becoming abnormal—that money is tight and everybody is experiencing difficulty in paying promptly.

(5) It may show a favorable condition, for example, that sales are expanding and collections have not yet caught up. (See Credit Barometrics, Statement Analysis.)

ACCRA

One of the three standard growths of cocoa. (See New York Cocoa Exchange.)

ACCRUED DIVIDEND

Regular dividends assumed to be earned, but not yet declared or due or payable. A dividend on stock does not accrue like interest on bonds. Dividends are uncertain and do not become payable until and unless earned and declared, whereas interest is an obligation which must be met, whether covered by earnings or not. While it may be illogical to assume dividends to accrue upon common stock, since the rate is contingent upon earnings, dividends upon preferred stock may more logically be assumed to accrue because they are more certain and the rate is fixed.

On organized stock exchanges stocks are not sold with accrued dividends; instead, prices at which stocks are quoted and traded are inclusive of any dividend which may be or has been declared, until the ex-divi-

dend date. Sales of stock "with accrued dividends" occur only in special cases by agreement, and then only where the stock is guaranteed, or in preferred issues where the dividend is known to be both certain and fixed. (See Dividend, Ex-dividend.)

ACCRUED INTEREST

Interest earned, but not yet due and payable. Interest accrues on all promissory notes, commercial paper, and fixed-interest bonds. On the stock exchanges of the United States, unless otherwise specified, bonds are quoted and traded at a net price, i. e., a price exclusive of accrued interest. The purchase price is for the principal amount alone, to which must be added interest at the coupon rate from the last coupon date to the date of delivery.

Bond interest is customarily paid every half year, e. g., March 1 and September 1. If, for example a $1,000 4 per cent. bond is purchased at 85 on April 15, and the semi-annual interest dates are March 1 and September 1, it would cost the buyer $850 in principal amount and $5.00 accrued interest (1 month and 15 days' interest, the interval between March 1 and April 15), a total of $855. On September 1, the holder would collect the semi-annual coupon of $20, this representing the $5.00 which was advanced as the accrued interest at the time the bond was purchased and delivered, and $15.00 interest which had accrued between April 15 and September 1.

If specified, bonds may be sold "flat," meaning that the quoted or agreed price includes any interest which may have accrued since the last coupon date. Income bonds and most adjustment bonds sell "flat." just as stocks. In England, the regular method of trading in bonds is "flat".

For convenience, bank and brokerage clerks use interest tables in calculating accrued interest. The table on this page shows the interest on $1,000 from 1 day to 6 months, at from 3 1/2 to 7 per cent. By using multiples or fractions, interest on practically any sum for any period can be computed for these proceedings by reference to table on this page. (See Flat.)

Interest on $1.000 from 1 Day to 6 Months.

Day	3½%	4%	4½%	5%	6%	7%
1	$0.0972	$0.1111	$0.125	$0.1389	$0.1667	$0.1944
2	0.1944	0.2222	0.250	0.2778	0.3333	0.3889

ACCRUED INTEREST PAYABLE

An account in the general ledger of a bank representing the interest owing to depositors upon their balances. It may also include interest on advances from a Federal Reserve bank. The amount of this item may be ascertained daily or monthly and is determined approximately by multiplying the aggregate of interest-bearing balances by the average rate.

ACCRUED INTEREST RECEIVABLE

An account in the general ledger of a bank representing interest accrued upon loans and investments, but not yet collectible. It may be accrued upon the daily or monthly basis and determined, approximately, by multiplying the aggregate of loans and investments by the average rate.

ACCUMULATION

This term has two meanings:

(1) The opposite of Amortization (q. v.).

(2) The quiet purchase of securities in a dull market by private investors, speculators or financial interests when prices have declined to a point below the value represented by underlying assets, potential earning power and current interest or dividends. Such buying is undertaken not for the purpose of supporting the market but for profit in the belief that the business outlook warrants higher prices. Accumulation usually implies the purchase of securities by powerful and well-informed interests during a Campaign (q. v.).

With reference to the speculative cycle, the period of accumulation begins at the conclusion of a bear market, when average prices are at a low level, and lasts until prices have risen high enough to induce distribution. (See Banking Support, Speculative Cycle.)

ACCUMULATIVE

Same as Cumulative. (See Cumulative Dividends, Preferred Stock.)

ACCUMULATIVE DIVIDENDS

Same as Cumulative Dividends. (See Cumulative Dividends, Preferred Stock.)

ACHMOUNI

A type of Egyptian cotton. (See Cotton.)

ACID TEST

An expression used among bank credit men in statement analysis work to indicate the ratio of cash and trade receivables to current liabilities. Like the Current Ratio (q. v.), it is another means of testing the current position, or degree of financial solvency of a concern. The acid test eliminates merchandise as a part of the working funds, and compares the total of cash, trade receivables, and high-grade marketable securities with the current liabilities. Thus, it is the ratio of current assets, less merchandise, to current liabilities. The receivables are subject to reduction for reserve for bad accounts, and are to include only trade items. Wherever this ratio is two for one or better, an extremely favorable position is disclosed.

ACKNOWLEDGMENT

A declaration, admission or certificate taken before a notary or other attesting officer, stating that the maker of an instrument or document has appeared before him and subscribed it as a voluntary act without duress.

ACQUITTANCE

A written document which releases a person from paying a debt or performing a contractual or other obligation.

ACTION

The French term for share of stock.

ACTIVE ACCOUNT

Bank—An account in which deposits and withdrawals are frequently made. The expense of handling an account varies directly with its activity, because of the cost of stationery, clerical aid and the use of the bank's space and equipment. An active account should maintain larger daily balances than an inactive one. (See Analysis Department, Bank Cost-Accounting.)

Broker—An account showing frequent purchases and sales. Such an account usually is given preferential treatment in the matter of interest-carrying charges.

ACTIVE ASSETS

Assets which are continuously employed in the business; productive assets; the opposite of dead assets. (See Assets.)

ACTIVE CAPITAL

Capital continuously employed in profitmaking pursuits. (See Capital.)

ACTIVE MARKET

One in which the volume of sales is large and there is a rush of orders to be executed.

Market activities is entirely relative to specific phases of speculative interest. On the New York Stock Exchange, activity must be measured in relation to the number of companies and shares listed. What was considered an active market forty years ago, when listings were fewer, might not be so considered under present conditions. Yet, an active market is chiefly a function of speculative activity for an advance. Under normal conditions, markets are more active, that is, transactions become more numerous, in an advancing market than in a falling market. Under circumstances of panic or emergency liquidation, however, the above rule is broken. For example,in October, 1929, a month of terrific decline in stock prices, all records were broken in daily stock transactions on the New York Stock Exchange. The three record days in point of activity on the New York Stock Exchange, all representative of sharply declining prices, occurred in October, 1929, as follows:

	Shares Transacted
October 29, 1929	16,410,030
October 24, 1929	12,894,650
October 28, 1929	9,212,800

The highest monthly sales volume in the history of the New York Stock Exchange was October 1929—141,668,410 shares. The previous monthly record was held by November, 1928, when stocks were rising, during which 116,053,290 shares changed ownership. Transactions in October, 1929, alone exceeded those of any full year prior to 1898. The October 1929 daily average of 5,448,785 shares affords an interesting contrast with sales volume in preceding years. Not till 1901 did the daily average for any one month exceed one million shares, the turnover of 3,336,695 shares on May 9, 1901 (day of Northern Pacific corner) standing as the record until 1924.

The period 1925 to 1929 easily marks the years of greatest activity in the history of the New York Stock Exchange. The largest monthly activity which has occurred since 1929 was in June, 1933, when 125,619,530 shares changed hands. One of the purposes of the Securities and Exchange Act of 1934 (q. v.) is to prevent unnecessary speculation by means of stringent margin requirements and penalties for manipulation. Accordingly, it is believed that speculative activity may never again reach the heights of 1928 and 1929. Average daily activity for a full session on the New York Stock Exchange reached 1,370,385 shares in 1946, compared with 1,413,538 shares in 1945.
(See under New York Stock Exchange.)

ACTIVE SECURITIES

Securities in which daily sales occur and for which daily quotations are available. Such securities are said to enjoy a "good market," and consequently possess high marketability and hypothecary (loan) value.

ACT OF BANKRUPTCY

See Bankruptcy.

ACTUAL RESERVE POSITION

See Reserve.

ACTUARY

An insurance expert in mathematics and statistics. He computes risks based upon mortality tables and the law of probabilities and averages, determines annuity rates, premiums upon policies, reserves against death claims, dividends upon participating policies, and other statistical data necessary to determine cash or loan values, amounts of extended and paid-up insurance, etc. (See Insurance.)

ADDITIONS AND BETTERMENTS

Additions in the system of accounts for railroads prescribed by the Interstate Commerce Commission are defined as structures, facilities, equipment and other properties added to those in service at the beginning of operations and not taking the place of any property for like purpose previously held. Betterments are physical changes in roadway, structures, facilities or equipment, the object of which is to make the properties affected more useful or of greater capacity than they were at the time of their installation or acquisition. Both additions and betterments are gross additions to Account 211, Investment in Road and Equipment, and are listed separately in Account 211-L, Investment Made During

the Year in Additions and Betterments on Leased Lines.

ADJUSTABLE CURRENCY

Another term for Elastic Currency (q. v.).

ADJUSTED CAPITAL FUNDS

Under the revised regulation of the Comptroller of the Currency, effective July 1, 1938 and issued in conjunction with the Federal Deposit Insurance Corporation and the National Association of State Supervisors, adjusted capital funds represent the net capital funds remaining after deduction for bond depreciation and write-offs on doubtful loans, full write-offs or provision for reserves on Group IV loans and Group III and IV bonds, and adjustments in fixed assets. The adjusted capital funds are then compared in ratio to the uncharged off book value of fixed assets and substandard assets, and to uncharged off book value of substandard assets and borderline bonds, the resulting ratios being an indication of strength of capital funds in relation to these weak assets. (See Comptroller's Regulation.)

ADJUSTED RESERVE

See Naked Reserve

ADJUSTMENT BONDS

Bonds usually growing out of railroad or traction company reorganizations, but which sometimes are issued in an adjustment of several existing issues into one class to provide for a uniform interest rate. Adjustment bonds are practically synonymous with income bonds, and in many cases they are designated as adjustment income bonds. The real significance of an adjustment or income bond issue is that interest is payable only if earned. Failure to pay interest, when not earned as determined by the provisions of the mortgage or agreement, does not constitute cause for foreclosure or receivership. Interest upon these bonds is a claim upon earnings only after payment of interest on all prior obligations. Thus, they are a claim on earnings prior to stock issues only.

The adjustment bond is an ingenious instrument. As its name implies, it is a device used by reorganization managers to aid in the adjustment of a capital structure that is too large for a company's earning power. To make the capitalization structure more flexible and to reduce fixed charges, the holders of the junior fixed-interest bonds are asked to accept in part, or perhaps in whole, adjustment bonds on which the payment of interest is contingent upon earnings. Its function, then, is the substitution of a contingent charge for an obligatory charge. If the company, under the new capital structure, is successful, interest will be paid on the adjustment bonds which may even work into an investment position, as in the case of the Atchison, Topeka & Santa Fe adjustment 4s. If earnings do not improve sufficiently to pay the adjustment bond interest, the holders are no worse off than at the time of receivership, and meanwhile the company is relieved of facing financial embarrassment.

Adjustment bonds partake of the nature of both bonds and stocks, but they are closer to the former than the latter. Normally, adjustment bonds are the lowest in rank of all the bonded obligations of a company. Yet most of these issues are secured by a mortgage, and all of them have a par value and maturity date, thereby representing a claim against the company at full maturity just as much as any other bond issue. But whether the company will be able to refund these bonds at maturity will depend upon its credit position, and the number and size of the obligations senior to them.

Interest on adjustment bonds is paid only when earned and declared by the board of directors. In this respect, adjustment bonds are like stocks. In most cases, the rule for determining net income available for these bonds is recited in the provisions of the adjustment mortgage, but in the case of railroad adjustment bonds would be fixed by the Interstate Commerce Commission accounting rules. In a number of instances, a company is not required to pay out the full amount available for the adjustment bonds, but is allowed to retain a part of such net income available as adjustment bond interest for capital purposes. The specific terms may be stated in full in the mortgage, or the payment of interest may be wholly discretionary with the board of directors. In the case of the Missouri-Kansas-Texas adjustment mortgage 5 per cent. bonds, the directors have no alternative than to pay such interest if earned.

Interest on some adjustment bonds is cumulative, and on others non-cumulative. It is usually payable in part, if not earned in whole. Coupons may or may not be attached. Some of these bonds are redeemable at par or at a premium prior to the obligatory maturity, and a few are convertible into stock. In some instances, interest is payable semi-annually, and in others annually. Adjustment bonds normally sell "flat" like stocks, although where these bonds have worked into an investment position as shown by the fact that the company is paying dividends on both preferred and common stocks, they sell on an "and interest" basis, like fixed-interest bonds of solvent companies. The Atchison, Topeka & Santa Fe adjustment mortgage 4s are an example of adjustment bonds that are traded on an "and interest" basis. When adjustment bonds are traded on a "flat" basis, they go ex-interest on the coupon date in the same manner as stocks go ex-dividend.

The following are some of the principal illustrations of adjustment bonds:

Atchison,Topeka & Santa Fe adjustment mortgage 4s, 1995.

Chicago, Milwaukee, St. Paul & Pacific adjustment mortgage 5s, 2000 (cumulative and convertible).

Hudson & Manhattan adjustment income 5s, 1957 (cumulative).

Missouri-Kansas-Texas adjustment mortgage 5s, 1967 (cumulative and convertible).

Third Avenue Railway adjustment income 5s, 1960.

Wolverine Power adjustment "A" 4 1/2s, 1959.

ADJUSTMENT MORTGAGE

See Adjustment Bonds.

ADJUSTMENT MORTGAGE BONDS

See Adjustment Bonds.

ADJUSTMENT PREFERRED STOCK

Preferred stock that has arisen out of an adjustment of claims in a reorganization.

This title for a preferred stock, however, has been comparatively rarely used in recent years, even by railroad reorganization managers in issuing new preferred stocks with dividends cumulative only to the extent earned. One example, outstanding since 1926, is Norfolk & Western Railway Company adjustment preferred stock.

ADJUSTMENTS

(1) The correction of errors in statements of account submitted by banks to their customers due to misposting, omission of deposit, unauthorized payment of check, failure to credit interest, overcharge for commission, etc. Adjustments are made by the bookkeeping or auditing department. (See Auditing Department.)

(2) The deductions and charges made from current earnings or from surplus and undivided profits, and in some cases from reduction in capital, to charge off losses on loans and discounts, securities or other assets and to provide additional reserves against these assets.

ADMINISTRATION, LETTERS OF

See Letters of Administration.

ADMINISTRATOR

A person appointed by the probate (or surrogate) court, or by the registrar of wills, to settle the estate of an intestate decedent (one who has died without leaving a will.) Like an executor and trustee, he holds the legal title to property destined for the benefit of others, the equitable owners.

His authority to act consists of Letters of Administration, granted by the court. He qualifies by giving bond, and follows much the same procedure as an executor. He collects the assets, advertises for claims and pays them off, and distributes the personal property among the rightful heirs in accordance with the inheritance laws of the state.

Administrators are of the following classes: (1) general administrator, appointed to act where there is no will; (2) administrator cum testamento annexo (with the will annexed), who acts when a decendent leaves a will without naming an executor, or when the executor has died, has become incapacitated, or refuses to act; (3) administrator de bonis non, who acts when the first administrator has died or has been discharged before the estate has been fully administered; (4) administrator pendente lite, who is appointed to take charge of an estate pending the outcome of litigation over a contested will; (5) administrator durante minori aetate, who is appointed to act during the minority of an executor; (6) administrator ad litem, who acts wherever the deceased has been or his estate is, a party to a suit, but only for the purpose of such action. (See Executor, Letters of Administration.)

ADMINISTRATRIX

The feminine form of Administrator (q. v.).

AD VALOREM

Latin for according to value. This term is used in connection with the tariff on imports. There are two principles of levying customs duties; based on number or by weight, or declared value. The first is called a specific duty; the second, an ad valorem.

ADVANCE

This term has three meanings:

(1) In general, the same significance as the word loan, but an advance may be on open account as well as being evidenced by a note, with or without collateral.

(2) A payment on account, or before a contract is completed, or legally due.

(3) An expression to indicate a rise in prices.

ADVICE

A form letter sent by a bank to a customer or bank in acknowledgment of the receipt or credit of money, checks, drafts, securities or other documents, or that it has executed the instructions of its customer, such as to make a telegraphic transfer, a payment of money, purchase of securities or to issue a letter of credit. On the other hand, a bank receives advices from correspondent banks, etc. These are known as incoming or returning advices.

ADVICE BOOK

A book or file in which duplicate outgoing and incoming advices are kept.

ADVICE DEPARTMENT

The department of a bank which handles advices, receipts or acknowledgments of deposits, securities, etc., received from customers, and which receives and checks incoming and return advices. (See Advice.)

ADVISE FATE ITEM

See Wire Fate Item.

AFFIDAVIT

Latin for "has pledged his faith." A written statement subscribed and sworn to before a notary public, commissioner, consul or other officer empowered to administer oaths. The affidavit must contain the affiant's (deponent's) name and address and signature of the attesting officer.

AFFILIATION

A concern whose management is closely connected with that of another. An affiliation may be secured with another company by a partial or controlling stock interest or by means of an interlocking directorate. An affiliated company is closely allied to a subsidiary company, except that in the latter control is more complete. (See Security Affiliate, Subsidiary Company.)

AFTER ACQUIRED CLAUSE

A clause in a mortgage whereby the lien of the mortgage will attach to any additional property acquired by the mortgagor subsequent to the date of the mortgage. (See Mortgage.)

AFTER DATE

An expression used in notes, drafts and bills of exchange. "Ninety days after date pay to the order of _____," the date referred to being the date the

instrument is drawn.

AFTER SIGHT

After acceptance, e. g., a draft payable 30 days after sight is payable 30 days after presentation and acceptance. This term should not be confused with At Sight.

AGAINST THE BOX

In a short sale (q. v.), the term used where the individual selling short actually owns the stock sold short, but for some reason does not intend to deliver that particular stock owned in order to cover his short sale. The principal reason would be that he wished to engage in selling that stock short, believing it will go lower, but does not wish to go to the trouble of delivering his certificate and then buy back the stock at the expected lower price as in a regular "long" sale. Also, the certificate may be inaccessible to him, in a safe deposit box or pledged, etc. In such a case, the order must be executed in the same manner as any other order to sell marked "short".

AGENCY

A legal relationship between principal and agent. (See Agent.)

AGENT

A person who represents or acts for another person called the principal in dealing with third parties. An agent is not to be confused with servant or independent contractor. An agent differs from a servant and an independent contractor in that he brings the principal into new contractual obligations. Normally, an agent is employed to represent the principal in certain business or professional transactions.

Agents are generally of two kinds: special, who are authorized to perform one or more specific acts for the principal and no others; general, who are authorized to conduct all the business of the principal or business of a certain kind with stipulated limitations. Also, a rarer type of agent is the universal agent, empowered with the broadest grant of authority to perform every act which the principal can lawfully delegate to an agent. Whatever business a person can transact for himself may be delegated to an agent.

Creation of an agency generally is governed by principles of contract law, and may arise by (1) written or oral contract; (2) instrument under seal where a statute so requires; and (3) authority implied from express authority conferred. In a partnership, each partner is the principal for and the agent of his copartners as to any acts within the scope of the partnership in business. An agency may also arise from equitable principles of estoppel, where there is a false or misleading holding out by the principal; reliance thereon by the third party; and damage or detriment incurred by the third party. Agencies may also arise by operation of law in the absence of actual consent by the principal, e. g., a married man may be bound to pay for necessaries for his wife purchased on his credit, or for necessaries similarly purchased by children under age on his credit. Finally, an agency may arise by ratification, whereby authority is conferred by the principal after performance of the agent's acts.

An agency may be terminated by (1) acts of the parties, such as by force of the original agreement, mutual consent of both principal and agent, revocation by the principal, or renunciation by the agent; and (2) by operation of law, such as death, insanity or bankruptcy of the principal or agent, war, or impossibility because of change in law or destruction of the subject matter.

The principal duties of the principal are to compensate the agent for services; reimburse the agent for expenses incurred in the course of the agency; indemnify the agent for losses and liabilities incurred in execution of duties; and protect and indemnify the agent for personal injuries sustained in the course of the agency. On the other hand, the agent's chief duties are loyalty to his trust, not to exceed his authority, obey instructions, exercise care in performance of his duties, account for the principal's money or property, and give notice to principal of all material facts necessary for protection of the principal's interests.

In order to perform certain transactions, an agent's authority is required by statute to be in writing, and should be conferred by a Power of Attorney (q. v.). Thus, in New York today, written authority is required before an agent may enter into an executory as well as an executed contract of conveyance, grant or assignment of an interest in real property, except a lease not exceeding one year. Also, at common law and in those states where the common law effect of a seal is still recognized, authority to execute a sealed instrument can be conferred only by authority under seal. However, in New York today oral authority conferred upon an agent is competent to enable him to bind the principal, whether or not the contract between the principal and the third party is under seal. And the distinctions between a sealed and unsealed instrument are practically abolished by a New York statute of recent years.

AGENT DE CHANGE

The title given to a member of the Paris, and other bourses, of continental Europe.

AGIO

The premium which the metallic or other currency of a country may command over legal tender paper money which is its face equivalent. This term is restricted in its use to continental Europe.

AGRICULTURAL ADJUSTMENT ACT

(1) An act approved May 12, 1933, and amended August 24, 1935, to extend control over additional farm products and their processing, which contemplated a raising of farm prices to their pre-war parity with manufactured goods in the base period August, 1909-July, 1914. Among other things it provided for direct agricultural relief by authorizing the Secretary of Agriculture to force increase farm prices either through allocating production or through leasing of land for the purpose of withdrawing it from production and to license and tax processors of agricultural products to pay the cost of this program.

Arranged for farm mortgage relief by granting authorization for the refinancing of farm mortgages at 4 1/2 per cent. interest through the issuance of not more than $2,000,000,000 in Government bonds, only

the interest of which was originally guaranteed by the Government but by later amendment, the principal also became so guaranteed.

Authorized a broad inflation program involving the expansion of Federal Reserve credits by as much as $3,000,000,000 in Treasury notes secured not by gold but solely by the credit of the United States Government also authorized the President (in the so-called Thomas Amendment, q. v.) to devalue the gold content of the dollar as much as 50 percent. and, for six months from the passage of the act, to accept up to $200,000,000 of silver at a price no exceeding 50 cents an ounce in payment for war debts due from any foreign government to the United States.

Empowered the RFC to make loans in an aggregate now exceeding $50,000,000 to drainage, levee, irrigation and similar districts.

Act Declared Unconstitutional.—The Agricultural Adjustment Act, together with the amendments of August 24, 1935, insofar as they pertained to agriculture was invalidated by a 6-3 decision of the United States Supreme Court on January 6, 1936. The Thomas Amendment was not invalidated. Basis for invalidation rested upon two grounds: (a) an infringement of states' rights, and (b) beyond the powers of Congress to grant a contract of award for compliance which was tantamount to compulsion. Thereupon, the Government ceased the operation of the Act. Processing taxes collected under the operation of the Act were ordered returned to the payers by a Supreme Court decision on January 13, 1936. In the case of Rickert Rice Mills, Inc., petitioner, on writ of certiorari to the United States Circuit Court of Appeals for the Fifth Circuit, vs. Rufus W. Fontenot, individually and as acting United States Collector of Internal Revenue for the District of Louisiana.

On February 10, 1936, Congress repealed under an Act briefly known as the Cotton-Tobacco-Potato Repeal Act, the laws auxiliary to the Agricultural Adjustment Act, namely, the Bankhead Cotton Control Act as amended, the Kerr Tobacco Act, and the Potato Control Act.

(2) On February 29, 1936, Congress approved as a substitute measure for the invalidated Agricultural Adjustment Act, legislation known as "Soil Conservation and Domestic Allotment Act." This act is based on the Federal power to protect land resources against soil erosion, and permits the Government to acquire lands or to make payments to agricultural land owners for withdrawing acreage from cultivation or planting acreage to non-commercial crops intended to restore fertility to the soil. To carry out these purposes, the Secretary of Agriculture may pay farmers not over $500,000,000 a year. The act provides that after Jan. 1, 1942, the States may take over regulation under the act under plans approved by the Secretary of Agriculture and under his supervision.

Most important principle of this substitute for the old AAA was its stated purpose to re-establish the August, 1909-July, 1914 ratio (August, 1919-July, 1929 for tobacco) between the purchasing power of the net income per person on farms and that of the income per person not on farms, and the maintenance of such ratio. This compared with the simple objective of price parity under the old AAA. But the act also provided that its powers shall not be used to discourage the production of supplies of foods and fibers sufficient to maintain normal domestic human consumption (as in the years 1920-1929).

(3) The Agricultural Adjustment Act of 1938 amended and supplemented the Soil Conservation and Domestic Allotment Act by providing for mandatory commodity loans, marketing quotas, and crop insurance, as follows:

Under Section 302 of the act, loans of the Commodity Credit Corporation (q. v.) for sustaining prices of commodities were made mandatory for cotton, corn and wheat under specified supply and price conditions. Purpose of such loans is to encourage storage of such commodities in times of surpluses by making storage at least as profitable as immediate marketing. The note and loan agreement for such loans provided that cooperating producers shall not be personally liable for any deficiency arising from sale of the collateral.

Under the marketing quota provisions, when 2/3rds of affected producers approve, the marketing of wheat, cotton, corn, rice and tobacco surpluses shall be regulated by marketing quotas when specified conditions of oversupply are found to exist by the Secretary of Agriculture.

Under the crop insurance provisions, crop insurance is introduced for the first time in agricultural history, first to wheat growers beginning with the 1939 crop, and later extended to other crops. Premium rates are to be calculated for each farm according to its loss history, and the insurance against losses from unavoidable causes covers 50% to 75% of past average yields. Premiums and indemnities are payable in the commodity or its cash equivalent.

To attain the objective of parity purchasing power, the act further authorized the Secretary of Agriculture to distribute the authorized payments to producers of corn, wheat, cotton, rice or tobacco so as to enable their combined proceeds from production and these payments as nearly equal to parity income as possible.

World War II Experience: During World War II, the General Maximum Price Regulations, which became effective in May, 1942, established ceilings over a wide list of commodities. However, many farm products were exempted because their prices had not reached parity. Beginning with the spring of 1943, the Steagall Amendment to the Price Control Act authorized the payment of subsidies to producers or processors of various essential food products which permitted price support at or above 90% of parity, thus achieving the aim of higher prices to farmers and resultant stimulation to production without corresponding increases in consumer prices. When price rollbacks were ordered, compensatory payments were made by the Secretary of Agriculture to affected producers or processors.

Although price control was terminated in 1946, the agricultural price stabilization and subsidy payment program was extended through 1948, with volume of payments and financing being dependent upon specific annual appropriations by Congress.

As of mid-year 1947, agriculture finds itself in quite prosperous condition. With the lifting of price controls in 1946, the average level of prices received by farmers advanced 25% from June, 1946 to October, 1946, and as of mid-year 1947, prices averaged 155% higher than before the World War II, and 15% above the post-World War I peak reached in 1920. Thus, current prices averaged about 30% above the Government price support point for the specified commodities.

AGRICULTURAL CREDIT

Credit extended to farmers for the purpose of facilitating farm operations, i. e., planting and harvesting of crops; purchase of implements and tools; breeding, raising, fattening or marketing of live stock and dairying, as differentiated from credit extended to purchase farm land. The latter is called farm mortgage credit. Present Government agencies extending credit of various types to aid agriculture, all in the Department of Agriculture, include:

1. Farm Credit Administration.
    a. Banks for Cooperatives.
    b. Federal Intermediate Credit Banks.
    c. Federal Land Banks.
    d. Production Credit Corporations
    e. Regional Agricultural Credit Corporation.
    f. Agricultural Marketing Act Revolving Fund.
2. Federal Farm Mortgage Corporation
3. Rural Electrification Administration.
4. Commodity Credit Corporation.
5. Farmers' Home Administration.
6. Federal Crop Insurance Corporation.

(See under above agencies.)

AGRICULTURAL CREDIT CORPORATIONS

See Agricultural Credit.

AGRICULTURAL CREDITS ACT

An act approved March 4, 1923, which created two classes of corporations designed to improve agricultural credit. These two classes of corporations are the Federal Intermediate Credit Banks, which were brought under the Farm Credit Administration in 1933, which in turn was placed in the Department of Agriculture in 1939; and National Agricultural Credit Corporations, of which only one exists, at Fresno, California, under jurisdiction of the Comptroller of the Currency. (See Intermediate Credit Banks, National Agricultural Credit Corporations.)

AGRICULTURAL LOANS

See Agricultural Credit, Agricultural Paper, Amortization Loans.

AGRICULTURAL PAPER

Notes and acceptances arising out of agricultural transactions as distinguished from purely commercial or industrial transactions.

To be eligible for rediscount, eligible paper must have a maturity at the time of discount, of not exceeding 90 days, exclusive of days of grace, except that agricultural paper, as defined below, may have a maturity of not exceeding 9 months, exclusive of days of grace.

As defined by the Board of Governors of the Federal Reserve System in Regulation "A", Sec. 1 (d), revised effective October 1, 1937, agricultural paper eligible for rediscount at the Federal Reserve Banks is "a negotiable note, draft or bill of exchange issued or drawn, all the proceeds of which have been or are to be used, for agricultural purposes, including the production of agricultural products, the marketing of agricultural products by the growers thereof, or the carrying of agricultural products by the growers thereof pending orderly marketing, and the breeding, raising, fattening or marketing of livestock." (See Cattle Loans.)

AIR POCKET

A stock market expression used to indicate abrupt and extreme weakness in a specific issue; that is, a decline out of proportion to that in the general list, or a decline in the face of general strength. It is caused by a sudden withdrawal of nearby bids. The term is akin to Soft Spot (q. v.), but is more forceful since it refers to a more violent downturn.

ALCOHOL

An important chemical product of increasing commercial importance. Ranks, after water, as the leading commercial solvent, and with water and sulphuric acid, as the three absolutely indispensable compounds entering into the manufacture of almost unlimited variety of essential products. It is one of the six most useful organic substances. The chemical formula of pure alcohol, specifically, ethyl alcohol, is CH_3-CH_2-OH, the raw material sources being chiefly grains and molasses. Ethyl alcohol is the most important of the alcohols, and is the only type suitable for beverage purposes. Other alcohols are known as methyl (wood alcohol), amyl, benzyl, butyl, allyl and propyl.

Alcohol manufacture and use in the United States is under Government control (Bureau of Industrial Control (Bureau of Industrial Control.) Since the tax-free denatured alcohol act was passed in 1906, use has increased from 1,000,000 gallons annually to about 100,000,000 gallons at the present time. Except for human consumption, when pure ethyl alcohol is required (as in all beverage use, flavoring extracts, medicinal, scientific and profession use) and subject to Federal taxes, alcohol for industrial purposes, authorized for use in manufacture of a specific product, is dena-

tured. Substances added to alcohol to render it non-drinkable are called denaturants. Though making alcohol unfit for human consumption, denaturants do not interfere with its commercial use or efficacy. There are two general types of denatured alcohol:

1. Completely denatured alcohol. This alcohol is so effectively denatured as to preclude the possibility of its use as a beverage. The denaturants are of such character that, by virtue of their odor and taste, they serve as a warning that the liquid is unfit for human consumption. Completely denatured alcohol is largely used as an antifreeze automobile radiator solution.

2. Specially denatured alcohol. This alcohol is denatured under 68 different Government formulas to serve the commercial requirements of a large group of specialized industries producing manufactured products of everyday modern use. These specific denaturants used in specially denatured alcohol under 68 different formulas vary, of course, according to the particular purposes for which the alcohol is to be used. In any event these formulas after having been made are unfit for beverage purposes.

The Uses of Alcohol, pub. by U. S. Treasury Dept., 1932.

ALDRICH-VREELAND ACT

See National Monetary Commission.

ALLONGE

A slip of paper attached to a bill of exchange or promissory note to provide for additional indorsements because the original instrument does not afford sufficient space.

ALLOTMENT

The share or portion of an issue of securities granted or assigned by an investment house or syndicate to the subscriber. In an underwriting syndicate the allotment would be made to syndicate members (participants). An allotment may be less than the amount subscribed, since offerings of securities are made "subject to allotment."

ALLOTMENT NOTICE

A letter issued to a subscriber or applicant for bonds or stocks, announcing the quantity allotted or assigned to him, the sum payable and when, or if payable in installments, the several payment dates.

ALLOTTEE

A person, investment house or syndicate member to which securities are allotted in response to a subscription therefor.

ALLOY

A base metal mixed with gold or silver to impart greater durability to coins made therefrom, because pure gold and silver are too soft for currency purposes.

All gold coin was withdrawn from circulation under the Gold Reserve Act of January 30, 1934 and formed into bars. Standard silver dollars are 9/10th fine, i. e., they contain nine parts pure metal and one part alloy (copper). "Subsidiary silver" (50¢, 25¢, and 10¢ pieces) also contain 10% copper. The 5¢ piece coined from October 1, 1942 through December 31, 1945 was composed of 56% copper, 35% silver and 9% manganese. The Act of March 27, 1942 authorized a change in the content of the 5¢ piece from its former composition of 75% copper and 25% nickel in order to release nickel and copper for War uses. Early in 1946, coinage of the 5¢ piece composed of copper and nickel in the former ratios was resumed. Coinage of the 1¢ piece at its former ratio of 95% copper, 4% tin and 1% zinc has been resumed after coinage at the ratio of 95% copper and 5% zinc was tried as a wartime measure in order to save tin.

English gold coins are 11/12 fine and because purer, are subject to greater abrasion than those of the United States. (See Abrasion, Coinage.)

ALTERATION

Any change involving an erasure and re-writing, either in a check or other negotiable instrument, is material which alters the effect of the instrument in any respect. An alteration may consist of a change in amount, date, time and place of payment, medium or currency, or in the number or relations of the parties.

Any material alteration in a check must be initialed or signed by the drawer. Due to the greater ease of forging initials, it is recommended that alterations be confirmed by full signatures. In order to save future controversy, it is still better to draw a fresh instrument than to issue one showing evidences of carelessness or inaccuracy.

The fraudulent alteration of checks, particularly raising the amount, is a source of great annoyance and loss. Numerous frauds have been perpetrated upon banks in this way, and a bank is responsible to its customers for paying on altered check. Just as a bank is presumed to know the signatures of its customers, so it is required to use due diligence in protecting them against losses through the fraudulent alteration of the amount. Paying tellers and check desk clerks should, therefore, scrutinize checks for possible alterations before they are paid or charged to the drawer's account.

Various means have been invented to prevent fraudulent alteration of checks. These are discussed under Check Protecting Devices (q. v.).

Where alterations become necessary in the books of account in a bank, they should be made neatly by ruling through the wrong entry and writing the correct one above or below it. In this way the evidence is not destroyed and the books are left in a neater condition that if figures are written over, erased, scratched out or inked over. (See Forgery, Forged Instruments, Negotiable Instruments Law, Art. IX, §205, 206.)

ALTERNATE DEPOSITS

Deposits made in the names of two persons connected by the word "or," e. g., John or Mary Doe. Such deposits made in the names of two persons, payable to either, or payable to either or the survivor, are termed "joint accounts" in banking parlance, and are frequently used by a man and wife, or by members of a partnership. Because use of the words "and" and "or' might have different legal effects from that intended by the parties, the deposit agreement should specifically state the right of either depositor to withdraw funds from the account and the right of the bank to pay the balance to the survivor, if so intended. In the

absence of specific agreement, the laws of the particular state will control.

ALTERNATIVE FISCAL AGENT

See Fiscal Agent

ALTERNATIVE PAYEE

When a check or bill is payable to either of two persons, each is an alternative payee. According to judicial construction, where an instrument is payable to payees in the alternative, either one of such parties who is in possession of the instrument is the holder and may negotiate or transfer the instrument. See Sec. 8 (4) and (5), and Sec. 41 of Uniform Negotiable Instruments Law (Sec. 27 (4) and (5), and Sec. 71 of N. Y. Negotiable Instruments Law).

ALUMINUM

Also known as aluminium in chemistry, is a silver-white metal combining the characteristics of lightness, resistance to oxidization, conductivity to heat, malleability, and ductility. Although discovered as an element in 1825, it was not till 1886 that the metal was produced commercially. Since that time, its use has widened more than that of any other metal, possibly excepting nickel, because of its property of lightness, magnesium being the only other important lighter metal.

Pound for pound, aluminum will carry more weight, or more electrical current, or more heat than any other commercial metal. Its lightness can be illustrated by pointing out that its specific gravity is 2.6 (water has a specific gravity of 1); copper 8.9, gold 19.32, iron 7.03 to 7.73, tin 7.3). Its tensile strength is approximately the same as that of copper being 15 tons per square inch whereas copper is 14 tons per square inch. Tensile strength can be increased by combination of metal with others.

The development of strong aluminum alloys has made possible the substantial increase in aluminum production during recent years of broadening the field of utilization. This was accomplished by evolving processes enabling low production cost for aluminum, thus making it feasible to gradually substitute this new metal for steel, copper and other cheaper metals, owing to its unique physical characteristics. The specific gravity of aluminum is about one-half that of iron yet it is strong regardless of its lower specific gravity. As a matter of fact, weight for weight, aluminum is exceeded in tensile strength only by the best cast steel and its own alloy, aluminum bronze. Its alloy, duraluminum, has the greatest tensile strength of any metal for its weight and is, therefore, desirable for use in aircraft construction.

Bauxite, the hydrated oxide of aluminum is the only ore which constitutes a commercially profitable source for aluminum. About 75% of the world's production of bauxite is treated for aluminum extraction. One of the essential requirements for the economical extraction of aluminum from bauxite is an abundance of low cost electric power. The importance of electric power in the production of aluminum is indicated by the fact that in producing each ton of metal 20,000 kilowatt hours of electrical current are consumed. In addition to the electrical current and carbon electrodes utilized in producing each ton of aluminum there are also required, four tons of bauxite, two tons of coal, some limestone, hundreds of pounds of soda and of cryolite, brought from Greenland, making in all 17 tons of materials.

The development of methods of alloying pure aluminum has resulted in a product which compares favorably with steel in strength and has a distinct advantage over the later metal in the matter of lightness. This advance in the process for manufacture of aluminum has greatly increased the utilization of the metal and it is now used in practically all of the major industries, in forms varying from a thin foil to heavy beams for construction purposes. In forms for working, aluminum is produced in sheets, tubes, rods, wire and ingots. From these shapes are manufactured a wide variety of products which are utilized in some manner or other in the construction of radio sets, automobiles, airplanes, cooking utensils, furniture, vacuum cleaners and for numerous other industrial purposes, including the manufacture of building materials, rubber and chemicals, as well as in the production of petroleum, the production and transmission of electric power, and in the construction of steam and electric railway equipment.

AMALGAMATION

See Merger, Consolidation of Banks.

AMERICAN ACCEPTANCE COUNCIL

An organization last located in New York City, previously known as the American Trade Acceptance Council, the purpose of which until its dissolution in 1936 was to aid generally in the development of use and open market for trade and bank acceptances. (See Trade Acceptance.)

AMERICAN BANKERS ASSOCIATION

The American Bankers Association is the nation-wide organization of all classes of banks in the United States. It has members in every state and territory of the Union, comprising over 15,840 of the 16,352 banks in the country. It includes virtually all the larger banks and the great majority of the smaller ones, representing over 99% of the nation's aggregate banking resources.

The Association was started in 1875 when bankers from various parts of the United States met and issued a call for a general banking convention which was held the same year. The chief aims of the Association as formally stated are to promote the general welfare and usefulness of banks and financial institutions; secure uniformity of action; obtain the practical benefits of personal acquaintance and discussion of subjects important to banking and commerce, especially proper consideration of financial and commercial usages, customs and laws affecting the banking interests of the entire country; and to provide for protection against crime.

The history of the Association shows development, growth and adjustment to meet the changing and expanding conditions of the country. The extension and evolution of varied interests in banking first called for a segregation of activities within the organization and from time to time various subdivisions were formed. Each such unit of specialized interest functions under its own elective administrative officers and covers

its particular field in more detail than could be attempted by the general activities of the Association. Thus arose the National, Savings, State Bank, and Trust Divisions. More recently, with the spreading tendency among banks to practice under a single charter all types of financial service, as when a commercial bank installs savings and trust departments, this evolution is being met in the Association through a greater coordination of common functional interests among the various Divisions. Thus all members can benefit in their activities without disturbing the present organization and distribution of administrative duties and privileges.

Administration of the Association as a whole is conducted by its general elective officers, with the General Convention as the supreme authority, with the Executive Council to exercise specific functions of administration and with the Administrative Committee to represent the Council and administer the affairs of the Association in the interim between meetings of the General Convention and the Council.

The nation-wide and varied representativeness of the Association as to its administration is safeguarded by several provisions. The members of the Executive Council are representative of the various states, being elected by the American Bankers Association membership within those states.

ABA services provided to the membership by the thirty departments of the Association include:

1. Post-War Small Business Credit Commission. This commission, created by the Executive Council, consists of personnel totaling forty, half representing large banks and half representing small banks, chosen from the twelve Federal Reserve districts, and staff trained specialists to carry out its program, which is extend to 1949. Purposes of the commission are:

(1) Survey the post-war credit needs of small business;

(2) Suggest ways and means by which credit applications may be made bankable by individual banks or by banks acting together;

(3) Educate bankers in the newer forms of lending; such as accounts receivable financing, field warehousing and term loans;

(4) Help in setting up credit groups composed of local banks, in various areas where there appears to be a need for such groups;

(5) Keep in touch with supervisory authorities, both state and federal, to acquaint them with the work of the commission;

(6) Educate bankers in the merchandising of credit, emphasizing the necessity for giving every credit application careful consideration.

2. Federal legislation activities, through the Committee on Federal Legislation, Subcommittee on Taxation, the Legal Department, and the Washington Office. Attorneys for the ABA read every bill introduced into Congress for its effect, direct or indirect, on private banking, and through consultation and contact with legislators and committees, and testimony where necessary at hearing, the Association keeps a close check on Federal legislation. Since 1938, the Association has been opposing government subsidized credit where it is in unfair competition with chartered banks.

3. Telegraphic code developed by the ABA, for insuring secrecy and saving in telegraph bills.

4. The magazine "Banking", published monthly, official journal of the Association.

5. Specialized studies and services for the particular classes of banks provided by the National Bank Division, Savings Division, State Bank Division and Trust Division.

6. Customer and personnel relations activities and services, supervised by the Director of Customer and Personnel Relations.

7. Insurance and protective services, supervised by the Insurance and Protective Committee.

8. Activities in education, both in the training of bank personnel and education of the public. Training of bank personnel is carried on through the American Institute of Banking (q. v.), a section of the Association. Advanced education is available to bank officers through the Graduate School of Banking (q. v.).

9. Credit Policy Commission, which is the governing body on all credit policies, developing adequate methods of operation in all phases of credit and assisting in formulating policies and practices.

10. Agricultural Credit Department, which collects and by analyzing data on agricultural financing, including operations of government farm credit agencies, seeks to increase the quantity and improve the quality of agricultural financing done by country banks.

11. The Agricultural Commission, composed of a representative farm-minded banker from each of twelve regions, which counsels and cooperates with individual banks and with agricultural committees of state bankers associations, working for agricultural improvement and closer cooperation between bankers and farmers.

12. Country Bank Operations Commission, composed of twenty experienced bankers drawn largely from rural communities, which devotes its entire attention to methods of increasing revenue, improving operations, adding services, preserving the dual banking system, stimulating new business activities, developing practical public relations, and in general, strengthening the place of the country bank in the economic life of the nation.

13. The important Bank Management Commission, whose function is to study management methods, conduct research, and recommend the best banking practices to member banks. Among studies prepared by this commission are those on computing and accruing federal income taxes, special checking accounts, safekeeping, check standardization and simplification, earnings and expenses of banks (annually), a bank money order plan, loans on accounts receivable, field warehousing, cost accounting, account analysis and service charges, purchasing of bank supplies, auditing and accounting methods.

14. Consumer credit services, research and studies on which are provided by the Committee on Consumer Credit.

15. Advertising services available to members through the Advertising Department, produced on a cooperative basis, all expenses of production and overhead being borne by revenue from material supplied to banks.

16. Service to members, committees and departments of the Association provided by the Research Council. Long term projects currently in process relate to social security legislation, deposit insurance, the possible shifting of bank deposits, and federal banking legislation.

INDIANA UNIVERSITY LIBRARY

17. To correlate activities in public relations, the Association has a Public Relations Council, which applies group judgment and effective coordination to the work of such Association units as the News Bureau, the magazine "Banking", the Advertising Department, the Personnel and Customer Relations Department, the American Institute of Banking, and the Committee on Public Education.

18. Services on legal problems, provided by the Legal Department, and information and guidance on banking law problems provided by Paton's Digest of Legal Opinions, the fourth edition of which is now available.

19. The Economic Policy Commission, which gives consideration to matters of economic interest, particularly those which have a practical bearing on banking and business. It keeps an eye on economic effects involved in proposed or pending legislation and assists the Association in determining its policy in economic matters.

20. Other activities, of which there are many covering specialized subjects affecting banking, include those of the Commerce and Marine Commission, giving attention to phases of foreign trade and international matters affecting development of foreign trade and banking; the State Association Section, composed of the secretaries of the 55 such associations located throughout the country, which implement and advance national programs and apply them to the individual states; the Department of Real Estate Finance, which published the Home Mortgage Loan Manual for guiding banks in mortgage lending practices and maintains files of mortgage information for use of member banks; and the Department of Economic Research, interpreting through its Economist the current economic trends.

The address of the official headquarters of the American Bankers Association is 12 East 36th Street, New York 16, N. Y. There the extensive financial library of the Association is maintained. The Washington office is located at 719--15th Street, N. W., Washington 5, D. C., where the general counsel maintains his offices. Chicago office is located at 105 West Adams Street, Chicago 3, Ill., where the western advertising offices of "Banking", and the office of the staff director of the Post-war Small Business Credit Commission, are maintained.

AMERICAN DEPOSITARY RECEIPTS

Normally, listings of shares of foreign companies on American stock exchanges will be in the form of American Depositary Receipts of an acceptable American bank or trust company, representing the deposit of an equivalent amount of underlying foreign shares. Direct listing of foreign shares is considered only in special cases where the form of the security itself, the facilities for ready transferability in New York, prompt interchangeability with certificates outstanding in the primary foreign market, and arrangements for distributing dividends and other rights and benefits to American holders are equivalent to those provided by the use of American Depositary Receipts. Form 19 of the Securities and Exchange Commission is required to be filed with the SEC and the stock exchange concerned for the permanent registration of American certificates (either American Depositary Receipts for foreign shares or American Participation Certificates in foreign bonds or notes) issued against securities of foreign issuers deposited with an American depositary, and of the foreign securities so deposited.

AMERICAN INSTITUTE OF BANKING

An organization founded in 1900 as a section of the American Bankers Association (q. v.) It was originally known as the American Institute of Bank Clerks. Its purpose is the education of bank personnel in the theory and practice of banking and in those principles of law, economics, and accounting that pertain to the banking business, and the establishment and maintenance of a recognized standard of education. The work of the Institute spreads over the entire United States through the organization of chapters and study groups, and by correspondence. As of October 20, 1947, there were 228 chapters and 100 study groups actively operating. In addition, there were approximately 1,600 students participating in its correspondence courses. Where chapters are not practicable, smaller units called study groups are organized. For remoter places, courses of study are pursued by correspondence. Conventions of the Institute are held annually. Headquarters are located at 12 East 36th Street, New York, N. Y. The organ of the American Institute of Banking is styled Bulletin of the American Institute of Banking, and is published quarterly.

AMERICAN PARITY

A foreign exchange term to indicate the equivalent in United States money of the foreign price of a security traded in internationally.

AMORTISEMENT

Same as Amortization (q. v.).

AMORTIZATION

This term has two meanings:

(1) Literally, "killing off," or wiping out, a term usually applied to the payment of long-term debt on the installment or sinking-fund plan; the gradual reduction of a debt by equal periodic payments sufficient to pay current interest and to extinguish the principal at maturity; the reduction of a debt by the application of annual or semi-annual partial payments to the discharge of the principal. This method of debt reduction usually applied to long-term debts, especially farm mortgage loans of the Federal land banks and joint-stock land banks (a method borrowed from European farm mortgage finance), and corporation bonds of the sinking-fund type. (See Amortization Loans.)

(2) The process of reducing or writing off a bond bought at a premium in order to bring its investment or basis value into coincidence with par value on the maturity date. The premium paid for a bond at the time of purchase represents a part of the investment which will not be returned at maturity. Consequently, a part of the cash interest paid periodically on the bond should not be regarded as income, but as an amount to be applied to the reduction of the principal of the investment. This is accomplished by a charge at each bond interest date to the cash interest account and a corresponding credit to the bond or premium on bonds account.

MATHEMATICS OF ACCUMULATION

Date	Cash Interest 3%	Net Income 4 1/2%	To apply to Increase Principal of the Investment, or Accumulation	Book Value	Par
1943 Mar. 1	....	....	(cost)	945.60	1,000.00
Sept. 1	15.00	21.30	6.30	951.90	.....

	120.00	174.40	54.40		

AMORTIZATION (continued)

To show briefly the mathematic history of a bond bought at a premium and carried on an investment basis, suppose a 6 per cent. four-year semi-annual bond, bought March 1, 1943 was bought to yield 4 1/2 per cent. The table on this page shows what portion of the cash interest is to be regarded as net income or yield and how much in reduction of the principal of the investment. Reference to the bond table shows that such a bond would cost $1,054.40.

The yield is determined by multiplying the book value, which in the first instance is the purchase price, by the pre-determined yield or basis rate, 4 1/2 per cent. The net income for September 1, 1943, is determined by multiplying $1,054.40 by 4 1/2 per cent. This is $23.70. The difference between $23.70 (yield) and $30.00 (cash interest) is $6.30, which is the first amortization installment to be applied in the reduction of the principal of the investment. The new book value, or investment value for September 1st. is the difference between $1,054.40 and $6.30, or $1,048.10. Since the investment value is constantly being reduced the net income for each subsequent interest period declines. It will be seen that the total of the amortization is equal to the premium and that provision has been made to completely extinguish it.

The entry in the books for the first interest period should be as follows:

Dr. Cash	$30.00
Total	$30.00
Cr. Interest Income	$23.70
Bond	6.30
Total	$30.00

Bonds bought at a discount are treated exactly the same way, except that the principal of the investment is constantly being added to instead of being reduced. The amount added to the investment at each interest period is called accumulation. The above table is given to illustrate the mathematical history of a 3 per cent., four-year semi-annual bond bought March 1, 1943, and purchased to yield 4 1/2 per cent. at the price of $945.60.

AMORTIZATION LOANS

A term which applies to long-term loans, especially farm mortgage loans, as allowed under the Federal Farm Loan Act (q. v.), in which the principal is extinguished or amortized during the period for which the

	240.00	185.60	54.40		

loan is made. Amortization loans were the only kind permitted under the Federal Farm Loan Act. Before the enactment of this law, it was customary for farmers to borrow on farm mortgages as security, giving notes of from three to five years' maturity, subject to renewal. Each renewal necessitated the payment of commissions and agents' fees, and when made in times of financial stringency, farmers sometimes lost their farms because they could not get their loans renewed.

Under the Federal Farm Loan Act, farmers as members of local cooperative associations, known as National Farm Loan Associations, may take out loans from the Federal Land Bank System for as short a period as five years and for as long a period as forty years. Payments are made annually or semi-annually so as to liquidate the entire indebtedness in the period of the loan. To illustrate the mathematics of an amortization loan, the following table is given. The loan is for $1,000 at 6 per cent. interest, repayable in five years by means of semi-annual installments of $117.24, which includes interest and part of the principal:

Payment No.	Instalment	Interest	Applied on principal	Principal still unpaid
1	$117.24	$30.00	$87.24	$912.76
2	117.24	27.38	89.86	822.90
3	117.24	24.69	92.55	730.35
4	117.24	21.91	95.33	635.02
5	117.24	19.05	98.19	536.83
6	117.24	16.10	101.14	435.69
7	117.24	13.07	104.17	331.52

10	117.13	3.41	113.72	.....
	$1,172.29	$172.29	$1,000.00	.....

The original Federal Farm Loan Board since succeeded by the Farm Credit Administration, encouraged the Federal Land Banks in establishing a standard 33-year loan. It did this because this sort of loan was one which simplified the bookkeeping, made the matter of payments and amortization plain to everybody, and gave every borrower the chance to turn himself so far as time was concerned. It spread the privilege of payment over a generation in time, and met every want of almost every borrower. Two amortization tables have been prepared on this basis of 33 years, covering both semi-annual and annual payments. These are exhibited below.

TABLE 1

(A loan of $100 at 6 per cent. interest repayable in 33 years by means of semi-annual instalments of $3.50, which includes interest and part of principal.)

Payment No.	Instalment	Interest	Applied on Principal	Principal still unpaid
1	$3.50	$3.00	$0.50	$99.50
2	3.50	2.98	.52	98.98

28.....	7.00	2.18	4.82	31.49
29.....	7.00	1.89	5.11	26.38
30.....	7.00	1.58	5.42	20.96
31.....	7.00	1.26	5.74	15.22
32.....	7.00	.91	6.09	9.13
33.....	9.68	.55	9.13	.....
	$233.68	$133.68	$100.00	.....

The borrower of any sum of money may find what his semi-annual payments would be by multiplying the payments in the first table shown under "Amortization Loans" by the number of thousands of dollars which he has borrowed or expects to borrow, e. g., a loan of $3.000 would call for a payment of about $351.72 every six months.

AMORTIZED LOANS

Same as Amortization Loans (q. v.).

AMORTIZED VALUES

In valuation of bonds, the amortized value is original cost price, plus or minus the amortization of discount or premium to maturity of the bonds. (See Amortization, Convention Values, Comptroller's Regulation.)

ANALYSIS DEPARTMENT

The department of a bank or investment or brokerage house engaged in preparing operating statistics. In an investment or brokerage house, it is more generally known as the Statistical Department (q. v.). The work of the department in a bank consists largely in determining the net profit or loss over a period of time. The analysis of a bank account consists in determining the average, maximum and minimum balance carried and available for lending or investing, number of checks written, average amount of checks in transit and direct and indirect charges thereagainst, and approximate profit or loss resulting from carrying the account. (See Bank Cost-Accounting.)

ANALYSIS OF ACCOUNTS

See Analysis Department, Bank Cost-Accounting.

ANALYSIS OF SECURITIES

See: Security Analysis.

ANALYSIS OF STATEMENTS

See Statement Analysis.

ANCILLARY RECEIVER

A receiver appointed for an insolvent corporation, generally a "foreign" corporation (one incorporated in another state), to assist and be subordinate to the foreign receiver in the collection and marshaling of assets of the insolvent corporation. (See Receiver, Receivership.)

AND INTEREST

A term used in bond quotations and sales to denote that accrued interest is to be added to the price, i. e., the price quoted is exclusive of interest. (See Accrued Interest.)

ANNA

See Foreign Moneys—India.

ANNUAL RETURN

See Return, Yield.

ANNUAL YIELD

See Yield.

ANNUITANT

One who receives an Annuity (q. v.).

ANNUITY

Periodic fixed money payments, payable annually, semi-annually, quarterly or monthly, at the beginning or close of the period, received from an insurance company in consideration of payments made to it either in a lump sum or in installments. Classification of annuities may be as to:

(1) Methods of purchase: single premium annuity, one purchased with a lump sum; and annual premium annuity, one purchased over a period of time by payment of installments.

(2) Method of payments to the annuitant: immediate annuity, one payable beginning in one year, one half year, quarter year, or one month; and deferred annuity, one that does not begin income payments until after a longer period of time to allow for completion of purchase of the annuity by accumulation of installments.

(3) Duration: certain annuity, when income payments are continued for a fixed, certain period; contingent annuity, when continued for an uncertain period; life annuity, when continued during a person's lifetime; perpetual annuity, when continued perpetually; terminable annuity, when income payments cease at a certain time or event.

Single premium annuities, purchasable with a lump sum, are suitable for persons or donors who have already accumulated a large fund. They are, generally speaking, particularly suitable for older people because such persons are of ages at which the return on the annuity is most attractive. On the other hand, deferred annuities are usually suitable for younger people, especially when paid for on installments.

In recent years, the acute investment problem of life insurance companies caused by lower returns on eligible investments resulting from low money rates generally, and the accumulation of large funds available for investment, have resulted in less interest by insurance companies in offering annuities and a reduction in the number of available annuity contracts offered. Representative of annuity contracts offered currently are the following, offered by a large New York life insurance company:

Immediate Life Annuities. —The annuity is payable during the lifetime of the annuitant, either yearly, half yearly, quarterly, or monthly, the first payment being a year, half year, a quarter year or a month, respectively, after the date of the contract, according to the contract purchased. No proportionate amount is payable for the fraction of a period from the last periodic payment to date of death. Evidence that the annuitant is living is required when each payment is made. The consideration depends on the age and sex of the annuitant at date of purchase. The consideration must be not less than $500 and, also, the income payments must not be less than $10 each. Evidence of age is required before issuance of contract. No medical examination is necessary. At ages of applicant under 50 for males or 55 for females, the company will not issue this contract but will issue the Life Annuity with Payments Guaranteed Ten Years at ages 15 and over. The rates for these two types of annuities would not differ materially at these lower ages, and the applicant thus secures the guaranty of 10 years payments at the younger ages for practically the same consideration as would be required under the Life Annuity. Immediate life annuities do not participate in the surplus of the company, and have no cash or loan values. Example: Under latest tables (see samples following page), a minimum consideration of $10 each month payable to a male aged 72 at time of application would cost $1,272.

Life Annuity with Payments Guaranteed Ten Years.—This annuity is payable as long as the annuitant lives, with the additional guarantee that if the annuitant die before ten years' payments have been made, the annuity will be continued to the beneficiary until the end of ten years from the date of the contract. Annuity payments will be made either yearly, half yearly, quarterly, or monthly (first payment being a year, a half year, a quarter year or a month, respectively, after the date of the contract), according to the contract purchased. Evidence that the annuitant is living is required when each payment, due after the end of the first ten years, is made. The consideration depends on the age and sex of the annuitant at date of purchase. Consideration must be not less than $500 and, also, the income payments must be not less than $10 each. Evidence of age is required before issuance of the contract. No medical examination is necessary. There is no participation in the surplus of the company, and no cash or loan values.

Joint and Survivor Annuities. —These annuities are payable until death of the survivor of two annuitants, either yearly, half yearly, quarterly, or monthly (first payment a year, a half year, a quarter year, or a month, respectively, after the date of the contract), according to the contract purchased. The annuity is not reduced upon the first death. No proportionate amount is payable for the fraction of a period from the last periodic payment to date of death of the survivor. Evidence that at least one of the annuitants is living is required when each payment is made. The consideration depends upon the ages of the two annuitants at date of purchase and upon the sexes. Consideration must be not less than $500 and, also, the income payments must be not less than $10 each. Evidence of age is required for each annuitant before issuance of the contract. No medical examination is necessary. The contract is non-participating, and has no loan or cash values.

Retirement Income Contract. —The income payments commence at the anniversary of the contract nearest age 55, 60 or 65 (maturity date), as selected, and are payable monthly thereafter for the life of the annuitant, with payments for at least ten years certain. Installments for the purchase of the contract ("premiums") are payable annually, semi-annually, quarterly, or monthly up to maturity date. Minimum monthly income must be $10, and the minimum premium must be $5. Surplus is distributed annually on the anniversary of the contract. Dividends may be (1) drawn in cash; (2) applied in part payment of any premium due; or (3) deposited at compound interest (never less than 2 per cent), as detailed in the contract. In default of other election, dividends are deposited in accordance with above option (3). Dividend deposits may be used at maturity date to increase the monthly retirement income. When the income begins, excess interest earnings at such rate as the company declares for each year will be allotted. Cash value is available from date of the contract and not later than maturity date. The company may at its option defer paying a cash value for not more than six months after it is requested. Loan value is available from date of the contract and prior to maturity date. Loan value is the amount which with

LIFE ANNUITIES—MALES AND FEMALES

Income payments for life of annuitant. First payment a year, a half year, a quarter year or a month, respectively, after purchase.

Age Last Birthday		Price of $100 Annuity

LIFE ANNUITIES—MALES AND FEMALES

Income payments for life annuitant. First payment a year, a half year, a quarter year or a month, respectively, after purchase.

Age Last Birthday		Annuity Purchased by $1,000			
Male	Female	Amount of Each Yearly Payment	Amount of Each Half-Yearly Payment	Amount of Each Half-Yearly Payment	Amount of Each Monthly Payment
50	55	$48.76	$24 06	$11 96	$3 97

interest at 5 per cent will be within the limit of the cash value on the next anniversary. The company may at its option defer granting a loan other than to pay premiums subsequent to the first, for not more than six months after it is requested. In the case of lapse, the contract if not surrendered for its cash value will be automatically continued as paid-up non-participating retirement income of reduced amount payable on the same terms as the regular income except that where the amount of reduced paid-up life income would be less than $5 a month, the cash value less indebtedness is paid instead and the contract is terminated. Such paid-up contract may be surrendered not later than maturity date for a cash value.

If the annuitant dies prior to maturity date, the then cash value is payable to the beneficiary. If the annuitant dies after maturity date and before all of the payments certain have been made, the remaining payments certain will be discounted at 2 per cent interest, compounded annually and paid in a single sum, unless otherwise provided by indorsement.

On or before the maturity date of the Retirement Income Contract, the proceeds arising from a claim by death or from surrender for cash, may be settled by any one of the optional Modes of Settlement generally allowed under policies of insurance, provided such proceeds are at least $1,000 and the guaranteed payment at least $10.

Other flexible features are the options of change to another maturity date; and privilege to change to any form, kind, or plan of insurance upon payment of such cost and furnishing of such requirements as are requested by the company.

In furnishing evidence of age, which is required before issuance of the Retirement Income Contract, as well as for the other contracts offered, statements or affidavits as to the date of birth, based on memory, even from relatives, are not sufficient. An official certificate from a record made at or near time of birth either of birth or baptism, giving the date of birth, is the best form of evidence.

G. W. Fitch: What Everybody Wants to Know About Annuities, 1934.

ANNUITY BONDS

Bonds which represent permanent or perpetual obligations, without definite maturity date. Examples are the Perpetual Interest Bearing Certificates of the Public Service Corporation of New Jersey; also certain Lehigh Valley Railroad consolidated mortgage bonds which had an original maturity date of 1923 were converted by mutual agreement into Irredeemable, i. e., perpetual, obligations. Bonds with very long maturity dates for practical purposes might well be considered perpetual obligations.

ANTECEDENTS

A term used among credit men in making a credit investigation. The business history of the subject of inquiry is regarded as important in order to show the concern's rate of progress or retrogression, and it is particularly desirable to know the history of the concern's personnel and their record for responsible management. The credit investigator should determine whether the business has been under the control of the present managers for a long or short period and whether it has frequently "changed hands." In case the present personnel is new, it is desirable to ascertain what their previous or antecedent business connections were and with what success their operations were attended.

ANTEDATE

A check or other instrument is antedated when given a date prior to the current date; thus, if today is september 1, 1947, July 1, 1947, antedates today. The instrument is not rendered invalid because it is antedated or postdated (q. v.), provided this is not done for an illegal or fraudulent purpose.

ANTHRACITE

See Coal.

ANTHRACITE ROADS

The railroad companies, a large part of the tonnage of which consists in carrying hard coal. For 1946, the following railroads reported the highest proportionate freight revenues from anthracite coal: Reading Company; Delaware & Hudson; Lehigh Valley; New York, Ontario & Western; Central Railroad of New Jersey; Delaware, Lackawanna & Western; and the New York, Susquehanna & Western.

ANTICIPATED ACCEPTANCE

A bank or other acceptance which is paid before it becomes due. (See Acceptance.)

ANTI-TRUST ACT

A term which refers to the Sherman Anti-Trust Act of 1890, or to the Clayton Act of 1914. (See Clayton Act.)

APPLIANCES

See Bank Appliances.

APPLICATION

A general term to denote an offer to buy something or to enter into some kind of contract. For instance, applications are made for an allotment of bonds or stocks offered for sale by signing a subscription list or blank. Applications are also made for money orders, letters of credit, cable transfers, bank accounts, loans, participations in loans, etc. It should be understood that an application is merely an offer, and not an acceptance of an offer. Prior to acceptance, it does not, therefore, bind either party.

APPORTIONMENT

Generally, the division of a subject matter into proportionate parts. Specifically, in rent law, apportionment arises in two cases: (1) By New York statute, where a tenant for life, who shall have demised the real property, dies before the first rent day, or between two rent days, his executor or administrator may recover the proportion of rent which accrued to him before his death. (2) By New York statute, where an owner of land grants it to A for years, reserving rent payable at the end of each rental period, with the remainder to B for life, and then to C in fee, and B, the life tenant dies between rent days, B's personal representative may recover apportioned rent, but it must be collected by C, from whom the proportionate share of B may be collected by B's personal representative.

In apportionment of dividends as between the life tenant and remainderman, the New York rule for cash dividends and dividends in other assets, is the "rule of Matter of Osborne": (1) ordinary dividends go to the life tenant; (2) extraordinary dividends also go to the life tenant unless they impinge on the corpus of the trust as it was on the date of the testator's death. To the extent that they impinge on the corpus, dividends must be allocated to the corpus for the remainderman. By New York statute, for dividends payable in stock of the declaring company, the rule is that all such stock dividends go to the corpus for the remainderman.

APPRAISAL

The act of placing a value upon property, either real or personal. Appraisals are made for various purposes. e. g., taxation, adjustment by insurance companies of fire losses, by engineers for property to be offered for sale, by banks for determining collateral value, and by public utility commissions for determining the capital investment in public utility properties as a basis for adjusting rates to yield a reasonable return.

In appraising real estate for sale or mortgage loan purposes, the most important factors to be considered are: (1) value of similar adjacent property as established by recent sales; (2) capitalization of current net income from the property; (3) trend of income in the past five years; (4) likelihood of enhancement or deterioration of the property based upon the future of the district in which it is located.

APPRAISEMENT

See Appraisal.

APPRAISER

A person who makes an appraisal. In England, a professional appraiser is licensed and the statements of appraisal, called the appraisements, are subject to a stamp tax.
(See Appraisal.)

APPRECIATION

Increase in the capital value of any kind of property through a rise in its market price, excluding any income, e. g., interest, dividends or rents that may have accrued thereon. A stock purchased at 50 and having a present market price of 65 has appreciated 15 points. It is the opposite of depreciation although depreciation usually refers to deterioration or obsolescence of physical properties rather than to loss in value due to a decline in the market price. Bonds, stock or real estate may appreciate; a savings deposit cannot.

APPROPRIATION

A fund authorized and set aside by a business for some special use, e. g., advertising, new building, etc.

APPROVED BONDS

Although there is no such thing as a "legal list" of bonds for commercial banks as there is for savings banks, the regulation of the Comptroller of the Currency, effective July 1, 1938, has the effect of establishing bonds eligible for commercial bank investment, i. e., bonds in the so-called approved group, Group I, which are those in the first four rating groups—BBB or better—as rated by at least two of the three recognized rating agencies. Even for bonds of the lowest of the approved rating groups—BBB—a bank may be subject to criticism for buying too many as tending toward speculative investments. If a bond does not have a recognized rating, it may not be bought if of a predominantly speculative character. (See Comptroller's Regulation.)

ARBITRAGE

Buying a specified item—whether foreign exchange, stocks, bonds, gold or silver bullion, bills of exchange, and less frequently grains and other commodities—in one market and selling it immediately in another where the ruling price is temporarily higher. As applied to triangular or indirect transactions in foreign exchange for the purpose of making a profit by the purchase of a foreign currency in one market and selling in another, where the price is temporarily higher, an illustration is given for the purpose of clearness. Suppose that on a certain day French francs are selling in New York for 0.8395¢. Simultaneously sterling can be purchased in New York at $4.00 per pound, and francs in London at the rate of 50 francs per pound. The New York rate for francs purchased directly is 0.8395¢, but by first purchasing sterling it is then possible to buy 50 francs for $4.00 in London, making the cost of one franc, by this indirect process, 1/50th of $4.00, or 0.8¢. Thus a profit of 0.395¢ on each franc could be realized.

However, this illustration is more theoretical than real, as due to exchange restrictions and regulations in foreign countries, not to mention the freezing of foreign assets, normal foreign exchange transactions have been either suspended or seriously impaired in recent years.

Arbitrage may be transacted wholly within one country. Thus a New York broker may buy a security on the Philadelphia Stock Exchange at a lower price than the prevailing price of the same security on the New York Stock Exchange, for sale in New York. Similarly, arbitrage may be transacted wholly within one market, as where "when issued" prices of new securities, e. g., in railroad reorganizations, are out of line with equivalent prices for present securities; or when new securities issuable in connection with rights to subscription or exchange offers, are out of line with equivalent prices for present securities.

Profits through arbitrage would be impossible if the prices of the currencies, commodities or securities traded in, were delicately adjusted to exact parities. Through the operation of world markets, there is an international price level for the principal commodities, foreign currencies, and internation securities. Each local market, however, such as New York and London, is affected by temporary disturbances and conditions, destroying the normal equilibrium of supply and demand so that constant local changes in price occur. When permitted by exchange regulations,successful arbitrage transactions consist, therefore, of buying in a weak "world market" and simultaneously selling in another that is strong. It depends, also upon efficient telegraphic or cable connections between the markets operated in, a knowledge of international price movements, capacity to make rapid computations in order to take advantage of temporary price conditions, and finally, a large capital, because arbitrage profits are small in comparison with the amount of money involved. Arbitrage houses in widely separated markets must be in constant communication and keep each other informed on market prices and tendencies. Arbitrage transactions between two houses are usually conducted on a joint account basis, profits being equally divided between the engaging parties.

From an economic standpoint, the effect of arbitrage dealings is to correct maladjustments in the prices of commodities or securities. It is a force tending to equalize, i. e., establish parities among markets for the same commodity or security through competition of arbitrageurs. For instance, when prices in one market tend to sag, arbitrageurs will buy, and as a result of the increased demand, prices advance, until the equilibrium is restored. Conversely, when the prices tend to advance, arbitrageurs will offer freely, until prices recede to a point where sales are no longer profitable. (See Back Spread)

Bibliography

Henry Deutsch (3d Ed. revised and rewritten by Otto Weber): Arbitrage in Bullion, Coin, Bills, Stocks, Shares and Options, 1933.

M. H. Weinstein: Arbitrage in Securities, 1931.

ARBITRAGE HOUSE

A stock exchange house, private banker, investment banker, or a foreign exchange dealer, which specializes in arbitrage transactions. (See Arbitrage.)

ARBITRATED EXCHANGE

See Arbitration of Exchange.

ARBITRAGEUR

One skilled in arbitrage; an arbitrage dealer. Also spelled arbitrager. (See Arbitrage.)

ARBITRATION OF EXCHANGE

A calculation based on rates of exchange to determine the difference in value of a given currency in three different places or markets, particularly when

made with a view to determine the cheapest way of making a remittance between two countries. The result is called the arbitrated exchange, but this term is gradually being replaced by the term commercial parity. When three places are involved the calculation is called simple arbitration; when more, compound arbitration. (See Arbitrage.)

ARE

A measure of surface in the Metric System (q. v.).

ARGENTINE PESO

The monetary unit of the Argentine Republic. See: Foreign Moneys—Argentine Republic.

ARREARS

A debt or contingent obligation due but unpaid, such as past due instalments or rents and unpaid interest on bonds. Dividends on cumulative preferred stock which have not been paid are also said to be in "arrears."

ARRIVAL DRAFT

A draft with shipping documents attached, payable upon arrival of the shipment against which it is drawn. Arrival drafts are usually forwarded by the shipper to the collecting bank (presumably a correspondent of the shipper's bank) located at the domicile of the consignee, with instructions not to demand payment therefore until the goods for which the draft have been drawn in payment have arrived at the drawee's (consignee's) destination.

An arrival draft is usually drawn and forwarded for collection at the time the goods are shipped and consequently the draft invariably reaches its destination before the goods. An arrival draft is first presented upon receipt to notify the drawee of its arrival and where it is held for payment, so that when the shipment arrives (the consignee will be notified by an arrival notice from the transportation company), the drawee may take it up. In case the goods arrive before the presentation of the draft for notification, the draft becomes payable immediately.

An arrival draft provides a means of insuring payment for the goods against which it is drawn, before delivery. Shippers usually consign goods to their own order and in such cases the bill of lading must bear the shipper's indorsement. Since the transportation company will not release the goods without surrender of the bill of lading, and the collection bank will not surrender the bill of lading until the draft is paid, the shipper protects himself by retaining title until the goods are paid for.

Sometimes the drawee, before paying an arrival draft, will ask permission to inspect or even sample the goods. This is justified if the shipment is of a perishable nature and a delay in transportation has occurred. The right of inspection is conferred by the collection bank only if allowance of inspection or sampling is specified in the bill of lading. Otherwise it is necessary to wire the shipper or consult the shipper's local representative for instructions. If the consignee should reject the shipment, the shipper or the shipper's local representative is notified immediately and the goods are disposed of in accordance with instructions. (See Draft.)

ARTICLES OF ASSOCIATION

An instrument similar to a certificate of incorporation, but applied particularly to mutual, mutual-benefit, social, charitable and other non-stock corporations.

The execution of this instrument is usually the first official step in the organization of all types of banking institutions. In the case of national banks, a form is furnished by the Comptroller of the Currency. This requires a recital of such facts regarding the proposed bank as title, location, capital stock, number of directors, date of annual meeting, powers of directors, etc. The articles must be signed by the applicants (at least five) and prepared in duplicate, one for the Comptroller and one for preservation in the files of the bank. (See Bank Organizations, Organization Certificate.)

AS PER ADVICE

Where they occur in a letter or upon a draft or bill of exchange, these words indicate that notice has, or is to be given, to the drawee that the draft has been drawn.

ASIATIC CURRENCY

Currencies of Asiatic countries. Several of these countries, e. g., China and India are large users of silver for monetary purposes. Consequently, rates of exchange fluctuate in accordance with credit and trade influences and the gold price of bar silver, and are never fixed.

ASKED PRICE

The price at which a security or commodity is formally offered for sale on one of the exchanges. Bid and asked quotations for stocks and bonds are quoted in the daily newspapers as indicative of the prices at which such securities can presumably be sold or purchased. In the case of bankers' acceptances, bid and asked prices are in terms of rates of interest. The dealer may quote, for example, 120-day bills "1 1/8% bid, 1 1/16% asked", meaning that he will buy the bill on a 1 1/8% basis, and sell on a 1 1/16% basis.

ASSAY

A test to determine the per cent. of pure metal in a specimen of ore or bullion. An assay report indicates that a certain gold ore submitted for analysis will yield, say $14, $50 or $600 of pure gold per ton, or that certain bullion is .985 fine.

ASSAY OFFICE

A laboratory for testing metals and ores, usually gold and silver. Official assay offices are located at New York, N. Y. and Seattle, Washington, and are part of the organization of the Bureau of the Mint, which also includes coinage and metal offices located at Philadelphia, Denver and San Francisco; gold bullion depository at Fort Knox, Kentucky; and silver bullion depository at West Point, N. Y. The only assay office that assays ores is the Seattle, Washington office, which charges a scale of fixed fees for assaying the sample according to the nature of the ore. Assay offices also receive bullion (since 1934 only imported

or newly mined bullion), payment for which is made on the basis or the mint price less melting, parting and refining charges. (See Coinage, Mint.)

ASSAY OFFICE BAR

A bar of pure or nearly pure gold or silver manufactured at a mint and assayed by a Government assay office. The term commercial bar is given to those assayed by a private assayer.

ASSENTED SECURITIES

Securities the owners of which have agreed to some change in their status, especially in case of reorganization where an assessment is made or the amount of securities is scaled down according to some definite plan. The stock certificates of stockholders who have paid their assessment would be stamped "assessment paid" or "assented."

ASSESSABLE

See Non-Assessable.

ASSESSED VALUATION

The valuation placed upon real or personal property for purposes of taxation, but the term usually refers to the taxable value of real estate. The rules for fixing assessed value vary in the different states; sometimes they are based upon full marketable value, but more often less, e. g., two-thirds or one-half.

Since the debt limit of most municipalities is prescribed by law, the assessed valuation of the property of a borrowing municipality is important as indicating its borrowing power. Investment bankers and investors who buy municipal bonds should ascertain the proportion of debt to assessed valuation in order to determine whether the debt is excessive. Usually these statistics are exhibited in circulars offering municipal bonds.

ASSESSMENT

A levy upon the security holders of a corporation for the purpose of raising additional capital in the case of financial difficulties, such as threatened or actual insolvency, or in a reorganization. (See Double Liability, Non-Assessable.)

ASSESSOR

One who appraises or assesses the value of property, e. g., a tax assessor.

ASSET CURRENCY

Same as General Asset Currency (q. v.). (See Baltimore Plan.)

ASSETS

An accounting term to signify properties and claims against others, owned by a business or individual, as distinguished from debts or other obligations due to others. Assets are classified as fixed, current and deferred, and as tangible and intangible. A balance sheet is a statement of assets, liabilities and capital (including surplus or deficit). (See Balance Sheet, Current Assets, Fixed Assets, Intangible Assets, Tangible Assets.)

ASSET VALUE

The term particularly applied to book value or equity value of investment companies (so-called "investment trusts"), and generally expressed on a per share basis. (See Book Value, Equity, Liquidating Value.)

ASSIGNATS

A name given to paper money authorized to be issued in 1789 by the revolutionary French Government. They were non-interest bearing notes, which originally were secured by the confiscated properties of the Church and were typical example of fiat money. Successive issues were authorized and issued in such volume without security that they depreciated rapidly, and in the end became valueless. (See Inflation.)

ASSIGNED BOOK ACCOUNTS

Book or open accounts of a business, the title of which has been transferred to a commercial credit company or to a bank as collateral for a loan. This is a type of commercial loan which has been receiving increased attention from commercial banks, as compared with its low regard in past years, in view of the satisfactory experience of finance companies with this type of business under proper legal safeguards and operating supervision. Where State banking laws prohibit the actual purchase of accounts receivable, because they are choses in action, and only permit loans on the accounts, such loans can be made secured by the assignment of the accounts, together with agreement for repurchase or substitution of accounts in default, provision for repayment out of collections, and other safeguards, lending either against individual accounts or under revolving loan agreement, either on the notification or non-notification of debtors basis. The notification type is preferred, as it makes better collateral.

Bibliography

Nelson M. McKernan: Meeting the Challenge of Changing Banking Conditions, 1947.

ASSIGNEE

One to whom property, or rights to, or interest in property have been assigned, either as an individual or trustee.

ASSIGNMENT

A transfer in writing of a right, claim or interest. Definite rules have been formulated by stock exchanges to govern the transfer (assignment) of stock. (See Assignment in Blank, Assignment for the Benefit of Creditors, Good Delivery, Stop Transfer Order.)

ASSIGNMENT FOR THE BENEFIT OF CREDITORS

An act by which an insolvent person or company (assignor) transfers title to property to a trustee (assignee), who is empowered to administer and liquidate the property and to distribute the proceeds to the creditors.

ASSIGNMENT OF CLAIMS ACT

An act approved Oct. 9, 1940 "to assist in the national defense program by amending Sections 3477 and 3737

of the Revised Statutes to permit the assignment of claims under public contracts'' (Public No. 811, 76th Congress). Such assignment of claims allow manufacturers to assign the contracts as security for borrowings from banks needed for defense plant construction.

Accordingly, a new form of uniform bankable contract was developed by the National Defense Advisory Commission (q. v.) after consultation with the War and Navy Departments and Comptroller General. This contract has two purposes: (1) to expedite signing of supplies contracts by the Army and Navy by assuring the contractor against loss on construction undertaken for military purposes; (2) to safeguard the Government's interest in such facilities on termination or completion of the contract.

The contract provides that the Government reimburse the contractor not in additions to the unit price, as previously, but in five equal annual installments covering the amount of his capital expansion costs. Thus, cost of supplies and amortization of construction cost would be kept separate. Prices are held at a minimum, and while the manufacturer is relieved of the risk involved in building fixed assets for the emergency, he still absorbs the risks involved in production. The contract also contains provisions whereby the contractor may by purchase or lease from the Government acquire use of the facilities for himself after they have served their emergency needs.

ASSIGNMENT IN BLANK

A formal transfer of title to stock or registered bonds on the reverse of the certificate in which the space for the insertion of the name of the new owner is left blank so that the name may be written in at any subsequent time. A stock certificate or a registered bond assigned in blank should not be purchased from an unknown person without proper identification and evidence of genuineness of the signatures of the assignor and witnesses. Street certificates (q. v.) are assigned in blank.

The following is a form of assignment on the reverse side of a stock certificate which has been approved by the Committee on Stock List of the New York Stock Exchange:

For value received.....
hereby sell, assign and transfer unto.....
.....
shares of the capital stock represented by the within certificate, and do hereby irrevocably constitute and appoint.....
attorney to transfer the said stock on the books of the within named company with full power of substitution in the premises.
Dated..... .....
In the presence of .....

Note—The signature of this assignment must correspond with the name as written on the face of this certificate in every particular without alteration or enlargement or any change whatever.

Such an assignment is a means of transferring title of stocks from a seller to purchaser, assignment being the method of negotiating stocks, whereas indorsement (and delivery) is the method of negotiating checks, drafts, money orders, and other order negotiable instruments.

For assignment separate from the stock certificate, the following form is approved by the New York Stock Exchange:

For value received.....hereby sell, assign and transfer unto..... .....
.....( ) Shares of the .....
Capital Stock of the .....
standing in .....name
on the books of said ....
represented by Certificate No.....
herewith and do hereby irrevocably constitute and appoint.....
attorney to transfer the said stock on the books of the within named Company with full Power of Substitution in the premises.
Dated.....
....

For assignment separate from the registered bond, the following form is approved by the New York Stock Exchange:

For value received.....hereby sell, assign and transfer unto.....
one bond of the.....
for.....($) ,
No.....herewith, standing in
.....name on the books of said.....and do hereby irrevocably constitute and appoint.....
.....attorney to transfer the said bond on the books of the within named company, with full power of substitution in the premises.
Dated.....
.....

ASSIGNOR

One who makes an assignment. (See Assignment, Assignment for the Benefit of Creditors, Assignment in Blank.)

ASSIMILATE

An expression to denote that the demand for securities is sufficient to absorb offerings without appreciable decline in prices. (See Absorb, Digested Securities.)

ASSOCIATED BANKS

Banks which are members of the same clearing house association.

ASSOCIATION

See Voluntary Association.

ASSUMED BONDS

Bonds of one corporation taken over by another. When one corporation purchases, exchanges its shares for those of another, or gains control of another through lease or ownership of majority of the stock, it usually assumes the latter's debts and, therefore, its bonds, e. g., a parent company assumes the bonds of a newly acquired subsidiary. In railroad finance, assumed bonds are usually divisional bonds, i. e., the bonds of smaller companies acquired and operated as divisions.

Assumed bonds are sometimes improperly called guaranteed bonds. This is a wrong designation unless the bonds are indorsed by the parent company, which, however, is responsible for payment of both principal and interest without indorsing them.

ASSURANCE

A term still used for the life coverage provided by contracts of life insurance companies, as contrasted with "insurance" for contracts of fire and casualty insurance companies. Formerly, the term was often used for "insurance", especially in maritime law. (See Insurance.)

AT CALL

On call. (See Call Money, Call Money Market.)

AT OR BETTER

A term used in connection with brokerage orders. In connection with a buying order, it means to purchase at the price specified or under; in a selling order, to sell at the price specified or above.

AT SIGHT

A term used in drafts and bills of exchange, indicating that payment is due on demand or presentation.

AT THE MARKET

A term used in reference to an order left with a broker for execution at the best available price. No price limit is specified, but it is presumed that the order will be executed at a price fractionally close to the last sale. Such an order is immediately communicated to the floor trader. (See Orders.)

AT THE OPENING

A term used in reference to an order placed with a broker specifying "at the opening" or "at the opening only", for execution at the opening of the particular security involved. No price limit is specified. If the order is for the purchase or sale of an odd lot, however, it must be executed at one-eighth of a point above or below the opening price for a full lot.

AT THREE DAYS

A term which refers to one of the methods of trading in issued stocks on the New York Stock Exchange. Under Rule 109 of the Exchange, bids and offers in stocks admitted to dealings on an issued basis shall be made on (1) cash basis, (2) regular way, and (3) seller's option, i.e., for delivery within the time specified in the option, which time shall be not less than 3 days nor more than 60 days. (See Methods of Trading.)

ATTACHMENT

A writ authorizing the seizure, or the act of seizure itself, by a sheriff or other executive officer of the law, of property belonging to the defendant in an action at law, and the holding of it, or prevention of holding it by the defendant, in order to satisfy a claim or judgment that plaintiff hopes to recover. An attachment is a legal means used by a creditor to circumvent loss that may occur by an act of a debtor, e. g., fraud or misrepresentation in obtaining credit, insolvency while goods are in transit, assignment to a third party, removal, actual or contemplated removal of the person or property of the debtor from the jurisdiction of the court, and also as a means of collecting a claim or judgment granted or decreed by a court. It is usual to require the creditor to furnish bond for double the amount involved should the attachment subsequently be vacated as illegal or improper. By its very nature, a writ of attachment is a provisional remedy for an emergency situation.

ATTESTATION

The formal witnessing of a signature, or signatures, on documents which require it.

ATTORNEY, POWER OF

See Power of Attorney.

ATTORNEY'S OPINION

See Legal Opinion.

AUCTION

A special market in which there is one seller and many buyers. An auction sale is conducted by an auctioneer who permits buyers to bid against one another, the goods going to the highest bidder. The entire public without discrimination is invited to participate. In an honest auction goods are sold regardless of cost, unless the seller reserves the right to reject all unsatisfactory offers, and the final price is determined by the value of the article to the successful bidder. Auctions are usually conducted for the purpose of selling out the property of the estate of a deceased person or in liquidating an insolvent business. Auction terms are usually spot cash for immediate delivery. Auction prices are sometimes referred to as liquidating prices, "forced sale," or "under-the-hammer" prices.

An auctioneer is not required to accept a bid. He invites bids from the persons present at the sale, but no bid becomes a binding sale contract until accepted by him. The auctioneer does not make an offer; he merely invites them.

Herewith are typical conditions of sale at an advertised auction:

1. The highest bidder to be the buyer, and if any dispute arise between two or more bidders, the lot so in dispute shall be immediately put up again and resold.
2. Any bid which is not commensurate with the value of the article offered, or which is merely a nominal or fractional advance, may be rejected by the auctioneer if in his judgment such bid would be likely to affect the sale injuriously.
3. The purchasers to give their names and addresses and to pay down a cash deposit, or the whole of the purchase money, if required, in default of which the lot or lots so purchased to be immediately put up again and resold.
4. The lots to be taken away at the buyer's expense and risk upon the conclusion of the sale, and the remainder of the purchase money to be absolutely paid or otherwise settled for to the satisfaction of the Auctioneer, on or before delivery; in default of which the undersigned will not hold themselves responsible if the lots be lost, damaged or destroyed, but they will be left at the sole risk of the purchaser.
5. The lots to be taken away and paid for, whether genuine or authentic or not, with all faults and errors of description, at the buyer's expense and risk, within

two days from the sale; the auction company not being responsible for the correct description, genuiness or authenticity of, or any fault or defect in any lot, and making no warranty whatever.

6. Receipted bills: goods will be delivered on presentation of a receipted bill. A receipted bill presented by any person will be recognized and honored as an order by the buyer, directing the delivery to the bearer of the goods described thereon. If a receipted bill is lost before delivery of the property has been taken, the buyer should immediately notify the auction company of such loss.

7. To prevent inaccuracy in delivery and inconvenience in settlement of the purchases, no lot can on any account be removed during the sale.

8. If, for any cause, an article purchased cannot be delivered in as good condition as the same may have been at the time of its sale, or should any article purchased thereafter be stolen, or misdelivered, or lost, the undersigned is not to be held liable in any greater amount than the price bid by the purchaser.

9. Upon failure to comply with the above conditions, the money deposited in part payment shall be forfeited; all lots uncleared within the time aforesaid shall be resold by public or private sale, without further notice, and the deficiency, if any, attending such resale, shall be made good by the defaulter at this sale, together with all charges attending the same. This condition is without prejudice to the right of the auctioneer to enforce the contract made at this sale, without such resale, if he thinks fit.

10. Unless the sale is advertised and announced as absolute and unrestricted, owners reserve the right to bid.

11. All claims must be made within 10 days after sale.

12. Shipping, boxing or wrapping of purchases is a business in which the undersigned is in no wise engaged, and will not be performed by the undersigned for purchasers. The undersigned will, however, afford to purchasers every facility for employing at current and reasonable rates carriers and packers; doing so, however, without any assumption of responsibility on their part for the acts and charges of the parties engaged for such service.

13. Records: the records of the auctioneers and the auction company are in all cases to be considered final, and the highest bid shall in all cases be accepted by both buyer and seller as the value against which all claims for losses or damages shall lie.

14. In lots where quantities are specified, articles are sold at so much each.

AUDIT

An examination of the books and records of a business to determine: (1) the financial status culminating in the balance sheet, and (2) the results of operations culminating in the profit and loss statement. There are three principal kinds of audits—balance sheet audit, cash audit and detailed audit. The first involves a verification of the assets and liabilities, a cash audit tests the accountability of one who has cash or funds in his custody, while a detailed audit involves a complete examination and verification of all the accounts, books, records and transactions in detail. While the final result of an audit is the disclosure of the financial status, as exhibited by the financial statements, there are several incidental purposes, e. g., to test the accuracy of the bookkeeping, to prevent recurrences of errors or fraud, to insure against over-valuation of assets and under-valuation of liabilities, and to determine improved methods of expediting clerical and bookkeeping procedures. In an audit, the books and records are examined, not only to test their arithmetical accuracy, but to test their agreement with the physical existence of assets, collateral against loans, special deposits, etc. An audit should also disclose any possible defalcation or misappropriation or conversion of funds.

Banks audits may be conducted by professional public accountants, by directors of the bank, or by the staff auditor of Auditing Department (q. v.). Audits conducted by official bank examiners are known as examinations. (See Bank Examinations.)

AUDITING

See Audit, Auditing Department.

AUDITING DEPARTMENT

The department of the bank which supervises the bookkeeping, accounting and auditing functions, usually in charge of an officer known as Auditor (q. v.). The purpose of this department is to secure a daily control of all transactions occurring in each department by condensing the department proofs; to secure periodical reconcilements of customers' accounts and to make investigations of errors and exceptions reported; to analyze expenses and earnings; to conduct examinations of the departments having custody over the bank's assets to secure two results: (a) to verify the physical existence of the assets as reported upon the books; (b) to appraise these assets as a safeguard against possible over-valuation; to secure an independent accounting control over each department in order to test the accuracy of its records; and to compile various reports and statements of condition as may be required by the bank's officers, official bank examiners, Comptroller of the Currency, or State Banking Department. As usually organized this department combines with auditing the functions of comptrolling.

AUDITOR

One who conducts an audit. (See Audit, Auditing Department, Certified Public Accountant, Bank Examiners.)

AUTARCHY

Also spelled Autarkie, and Autarchie, a term of European, and especially German, origin, meaning national economic self-sufficiency or self-containment. A nation has applied the principle of Autarchy when it endeavors to provide for all, or as much as possible, of its home needs by means of its domestic raw material resources, technical equipment and labor. Absolutely applied, a nation would neither export or import, but would become an autonomous economic unit, relying entirely upon itself. Autarchy, however theoretically desirable as a defensive measure, as during a war, is practically impossible of attainment since no nation possesses the natural resources and climatic conditions to produce the variety of finished products essential to civilized life. Autarchy is an expression

of extreme nationalism, or of nationalistic idealism, and exists more in its breach than in its observance.

AUTHORITY TO PURCHASE

An instrument used as a substitute for the commercial letter of credit. A foreign shipment may be financed by the importer, either through a letter of credit or an authority to purchase. The former instrument vests the exporter with the right to draw drafts upon a bank. On the other hand, an authority to purchase instructs the shipper to draw his draft upon the importer directly, but assures him that the draft will be purchased by the notifying bank.

An authority to purchase applies almost exclusively to Far Eastern commerce, especially intra-Chinese transactions, or to facilitate exports from the United States to the Far Eastern countries. They are practically always issued in dollars. The follow the same differences as letters of credit as to (1) tenor of drafts, (2) documents required, (3) form of currency and (4) privilege of cancellation.

The following is a form of authority to purchase:

No.....

AUTHORITY TO PURCHASE

The.....Bank
Shanghai.....19..

To.....
.....

Dear Sirs:

We hereby authorize you to negotiate to the debit of our account, the drafts drawn by .....
on.....of.....at.....
sight, up to the aggregate amount of.....
against shipment of....., to.....
Insurance against all risks is to be effected by the shipper, unless otherwise instructed.

Drafts are to be made out in duplicate and to contain the clause "with interest added at the rate of .....% per annum from date hereof to approximate date of receipt of remittance in....." and to be accompanied by a full set of Bills of Lading, or Parcel Post Receipts, or Insurance Policies (all made out or indorsed to the order of the .....Bank), and invoices of goods shipped for the amount of such drafts.

Drafts drawn under this Authority to Purchase must also state that they are "Drawn under.....Bank, A/P No....., dated.....19....."

This authority remains in force till .....19..., and is subject to Revocation or Irrevocable without the consent of the beneficiaries.

(See Letters of Credit.)

AUTHORIZED BONDS

The amount of bonds which a corporation, state or municipality may legally issue. Corporations are not required to issue at one time the entire amount authorized. A part of the bonds authorized may be held awaiting the need for additional capital. Power to issue bonds usually is fixed by the corporate by-laws and usually requires a two-thirds vote of the stockholders. In the case of public utility and railroad corporations bonds cannot be issued without the permission of the local Public Service Commission, or Interstate Commerce Commission, respectively. A state or municipality is usually not permitted to issue bonds in excess of the debt limit fixed by law. This limit is usually based upon the total assessed valuation of the property. (See Bond.)

AUTHORIZED CAPITAL STOCK

The amount of capital stock which a corporation is authorized to issue according to its charter or certificate of incorporation. A corporation is not required to issue the entire amount of stock authorized. The difference between the authorized stock and that issued and outstanding is called unissued stock. Stock may be issued for cash, labor done or property actually received for the use and lawful purposes of the corporation, or disbursed as stock dividends, but it must not be issued for a consideration less than its par value if it has one, or less than a minimum value fixed by law, if it has no par value. A corporation may change its authorized capital stock, but only by amendment to its certificate of incorporation. (See Capital Stock.)

AUTOMATIC CURRENCY

Another term for Elastic Currency (q. v.).

AVAILABILITY DATE

First read Federal Reserve Check Collection System. The date upon which the proceeds of checks or other items drawn on out-of-town banks, and forwarded by the sending bank for collection through the Federal Reserve check collection system, are received and credited by the Federal Reserve bank to the reserve account of the sending bank. Each Federal Reserve bank publishes a "Schedule Showing When the Proceeds of Items Will Become Available," covering every point in the United States, so that member or clearing member banks sending checks for collection through a Federal Reserve bank may know on what days such checks will be credited to their reserve accounts.

AVAILABLE ASSETS

Free or unhypothecated assets; assets which may be sold or otherwise employed, because not loaned, pledged as collateral against a loan, or otherwise covered by lien.

AVAILABLE FUND (s)

(1) A fund held by non-stock savings bank in cash or on deposit with another bank or trust company for the purpose of paying withdrawals in excess of current receipts, for meeting current obligations, or for awaiting a more favorable opportunity for investment. In New York state this fund is limited to 20 per cent. of deposits.

(2) Total available funds of a bank at any time for conversion into earning assets or other investment are not only its deposits but its total capital funds and any borrowed money as well.

AVAILS

See Net Avails

AVERAGE

In ocean shipping, this term refers to the loss or damage sustained by a ship or its cargo, or to the amount payable by the owner of the ship and the owners of the cargo to make good such loss or damage.

Average is of two classes—particular and general. A particular average is borne entirely by the owner, or his insurer, of the particular property which is lost or damaged, whether a part of the ship or of its cargo. The loss of or damage to any particular property cannot be assessed among all the cargo owners. A general average, however, is one incurred in the common interests of the ship and cargo, and is borne by all the parties interested in the ship and cargo in proportion to such interests as ascertained by persons known as average adjusters. Jettison (throwing overboard a certain part of the cargo in order to save the rest) is a loss that would be defined as a general average. (See Dow-Jones Averages, Market Averages, Stock Price Averages.)

AVERAGE ADJUSTER

See Average.

AVERAGE BALANCE

In the case of a borrowing account, the average balance against loans or line of credit is the principal determinant of account profitableness for a bank, similar to minimum free balance in the case of a checking (non-borrowing) account. Customarily, banks request borrowers to keep on deposit about 20% of his borrowings, in order to maintain a relative proportion between manufactured credit and cash balances and to provide for cash withdrawal needs of other borrowing customers. (See Line of Credit, Twenty Per Cent Rule.)

AVERAGE BOOK

See Average Loan and Balance File.

AVERAGE LOAN AND BALANCE FILE

A card file or book customarily kept by banks to show each customer's average daily or monthly loans and deposits over a period of, say, ten years. The information posted on these cards is obtained from the depositors' ledgers and the loan and bills discounted ledgers. It furnishes a quick and convenient means of obtaining important information concerning depositors' accounts, e. g., (1) amount of average deposits and loans as a measure of profitableness, (2) to determine the average balance as a measure of possible borrowing power when applying for a loan, (3) to determine whether the average balance is in proportion to loans (usually a 20 per cent. average balance is required to be maintained against loans), and (4) to determine whether the deposit balance is increasing or decreasing. (See Central File.)

AVERAGE RESERVE POSITION

See Reserve.

AVERAGES

See Dow-Jones Averages, Index-Numbers, Price Composites.

AVERAGING

A method used by stock market speculators to reduce the cost of purchases. Averaging down means to buy more stock of a given issue at a price less than the last purchase successively as the price declines. Averaging up means to buy more of a given security at successively higher prices as prices advance. This method is employed out of recognition of the fact that the high and low points of a movement cannot be exactly predicted. Averaging is, therefore, a method of insurance against altogether missing the market.

AWARD

In general, the written decision of a court, board of arbitrators or judges, referees, investigators, or commission, on the case, question, or matter that has been submitted to them for decision.

The acceptance of a bid to buy a block of securities. Bond issues, particularly municipal bonds, are frequently offered for sale to competitive buyers under sealed bids. This term is generally used to indicate the formal acceptance by the proper authorities of the offer to purchase by the investment banker or bond house which has been the successful bidder.

BABY BONDS

Bonds of denominations of $10, $25, $50 and $100, issued as a means of widening the investment market and to permit increased diversification.

BACK

An abbreviated term for Backwardation (q. v.).

BACK SPREAD

First read Arbitrage.

A term used in arbitrage transactions in securities, commodities, or foreign exchange, when the price of the same thing in different markets is less than the normal difference. Suppose, for example, United States Steel is selling on the New York Stock Exchange at $90 and on the London Stock Exchange at $93, the difference in the quotations representing a permanent difference due to cost of shipment, insurance, exchange rates, loss of interest, etc., to make them equivalent, or to establish commercial parity. Assuming three points to be the normal difference in quotations for this stock as between these two markets, no profit could be made by buying in New York and selling in London, or vice versa. If, however, the London quotations should be less than $93, say, $91, making the difference less than normal, a profit could be made by buying the stock in London and selling simultaneously in New York. Such a transaction is known as a Back Spread.

A back spread differs from a spread in that in the latter the difference in price between two markets is greater than the normal difference. (See Spread.)

BACKWARDATION

A term applicable to a practice of delaying settlement on the London Stock Exchange. Suppose a speculator who has sold stock for delivery at the next Fortnightly Settlement (q. v.) wishes to postpone the delivery until the following settlement period because of his belief that the price of the security will in the meantime decline, and accordingly arranges with his broker to postpone delivery. This is secured either through obtaining the consent of the purchaser to delay delivery for a consideration, or by borrowing the stock from someone else. The consideration or charge made by the purchaser or lender of the stock for the privilege granted to the seller by extending the time of delivery is called Backwardation.

On the other hand in the reverse situation, when the speculator who has bought stock desires to postpone delivery, the charge made for the accommodation is called a contango. This charge based on the interest on the amount of the transaction during the period between the settlement days is made because the seller must wait till the next settlement for his money. Backwardation is paid by the seller, while contango is paid by the buyer.

BAD DEBTS

In commercial usage, uncollectible accounts; receivables whether evidenced by overdue open book accounts, or notes which are irrecoverable. Bad debts usually arise through the inability to meet current obligations or insolvency of the debtor, and provision for these losses should be made by setting up a reserve.

In banking usage, bad debts are bad loans which arise through the failure of makers or indorsers to pay at maturity notes or drafts which they have signed. Notes not paid at maturity are protested and usually turned over to the legal department for enforcement of payment. In the meantime, they are charged to Bills Overdue account. The bank then has the problem of "working out" these loans to obtain maximum possible recovery, involving such measures as foreclosure, sale, retention for reasonable period of time before sale, taking over additional security of the debtor to avoid loss, etc. If after exhausting these recovery measures, there remain some balance due on the bad debt, it is the net loss on the item. In treating these charge-offs, many banks fully charge off the bad debt upon default, by allocating a portion of the Contingent Reserve for the purpose, most banks not disturbing Undivided Profits directly. Thus, when net recoveries are eventually realized, they are available for credit either to Contingent Reserve or directly to Undivided Profits.

The National banking laws (Sec. 5204 Revised Statutes) define bad debts to be those on which interest is past due and unpaid for a period of six months, unless well secured, and in process of collection. Bad debts thus defined must be deducted from profits. (See Bills Discounted, Overdue Bills, Recovery.)

BAD DELIVERY

In the sale and transfer of stock certain conditions are imposed by the rules of stock exchanges. These rules relate to days and hours of delivery, assignment of stock, power of attorney, etc. If deliveries are made without the proper observance of these rules, they are known as Bad Deliveries. What constitutes a good delivery is explained under Good Delivery (q. v.)

BAD LOANS

See Bad Debts

BAHIAS

One of the three standard growths of cocoa.

BAILEE

One to whom personal property is delivered for some temporary specific purpose, upon completion of which it is to be returned to the owner. The bailee has temporary possession of such goods entrusted to him, but has only a limited property interest. A railroad company which receives a shipment of goods for transportation under a contract of bailment, called the bill of lading, is a bailee. Warehousemen who accept property for storage are also bailees, the contract of bailment being a warehouse receipt.

Safe deposit companies which receive the valuables of customers for safe-keeping act as bailees, and as such have a lien on the property deposited in case rentals are not paid after a specified time. While the laws in the various states differ, as a rule if the rental on a safe deposit box is not paid for two years, notice may be sent to the renter that, if not paid before, the contents will be

sold in 30 days for payment of the rent.

Where a bank or trust company acts as custodian of securities, it is a bailee.

BAILEE RECEIPT

A receipt given to a bank holding title to goods by a bailee, a customer of the bank who is permitted to sell them for the account of the owning bank. A bailee receipt is often used in lieu of a Trust Receipt (q. v.), given upon release of documents covering imports for the purpose of warehousing, selling or manufacturing. The trust receipt has proved to be inadequate collateral and only as good as the credit standing of the signer. It has often failed the banks in pressing claims against third parties who have purchased goods from the borrower. In releasing shipping documents so that imports may be procured at the steamship terminal, and sold in advance of the maturity of the draft drawn against the bank, banks sometimes require customers of doubtful standing to sign a bailee receipt. This instrument is regarded as more stringent that the trust receipt and is supposed to offer the bank greater protection. The opinion has been expressed, however, that a trust receipt is a priori a bailee receipt and that legally no difference exists between the two instruments.

The following is a typical form of bailee receipt:

Received from the .....Bank, solely for the purpose of selling the same for account of said bank, the following property, marked and numbered as follows:

.....

and ..... hereby undertake to sell said property for account of said bank, and collect the proceeds thereof and deliver the same immediately upon receipt to the said bank in whatever form collected to be applied to the credit of....., hereby acknowledging.....to be bailee of said property for the said bank, and.....
do hereby assign and transfer to the said bank the accounts of the purchasers of said property to the extent of the purchase price thereof, of which fact notice shall be given at the time of delivery of said property by .....to said purchaser or purchasers, and all invoices therefor shall have printed, written or stamped thereon the following: "Transferred and payable to the ....Bank."

If said property is not sold and the proceeds so deposited within ten days from this date,.....undertake to return all documents at once upon demand or to pay the value of the goods at the bank's option.

The said goods while in our hands shall be fully insured against loss by fire for the benefit of the bank.

The terms of this receipt and agreement shall continue and apply to the merchandise above referred to, whether or not control of the same or any part thereof be at any time restored to the .....Bank and subsequently delivered to us.
(See Trust Receipts.)

BAILMENT

The deposit of personal property by a bailor with the bailee for a specific purpose, such as safe custody, transportation, or storage. (See Bailee.)

BAILOR

A party who bails or delivers another (the bailee) for a specific purpose under contract of bailment. (See Bailee, Bailment.)

BALANCE

The sum necessary to equalize the debit and credit totals of an account. A debit balance is the excess of debits over credits, and a credit balance is the excess of credits over debits. (See Bank Balance.)

BALANCE OF TRADE

The difference between the money value of a nation's commodity exports and imports as shown by the Customs' Reports. It usually applies to a nation's trade with all other nations, although sometimes to the balance of trade with a specified nation, e. g., England. Balance of trade is not to be confused with international balance of payments (q. v.), a more inclusive term which attempts to cover all international transactions, and which includes not only net merchandise balance of trade, but also net flow of payments for services (shipping, travel, remittances, interest and dividends, and other such as merchandise adjustments, war debt receipts, Government transactions and miscellaneous), and not capital movement.

If the annual commodity exports of the United States are eight billions a year and imports five billions, the difference of three billions is the balance of trade, or more accurately, balance of international trade, and is said to be favorable. When imports exceed exports, the balance of trade is unfavorable. From a strictly economic aspect, there is nothing evil in an unfavorable balance of trade for creditor nations, provided they have an adequate gold supply. Nations that have foreign obligations to meet, e. g., bonds floated in foreign countries, or which have inadequate gold reserves, should export an excess of commodities. The so-called unfavorable balance of trade idea, therefore, is wholly relative. The great creditor nations normally have an excess of commodity imports. When the money values of commodity exports and imports are not in balance, the difference is paid or remitted in some other kind of value. One of the chief mediums used in settling foreign balances is gold, although the purchase of securities, money remittances, payment of ocean freight and insurance charges, and other invisible imports also assist in settling balances with foreign countries. (See Foreign Exchange, Foreign Trade, Gold Movements, Invisible Imports, International Balance of Payments.)

BALANCE SHEET

An itemized statement, known also as a Financial Statement, Statement of Assets and Liabilities, Statement of Resources and Liabilities, Statement of Condition, and simply Statement, showing the nature and amount of the assets, liabilities and net worth of a business as of a given date. From an accounting standpoint a balance sheet is a schedule of balances of the real accounts taken off the ledger after the nominal accounts have been closed. It is an instantaneous photograph or cross section of the affairs of a business, which discloses the equities of the various classes of owners in the net asset value or net worth.

A balance sheet is prepared primarily for the information of the proprietors or managers, and in this respect, "the purposes of the balance sheet are twofold. Primarily it shows the financial status of the concern, giving information as to its solvency, and in a less de-

gree it exhibits profits which have been made. The first purpose is on the face the most evident one. The balance sheet shows a cross section of the business, it presents the status at a given moment of time; it is ostensibly a showing of assets and liabilities, not of income and expenses. Yet the balance sheet is not without value as an exhibit of profits. Prepared, as it ordinarily is, at annual intervals, it serves, at least by comparison, to show the flow of income during the period, as well as the financial status at the moment of its preparation." (H. R. Hatfield, Modern Accounting).

Among corporations the interim unaudited balance sheet is intended for the managers (board of directors and officers) rather than for the owners (stockholders). The latter usually receive an audited balance sheet in the annual report of the business, and in this connection, the balance sheet becomes a report of accountability of the managers to the stockholders. The balance sheet enables the managers (board of directors and officers) and owners (stockholders) to see whether the original investment has been kept intact, and whether additions have been made thereto, or losses sustained. By exhibiting the present financial status it discloses, by comparison with previous balance sheets, the results of past operations. It also enables the managers or owners to plan future policies and to control the assets and liabilities so as to increase the investment and equity of the owners.

While the primary purpose of a balance sheet is to furnish useful information concerning the business to its proprietors, it has several miscellaneous functions. Balance sheets are almost universally used as a basis for commercial and mortgage loans, and most banks require prospective borrowers to submit their latest financial statement upon application for a loan. They are essential to the scientific appraisal of the value of a business for the purposes of sale, and to furnish a basis for forming an intelligent opinion as to the value of its securities by investors and speculators. From all points of view, it is desirable that a balance sheet should be a truthful statement of the affairs of a business. To a large extent valuations appearing in a balance sheet, especially among the fixed assets, are a matter of opinion, but such valuation should always be conservative. The balance sheet should show the financial position of a business to be no better than it actually is. Some of the states have enacted False Statement Acts (q. v.), which impose penalties upon borrowers who sign false statements as a basis for loans. (See Bank Statement, False Statement Acts, Statement Analysis.)

BALANCE SHEET TESTS

See Statement Analysis.

BALBOA

See Foreign Moneys—Panama.

BALLOONING

A stock market expression to denote the forcing of quotations of a given stock, or of the entire market, to unreasonably high or inflated values, i. e., to levels out of accord with asset values and present or prospective earning power.

BALTIMORE STOCK EXCHANGE

One of the smaller national securities exchanges, registered under the Securities Exchange Act of 1934. As of June 30, 1946, 89 outstanding stock issues of 60 issuers and 27 bond issues were listed, of which stocks over 58% were issues traded on other exchanges, and of which bonds, over 41% were also traded on other exchanges. For the fiscal year ended June 30, 1946, total market value of sales effected on the Baltimore Stock Exchange was $7,337,000, consisting of $5,585,000 in stocks (207,000 shares) and $1,752,000 in bonds ($1,919,000 principal amount). See National Securities Exchanges.

BANI

See Foreign Moneys—Roumania

BANK

A term said to be derived from the Italian word Banco (bench) at which the money-lenders, Jews and Romans, transacted their business in the market-place. In its original sense, which is still used today, the word means a pile or accumulation, as a sand bank, or bank of a river. The term has undergone an evolution in its meaning, and whereas the Bank of Venice, one of the earliest banks, was originated to make a public loan (also true of the Bank of England, created in 1694), and the Bank of Amsterdam (created in 1609), was a bank of deposit only, and banks of later periods were primarily banks of issue, in the modern sense the main purpose of banking is to supply credit in some form or other.

The New York State banking law defines a bank as "any domestic moneyed corporation, other than a trust company, authorized to discount and negotiate promissory notes, drafts, bills of exchange and other evidences of debt; to receive deposits of money and commercial paper; to lend money on real or personal security; and to buy and sell gold and silver bullion, foreign coins or bills of exchange."

Modern banks may be classified according to their functions into six broad groups, viz.: (1) commercial banks (e. g., national banks and state banks); (2) savings banks; (3) trust companies; (4) investment banks; (5) mortgage banks; and (6) bankers' banks (also known as reserve banks or central banks, e. g., Federal Reserve Banks).

Many modern banks, organized as National banks, state banks, or trust companies, and located in the large cities, are practically financial department stores and engage in all kinds of banking activities. A complete banking service comprehends the following functions: (1) receive demand deposits, and pay customers' checks drawn against them; (2) receive time deposits and pay interest thereon; (3) discount notes, acceptances and bills of exchange; (4) supply credit by making advances with or without security, by issuing letters of credit, and by accepting bills drawn thereunder; (5) transfer money at home and abroad; (6) Make collections and facilitate exchanges; (7) issue circulating notes (restricted to Federal Reserve banks); (8) issue drafts, cashiers' checks, and money orders, and certify checks; (9) furnish safe-deposit vaults; (10) assume custodianship of securities and other valuables; (11) act in a fiduciary capacity for individuals and corporations; (12) invest in Government or other securities and act as fiscal agent for the Government, or any of its civil divisions; (13) buy and sell gold bullion under license from Treasury Department, and foreign coins; (14) and deal in foreign exchange.

The laws of the United States provide for the organization of many Federal banking corporations of a public or quasi-public character, in addition to providing for the organization of National banks and the Federal system of private banking. The traditionally private Federal banking system has been meeting increasing competition in recent decades, particularly since 1933, from many Government corporations and credit agencies. In addition to Government banking corporations of a primarily regulatory nature, such as the Federal Reserve Banks, Federal Deposit Insurance Corporation, and Federal Savings and Loan Insurance Corporation, there are those of a supplementary or competitive nature, such as: In the Farm Credit Administration: Banks for Cooperatives, Federal Intermediate Credit Banks, Production Credit Corporations, Regional Agricultural Credit Corporation; also in the Department of Agriculture: Federal Farm Mortgage Corporation, Rural Electrification Administration, Commodity Credit Corporation, Farmers Home Administration, and Federal Crop Insurance Corporation; in the Federal Home Loan Bank Administration: Federal Home Loan Banks and Home Owners Loan Corporation; also in the National Housing Agency, the Federal Public Housing Authority and its affiliatex, Defense Homes Corporation; Federal Housing Administration; Federal National Mortgage Association; Reconstruction Finance Corporation; Export-Import Bank; Federal Works Agency, etc. In addition, there is the Postal Savings System, organized under the Postal Savings Act of 1910.

Supervising the National banks, member banks of the Federal Reserve System and insured banks are the Comptroller of the Currency, the Board of Governors of the Federal Reserve System, and the Federal Deposit Insurance Corporation. The Federal Savings and Loan Insurance Corporation supervises the system of Federal Savings and Loan Associations. The Postal Savings System is supervised by the Trustees of the Postal Savings System. However, management and supervision of Government corporations and credit agencies is largely in the hands of their organic boards of directors and the administrative side of the Executive branch of the Government.

Under the jurisdiction of the various State Banking Departments are the following private banking types, viz.: State Banks, Trust companies, Mortgage companies, Title Insurance companies, Savings banks, Building and Loan associations, Safe Deposit companies, Industrial banks (Morris Plan banks), Private banks, Credit unions, Personal loan brokers and companies, and Land banks. In addition to the bank types created by law, and beyond the jurisdiction of the supervising bank authority, are investment bankers, stock exchange brokers, note brokers, foreign exchange dealers, discount houses, and pawnbrokers.

BANK ACCEPTANCE

As defined by Regulation "A" of the Board of Governors of the Federal Reserve System, "a draft or bill of exchange, whether payable in dollars or some other money, accepted by a bank or trust company, or a firm, person, company or corporation engaged generally in the business of granting bankers' acceptances."

Bank acceptances are used in financing international trade and domestic transactions involving major staple commodities. They are practically a new type of credit instrument in the United States, and did not exist here before the Federal Reserve Act, Section 13 of which provides for their issuance. Bank acceptances hold a prominent place among credit instruments and constitute the highest form of commercial credit in which the credit risk has been practically eliminated, since the direct responsibility for their payment rests upon banks whose credit is widely known. Bank acceptances arise out of drafts drawn under letters of credit issued by the accepting bank. The bank substitutes its credit for that of its customer and accepts drafts drawn under letters of credit, provided they are in accordance with the terms thereof. The customer is required to place the bank in funds to meet the acceptance at its maturity.

Up to 1915, American bankers' acceptances were practically unknown. At the present time, however, not only have they become familiar in eastern financial centers as a medium of investment for short term funds, but they are known and purchased in many parts of the country remote from the seaboard. In this way, interior banks, business houses, and individuals have assumed an important part in the financing of American foreign trade.

While bankers' acceptances are used to some extent in the domestic movement of goods, their principal use is in the financing of exports and imports. A typical example of the use of bankers' acceptance in export trade, without describing technical details, is as follows: A Liverpool merchant buys $50,000 worth of cotton from an American exporter in New York. At the same time the Liverpool merchant requests his own bank to make an arrangement with a bank in New York for a "com-

mercial acceptance credit"—that is, a formal agreement to honor at maturity a draft or bill of exchange in a specified amount drawn in accordance with terms laid down in the agreement. The New York bank issues this acceptance credit on the guaranty of the British bank, which, in turn, has the guaranty of the Liverpool merchant that funds will be available to pay the bill when it matures. Under this credit the American shipper draws a time bill of exchange on the New York bank that issued the credit, due, say, at the end of ninety days. The American shipper then presents to the New York bank the bill with any documents which may be called for under the terms of the acceptance credit, and if found to conform with them in all particulars, it is "accepted"—that is, the bank notes on the face of the bill, the fact of "acceptance," which signifies that the bank will pay the bill upon maturity. The American shipper is then free to hold the bill until maturity, to discount it at his bank, or to sell it in the open discount market, whichever suits him best.

In an import transaction, the parties are transposed, the following being an illustration: An importer in New York wishes to buy tea from a merchant in Yokohama. The Yokohama merchant is not willing to make the shipment unless the New York importer is financially strong and is well and favorably known to him. The seller of the tea in Yokohama stipulates, therefore, that the New York importer must provide him with a commercial letter of credit, issued by a bank or banker of good standing, under which he may draw his bill. The New York importer obtains such a credit from his bank here and forwards it to the Yokohama merchant, who, upon its receipt, or cable advice of its contents, is then quite willing to make his shipment. After the latter delivers his goods to a steamship company and obtains from it his bill of lading, he attaches this, together with the other necessary shipping documents, to his draft, drawn at three or four months' sight on the bank which has issued the credit, and sells the draft to some bank in Yokohama at the current rate of exchange—thereby immediately obtaining payment in his local currency.

The bank in Yokohama then forwards the draft and shipping documents to its New York agency or correspondent. When the New York agency receives the draft and documents, it presents them to the drawee bank, which, after having satisfied itself that they are in order and that they comply with the credit, detaches and retains the documents, which it usually surrenders under trust receipt to its customer in order that he may obtain the tea, dispose of it and out of the proceeds retire the credit in due time. The drawee bank then accepts the draft and returns it to the New York agency of the Yokohama bank, which either holds it in its portfolio until maturity, or, in case of need, discounts it in the open market.

In the case of an acceptance drawn against a domestic shipment, the principle is similar, in most respects, to the export and import bills already described. The credit is provided by the American buyer in favor of the American seller, under which the seller draws his draft on the buyer's bank, with the shipping documents attached.

Another class of eligible acceptances consists of those secured by readily marketable staples stored in a warehouse, independent of the borrower. The owner of the goods draws a draft upon the bank from which he has obtained a credit and lodges with the bank the relative warehouse receipt covering his goods as collateral security. The purpose of such a credit is to finance staple commodities for comparatively temporary periods pending distribution into the channels of trade.

The New York Market is the only important market in the United States for bankers' acceptances. At times in the past, bankers' acceptances purchased by the Federal Reserve Banks in open market operations have been an important portion of outstanding Federal Reserve credit, but the volume outstanding has declined in reflection of general decline in acceptance volume, and it is now a minor portion of Federal Reserve credit. Buyers of acceptances, who are the customers of the dealers or so-called discount houses, include, generally speaking, those who desire an investment practically without risk, the proceeds of which will come due and be paid within a short time, or which may be sold at will in the open discount market. Some investors purchase bills which mature at a time coinciding with a known date when they, in turn, have obligations to meet or longer investments to make. In this way the acceptance market furnishes a means whereby funds may be employed pending the time when they are required for some definite and previously known use. (See Acceptance Credit, Letters of Credit, Limitations on Acceptance Credits.)

BANK ACCOUNT

Funds deposited in a bank. There are two principal types of bank accounts (other than those of governmental bodies), classified as to time element: demand and time. Under the National Bank Act, a demand deposit is payable within 30 days and a time deposit, after 30 days. Classified as to types of depositors, bank accounts may be classified as to individual, corporation, joint accounts, trustee, and unincorporated association accounts. Demand deposits may also be classified as to checking accounts and other deposits payable within 30 days; and time deposits, as to savings, Christmas Club, special funds, and other deposits payable after 30 days. Funds deposited in a savings account cannot be with drawn by check, but only upon presentation of the pass book, and are legally subject to 30 days notice of withdrawal, although this requirement of notice is rarely exercised. (See Demand Deposits, Time Deposits.)

BANK ACCOUNTING

See Bank Bookkeeping, Bank Cost-Accounting.

BANK ADVERTISING

See Publicity Department.

BANK APPARATUS

See Bank Appliances.

BANK APPLIANCES

A number of important mechanical appliances have been adopted by banking institutions in recent years to short-cut the great volume of clerical detail and to mechanize operations in order to reduce expenses. The principal machines used in modern banking are as follows: adding machine, adding typewriter, addressing machine, annunciator, bookkeeping and billing machine, calculating machine, check cancellation machine, check indorsing machine, check protecting and writing machine, computing machines, coupon cutter, dictaphone, automatic cashier, automatic coin counting and

wrapping machine, automatic typewriter, endorsing machines, envelope sealing machine, folding machine, letter opener, mailing machine, mimeograph, multigraph, numbering machine, pencil sharpener, photostat, perforating machine, posting machine, proof machine, receipt machine, Recordak equipment, stamp affixing machine, tabulating equipment, telautograph, time dating stamp, time lock, time recording machine, transit machine, typewriter

BANK AUDITING

See Audit, Auditing Department, Bank Examination.

BANK BALANCE

This term has two meanings

(1) The amount standing to the credit of a depositor's account at a bank, representing the sum he is entitled to withdraw

(2) The difference between the total debits and credits, whether against or in favor, of a bank at the clearing house, i. e., a given bank's clearing house debit or credit balance

BANK BALANCE SHEET

See Bank Statements

BANK BOOK

Same as Pass Book (q. v.)

BANK BOOKKEEPING

Bookkeeping which in most respects follows the principles of bookkeeping in other lines of business, but differs in two important particulars: (1) transactions must be recorded as soon after their occurrence as possible; and (2) the bank should be able to determine its correct financial status and results of operations at the close of each day's business.

A bank deals with cash and cash items. Most of its assets are quick or liquid assets which it endeavors to keep liquid in order that customers may make withdrawals at their pleasure. A bank is a huge accounting machine, an instrument by which its customers mutually settle their debts. In keeping financial accounts for its customers a bank is an important factor in insuring their solvency. If through an oversight in the bookkeeping department a customer's account shows an overdraft when as a matter of fact funds have been received which would create a credit balance, but are not yet posted, the customer's position may be seriously jeopardized. Since a bank must handle a great volume of checks and other cash items affecting many separate accounts, some scheme must be provided for securing the posting of transactions to the ledgers with utmost dispatch and accuracy.

The Comptroller of the Currency and many of the state banking departments require banks to secure a daily trial balance. Even without this requirement ordinary prudence would dictate a daily balancing of books. Because of the sheer volume of transactions a bank is called upon to administer, it is essential that each separate department and the bank as a whole prove its work daily, so that in case errors occur they can be corrected and immediately, and before matters become further involved. Furthermore, a proof is essential in determining the bank's condition as to solvency, liquidity and profits. To protect its customers whose solvency partly depends upon the solvency of their bank it is necessary for a bank to determine its financial condition at the close of each day's business.

The bookkeeping or accounting system of a bank varies according to its type, size and kind of service performed, but most of its books and many of its operations are common to all. The bookkeeping work of a bank may be divided into (1) preparation of the original entry records in the various operating departments; (2) preparation and sortation of posting mediums for posting to depositors' and general ledgers; (3) preparation of daily department proofs of original entry records; (4) keeping the accounts of depositors in the depositors' or "individual" ledgers; (5) keeping the general accounts (general ledger and statement book), and (6) keeping the various departmental subsidiary ledgers, e. g., liability ledger, bond ledger, etc.

A bank's bookkeeping records may be classified in four broad divisions: (1) exclusively corporate records; (2) general accounting records; (3) depositors' or "individual" ledgers; (4) department records. The exclusively corporate records consist of (a) stock journal, or stock certificate book, from which shares of stock are issued, and which shows the evidence of ownership of the shares; (b) stock transfer journal which is a chronological record of the transfers of shares; (c) stock ledger which shows the number of shares owned and held by each stockholder; (d) directors' minute book which contains the minutes of directors' meetings and their resolutions, which often affect the accounting records; (e) articles of incorporation which contain the authorization for the bank's existence and affect the records with respect to capital stock; (f) dividend book which contains a record of dividend disbursements and the names and addresses of stockholders entitled to receive dividends. The general accounting records consist of (1) general ledger; (2) statement book, and (3) general expense book. The department records consist of various subsidiary ledgers, ticklers and other facilitating records.

The following is a list of the more important bookkeeping records especially applicable to a commercial bank:

Acceptance Liability Ledger.
Acceptance Register.
Acceptance Maturity Tickler.
Acceptance Ledger.
Accounts Opened and Closed Record.
Advice Book.
Bank Note Register.
Bill Ledger (Book).
Bill Register.
Bill Maturity Tickler.
Bond Classification Record.
Bond Earnings Record.
Bond Journal.
Bond Ledger.
Bond Maturity Tickler.
Branches Ledger.
Cash Book.
Cashier's Check Register.
Certificate of Deposit Register.
Certified Checks Register.
Collection Ledger.
Commission Record.
Coupon Check Register.
Coupon Ledger.

Customers' Securities Control.
Depositors' Ledger.
Discount Ledger.
Discount Maturity Tickler.
Discount Register.
Dividend Book.
Expense Book.
Exchange Record.
Federal Reserve Ledger.
Federal Reserve Register.
General Ledger.
Indexes.
Individual Ledgers.
Journal.
Letters of Credit Register.
Loan Ledger.
Loan Register.
Minute Book.
Mortgage Ledger.
Mortgage Register.
Note Tickler.
Offerings Book.
Overdue Bills Book.
Real Estate Record.
Safe Deposit Register.
Securities Ledger.
Securities Register.
Security Numbers Record.
Signature Records.
Stock Certificate Book.
Stock Ledger.
Stock Transfer Journal.
Time Deposits Ledger.
Time Loan Maturity Tickler.
Trust General Ledger.
Trust Securities Register.

(See Auditing Department, Bank Statements, Bookkeeping Department, General Bookkeeping Department, General Ledger, Statement Department.)

BANK CHARTER

See Certificate of Incorporation.

BANK CHARTER ACT

See Bank of England.

BANK CHECK

See Check.

BANK CLEARINGS

Exchanges for the clearing house; checks and other items presented for collection through the clearing house by its members. Total bank clearings and balances for the principal cities having clearing house associations are published daily in the local newspapers. The principal financial magazines compile weekly, monthly and annual bank clearings for the principal cities and the United States as a whole as a barometer of business activity.

Bank clearings, however, do not provide an inclusive barometer of deposit activity, as there are many transactions which do not clear through the clearing house; and also, as the number of banks is reduced by merger or consolidation, the volume of clearings necessarily is reduced. Accordingly, bank debits (q. v.) are a superior indicator of business activity as reflected in turnover of deposits and volume of money payments. (See Business Barometers.)

BANK COMMISSIONER

A title given in some states to the chief of the State Banking Department (q. v.). In other states this officer is known as Superintendent of Banks.

BANK COST-ACCOUNTING

Although first associated with manufacturing business, cost-accounting has become especially adaptable to banking; in fact, it is essential if proper charges for various services are to be made, and to determine whether given accounts are profitable or unprofitable. While cost-accounting in banks is usually taken as synonymous with account analysis, its scope is more extended and includes the determination of costs by departments, by classes of services, unit services and deposit accounts. In a well-managed bank, moreover, the cost-accounting system and budget system will serve as mutual checks on one another.

Various systems or methods of determining costs have been devised. The object of account analysis is to apportion the expenses of the bank to each account on some equitable basis, and to credit to each account its proportion of earnings. The earnings attributable to an account may be accurately ascertained without much difficulty, and consist of the interest at the current lending rate upon the usable balance, determined by subtracting from the average balance the amount of the average float (items in process of collection), and the required legal reserve. The determination of the expenses assignable to each account, however, presents some difficulties. In a recent exposition of the fundamentals in bank cost-accounting ("How to Price Bank Services," in "Banking" for October, 1947), Mr. A. Paul Thompson states the basic idea of bank cost accounting as the analysis and segregation of financial transactions as recorded on the books of account whereby they are allocated to the individual customer services to which they relate. The following procedure is advocated as an approach which has proved practical and desirable in moderate sized as well as larger city banks for measuring operating performance:

1. Select the division of operation.
2. Distribute the time of the personnel among the divisions.
3. Count the items of activity for each division.
4. Evaluate the item count according to the work unit value of each kind of item.
5. Determine the number of personnel required based on standard.
6. Compare actual number of personnel with standard required and analyze variances.

The following procedure is recommended for determining the fairest possible compensation for services rendered to customers:

After the expense, direct and indirect, of a department or section has been determined and an accounting has been made of that department's activity in terms of units of time, such as minutes, the cost of each unit of time performed is the quotient of the total expense divided by

the units of time worked. Once the cost of a unit of time is determined, and the time required to handle the different transactions in that department is known, it becomes simple to convert the total costs into item costs.

The above fundamentals outlined by Mr. Thompson are of general application, but it should be realized that bank cost accounting systems will differ widely, based on local adaptation to specific needs. An essential first step in all cost accounting systems is to know what costs are in sufficient degree of detail, and to help in determining this, the assistance of professional bank analyst companies, correspondents and banking associations is available in supplementing the bank's own accounting and auditing staff. Knowing its costs, a bank is then able to apply corrective measures. In analysis of accounts, for example, reduction of interest if any is paid, increase in balance, reduction in activity, and finally, service charge, may be necessary steps in bringing account cost into line with applicable earnings.

BANK CREDIT

Credit created or extended by a commercial bank by loans and discounts to its customers with or without collateral, and purchase of investment securities, as distinguished from commercial credit, personal credit investment credit, public credit, etc. (See Credit.)

BANK CREDIT CURRENCY

See Credit Currency.

BANK DEBITS

A term, more fully described as Debits to Deposit Accounts, meaning the total dollar value of checks drawn against aggregate deposit accounts, i. e., withdrawals against deposit credits of individuals, firms, and corporations. It represents the rate of turnover, or velocity, of bank deposits, and differs from bank clearings in that the latter represents only checks received from other banks through the clearing house, and does not include checks cashed or withdrawals made at the depositor's own bank, checks cleared otherwise than through the clearing house, etc. The term may apply to a single account, the total of all accounts, the total of all accounts in the banks of a single locality, state, Federal Reserve District, or the United States.

In recent years, statistics of bank debits have come to be regarded as important business data by business analysts and statistical economists. Their peculiar value is that of gauging business activity or volume of trade. Since these data are available for important cities, they suggest the relative change in activity (by comparison with figures for preceding periods) as between different localities in the country. It is by using these data that some of the forecasting services construct their "business maps."

Debits to bank accounts are more sensitive to trade necessities than bank credits because excess funds can be called upon or allowed to remain idle as required, although the two must be in rough correspondence. The greater the aggregate withdrawals from the banks the greater the volume of business transacted, and vice versa. Bank debits, of course, are not a precise measure of the volume of business done. Allowance must be made for price changes and for the degree of speculative activity (in securities, commodities, or real estate), which has little bearing upon the quantity of goods moving into consumption channels.

Bank debit statistics are collected and reported monthly by the Board of Governors of the Federal Reserve System, summary figures being published each month in the Federal Reserve Bulletin, based on 334 reporting centers. In addition to debits to total deposit accounts (except interbank accounts), the Board also publishes debits to demand deposit accounts (except interbank and Government accounts), as well as the annual rate of turnover of total deposits and of demand deposits calculated for New York City alone and also in one figure for the other leading cities. For description of the data and current figures, see "Banking and Monetary Statistics" (Board of Governors of the Federal Reserve System, 1943) and current Federal Reserve Bulletins. In addition to these summary figures, weekly bank debits (debits to demand deposit accounts except interbank and U. S. Government accounts), are published weekly by the Board in the series entitled Weekly Reporting Member Banks—New York City and Outside.

BANK DEPOSIT

See Deposits.

BANK DEPOSIT INSURANCE ACT

The name given to the Act of June 16, 1934, which extended to June 30, 1935 the temporary plan for insurance of bank deposits originally set up by the Banking Act of 1933 (q. v.). Public Resolution of June 28, 1935 further extended the temporary plan for insurance of deposits to August 31, 1935. Permanent deposit insurance was provided by the Banking Act of 1935 (q. v.), approved August 23, 1935.

BANK DIRECTORS

BANK DISCOUNT

See Discount.

BANK DRAFT

A sight or demand draft drawn by one bank as drawer upon another bank as drawee. (See Draft.)

BANK EMPLOYEES

See Bank Occupations, Personnel Department.

BANK EXAMINATION

An inspection of the financial conditions of a bank, initiated by the bank itself or conducted by legally constituted authorities, to assure the depositors, stockholders and the public that the affairs of the bank are being conservatively and efficiently managed. Bank examinations may be classified as external and internal. The former are compulsory, and are conducted by agencies created by the law for that purpose, and the latter by the bank's own auditing department, or by public accountants at the request of the bank.

National banks are subject to at least two examina-

tions a year by national bank examiners, acting under the supervision of the Comptroller of the Currency. State banks are also usually subject to two examinations a year, acting under the supervision of the state banking department. The New York state banking laws also require periodic examinations to be made by the board of directors, but they are allowed to engage public accountants to conduct the examination in their stead. The purpose of directors' examinations is to place the board on record as having intimate knowledge of the affairs of the institution which they direct. Banks which are members of a clearing house association are often subject to examination by such association. Clearing house examinations are not required by law, but are instituted as a matter of conservative banking practice.

Examiners of the Federal Deposit Insurance Corporation may examine any State non-member bank which is insured or making application for insurance. Also, with consent of the Comptroller of the Currency and the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation may examine any national bank, or State member bank; it can also examine any closed insured bank.

Federal Reserve banks are subject to examination by the Federal Reserve Board which maintains a "Division of Examination" and a "Chief Federal Reserve Examiner.' The Federal Reserve Board also has power to examine member banks, The Federal Reserve Act provides that any Federal Reserve bank may, with the approval of the Federal Reserve Board, examine any member bank within its district. In practice, the district Federal Reserve Bank usually secures a copy of the examination of the district National Bank Examiner and thus does not examine further in the case of national banks in the district. The district Federal Reserve Bank, however, has power to examine any member bank in the district if improper use of Federal Reserve credit is being made. State member banks are also examined by district Federal Reserve Banks; usually at the same time and in cooperation with State examiners. The trust department of a national bank is subject to examination by the banking department of the state in which it is located.

The specific purposes of an external bank examination are to ascertain (1) whether the bank is solvent as shown by a verification of its assets and liabilities: (2) whether the management is conforming to the restrictions imposed by law; and (3) whether the bank, although conforming to the legal restrictions, is adopting policies which may lead to embarrassment or disaster at a future date.

Examination Not an Audit—An external bank examination is not a complete audit, and is not so intended. They are distinct in their purposes. Bank examiners do not set up a complete financial statement which purports to be a true and correct exhibit of the bank's financial condition. Neither do they certify that no defalcations have occurred.

A bank that may be thoroughly examined in one or two days could not be completely audited in less time than one or two weeks. Every bank in the system should receive a thorough audit at least once a year by qualified accountants not connected with the management of the bank in any way.

It is incumbent upon an examiner, in addition to seeing that the business of the bank is conducted within the provisions and limitations of the banking laws, to satisfy himself that every dollar that has been paid into the institution, as shown by its books, is properly accounted for. But is is the business of an auditor to determine by balancing and verifying each and every account whether the books show correctly every dollar received.

It is no reflection upon an examiner who fails to discover a shortage which is the result of the pernicious practice which prevails in some of the smaller banks of permitting the individual ledger bookkeeper to receive deposits and make entries in and balance pass-books, or a receiving teller to make entries in the ledgers. A shortgage due to the opportunities afforded by this objectionable practice may remain concealed for years unless revealed by accident, and can be discovered only by balancing or verifying the pass-books.

After the examination is completed, a comprehensive report is prepared and submitted in writing by the chief bank examiner to the board of directors. The Board of directors is required to adopt the recommendations of the bank examiner who may, for example, require writing off all overdue notes, or depreciation on investments, and even that more capital be furnished to make good losses sustained, even though a deficit has nor occurred. Improvident policies and loose accounting methods are criticized, and recommendations made for their improvement. The report of a national bank examiner is required to be read at the next succeeding meeting of the board of directors, and noted in the minutes.

Internal examinations conducted by a bank's own auditing department may be classified as continuous and spot. The general control of the bookkeeping and accounting routine, summarization of department proofs and reconcilement of customers' accounts may be regarded as a continuous audit. These functions are performed daily in order to secure protection against theft or defalcation and to prevent clerical errors.

Spot examinations are irregular, the element of surprise being their chief characteristic. The auditors make their appearance in a certain department of the bank and verify the assets under custody without being announced. It is calculated that a spot audit tends to assure constant alertness in the clerical force.

(See Audit, Bank Examiners, Comptroller of the Currency, Directors' Examinations, State Banking Department, Visitorial Powers.)

BANK EXAMINERS

Persons appointed pursuant to the national banking laws, Federal Reserve Act, and various state banking laws to examine the affairs of banks and banking institutions within their jurisdiction.

National bank examiners are appointed by the Comptroller of the Currency with the approval of the Secretary of the Treasury, and in the office of the Comptroller of the Currency, the Chief National Bank Examiner is directly responsible for all examining activities.

Each Federal Reserve District has a National Bank Examiner in charge of all the other examiners assigned to his district. Since the Comptroller of the Currency is required by law to examine every national bank at least twice in each calendar year, the staff is kept quite busy. Appointments are usually made from a list of eligibles secured through noncompetitive examinations held at the office of the Comptroller of the Currency in Washington from time to time as the needs of the service require. The examination covers the following subjects: general banking practices, accounting, negotiable instruments, commercial and banking law, and the National Bank and Federal Reserve Acts. An examiner should also understand the principles of auditing and the chief avenues of fraud.

The salaries of national bank examiners are fixed by the Federal Reserve Board upon the recommendation of the Comptroller of the Currency. National bank examiners have power to examine thoroughly all the affairs of the banks undergoing examination, to administer oaths, and to examine any officers or employees thereof. Examiners are required to make a full and detailed report of the conditions of each bank examined to the Comptroller of the Currency. The recommendations contained in this report are submitted to the directors of the bank from the office of the Comptroller of the Currency.

National bank examiners are forbidden to disclose the names of borrowers or the collateral against a bank's loans, and banks are prohibited from making loans or granting gratuities to bank examiners.

The regulations applying to national bank examiners apply in a general way to state bank examiners. Under the banking laws of the state of New York, bank examiners are appointed, their salaries fixed and duties assigned, by the Superintendent of Banks. They are required to take the constitutional oath of office, and may be retired from service upon half pay after twenty years' service and mental or physical incapacity. (See Bank Examination, Federal Reserve Act, Sec. 21, 22.)

BANK EXCHANGES

Same as exchanges, or Exchanges for Clearing House (q. v.).

BANK FAILURES

See Failures.

BANK HOLIDAYS

There is no such thing as a national holiday in the United States, as each State by statute or by proclamation of its Governor designates the legal holidays. The following holidays are observed by all the States:

New Year's Day	January 1
Washington's Birthday	February 22
Independence Day	July 4
Labor Day	First Monday in September
Thanksgiving Day	Fourth Thursday in November.
Christmas	December 25

Most of the States also observe Memorial Day, May 30, and a lesser number of States observe Lincoln's Birthday, February 12, and Columbus Day, October 12. Election Day, the first Tuesday after the first Monday in November, is a legal holiday each year in various States, but in others, it is not a legal holiday in odd-numbered years, as general elections in such States are held only in even-numbered years. Where a holiday falls on Sunday, the next day is commonly observed as the holiday.

Many States have permitted or required the closing of banks on Saturdays during the summer months. In New York State, a bill providing for permissive year-round 5-day bank week was signed on February 24, 1947. The measure requires that boards of directors of banks desiring to close on Saturdays the year round must adopt resolutions authorizing such action. Many banks in New York State have taken such action, after giving due notice to their domestic and foreign customers and correspondents.

Under the Uniform Negotiable Instruments Law, where the day, or the last day, for doing any act required or permitted to be done falls on Sunday or on a holiday, the act may be done on the next succeeding secular or business day. Every negotiable instrument is payable at the time fixed therein without grace, and when the day of maturity falls upon Saturday, it is to be presented for payment on the next succeeding business day, except that instruments payable on demand may, at the option of the holder, be presented for payment before 12 o'clock noon on Satruday when the entire day is not a holiday. (Sec. 85, Uniform Negotiable Instruments Law; Sec. 145, New York Negotiable Instruments Law.)

BANK FOR INTERNATIONAL SETTLEMENTS

An institution organized as part of the Young Plan to effect a revised settlement of the various financial claims among creditor nations arising out of World War I. The Young Plan displaced the Dawes Plan of reparation payments and the Bank for International Settlements the function of the Agent General. The bank opened in May, 1930, under Swiss charter, at its headquarters in Basle, Switzerland. The capital of the bank consists of 200,000 shares, stockholders including 24 European central banks. In the case of Japan and the United States, the shares are held by private banks rather than central banks. The American interest totaled 9.9%, but this voting power was not exercised because the United States Government refused to permit an American representative to participate officially in the collection of German reparations. Today, the United States interest includes the Japanese interest and also part of the original German interest.

The bank received the $300,000,000 proceeds of the first of a series of Young Plan loans late in May, 1930, and distributed them to the German and creditor governments. The first monthly statement was published as of June 30, 1930. Although established for the main purpose of collecting and transferring German reparations, the bank engaged in other functions permitted by its charter, such as protecting currencies, handling deposits and transfers for the central banks, and otherwise acting as a common agent for them.

During World War II, the bank because of its primary function and the fact that most of its assets were German claims, necessarily kept close connections with the German financial situation, and at the Bretton

Woods Conference, in 1941, a resolution was adopted recommending a liquidation of the Bank for International Settlements, in view of the organization of the International Monetary Funds and the International Bank for Reconstruction and Development (q.v.). However, there has since been no definite action for liquidation, and as of 1947, indications are that the Bank for International Settlements may be kept in operation by the controlling nations as part of the European central banking organization and as an adjunct of the Fund and the Bank.

Financial statement of the Bank for International Settlements as of March 31, 1947 shows that investments in Germany represent approximately 60% of total assets, totaling 291.2 million Swiss gold francs book value, including 105.1 million claims on the Reichsbank and Goldiskontbank; 70.2 million on the German Treasury; and 109.9 million on the Germany Railway and Postal Administrations. Other assets, converted at $0.3244 per Swiss gold franc, totaled about $67,000,000.

BANK INDORSEMENT

See Bank Stamp.

BANK INSOLVENCY

Under Federal Deposit Insurance (q. v.), the decision to close a national bank or insured state bank rests with the board of directors of the bank and the Comptroller of the Currency or state supervisory authority. Test of national bank insolvency, as outlined in Section 5205, Revised Statutes, is impairment of capital. Every national bank which fails to pay up its capital stock or whose capital stock shall have become impaired by losses or otherwise, shall pay up the deficiency in capital stock within three months of receipt of notice from the Comptroller of the Currency, by assessment upon the stockholders pro rata for the amount of capital stock held by each stockholder. If any national bank fails to pay up its capital stock and refuses to go into liquidation, after the three months of notice, the Comptroller of the Currency may appoint a receiver to close up the business of the national bank in accordance with Section 5234, Revised Statutes.

Whenever a national bank is closed on account of inability to meet the demands of depositors, the Comptroller of the Currency shall appoint the Federal Deposit Insurance Corporation as receiver for the national bank. Whenever any state insured bank is similarly closed for inability to meet demands of its depositors, the Federal Deposit Insurance Corporation shall accept appointment as receiver if such appointment is tendered by the State supervisory authority and is authorized or permitted by state law.

Before an insured bank is permitted to close, however, the Federal Deposit Insurance Corporation steps in, in order to reduce the risk or avert threatened loss to it on its deposit insurance liability, and will by loans, purchase of assets, guarantee against loss, etc., facilitate merger or consolidation of an insured bank with another insured bank, or facilitate the sale of assets of an open insured bank to and assumption of liabilities by another insured bank. (See Bank Deposit Insurance Act, Federal Deposit Insurance Corporation, Deposit Insurance, Insured Bank.)

BANK LAW

A general term to designate the statute of the United States and of the various states under which banking institutions are organized, operated and regulated. It also refers to the great body of court decisions concerning negotiable instruments, bank forms, documents, etc., and to regulations of the Board of Governors of the Federal Deposit Insurance Corporation, rulings of the Comptroller of the Currency, and Treasury Department, and to the regulations of the various State Banking Departments. (See Banking Act of 1933, Banking Act of 1935, Farm Credit Act, Farm Credit Administration, Federal Farm Loan Act, Federal Reserve Act, Federal Reserve Board Regulations, Legal Investments for Savings Banks, National Bank Act, Negotiable Instruments Law.)

BANK LOANS

See Loans.

BANK MAGAZINES

See Financial Magazines.

BANK MONEY ORDER

A form of money order issued and sold by banks, as distinguished from postal and express money orders. They are practically a modified form of cashier's check, and unlike postal money orders may be indorsed any number of times. Their cost is normally below Post Office fees for postal money orders, on a similarly graduated basis. Many banks have also installed the "Registered Check" service in lieu of money orders or no minimum balance checking accounts. (See Express Company Money Orders, Money Orders, No Minimum Balance Checking Accounts, Register Checks.)

BANK NOTE

A bank's own promise to pay to bearer upon demand, and intended to be used as money. Bank notes are often referred to as circulating notes, or circulation. The privilege of note issue in the United States is now restricted to Federal Reserve banks, which issue Federal Reserve Notes (q. v.). Since March, 1935, funds have been on deposit with the Treasury to cover retirement of all Federal Reserve Bank notes (q. v.), and also, since August, 1935, to cover retirement of all outstanding National Bank notes (q. v.).

BANK OCCUPATIONS

The principal occupations in a commercial bank are as follows: accountant, adding machine operator, advice clerk, assistant cashier, auditor, bill clerk, bond clerk, bookkeeper, cashier, certifications clerk, check-desk clerk, chief clerk, clearing-house settlement clerk, collateral clerk, collection clerk, commercial credits clerk, comptroller, coupon clerk, coupon collection clerk, coupon collection teller, coupon teller, credit analyst, credit correspondent, credit investigator, credit man, custodianship teller, customers' securities clerk, dictaphone operator, discount clerk, discount

teller, draft clerk, fanfold machine operator, file clerk, foreign currency teller, foreign exchange bookkeeper, foreign exchange clerk, foreign exchange trader, general bookkeeper, guard, junior clerk, ledger clerk, letter of credit clerk, loan clerk, mail teller, messenger, money clerk, night watchman, note teller, office boy (page), paying teller, personnel officer, secretary, securities clerk, senior clerk, shipping clerk, signature clerk, statement machine clerk, statistician, stenographer, stenotypist, stockroom clerk, stop-payment clerk, substitution clerk, transit clerk, translator, trust officer, typist, vault attendant, voucher clerk.

BANK OF CANADA

Established in 1934 and began operations March 11, 1935 as the central bank and bankers' bank for Canada. It acts as the fiscal agent for the Dominion of Canada and may also, by agreement, act as banker or fiscal agent for any Province. It is the central bank depositary for the legal minimum reserves of the chartered banks, which are required to maintain with the Bank of Canada reserve balances, which may include Bank of Canada notes, of not less than 5% of their deposits payable in Canadian dollars. The Bank of Canada now has the sole note issue power, and its notes are legal tender. Operating powers include power to buy and sell securities in the open market, discount securities and commercial bills, fix discount rates, and buy and sell bullion and foreign exchange. Head office is located at Ottawa, and the Bank has power to establish branches and agencies within Canada, as well as abroad if approved by the Governor in Council.

Under the Exchange Fund Order of 1940, the Bank transferred its reserve of gold, totaling about $207,000,000, to the Foreign Exchange Control Board in exchange for short-term Dominion securities, and the Bank of Canada's own statutory 25% minimum gold reserve requirements against notes and deposit liabilities was suspended. Canada was on the gold bullion standard when it followed the lead of England in placing an embargo on export of gold October 19, 1931, and suspending redemption of Dominion notes in gold on April 10, 1933. Thus, although the Bank of Canada under its charter was to maintain fixed market for gold bullion in amounts of 400 ounces or more, this requirement never did go into effect. When the monetary value of gold was increased from $20.67 per ounce to $35 per ounce, the resulting gold profit largely accrued to the Treasury, to be used as an Exchange Fund to regulate the exchange value of the Canadian dollar.

Original capital of the Bank of Canada was $500,000, which was increased on June 18, 1936 to $10,000,000, of which 100,000 Class "B" shares were issued to the Dominion at par, and the 100,000 Class "A" shares, $50 par value, were sold to the public, who were limited to 50 shares per person and were required to be British subjects ordinarily resident in Canada or corporations controlled by such persons. On August 15, 1938, the Bank became a wholly Government-owned institution, the capital being reduced to $5,000,000, and all of the 100,000 shares, $50 par value, are held by the Minister of Finance on behalf of the Dominion of Canada.

A subsidiary of the Bank of Canada, the Industrial Development Bank, began operations November 1, 1944 with capital of $25,000,000, of which $10,000,000 was paid up and subscribed by the Bank of Canada. This subsidiary does no deposit banking, its function being to supplement the chartered banks and other lending agencies in the supply of medium and long term capital to small enterprises. This investment banking subsidiary has a borrowing power of up to three times its paid up capital stock and reserve fund.

Comparative balance sheet of the Bank of Canada follows:

BANK OF CANADA

Comparative Statement of Condition

(in thousand Canadian dollars)

Assets:	Sept. 30, 1947	Dec. 31, 1
£ and U. S. Funds	$ 1,908	$ 9
Subsidiary Coin	399	3
Government Securities (short-term securities)	1,088,017	1,197,4
Other Government Securities	744,656	708,1
Other Securities	25,000	15,0
Bank Premises	2,465	2,4
All Other Assets	21,598	24,2
Total Assets	$1,884,033	$1,948,6

Rest Fund	10,000	10,0
Notes in Circulation	1,172,241	1,186,2
Liabilities in Foreign Currency (payable in sterling, U. S.A. and foreign gold currencies)	1,908	9
Deposits:		
Dominion Government	128,192	81,4
Chartered Banks	481,115	565,4
Other	61,971	93,8
All Other Liabilities	23,556	5,6
Total Liabilities	$1,884,033	$1,948,6

BANK OF CIRCULATION

Same as Bank of Issue (q. v.).

BANK OF DEPOSIT

Strictly any bank which receives deposits, which would include practically every banking type. In ordinary usage, however, it applies to banks which receive deposits subject to check, and therefore to commercial banks, and the banking departments of trust companies. These institutions, in addition to receiving such primary deposits, create derivative deposits by their lending and investing functions.

BANK OF DISCOUNT

A bank which discounts notes, acceptances, and bills of exchange and otherwise lends its credit, as distinguished from a savings bank, mortgage company, etc. All commercial banks are banks of discount, which would include National banks, state banks, and the banking departments of trust companies. Federal Re-

serve banks also come under this designation. (See Bank.)

BANK OF ENGLAND

The central banking institution of England with the main office in London, and branches located in the principal cities of England. Its full official title is "The Governor and Company of the Bank of England," and it is sometimes called, colloquially, "Old Lady of Threadneedle Street." It is primarily a bankers' bank, and occupies the same relation to the English banking system as the Federal Reserve banks to the banking system of the United States.

Nationalization—Under the Bank of England Act of 1946, the Bank of England on March 1, 1946 began operations as a Government-owned institution. The Governor, Deputy Governor and thirteen of the former directors were reappointed, and three new directors were appointed to complete the new directorate of sixteen. The Crown now appoints all directors as well as the Governor and the Deputy Governor, the latter each for a term of five years and the directors, for terms of four years. Stockholders of record on the books of the Bank on the day prior to the "appointed day" (March 1, 1946) received new Treasury stock bearing 3% interest and redeemable on three months notice at par on and after April 5, 1966. All of the stock was transferred to the Treasury's nominee, the Treasury Solicitor, free of all trusts, liabilities or encumbrances. Since the policies of the Bank of England as a privately owned joint-stock company before nationalization were determined to a large extent by the Treasury, nationalization was more a matter of form than of substance. The bill received the Royal Assent and became law on February 14, 1946.

The original charter was granted in 1694, but was modified in 1844 by what is known as the "Bank Charter Act," or briefly as "Bank Act," which established the Bank of England on its present basis. Its original capital was £1,200,000, as compared with proprietors' capital of £14,553,000 in 1816 to date. The Bank Charter Act drew a sharp line of demarcation between two departments of the Bank of England, viz., "Banking Department" and "Issue Department." Except for the requirement that a weekly Bank Return (q. v.) be prepared and published, the conduct of the Banking Department was left to the discretion of the governors, but the activities of the Issue Department were rigidly prescribed. The object of this provision was to insure against note inflation. The Bank of England was given a practical monopoly of the note-issuing privilege, since no other bank organized after 1844 was allowed to issue notes. Of the banks in existence in 1844, only those conducting business 65 miles from London retained the right to issue notes. Whenever existing banks merged or increased number of partners to over six, their note-issuing privilege ceased, and the Bank of England was entitled to increase its "fiduciary" note issue (other than notes secured 100% by gold) by two-thirds of the lapsed issues. The fiduciary note issue, secured by Government debt, was limited to £14,000,000. However, in order to provide greater elasticity in the note issue during times of credit expansion or emergency, the Bank Charter Act requirements could be suspended. The Act also required the Bank to maintain a free market for gold at fixed prices of £3 17s. 9d for purchases and £3 17s. 10 1/2d per ounce for sales.

During World War I, the Bank Charter Act was virtually suspended, and England was obliged to abandon the gold standard. The Bank of England was renowned as the bulwark of the international gold standard prior to World War I. Upon the Bank of England devolved very largely the responsibility of acting as custodian of the gold reservoir for international banking. London was the world's financial center, and a considerable portion of its banking power was available for the financing of international transactions. Bills of exchange on London could be discounted almost anywhere in the world, because London was equipped to honor sterling bills in gold practically without limit. An adequate gold reserve was assured by means of controlling the discount rate, or "bank rate" (q. v.), as it is known in England. When the gold reserve was drawn upon heavily, the bank rate was raised in order to discourage further borrowing, and when the reserve rose, the rate was lowered. If the advance in the bank rate did not restrict borrowing and counteract the outflow of gold, the Bank of England entered the open market, and by thus reducing the supply of bills, forced money rates up.

After World War I, the Gold Standard Act of 1925 placed England on the gold bullion standard. This Act abolished the free coinage of gold, relieved the Bank of England of the obligation of redeeming its notes in gold, and made the market for gold in 400-ounce gold bars at the original prices of £3 17s. 9d for purchases and £3 17s. 10 1/2d for sales.

The Currency and Bank Notes Act of 1928 amalgamated the British note issues, fixed the "fiduciary issue" (notes not secured by gold but by securities and silver coin) at £260,000,000, and empowered the Treasury, upon request of the Bank, to authorize temporary increases in the fiduciary issue. The Currency and Bank Notes Act of 1939 fixed the amount of the fiduciary issue at £300,000,000. On September 6, 1939, £280,000,000 in gold, all but a nominal amount of the gold held by the Issue Department, was transferred to the British Exchange Equalization Account, and the Treasury authorized a temporary increase in the fiduciary issue to £580,000,000. During wartime, further legislation lengthened the period (two years under the 1928 Act) during which temporary increases in fiduciary issue could be authorized without confirming legislation by Parliament. Accordingly, the fiduciary has been increased from time to time since, usually in £50,000,000 increments, to present total of £1,450,000,000.

On September 21, 1931, England went off the gold bullion standard when the Bank of England was relieved of the obligation to sell gold at the fixed price. With the establishment of the British Exchange Equalization Account in 1932, virtually the whole of the United Kingdom's gold reserves have been transferred to that Account. Through February, 1939, British gold reserves were valued at legal parity, of 85 shillings per fine ounce; thereafter at market price, which fluctuated until September 6, 1939, when it was officially set at 168 shillings per fine ounce. This last rate remained in effect until June 9, 1945, when it was raised to 172 shillings, 3 pence. Throughout these changes, there were various transfers of gold between the Bank of England and the Exchange Equlization Account from time to time, with the result that latest returns of the Bank (1947) show Bank holdings of gold of only £247,833.

Internally, the Bank of England continues to perform its traditional functions. The Bank is the bank of issue.

It is the fiscal agent of the Government. It is the bankers' bank. The English banking laws do not require the Bank of England or the joint-stock banks of the country to maintain minimum legal reserves against deposits, as in American banking practice, the size of reserves being left to the discretion of the bank managements. In practice, latest returns show the Bank of England averaging about 20% reserves, and the joint-stock banks, about 8%. Through open market operations, the Bank of England broadens or contracts the supply of banking funds in the London money market. Traditionally, open market operations have been indirect—in times of commercial activity, the banks sell their notes and bills to the Bank of England through the medium of the discount market, and not directly to the Bank. However, in recent years, the Bank of England has supplemented this traditional method and has dealt directly through its agents with the banks in bills, whenever the discount market has faced conditions of stringency. (See Bank of England Return, Bank Rate, Discount Market, Joint-Stock Banks, Sterling Credits.)

BANK OF ENGLAND RETURN

The statement of condition, or "Bank Return" as it is known in England, which the Bank Charter Act requires the Bank of England to publish weekly in the London Gazette. Officially, it is "an Account pursuant to the Acts 7 and 8 Victoria, ch. 32; 18 and 19 George V, ch. 13; and 9 and 10 George VI, ch. 74." The statement covers the week ending each Wednesday, appearing Thursday morning of each week, simultaneously with the Bank Rate (q. v.).

On page 49 is the Bank of England Return for the week ending Wednesday, October 8, 1947. Explanation of items follows:

No. 1. Notes issued. Circulating notes of the Bank of England, of which £ 1,374,305,021 is active circulation, and £75,942,812 notes of the Issue Department are held by the Banking Department as an asset. Notice that practically all of the circulation is the fiduciary issue, £ 1,450,000,000, which is secured by Government debt, other Government securities, other securities and silver coin. The fiduciary issue was last increased, by £ 50,000,000, on December 10, 1946, compared with three increases of £ 50,000,000 each during 1945; three increases of £ 50,000,000 each in 1944; three increases of £50,000,000 in 1943; two increases of £ 50,000,000 and one increase of £ 70,000,000 in 1942; three increases of £50,000,000 each in 1941; and one of £50,000,000 in 1940. Thus, since 1940, the fiduciary issue has been increased £ 870,000,000.

Circulation in excess of the fiduciary issue is secured 100% by gold coin and bullion, valued at monetary value of 172 s. 3 d.

No. 2. Government debt represents total loans made directly by the Bank of England to the Government.

No. 3. Other Government securities are holdings of Government bonds, Treasury bills and other Government issues.

No. 4. Other securities. This miscellaneous account includes commercial bills, foreign exchange, and holdings of bonds and stocks.

No. 5. Silver coin held as cover for the fiduciary issue. Of minor importance.

No. 6. The combined total of Nos. 2, 3, 4 and 5 represents the cover for the fiduciary issue, £1,450,000,000.

No. 7. Gold coin and bullion, held as 100% cover the note issue in excess of the fiduciary issue. Any excess of gold over that needed for cover is transferred from time to time as needed to the British Exchange Equalization Account and vice versa. These transfers in recent years have been as follows: January 6, 1939, £ 200,000,000 (at legal parity), from the Bank to the Exchange Equalization Account; March 1, 1939, approximately £5,500,000 (at current price), from the Exchange Equalization Account to the Bank; July 12, 1939, £ 20,000,000, from the Exchange Equalization Account to the Bank; September 6, 1939, £ 279,000,000, from the Bank to the Exchange Equalization Account.

As the result of these net transfers, the present gold holdings of the Issue Department are only £247,833.

In the Banking Department, the operation division of the Bank, the accounts are as follows:

No. 8. Capital, which has remained fixed at £ 14,553,000 since 1816.

No. 9. Rest, representing other capital accounts, which totals £3,149,998. Excess over £3,000,000 is available for dividends.

No. 10. Public deposits, which include deposits of the Exchequer, savings banks, Commissioners of the National Debt, and dividend accounts.

No. 11. Other deposits, consisting of: (1) bankers deposits, consisting of balances of joint-stock and private bankers in England, corresponding to "reserve balances" of British banks maintained with the Bank of England. However, no legal reserve requirements exist, so that changes in this item reflect directly fluctuations in demand and supply of banking funds. (2) Other accounts consists of balances of banks in the Dominions, Ireland, the Colonies and foreign countries; foreign Colonial Governments; English municipalities etc.

No. 12. Government securities, which include British Government obligations, advances to the Treasury, and Treasury bill holdings of the Bank, acquired at its own initiative in open market operations.

No. 13. Other securities, consisting of: (1) discounts and advances, which include Treasury bills and bills of exchange acquired by the Bank at the initiative of the market, and loans to customers such as the discount houses; (2) securities, which include foreign and domestic commercial bills acquired by the Bank at its own initiative. This account also "hides" balances of and advances to foreign central banks.

No. 14. Notes, which are the Banking Department's holdings of the Issue Department's notes not actually in circulation (see No. 1).

No. 15. Gold and silver coin, mostly silver coin, which are the available cash resources, available as cover for any increase in notes. The ratio of Nos. 14 and 15 to deposit liabilities (public and other deposits) is called the "proportion". No legal minimum is required, and as will be noted from the Comparative Statement, it is currently running at about 20%. The

proportion is comparable to the Federal Reserve ratio of reserves to deposit liabilities.

BANK OF ENGLAND STATEMENT

See Bank of England Return.

BANK OF FRANCE

The central banking institution of France, established in 1800 with a capital of 30,000,000 francs by Napoleon Bonaparte, then first consul. Its head office is located in Paris and it is required to have at least one branch in each department of the republic, operating a total of about 660 branches and offices throughout France.

The Bank of France was nationalized under law of December 2, 1945, effective January 1, 1946. At the time of nationalization, capital authorized and paid up was 182,500,000 francs, divided into 182,500 shares of 1,000 francs each, which were actively traded on the Bourse. Holders received in exchange for their stock 3% bonds, redeemable in 50 years, and the stock was transferred to the Government. As a privately owned institution, the Bank had operated under close supervision of the Government.

The exclusive right of note issue was conferred upon the Bank of France in 1848. On account of the undeveloped use of the check, the notes of the Bank of France are the chief medium of exchange for both large and small business transactions. This necessitates a large emission of bank note currency, which is the chief function of the Bank as a central bank. It is the fiscal agent for the Government and manages the public debt, but it has only limited powers to engage in open market operations, and its control over French credit conditions is exercised through its discount policy and manipulation of the discount rate. It is as the largest commercial bank in France, dealing directly with the public, that the Bank of France exercises its greatest influence, operating under its broad powers to discount bills and acceptances, which are widely used in French business. French banks, although not required by law to maintain balances at the Bank of France, keep balances and make use of the Bank's discount and collection facilities. In addition to discounting bank and commercial paper the Bank also extends loans secured by securities collateral (so-called "Lombard" loans), at premiums over the discount rates.

As the central bank for France, the Bank of France plays a supporting secondary role in implementing Treasury policies in Government financing, gold trans-

fers to the Exchange Stabilization Fund, anti-inflation measures, and foreign exchange control. The French franc was devalued December 26, 1945 from 50 to 119 to the dollar, and gold was revalued on the basis of 134,027.90 francs per fine kilogram.

Reflecting Wartime and post-War inflation, note circulation of the Bank of France has expanded from 110,935 million francs at the close of 1938 to 721,865 million francs at the close of 1946 and 831,507 million francs July 31, 1947. During this same period, direct advances to the Government have expanded from 20,627 million francs at the close of 1938 to 493,900 million francs at the close of 1946 and 539,000 million francs as of July 31, 1947, the advances for occupation costs having remained at 426,000 million francs since 1944.

BANK OF GERMANY

With Germany under occupation and divided into four zones of occupation, without any central government, the Bank of Germany, or Reichsbank, is no longer operative. In the American Zone, the American Military Government in December, 1946 established a new central banking system, modeled on the Federal Reserve System, whereby each German state established its own central bank, taking over the assets and activities of the former Reichsbank in its area. These state central banks, however, have no power to issue notes or other currency. Provision is made for a central board to operate when and if unification of Germany is achieved, coordinating these state central banks and having the power to issue currency through the state central banks.

Accordingly, when and if Germany is unified, it is probable that restoration of the former Reichsbank along its former organizational lines would not occur. The Reichsbank before the occupation was the sole central bank for the country, operating from the central headquarters in Berlin a system of about 478 offices and many sub-branches primarily for clearing or "giro" purposes. Through these offices it dealt with bankers and the public. Banks were not required to maintain balances with the Reichsbank, but did so for the purpose of the discount and clearing facilities. The Reichsbank had the sole note issue power, and under the 1924 reorganization in accordance with the Dawes Plan, was required to maintain a minimum reserve of 40% in gold and foreign exchange against notes. By the law of 1939, however, this requirement was eliminated, and notes in circulation were required instead to be secured primarily by eligible bills of exchange and Treasury bills and securities, as well as maturing Lombard loans. This reflected the shortage of metallic reserves, and the note inflation, which reached six times the pre-War level by the time of the occupation. Advances by the Reichsbank to the Treasury on direct loans were also substantial, the 1939 law having eliminated the previous specified limitations of Rm. 100 million for direct advances and Rm. 400 million for discounts of Treasury bills.

Because of the low supply of capital in Germany and low level of commercial bank reserves, the Reichsbank exercised a major influence on German credit through its discount rate and rationing of credit. Credit rationing, in connection with discounts of banks and business concerns for the purpose of purchasing foreign exchange, meant that such borrowers in order to obtain the full amounts needed, would sell foreign exchange to the Reichsbank, thus increasing and centralizing its holdings of the country's foreign exchange.

Although its capital stock was owned by private stockholders, the Reichsbank was under the close control of the Government, being under the 1939 law directly responsible to the Fuehrer and Chancellor. In line with the trend towards nationalization, therefore, it is probable that the Reichsbank would be completely nationalized and private stock ownership eliminated should the bank ever be restored.

BANK OF INDIA

See Central Banks (Reserve Bank of India).

BANK OF ISSUE

A bank empowered with the note issuing privilege. For example, the Bank of England, the Bank of France, and the Federal Reserve Banks are banks of issue. (See Bank Note, Circulating Notes.)

BANK OF ITALY

See Central Bank.

BANK OF NEW YORK AND TRUST COMPANY

The oldest bank in New York City, organized as the Bank of New York on March 15, 1784, and first opened for business on June 9, 1784.

This bank was strongly capitalized at the start at $500,000, all in specie. Its charter forbade the bank to incur debts in an amount more than three times its capital or to buy stocks or to speculate in real estate. Alexander Hamilton, then but 27 years old, was one of the founders and wrote its constitution. Dividends have been paid in every year since organization excepting 1837 when it was prevented from so doing because of a State-wide law against it.

This institution was not only the first bank in New York City, but for 15 years was the only bank.

BANK OF NORTH AMERICA

The oldest bank in the United States, located at Philadelphia, and chartered by the Continental Congress on May 26, 1781. It was the only charter granted by that body, but was made perpetual. The original capital was fixed at $160,000, but this was shortly after increased The bank was planned by Robert Morris, Superintendent of Finance of the Revolution, and began operations on January 7, 1782. Because some doubt was raised as to the right of Congress to charter a bank, it obtained a new, but not perpetual, charter from the state of Pensylvania in 1784. This bank performed the functions of a commercial bank, made advances to the Government, and issued circulating notes redeemable in coin. It was a success, as demonstrated by the fact that after the Revolution it paid annual dividends of 14 per cent.

Under the Pennsylvania charter, which was renewed at intervals, the bank continued its operations, until it was granted a charter under the National Bank Act. It then operated as a National bank, and by special dispensation, without a change in its original name.

As of March 1, 1923, this bank relinquished its National bank charter and its assets were purchased by the Commercial Trust Company of Philadelphia, which on the same date changed its name to Bank of North America & Trust Company, under a charter from the state of Pennsylvania. In 1929 the Bank of North America & Trust Company was merged by the institution now known as the Pennsylvania Company for Banking and Trusts.

BANK OF THE UNITED STATES

A bank known as the First Bank of the United States, chartered by Congress in 1791, and which began operations in December of that year with a capital of $10,000,000, one-fifth of which was subscribed by the Government. The plans of the bank were outlined by Alexander Hamilton, then Secretary of the Treasury.

The bank was permitted to establish branches without limit, and eight were actually put into operation The Business of the branches was restricted to receiving deposits and discounting commercial paper. The head office was located in Philadelphia.

The note issue of the bank was limited to the amount of its capital stock, and no indebtedness could be carried in excess of its deposits. It made advances to the Government, and acted as its fiscal agent. It was dissolved through the expiration of its charter in 1811.

The Second Bank of the United States was established in 1816 through the efforts of President Madison with a capital of $35,000,000, one-fifth of which was subscribed by the Government. It was organized and operated along the same lines as the First Bank of the United States, but its operations were not successful until 1819, when it became a strong institution, provided a sound circulating medium, and furnished the soundest banking system then devised in the United States. Due to the antagonism of political interests sponsoring the "state banking system," the renewal of the charter was refused, and it was dissolved in 1836.

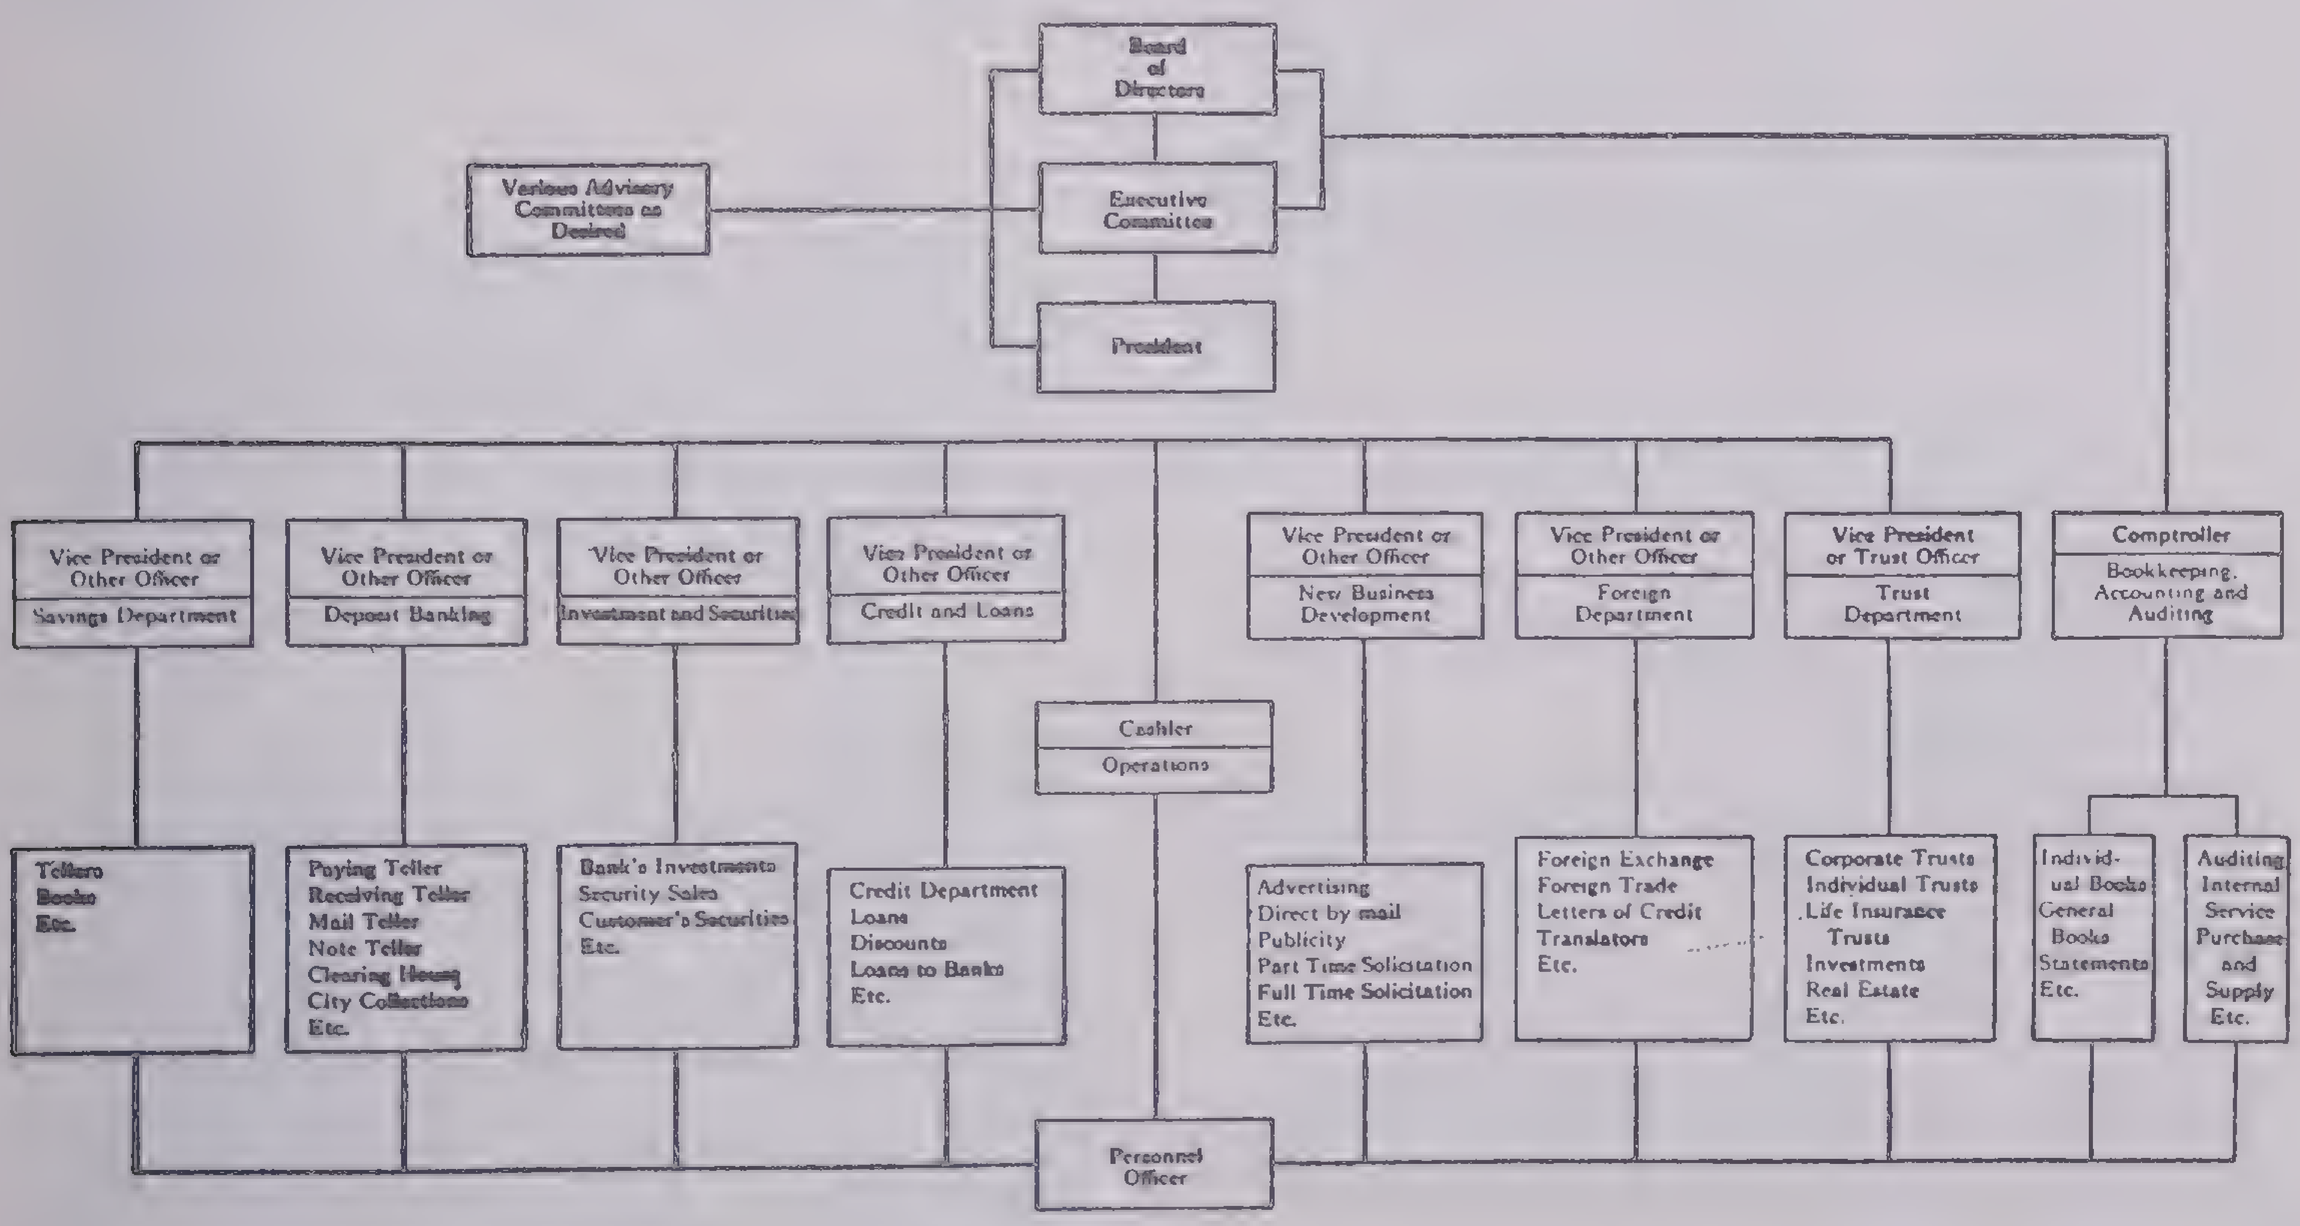
BANK OFFICERS

See Auditor, Bank Organization, Cashier, Comptroller, Trust Officer.

BANK OF UNITED STATES

This New York City institution, incorporated under New York laws in 1913, had no connection whatever with the United States or Federal banking, and at first it was denied the use of that name on the grounds of public policy. Subsequently, however, permission was granted by the New York State Banking Department. This bank failed on December 11, 1930, with some 60-odd affiliates, mostly holding companies, to which the bank had diverted loans mainly for real estate, insurance, hotel operating, and security trading operations. This bank failure was the greatest in American Banking history, with 413,000 depositors and claims totaling $189,250,743. Claims were subsequently paid a total of 76 1/8%, or $102,521,348, the final liquidating divident being paid on May 16, 1944. This liquidation experience was after 100% assessment of the stockholders of the bank, or full par value of $25 per share on the 1,010,000 shares ($25,250,000 capital), under the "double liability" statute then prevailing. However, because of collection difficulties, only about 42% of stockholder assessments were collected, or approximately $10,500,000.

Bank Organization Chart



BANK ORGANIZATION

The scheme or plan by which the various divisions, departments, sections, operating units, and individual jobs of a bank are co-ordinated and sub-ordinated, authority defined, functions described, and responsibilities located for each officer and employee, to the end that the banking business may be properly controlled, and made to operate smoothly. The modern metropolitan bank performs numerous types of services, quite diverse in their nature, and which call for expert supervision. Usually these different branches of bank service are rendered better when administered by specialists, and in many banks separate divisions of service are created, for the convenience of the public as well as from the viewpoint of internal administration, for the successful operation of which a separate officer, usually a vice-president, is responsible. To illustrate a suggested line type of organization effective for a bank of large size, a bank organization chart is presented herewith with permission of the Bank Management Commission, American Bankers Association.

A bank is owned by its stockholders, but this body is too large and unwieldy actively to manage its affairs. Control of the policies and management of the bank are therefore vested in the board of directors, elected by the stockholders, usually annually. This body is responsible to the stockholders for successful management, and to the government banking officials for the observance of the banking laws. The actual administration of the bank's operation, however, devolves upon the officers, who are appointed by the directors. The officers usually consist of a president, who in a small bank may be merely a figurehead who is primarily interested in another line of business, one or more vice-presidents, a cashier, who is usually equivalent to the general manager and whose duties are never delegated, and in large banks, a number of assistant cashiers, and perhaps a comptroller.

The larger divisions of a bank naturally fall into two classes: those serving the public and the facilitating or co-ordinating divisions. The Irving Trust Co. of New York City, which has organized its services along functional lines, calls its divisions of the first class, Deposit Division, Securities Division, Credit-Loan Division, Trust Division and Foreign Division; and divisions of the second class, Business Extension Division, Publicity Division, General Co-ordinating Division, and Auditing Division.

For the steps necessary in forming a new bank, see National Bank, State Bank, Trust Company. See Organization Chart on page 51.

BANK PAPER

This term has two meanings:
(1) Bankable Paper (q. v.).
(2) Paper bearing the indorsement or acceptance of a bank, e. g., a bank acceptance, or note rediscounted at a Federal Reserve bank.

BANK RATE

A term applied to the rate of discount fixed by the Bank of England, or other central bank of Europe, as distinguished from the open market rate. The English bank rate is the minimum rate at which the Bank of England will discount approved bills of exchange. The rate was 2% from July 6, 1932, to August 23, 1939, when it was raised to 4%; subsequently, it was reduced to 3% September 27, 1939 and to 2% on October 26, 1939, at which level it has since remained.

The equivalent to the bank rate in the United States is the Federal Reserve rate of rediscount which may vary in the separate Federal Reserve districts. (See Rediscount Rate.)

BANK REFERENCE

The name of a bank with which a concern has an account, given to another concern as a reference in order that its credit standing may be investigated. Before accepting new accounts banks usually investigate the character, ability and financial responsibility of their customers, and through constant contact are in a position to give an opinion to others concerning the standing of their customers.

BANK RESERVE

The proportion of cash or balances on deposit with other banks which a bank is required by law or by banking policy to keep against deposits. In the United States, reserve requirements are prescribed by law; in England, France and many other countries, the reserve is left to the discretion of the bank management. Member banks of the Federal Reserve System keep their reserves with the Federal Reserve bank of their district. State banks and trust companies keep their reserves in the form designated by state law. Generally this requirement consists of a certain percentage in the form of deposits with other banks. As a rule, state laws permit state banks and trust companies which are members of the Federal Reserve System to follow the provisions of the Federal Reserve Act in lieu of state requirements. (See Reserve.)

BANK RETURN

A term given to a bank statement or balance sheet in England, e. g., Bank of England Return. The term is sometimes applied in this country to denote the weekly statement of the New York Clearing House Banks, which is also known as "Individual Bank Return," "Statement of the Associated Banks," and as "Clearing House Statement." (See Bank of England Return, Clearing House Statement.)

BANK STAMP

The indorsement of a bank placed on the reverse side of a check, note, acceptance or other negotiable instrument with a rubber stamp or an indorsement machine. Bank indorsement stamps are of two kinds, direct and general. In a direct indorsement the name of the payee bank is specifically stated, whereas a general indorsement bears the words, "Pay to the Order of any Bank or Banker." The general indorsement is in more common use since it permits standardization, thus enabling the bank to dispatch large number of checks with the minimum of time and labor.

BANK STATEMENT

A financial statement or Balance Sheet (q. v.) of a bank, exhibiting the nature and amount of its assets, liabilities and net worth. National banks are required to submit statements of condition upon call of the Comptroller of the Currency (see Comptroller's Call) at least three times a year at irregular intervals. Immediately following the call the statement is required to be published in the local newspapers for the benefit of the public. Similar requirements are imposed upon state banks and trust companies by the various state banking laws.

Inasmuch as banks hold the key to the credit structure of the nation, and the collapse of banking credit would bring ruin throughout industrial and commercial life, the solvency of the banks is of paramount public concern. The publication of bank statements helps the public, stockholders and depositors to determine; (1) the bank's indebtedness to depositors; (2) the bank's indebtedness to stockholders; (3) the quality and liquidity of the assets; (4) the ability of the bank to discharge its obligation to depositors; (5) the excess of assets over liabilities; and (6) amount of reserves.

In the following examples four types of bank statements are exhibited:

The term is also applied to the weekly report of the condition of the New York Clearing House banks, otherwise known as Individual Bank Return and as Bank Return. In a broad sense, the term also applies to the weekly statements of the Federal Reserve banks, the reports of the member banks to the Federal Reserve Board, and the brokers' loan figures compiled by the Federal Reserve Board and the New York Stock Exchange. (See Bank Debits, Brokers' Loans, Condition of Member Banks, Clearing House Statement, Federal Reserve Statement, General Ledger.)

BIBLIOGRAPHY:

Garcia, F. L.: How to Analyze a Bank Statement (rev. ed.), 1947.

BANK STOCK

The shares of banks and trust companies. National bank stock may be Preferred Stock or Common Stock, but various States allow only one class of stock, i. e., common. Bank stock is regarded as having investment qualities superior to common stocks of other corporations, and normally commands a price greater than book value, due to the fact that the assets of a bank are practically all liquid, and have a liquidating value practically equivalent to book value. Since most banks carry a large surplus and undivided profits, their shares are quoted at high prices. The yield is normally lower than for other stocks.

Bank stocks of well managed institutions usually make satisfactory investments, provided the investor does not require a large return. They combine to a high degree (if purchased at book value or below) safety of principal, regular income, together with long term potentialities of appreciation in market value. With the growth of American cities, it is only normal that commercial banks and trust companies should grow, and with this growth and the regular "plowing back" into capital funds of earnings in excess of conservative dividends, stockholders are practically assured from time to time either large cash returns, an increase in the equities behind the stock, or rights to subscribe to additional stock on favorable terms. Therewith there are corresponding gains in market quotations.

Bank stocks enjoy characteristically high earnings leverage, represented by the ratio of deposits and earning assets in relation to capital funds. With the substantial increase in deposits and earning assets since 1933, when interest on demand deposits, major source of deposits, was prohibited by law, earnings leverage has been high in volume and low in cost. Consequently, a future rise in interest rates and in yields on earning assets from low levels of recent years would have a powerful effect, because of the high leverage, on earnings on capital funds.

In considering the investment value of bank and trust company stocks, it should also be emphasized that these institutions do not usually depend upon any one industry (except in certain small towns of the West and South serving agricultural interests almost exclusively), one crop, or locality. Stockholders are also protected by virtue of the regulation and supervision imposed by the National and state bank laws. In large cities, banks which are members of the clearing house are examined by its inspectors. By means of these periodic examinations, the managements are warned of incipient dangers, thereby affording a further safeguard to depositors and stockholders.

Seasoned bank stocks are generally regarded as sound investments for fiduciary funds in states where there is no statutory list of legal investments and the rule of ordinary care and prudence is followed.

Bibliography

Heidel, W. C.: The Banking Industry and the Position of Bank Stocks From the Viewpoint of the Investor, 1944.

BANKABLE PAPER

Paper (q. v.), the principal debtors or indorsers of which have a sufficiently high credit standing that a bank will readily discount it.

BANKER

A term loosely applied to a person engaged in the banking business; one who lends funds belonging to others, as distinguished from one who lends his own money, i. e., a capitalist. The banking laws of many states reserve the term "banker" to designate private banks as distinguished from incorporated banks, at the same time restricting the term "bank" to incorporated banks. The term is often improperly used as the equivalent of the term Financier (q. v.), and to include investment bankers, stock exchange brokers, syndicate managers, etc. (See Individual Banker, Private Banks.)

BANKER'S ACCEPTANCE

See Bank Acceptance.

BANKERS' ASSOCIATIONS

Associations of banks, bankers, trust companies, etc., formed to promote their general welfare and usefulness, to secure favorable legislation, to disseminate useful information on banking practices and customs, and to secure mutual protection against crime. The most important of these associations is the American Bankers' Association (q. v.), which includes a division each for national banks, state banks, stock savings banks and trust companies. Other bankers' associations of national scope and influence are the Association of Reserve City Bankers, Investment Bankers' Association of America, National Association of Mutual Savings Banks, Farm Mortgage Bankers' Association of America (q.v.) and Morris Plan Bankers' Association.

Besides the bankers' associations of national scope, practically every state has a separate bankers' association, e. g., New York Bankers' Association, Ohio Bankers' Association, Wisconsin Bankers' Association, etc. Many of these state-wide associations publish a sectional bank magazine under their auspices. (See Financial Magazines.) In several states mutual savings banks and investment bankers have organized separate state associations.

BANKER'S BANK

A bank located in a large city and which specializes in transactions with other smaller banks. A term also applied to a Central Bank (q. v.), such as the Federal Reserve Banks or the Bank of England.

BANKER'S BILL

A bill of exchange drawn by a bank in one country upon a bank in another country, usually against credit balances and without supporting documents, as distinguished from a commercial bill. (See Bill of Exchange.)

BANKER'S DRAFT

A check or bill drawn by one bank against balances deposited with another. The term usually applies to domestic transactions. (See Draft.)

BANKERS' SHARES

A term introduced with the early American investment "trust" shares of the fixed type, and now largely obsolete. The term designated the certificates of ownership issued by the trustee, usually a trust company, upon deposit by the sponsor of units of the underlying securities.

For example, upon deposit with the trustee of the designated fixed unit, say 10 shares each of each of 25 specific companies, the trustee issued to the sponsor 2,000 certificates of ownership, or "bankers' shares," which were sold to investors by the sponsor and distributors. Each certificate of ownership evidenced the holder's 1/2000th interest in the underlying unit. Upon accumulation of 2,000 certificates of ownership the holder usually had the privilege of presenting them for the underlying unit under stated conditions.

The 1929-1932 deflation took a heavy toll of fixed type investment "trusts," and none is now being actively offered. Because of termination dates in the future, however, various of these fixed type companies are still in legal existence, slated for complete liquidation upon termination dates.

For full treatment of this subject, see Investment Companies.

BANKING

For Bibliography on Banking, see Bank.

BANKING ACT of 1933

An act, approved June 16, 1933, effectuating important changes in relation to Federal Reserve Banks, member banks, national banks, state and mutual savings banks, Morris Plan banks, and postal savings. Also known as the Glass Act, and Glass-Steagall Act.

Among other things, this act:

1. Provides for the co-ordination of Federal Reserve open-market activities, for the prevention of speculative uses of credit, for regulation of interbank control, for the insurance of deposits in member banks, for regulation of their operations, for separation of security affiliates and permits branch banking.

2. Creates a Federal Open Market Committee, one member selected by each Reserve Bank directorate, to regulate open-market activities and provides that undue use of bank credit may subject a member bank to suspension.

3. Creates the Federal Deposit Insurance Corporation, and provides for a deposit insurance fund made up of $150,000,000 appropriated by the Federal Government plus stock subscriptions.

4. Provides for a temporary deposit insurance fund from January 1, 1934, to June 30, 1934, insuring individual deposits to $2,500.

5. Provides that after July 1, 1934, the corporation should insure the deposits of all member banks, deposits under $10,000 being fully covered; the next $40,000, 75 per cent.; over $50,000, 50 per cent. Deposits in non-member State banks holding Class A stock are insured until July 1, 1936. Membership in the insurance corporation after July 1, 1936, is limited to national banks and members of the Federal Reserve System.

6. Forbids member banks to act as agent in security loans to brokers or dealers, to extend credit to purchase securities under repurchase agreement from any affiliate, to invest in affiliate obligations, or to accept obligations of affiliates as collateral on loans exceeding 10 per cent. of capital or surplus.

7. Provides that no executive officer shall borrow from his member bank and that he must report to his board of directors concerning loans from another member bank.

8. Permits investment transactions without recourse for customer's account; permits purchases on own account under comptroller regulations, and provides that the securities of a single obligor should not exceed 10 per cent. of outstanding issues.

9. Security affiliates not permitted after one year; security corporations prohibited from engaging in banking business.

10. Branch banking within a city permitted with the approval of the Comptroller wherever State banks are expressly so authorized; branch banking within a State permitted wherever statutes specifically permit, but no branches permitted beyond the city unless unimpaired capital is at least $500,000 or minimum of $250,000 in States with population under 1,000,000 and which have cities therein of more than 100,000 population, or a minimum of $100,000 in States under 500,000 population which have no cities exceeding 50,000 population.

BANKING ACT OF 1935

An act, approved August 23, 1935, amendatory to (1) Banking Act of 1933 (q. v.), (2) Federal Reserve Act, and (3) other banking statutes. Title I concerns itself with Federal deposit insurance; Title II with amendments to the Federal Reserve Act; and Title III with (a) "technical" amendments to the banking laws; (b) amendments to Federal Reserve Act; (c) amendments to National Bank Act (revised statutes), and (d) amendments to miscellaneous acts.

The principal provisions of the Banking Act of 1935 are as follows:

1. Created an open market committee of seven Federal Reserve Board members and five representatives of the twelve regional Reserve banks with power to control credit fluctuations by purchasing and selling government bonds in the open market by the Reserve banks.

2. Retained existing statutory requirements governing maintenance of reserves against deposits as a further check on use of bank funds for speculation. By a vote of not less than five of the seven board members the then existing requirements of 7, 10 and 13 per cent. could be doubled, but not lowered.

3. Allowed Reserve banks to continue to propose changes in rediscount rates, subject to board approval, rates to be restated at least every two weeks. The board could veto the proposed rates or change them.

4. Reorganized Reserve Board into a seven-member bipartisan board, all appointive and all having the title of "governor", to serve fourteen-year terms at $15,000 salaries. Secretary of Treasury and Comptroller of currency were removed as ex-officio members. Not more than four of seven could be of same political party. The President would select a chairman and vice-chairman from the seven to serve for four years.

5. Gave head of twelve Reserve banks title of "Pres-

ident" instead of "governor" so as not to conflict with the new Reserve Board titles. Presidents would be selected for five-year terms by the bank boards, subject to Reserve Board approval.

6. Made permanent the temporary law expiring August 31, 1935, fully insuring bank deposits up to $5000. Provides annual assessment on banks for insurance fund membership of one-twelfth of 1 per cent. of total deposits, assessments to continue until the fund reaches $500,000,000 then to be resumed when that total is impaired 15 per cent.

7. All state banks organized after bill becomes law would have to join the Federal Reserve System by July 1, 1937, in order to obtain deposits insured. The same requirement is applied to all state banks then in operation with deposits of $1,000,000 or more if they desired to remain insured.

8. Prohibited a banker from serving on the board of more than two banks.

9. Permits national banks to make five-year real estate loans up to 50 per cent. of appraisal value of the property with aggregate loans not to exceed the capital and surplus of the bank, or 60 per cent. of its time and savings deposits, whichever is the greater. Loans could be made up to 60 per cent. if secured by mortgage insuring repayment of at least half the loan in ten years.

BANKING DEPARTMENT

See State Banking Department.

BANKING HOUSE

The premises or building in which a bank conducts its business. The banking house and fixtures and appliances are the only fixed assets a national bank is permitted to own. "Other Real Estate" of national banks therefore represents realty taken to avoid or minimize loss on defaulting loans on real estate, and required to be disposed of within a reasonable time.

Under the Banking Act of 1933, no national bank, without approval of the Comptroller of the Currency, and no state member bank, without approval of the Board of Governors of the Federal Reserve System, shall thereafter invest in or lend on bank premises directly or indirectly if the total of such loans and investments will exceed the bank's capital stock.

Very often the banking house is carried on the balance sheet at a nominal value, i. e., at a value much below the market value.

BANKING POWER

The lending or investing power of a bank; as measured by its excess reserves, i. e., reserves maintained in excess of legal reserve requirements, which furnish the basis for expansion of loans and investments. For the banking system as a whole, the power to expand loans and investments is the reciprocal of the average reserve requirements. Thus, with reserve requirements for the Federal Reserve System averaging in fact about 15%, the system as a whole can expand loans and investments approximately 6 2/3 times for every dollar in excess reserves.

BANKING SUPPORT

An expression to denote the purchase of securities in sufficient volume to stabilize the market after a break in prices, by large and influential banking and financial interests Since 1933, with the prohibition of pools and other speculative devices in security markets, liquidation of security affiliates of banks, raising of margin requirements, and increase in capital gains taxes, banking support on declines in security markets has become more fictional than real. Most important source of institutional support has now developed in the investment companies (q v.). (See Support.)

BANKING SYNDICATE

A group of banks associated together with one as manager for the purpose of underwriting and floating an issue of securities. Under the Banking Act of 1933 (q. v.), member banks were forbidden to trade in and underwrite securities, except U. S. Government direct obligations and guaranteed obligations, and state and municipal issues; and the same act required the divorcement of security affiliates (q. v.) by member banks one year from June 16, 1933, date of enactment of the act. (See Syndicate.)

BANKRUPT

A debtor (person or corporation), who being unable to meet his business obligations in full, has been declared by Court decree to be entitled to operation of the bankruptcy laws. Original Federal bankruptcy law (Bankruptcy Act, July 1, 1898), a liquidation statute, has been amended by various provisions which now provide for the rehabilitation or reorganization of debtors, adjustments and settlements. (See Bankruptcy.)

BANKRUPTCY

A condition of Insolvency (q. v.) in which the property of the debtor or insolvent is taken possession of by a receiver or trustee in bankruptcy for distribution among the creditors under the direction of a bankruptcy court and through the operation of the National Bankruptcy Act of 1898. From the original limited purpose of the Act of marshalling assets of the bankrupt for liquidation, this Federal legislation has evolved so that the term bankruptcy today includes rehabilitation and discharge of debts for individuals, partnerships, corporations (with exceptions), farmers, railroads and municipalities. Bankruptcy is a court proceeding which may be brought at the instance of the insolvent himself, in which case it is called voluntary bankruptcy, or upon the petition of a creditor or creditors, in which case it is involuntary bankruptcy. To be adjudged an involuntary bankrupt the insolvent must have committed an "act of bankruptcy" (see National Bankruptcy Act, Sec. 3) and be indebted in the sum of not less than $1,000.

The purposes of bankruptcy are (1) to permit an individual, partnership or corporation which is hopelessly insolvent to free itself of a debt which is unsupportable by wiping out its excess of liabilities, and giving it a clean slate, provided there is an absence of fraud, and (2) to protect the creditors from further losses and to insure their participation to the fullest extent in the property of the bankrupt.

There was no federal bankruptcy law during about two-thirds of our national existence. Bankruptcy legislation in the United States has been passed largely to clean up the economic mess left by a panic. The first bankruptcy law was adopted in 1800 and repealed three years later. It grew out of the business crisis caused by English and French restraint on American trade. The second bank-

ruptcy act, passed in 1841, was directly due to the acute distress resulting from the panic of 1837. This act lasted only eighteen months. The next bankruptcy act became a law in 1867. It endured for eleven years. The present bankruptcy law was enacted in 1898. Unlike its three predecessors it was not repealed when the immediate crisis causing its passage had passed.

So long as there is no federal act the states are free to enact insolvency laws. These are automatically suspended when a federal law goes into effect. State insolvency legislation has two fundamental defects. In the first place its administration is limited by state lines, and secondly the state cannot grant a binding discharge owing to the constitutional provisions against a state's impairing the obligation of contracts.

Bankruptcy is concerned with insolvencies. Insolvency is defined by Congress as an excess of liabilities over assets taken at a fair valuation. This definition has nothing to do with the Constitution and Congress would be entirely free to define insolvency as inability to pay one's debts as they mature. The latter definition is the usual understanding in other kinds of administration of insolvent estates and is the customary definition in foreign bankruptcy laws. To a certain extent this latter definition has also been accepted in the recent amendments to the bankruptcy law, to which reference is made below.

Banking and insurance corporations and building and loan associations are entirely outside the present federal bankruptcy act. All other persons and corporations can take advantage of the act if they wish. Involuntary petitions may be filed against all persons committing an act of bankruptcy except farmers and wage earners. Railroad corporations were brought within the purview of bankruptcy in 1933.

Bankruptcy administration has both advantages and disadvantages in comparison with equity receiverships and assignments for the benefit of creditors, which are the two chief rival methods. The bankruptcy court has jurisdiction over the bankrupt's property wherever situated. This insures a unified administration. It makes unnecessary the cumbersome and expensive system of ancillary receiverships which is characteristic of an equity control of a corporation with property in several states. The fees of bankruptcy administrative officers are limited by law, whereas such fees are subject to the court's discretion in the case of an equity receivership.

Only in bankruptcy may preferences ordinarily be set aside. Bankruptcy also has much the more severe penalties for concealment of assets and interferences generally with the administration of the estate. Only in bankruptcy, too, may there by a discharge of the debtor. This is of great importance when an individual bankrupt is involved, but makes less difference if the outcome is to the winding up of a corporation.

The chief disadvantages of bankruptcy heretofore were that for the most part bankruptcy contemplated only liquidation, whereas a reorganization was possible in an equity receivership. Provisions for bankruptcy administration were not flexible. In dealing with small estates That especially relating to corporations, entitled Corporate Bankruptcy Act was approved June 7, 1934. The Emergency Railroad Transportation Act was passed June 16, 1933. The Municipal Bankruptcy Act was approved May 24, 1934. Sections of the law which indicate its present wide applicability are: Chapter X, for corporate reorganization of secured obligations; Chapter XI, for those seeking an arrangement with general unsecured creditors; Chapter XII, for real property arrangements by persons other than corporations; and Chapter XIII, for the wage earner plan for debtors burdened with garnishment.

In the case of insured banks, the Federal Deposit Insurance Corporation acts as receiver for all national banks, and it may be appointed receiver for state banks which are placed in receivership. In the case of insurance companies, the states exercise jurisdiction over insolvent companies as part of their regulation of operations. (See Corporate Bankruptcy Act, Insolvency, Municipal Bankruptcy Act, National Bankruptcy Act.)

BANKRUPTCY ACT

See National Bankruptcy Act.

BANKS FOR CO-OPERATIVES

The Central Bank of Co-operatives was organized in the District of Columbia under the Farm Credit Act of 1933 (passed on June 16), with initial capital stock of $50,000,000. Twelve regional banks for co-operatives, each with a capital stock of $5,000,000 were organized under the authority of the act, one located in each of the 12 Federal land bank cities.

The captial stock of the Central Bank of Co-operatives and of the 12 banks for co-operatives as provided by law shall be in such amount as the Governor of the Farm Credit Administration determines is required to meet the credit needs of eligible borrowers. Subscriptions and payments for stock in the Central Bank for Co-operatives and in the banks for co-operatives are make by the Governor of the Farm Credit Administration from the revolving fund under the Agricultural Marketing Act, as amended. Such subscriptions may be increased or decreased from time to time at the discretion of the Governor of the Farm Credit Administration subject in the instance of the Central Bank for Co-operatives to certain restrictions of the law. The retirement of stock subscribed by the Federal Government may be required whenever in the judgment of the Governor of the Farm Credit Administration any of the banks have resources available.

Additional capital stock is subscribed by the co-operative associations. Each co-operative association borrowing from the Central Bank or from 1 of the 12 banks for co-operatives must own or purchase at the time the loan is made an amount of stock in the bank equal in fair book value (not to exceed par) to $100 per $2,000 borrowed. Such stock is retired on payment of the loan at the purchase price, less the pro rata impairment, if any. If the State law under which the co-operative association is organized does not permit subscriptions to stock in the banks for co-operatives, it must pay into a guaranty fund an amount equal to the stock subscription it otherwise would have been required to make.

After the deduction from earnings of operating expenses, losses, and amounts necessary to restore impairment of capital, if any, the Central Bank for Co-operatives and each of the 12 banks for co-operatives must apply 25 per cent. of the remainder to the creation

and maintenance of a surplus equal to at least 25 per cent. of the capital and guaranty fund. Any sums remaining, may with the approval of the chairman of the board of the bank, be devoted to the payment of dividends, which by law shall not exceed 7 per cent.

Management—The Central Bank for Co-operatives has seven directors. The Co-operative Bank Commissioner is chairman of the board. The other 6 directors are appointed by the Governor of the Farm Credit Administration and the successors of the 3 first chosen will be appointed from nominees selected by borrowers as provided in the act. The chairman is the executive officer of the bank. The directors serve without compensation. except for reasonable per diem expenses. The directors of the Federal land bank of the district are the ex-officio directors of the regional bank for co-operatives located within the district. The compensation of officers and employees of each of the banks for co-operatives is fixed by its directors, subject to the approval of the Governor of the Farm Credit Administration.

Loans and Discounts—The function of the Central Bank for Co-operatives and the 12 banks for co-operatives is to extend credit to co-operative associations as that term is defined in the act. The Central Bank for Co-operatives is authorized to make loans direct to co-operatives, and to discount loans of the 12 banks. The 12 banks for co-operatives are authorized to make loans to co-operative associations only. The Central Bank for Co-operatives will consider applications by co-operative associations requiring loans of more than $500,000. Although all applications for loans in excess of $300,000 will be made to the Central Bank for Co-operatives, those under $500,000 may be referred at the discretion of the Co-operative Bank Commissioner to the banks for co-operatives for final action. In general, loans of $300,000 or less will be made by the banks for co-operatives.

Credit may be extended to a co-operative association to assist in: (1) Processing, preparing for market, handling, or marketing farm products; (2) purchasing, testing, grading, processing, distributing or furnishing farm supplies; or (3) furnishing farm business services. Types of credit available are: (1) commodity loans; (2) operating capital loans; and (3) physical facility loans.

Loans for the financing of physical facilities shall be made only if the Governor of the Farm Credit Administration finds that the purchase price or rent is reasonable. No such loans may be made in excess of 60 per cent. of the value of the facilities.

Maturities—It is generally required that the effective merchandising loans shall be repaid at the end of the marketing season of the commodity for which the loan was obtained, though such loans may be of somewhat longer duration when circumstances warrant.

The duration of physical facility loans is determined primarily by the borrower's ability to repay as disclosed by its record of operation or, in the case of new associations, on what may be reasonably anticipated on the basis of prospective volume, costs of operation, and so on. Physical facility loans may be repaid by amortization over a period not in excess of 20 years, but are generally repaid over periods of five to ten years.

Rates of Interest.—The loan rates of the Central Bank for Co-operatives and of the 12 banks for co-operatives are prescribed by the Governor of the Farm Credit Administration and may not be more than 6 per cent. on the unpaid principal. The rate on effective merchandising loans shall exceed by approximately 1 per cent. the Federal intermediate credit bank discount rate. The rate on facility loans shall generally conform to the prevailing rate on mortgage loans made to members of national farm loan associations. On December 31, 1946, the rates in the continental U. S. were as follows: commodity loans, 1 1/2%; loans secured by commodity loan documents eligible for purchase or payment by the Commodity Credit Corporation, 1%; operating capital loans, 2 1/2%; and facility loans, 3 1/2%.

Volume of Business.—Total credit extended by the 12 banks for co-operatives as of December 31, 1946 was $353,591,000, and the following loans and advances were outstanding as of that date: Loans to co-operative associations, $160,131,000, consisting of loans secured by Commodity Credit Corporation documents, $2,781,000; commodity loans, $29,366,000; operating capital loans, $93,866,000; and facility loans, $34,118,000. In addition, there were outstanding advances under the Commodity Credit Corporation of $38,345,000, making total credit outstanding of $198,476,000. (All figures rounded.)

The Central Bank for Co-operatives as of December 31, 1946 had total credit extended of $177,788,000, of which $69,515,000 was actually outstanding, as follows: Loans and advances outstanding—Loans to co-operative associations: secured by Commodity Credit Corporation documents, $2,679,000; commodity loans, $22,522,000; operating capital loans, $22,725,000; and facility loans, $4,200,000; total loans to co-operative associations, $52,126,000. Advances under the Commodity Credit Corporation program totaled $17,389,000, making the total $69,515,000 in credit outstanding. (All figures rounded.)

Debentures—In addition to the capital paid in by the United States Government and by co-operative borrowers, the Central Bank for Co-operatives is authorized to obtain funds for lending purposes through the issuance and sale of debentures. The aggregate amount of debentures outstanding may not exceed five times the paid-in capital and surplus of the bank. The interest rates will be fixed by the chairman of the board of directors of the bank. The provisions of law applying to the preparation and issue of Federal intermediate credit bank debentures shall, so far as applicable, govern the preparation and issue of such debentures.

Debenture Collateral Held in Trust—The collateral securing the debentures will be held in trust by a custodian appointed by the Governor of the Farm Credit Administration. The debentures shall be secured by collateral equal at least in value to the amount of the debentures, and shall consist of cash, direct obligations of the United States, or notes or other obligations discounted or purchased or representing loans and discounts made by the bank according to law.

Location and Territory—The location of and district served by each of the 12 regional banks for co-operatives are identical with those of the corresponding Federal land banks.

BAR GOLD

See Gold Bars.

BAR SILVER

See Silver.

BARGAIN COUNTER

A stock market expression to apply to securities

offered for sale at prices below their Intrinsic Value (q. v.), especially during a panic, severe decline, or following a period of prolonged liquidation.

BARGAIN HUNTER

A stock market expression to apply to a speculator or investor who waits till securities are on the Bargain Counter (q. v.), before purchasing; one who defers the purchase of securities until he believes prices are at their extreme low range.

BAROMETER STOCKS

Standard, active stocks which lead the movement in other stocks, and indicate the general trend of the market; stocks the movements of which are followed sympathetically by other stocks. United States Steel common is regarded as a barometer for industrial stocks, and New York Central for railroad stocks. (See Business Barometers, Market Leaders, Speculative Cycle, Steel the Barometer of Trade, Swings.)

BAROMETERS

See Business Barometers, Investment Barometers.

BARRATRY

Damage, embezzlement or fraud committed by a vessel's master or crew against the vessel or its cargo resulting in loss to the owners. It is one of the long list of risks for which an ocean carrier is not liable as indicated in an ocean bill of lading. This risk must, therefore, be covered in the Marine Insurance Certificate (q. v.).

BARREN MONEY

Money which does not earn interest or other income.

BARTER

The direct exchange of commodities without the use of money, and without reference to price, e. g., the exchange of four cows for one horse. Barter is a primitive and inconvenient means of trading. In indirect barter very often a standard commodity, e. g., grains, cattle, tobacco, jewels, was used as a medium of exchange, or third commodity, to serve as a middle term between other commodities.

BASE COINS

Coins made of metals less valuable than gold or silver, e. g., nickel and copper. The term is used in England to denote counterfeit coins. (See Minor Coins.)

BASE PERIOD PRICE

In calculating parity price (q. v.) for a Government supported agricultural commodity, the base period price is the price for that commodity for the period specified in the Agricultural Adjustment Act of 1938 (q. v.). Base period is generally August, 1909 to July, 1914. For burley tobacco and flue-cured tobacco, base period is August, 1934 to July, 1939. For potatoes, other tobacco and other commodities not having the 1909-1914 base period, the base period is August, 1919 to July, 1929. By multiplying base period price by the parity index (q. v.), the parity price is calculated. Base period prices of various commodities for the 1909-1914 base period are as follows:

Barley	61.9¢ per bu.
Butterfat	26.3¢ per lb.
Cotton	12.4¢ per lb.
Cottonseed	$22.55 per ton
Corn	64.2¢ per bu.
Eggs	21.5¢ per doz.
Flaxseed	$ 1.69 per bu.
Hogs	$ 7.27 per 100 lbs.
Milk, wholesale	$ 1.60 per cwt.
Oats	39.9¢ per bu.
Rye	72.0¢ per bu.
Sorghums, grain	$ 1.21 per 100 lbs.
Soybeans	96.0¢ per bu.
Wheat	88.4¢ per bu.
Wool	18.3¢ per lb.

Where the production or consumption of a commodity has so changed since the base period that its actual base period price would result in a parity price out of line with other parity prices, the actual base period price is adjusted and termed a "derived base period price". An example is the derived base period price for soybeans, as above.

BASIC COMMODITIES

The so-called six basic agricultural commodities for which support programs are administered by the Department of Agriculture and the Commodity Credit Corporation (q. v.) are: cotton, corn, wheat, tobacco, rice and peanuts (used as nuts). Under support programs effective through 1948, producers may obtain loans at 90% of parity (for cotton, 92 1/2%). Unless present legislation is extended or amended, the loan rates after December 31, 1948 would be 52% to 75%, as specified in the Agricultural Adjustment Act of 1938 (q. v.). (See Steagall Commodities.)

BASIS

The annual rate of return on the money invested in a stock, or the rate of yield on a bond, if held to maturity; the effective interest rate on a security. (See Return, Yield.)

BASIS GRADE

The term used with reference to the basic contract grades deliverable on futures contracts at par. In cotton, the basis grade is middling 15/16 inch. There may be more than one basis grade, as in wheat, according to the exchange on which it is traded. For example, on the Chicago Board of Trade, four of the basis grades deliverable on 1947 contracts are: No. 1 Northern Spring Wheat, No. 2 Hard Winter Wheat, No. 2 Red Winter Wheat, and No. 2 Yellow Hard Winter Wheat. If other grades are delivered, the buyer must pay more or less, determined by the differential in price between the basis grade and the grade delivered. See Commodity Exchanges, Cotton Futures, Grades, Wheat Futures.

BASIS VALUE

The value of a security considered as an investment, and, in the case of bonds as bearing a series of interest incomes, if held to maturity. Bonds are usually bought on a certain "basis," or "to yield —— per cent." Other things being equal bond values are com-

pared by the effective interest rate, i. e., basis value, or yield. (See Investment Value, Yield.)

BATCH SYSTEM

See Block System.

BEAR

A term used among operators in various markets, and applied to a person who believes that security or commodity prices will decline, and who accordingly sells on that expectation, as distinguished from a Bull (q. v.). Bears are also short sellers, i. e., sell what they do not possess, in anticipation of a decline in price at which they can buy back, i. e., cover, at a profit.

Bears are market pessimists who take the view that market or business conditions are growing worse. One may be a bear on a particular security without being bearish on the entire market. The public usually takes the bull side of the market, while the bear side is largely confined to professional operators. (See Short Sale.)

BEAR ACCOUNT

Same as Short Account (q. v.).

BEAR MARKET

An expression used to describe the stock market when the influence of the bears is predominant, and the trend of prices is downward. It is more particularly applied to a market in which the downward tendency has been prolonged or is expected to be prolonged, with minor upward interruptions, over an extended period, say, a year or more. (See Bear.)

BEAR RAID

A stock market expression to denote vigorous short selling by the bears, taking tactical advantage of the technical position of an overbought market to force prices down, and thus compel those who are long of stocks to sell at a loss, while they, the bears, cover at a profit.

BEARER

"The person in possession of a bill or note which is payable to bearer." (Negotiable Instruments Law.) Holder; the person in possession of money, or a check, bill, note, or other instrument. Title to valuable papers can be transferred by delivery or by indorsement; if transferable by delivery they are called bearer instruments e. g., money, coupon bonds, coupons, bearer checks, bearer notes or bills, bearer bonds, etc.; if transferable by endorsement, they are negotiable only by indorsement, e. g., checks, notes, bills of exchange, etc. The term assignment is usually intended to describe the transfer of a non-negotiable chose in action, such as stock certificates, registered bonds and bills of lading, as well as non-negotiable bills, notes or checks.

BEARER BONDS

Coupon bonds, which are payable to bearer and carry detachable interest coupons.
(See Coupon Bonds.)

BEARER INSTRUMENTS

See Bearer, Pay to Bearer.

BEATING THE GUN

Solicitation of orders for a security before effective date for the offering as filed by amendment to the Registration Statement with the Securities and Exchange Commission. See Registration Statement.

BELGA

See Foreign Moneys—Belgium.

BELOW PAR

A price quoted below the face value of a security. (See Par.)

BENEFICIARY

One in whose favor a trust operates, or in whose behalf a life insurance policy, or other document conferring value, is drawn. The beneficiary under a letter of credit is the party in whose favor it is issued, and who is entitled under its terms to draw a bill of exchange for acceptance by the issuing bank, and for discount by the notifying bank.

BEQUEST

A gift or legacy of personal property left by a decedent in his will; a testamentary gift of personalty, as distinguished from a testamentary gift of realty, which is called a Devise (q. v.).

BID AND ASKED QUOTATIONS

Prices at which securities are wanted and at which they are offered for sale. Bid and asked quotations on the New York Stock Exchange are obtainable through member firms during trading hours from the Quotation Department of the Exchange, which maintains a large staff of quotation pages on the floor of the Exchange providing the central quotation room of the Quotation Department with bid and asked quotations. At the close of each trading session, sheets at each post record the closing bid and asked quotations for each stock traded, along with the high, low and close for the stock as well as total shares traded, which information is furnished for general publication. Closing bid and asked quotations are also furnished for publication on stocks not traded for the particular trading session. (See Quotations.)

BID PRICE

The price offered for a security or commodity by a prospective buyer: the price at which a security or commodity is wanted, and subject to immediate acceptance, unless otherwise stated, for the amount specified.

BIDS AND OFFERS

Stock exchange rules define the various kinds of bids and offers which may be made. On the New York Stock Exchange all bids and offers are for 100 shares of stock, or for $1,000 par value of bonds, unless otherwise stated. With reference to payment and delivery bids and offers may be made in four ways, described under Methods of Trading (q. v.). Bids and offers for

larger lots than 100 shares for stocks, or $1,000 for bonds, at a certain price, are good for any part thereof in full lots of multiples thereof, until the order is filled. The first bid or offer, when there are several at the same price, and when it can be distinguished, takes precedence over the others. Bids and offers may not be made in variations of less than one-eighth point.

BIG BOARD

The term colloquially applied to the New York Stock Exchange (q. v.).

BILL

This term has six meanings:
(1) Bill of Exchange (q. v.).
(2) A statement of account or of money due.
(3) Same as Note (q. v.).
(4) Bill of Lading (q. v.).
(5) Bill of Sale (q. v.).
(6) A way bill, or written list and description of goods which a railroad accepts for transporting goods.

BILL BOOK

Another name for Liability Ledger (q. v.).

BILL BROKER

A term used in England to designate a merchant or firm that negotiates and discounts commercial paper, or buys and sells it in the open market for a profit. The English bill broker corresponds to the American note broker. (See Note Brokers.)

BILL FOR PAYMENT

A draft or bill of exchange drawn and presented for payment, as distinguished from a bill for acceptance. (See Article VI, Uniform Negotiable Instruments Law, Article VII, New York Negotiable Instruments Law: Presentment for Payment.)

BILL OF CREDIT

This term has two meanings:
(1) A written advice requesting the party to whom it is addressed to extend credit to the bearer on the voucher or security of the signer.
(2) "Paper issued by the sovereign authority and intending to circulate as money" (John Marshall). The United States Constitution empowers Congress to borrow money and to emit "bills of credit." The use of this term to denote Government paper money is practically obsolete.

BILL OF EXCHANGE

"An unconditional order in writing addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand or at a fixed or determinable future time a sum certain in money to order or to bearer." (Sec. 210, Negotiable Instruments Law; Sec. 126, Uniform Negotiable Instruments Law.)

The terms bill of exchange and draft are used interchangeably, but the former is usually applied to an order to pay money arising out of a foreign transaction while the latter term is more often reserved for domestic transactions. Technically, too, a bill of exchange is always a negotiable instrument, while a draft may be non-negotiable. (See Draft, Foreign Bills of Exchange, Negotiable Instruments Law, Art. X-XVI.)

BILL OF LADING

A receipt issued by a carrier (land or water transportation company, express company or forwarding agent), as bailee, certifying that it has received the therein described goods from the within-named consignor for transportation to a certain destination, to a specified consignee or to the order of any person. Bills of lading are an important form of collateral available as security for loans from commercial banks and foreign banking corporations, and when they arise out of interstate commerce or commerce between any state and a foreign country are subject to the Federal Bill of Lading Act, passed August 29, 1916, and effective since January 1, 1917.

A bill of lading performs three functions and has as many legal characteristics: it is a receipt for designated goods; a contract to transport from the point of origin to the destination, the intermediate ways (especially in ocean bills of lading) usually being specified; and a document (or muniment) of title.

As a receipt a bill of lading should describe the goods so that they can be readily identified. It should be free from any disclaimer concerning the unsatisfactory condition of the wrapping of boxes or other containers, and from clauses limiting the carrier's responsibility, e. g., "said to contain," "shipper's load and count," etc. In other words, the bill of lading should be clean.

As a contract to transport, a bill of lading should be signed by a responsible, regularly established carrier, or agent, and the points of origin and destination should be set forth.

As a document of title, the various rights under a bill of lading depend upon its class. The Federal Bill of Lading Act distinguishes sharply between a "straight" and "order" bill of lading. The first states that the goods are consigned or destined to a specified consignee, and is intended primarily for domestic shipments; while the latter consigns the good to the order of any person, and is intended for both domestic and foreign shipments. A straight bill of lading must be marked "non-negotiable," and duplicates must be so characterized. Title to the goods rests with the consignee, and while he may transfer his title by indorsement and delivery, he can transfer no better title than he himself holds, and a bank which lends on a straight bill of lading to a wrongful person, has no protection. An order bill of lading, however, may be negotiated, and when properly indorsed, any holder in good faith has title to the goods without question as to how possession has been acquired, and is therefore, good bank collateral.

The elements of a bill of lading which should be scrutinized before accepting it as collateral are: (1) date, which should be sufficiently recent to indicate that the shipment has not already been delivered, i. e., the bill should not be stale. A back date arouses the suspicion of possible fraud; (2) name of issuing carrier, which should be a responsible railroad, or steamship, express or forwarding company; (3) points of origin and destination; (4) names of consignor and consignee (in an order bill of lading the names of these parties may be the same, and in this case the consignor must make an indorsement in blank or special indorsement, in order to convey title to the holder); (5) description of merchandise, which should be clear, and conform in the case of ocean bills of lading to the relative documents, e. g., seller's invoice, certificate of origin, consular invoice, certificate of weight and inspection, etc.; (6)

issuance in sets, which, if designated, should be complete, whether two, three or four, as the case may be; (7) carrier's liability, which should be defined so as to clearly set forth the limitations on such liability.

BILL OF LADING ACT

The text of the Federal Bill of Lading Act, approved August 29, 1916, and effective since January 1, 1917, follows:

AN ACT RELATING TO BILLS OF LADING IN INTERSTATE AND FOREIGN COMMERCE

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That bills of lading issued by any common carrier for the transportation of goods in any Territory of the United States, or the District of Columbia, or from a place in a State to a place in a foreign country, or from a place in one State to a place in another State, or from a place in one State to a place in the same State through another State or foreign country, shall be governed by this Act.

Sec. 2. That a bill in which it is stated that the goods are consigned or destined to a specified person is a straight bill.

Sec. 3. That a bill in which it is stated that the goods are consigned or destined to the order of any person named in such bill is an order bill. Any provision in such a bill or in any notice, contract, rule, regulation, or tariff that it is nonnegotiable shall be null and void and shall not affect its negotiability within the meaning of this Act unless upon its face and in writing agreed to by the shipper.

Sec. 4. That order bills issued in a State for the transportation of goods to any place in the United States on the Continent of North America, except Alaska and Panama, shall not be issued in parts or sets. If so issued, the carrier issuing them shall be liable for failure to deliver the goods described therein to anyone who purchases a part for value in good faith, even though the purchase be after the delivery of the goods by the carrier to a holder of one of the other parts: Provided, however, That nothing contained in this section shall be interpreted or construed to forbid the issuing of order bills in parts or sets for such transportation of goods to Alaska, Panama, Porto Rico, the Philippines, Hawaii, or foreign countries, or to impose the liabilities set forth in this section for so doing.

Sec. 5. That when more than one order bill is issued in a State for the same goods to be transported to any place in the United States on the Continent of North America, except Alaska and Panama, the word "duplicate," or some other word or words indicating that the document is not an original bill, shall be placed plainly upon the face of every such bill except the one first issued. A carrier shall be liable for the damage caused by his failure so to do to anyone who has purchased the bill for value in good faith as an original, even though the purchase be after the delivery of the goods by the carrier to the holder of the original bill: Provided, however, That nothing contained in this section shall in such case for such transportation of goods to Alaska, Panama, Porto Rico, the Philippines, Hawaii, or foreign countries be interpreted or construed so as to require the placing of the word "duplicate" thereon, or to impose the liabilities set forth in this section for failure so to do.

Sec. 6. That a straight bill shall have placed plainly upon its face by the carrier issuing it "non-negotiable" or "not negotiable."

This section shall not apply, however, to memoranda or acknowledgments of an informal character.

Sec. 7. That the insertion in an order bill of the name of a person to be notified of the arrival of the goods shall not limit the negotiability of the bill or constitute notice to a purchaser thereof of any rights or equities of such person in the goods.

Sec. 8. That a carrier, in the absence of some lawful excuse, is bound to deliver goods upon a demand made either by the consignee named in the bill for the goods or, if the bill is an order bill, by the holder thereof, if such a demand is accompanied by—

(a) An offer in good faith to satisfy the carrier's lawful lien upon the goods:

(b) Possession of the bill of lading and an offer in good faith to surrender, properly indorsed, the bill which was issued for the goods, if the bill is an order bill; and

(c) A readiness and willingness to sign, when the goods are delivered, an acknowledgment that they have been delivered, if such signature is requested by the carrier.

In case the carrier refuses or fails to deliver the goods, in compliance with a demand by the consignee or holder so accompanied, the burden shall be upon the carrier to establish the existence of a lawful excuse for such refusal or failure.

Sec. 9. That a carrier is justified, subject to the provisions of the three following sections, in delivering goods to one who is—

(a) A person lawfully entitled to the possession of the goods, or

(b) The consignee named in a straight bill for the goods, or

(c) A person in possession of an order bill for the goods, by the terms of which the goods are deliverable to his order; or which has been indorsed to him, or in blank by the consignee, or by the mediate or immediate indorsee of the consignee.

Sec. 10. That where a carrier delivers goods to one who is not lawfully entitled to the possession of them, the carrier shall be liable to anyone having a right of property or possession in the goods if he delivered the goods otherwise than as authorized by subdivisions (b) and (c) of the preceding section; and, though he delivered the goods as authorized by either of said subdivisions, he shall be so liable if prior to such delivery he—

(a) Had been requested, by or on behalf of a person having a right of property or possession in the goods, not to make such delivery, or

(b) Had information at the time of the delivery that it was to a person not lawfully entitled to the possession of the goods.

Such request or information, to be effective within the meaning of this section, must be given to an officer or agent of the carrier, the actual or apparent scope of whose duties includes action upon such a request or information, and must be given in time to enable the officer or agent to whom it is given, acting with reasonable diligence, to stop delivery of the goods.

Sec. 11. That except as provided in section twenty-

six, and except when compelled by legal process, if a carrier delivers goods for which an order bill had been issued, the negotiation of which would transfer the right to the possession of the goods, and fails to take up and cancel the bill, such carrier shall be liable for failure to deliver the goods to anyone who for value and in good faith purchases such bill, whether such purchaser acquired title to the bill before or after the delivery of the goods by the carrier and notwithstanding delivery was made to the person entitled thereto.

Sec. 12. That except as provided in section twenty-six, and except when compelled by legal process, if a carrier delivers part of the goods for which an order bill had been issued and fails either—

(a) To take up and cancel the bill, or

(b) To place plainly upon it a statement that a portion of the goods has been delivered with a description which may be in general terms either of the goods or packages that have been so delivered or of the goods or packages which still remain in the carrier's possession, he shall be liable for failure to deliver all the goods specified in the bill to anyone who for value and in good faith purchases it, whether such purchaser acquired title to it before or after the delivery of any portion of the goods by the carrier, and notwithstanding such delivery was made to the person entitled thereto.

Sec. 13. That any alteration, addition, or erasure in a bill after its issue without authority from the carrier issuing the same, either in writing or noted on the bill, shall be void, whatever be the nature and purpose of the change, and the bill shall be enforceable according to its original tenor.

Sec. 14. That where an order bill has been lost, stolen or destroyed, a court of competent jurisdiction may order the delivery of the goods upon satisfactory proof of such loss, theft, or destruction and upon the giving of a bond, with sufficient surety, to be approved by the court, to protect the carrier or any person injured by such delivery from any liability or loss incurred by reason of the original bill remaining outstanding. The court may also in its discretion order the payment of the carrier's reasonable costs and counsel fees: Provided, a voluntary indemnifying bond without order of court shall be binding on the parties thereto.

The delivery of the goods under an order of the court, as provided in this section, shall not relieve the carrier from liability to a person to whom the order bill has been or shall be negotiated for value without notice of the proceedings or of the delivery of the goods.

Sec. 15. That a bill, upon the face of which the word "duplicate" or some other word or words indicating that the document is not an original bill is placed, plainly shall impose upon the carrier issuing the same the liability of one who represents and warrants that such bill is an accurate copy of an original bill properly issued, but no other liability.

Sec. 16. That no title to goods or right to their possession asserted by a carrier for his own benefit shall excuse him from liability for refusing to deliver the goods according to the terms of a bill issued for them, unless such title or right is derived directly or indirectly from a transfer made by the consignor or consignee after the shipment, or from the carrier's lien.

Sec. 17. That if more than one person claim the title or possession of goods, the carrier may require all known claimants to interplead, either as a defense to an action brought against him for non-delivery of the goods or as an original suit, whichever is appropriate.

Sec. 18. That if some one other than the consignee or the person in possession of the bill has a claim to the title or possession of the goods, and the carrier has information of such claim, the carrier shall be excused from liability for refusing to deliver the goods, either to the consignee or person in possession of the bill or to the adverse claimant, until the carrier has had a reasonable time to ascertain the validity of the adverse claim or to bring legal proceedings to compel all claimants to interplead.

Sec. 19. That except as provided in the two preceding sections and in section nine, no right or title of a third person, unless enforced by legal process, shall be a defense to an action brought by the consignee of a straight bill or by the holder of an order bill against the carrier for failure to deliver the goods on demand.

Sec. 20. That when goods are loaded by a carrier such carrier shall count the packages of goods, if package freight, and ascertain the kind and quantity if bulk freight, and such carrier shall not, in such cases, insert in the bill of lading or in any notice, receipt, contract, rule, regulation, or tariff, "Shipper's weight, load, and count," or other words of like purport, indicating that the goods were loaded by the shipper and the description of them made by him or in case of bulk freight and freight not concealed by packages the description made by him. If so inserted, contrary to the provisions of this section, said words shall be treated as null and void and as if not inserted therein.

Sec. 21. That when package freight or bulk freight is loaded by a shipper and the goods are described in a bill of lading merely by a statement of marks or labels upon them or upon packages containing them, or by a statement that the goods are said to be goods of a certain kind or quantity, or in a certain condition, or it is stated in the bill of lading that packages are said to contain goods of a certain kind or quantity or in a certain condition, or that the contents or condition of the contents of the packages are unknown, or words of like purport are contained in the bill of lading, such statements, if true, shall not make liable the carrier issuing the bill of lading, although the goods are not of the kind or quantity or in the condition which the marks or labels upon them indicate, or of the kind or quantity or in the condition they were said to be by the consignor. The carrier may also by inserting in the bill of lading the words "Shipper's weight, load, and count," or other words of like purport indicate that the goods were loaded by the shipper and the description of them made by him; and if such statement be true, the carrier shall not be liable for damages caused by the improper loading or by the non-receipt or by the misdescription of the goods described in the bill of lading; Provided, however, Where the shipper of bulk freight installs and maintains adequate facilities for weighing such freight, and the same are available to the carrier, then the carrier, upon written request of such shipper and when given a reasonable opportunity so to do, shall ascertain the kind and quantity of bulk freight within a reasonable time after such written request, and the carriers shall not in such cases insert in the bill of lading the words "Shipper's weight," or other words of like purport, and if so inserted contrary to the provisions of this section, said words shall be treated as null and void and as if not inserted therein.

Sec. 22. That if a bill of lading has been issued by a

carrier or on his behalf by an agent or employee the scope of whose actual or apparent authority includes the receiving of goods and issuing bills of lading therefor for transportation in commerce among the several States and with foreign nations, the carrier shall be liable to (a) the owner of goods covered by a straight bill subject to existing right of stoppage in transitu or (b) the holder of an order bill, who has given value in good faith, relying upon the description therein of the goods for damages caused by the nonreceipt by the carrier of all or part of the goods or their failure to correspond with the description thereof in the bill at the time of its issue.

Sec. 23. That if goods are delivered to a carrier by the owner or by a person whose act in conveying the title to them to a purchaser for value in good faith would bind the owner, and an order bill is issued for them, they can not thereafter, while in the possession of the carrier, be attached by garnishment or otherwise or be levied upon under an execution unless the bill be first surrendered to the carrier or its negotiation enjoined. The carrier shall in no such case be compelled to deliver the actual possession of the goods until the bill is surrendered to him or impounded by the court.

Sec. 24. That a creditor whose debtor is the owner of an order bill shall be entitled to such aid from courts of appropriate jurisdiction by injunction and otherwise in attaching such bill or in satisfying the claim by means thereof as is allowed at law or in equity in regard to property which can not readily be attached or levied upon by ordinary legal process.

Sec. 25. That if an order bill is issued the carrier shall have a lien on the goods therein mentioned for all charges on those goods for freight, storage, demurrage and terminal charges, and expenses necessary for the preservation of the goods or incident to their transporation subsequent to the date of the bill and all other charges incurred in transportation and delivery, unless the bill expressly enumerates other charges for which a lien is claimed. In such case there shall also be a lien for the charges enumerated so far as they are allowed by law and the contract between the consignor and the carrier.

Sec. 26. That after goods have been lawfully sold to satisfy a carrier's lien, or because they have not been claimed, or because they are perishable or hazardous, the carrier shall not thereafter be liable for failure to deliver the goods themselves to the consignee or owner of the goods, or to a holder of the bill given for the goods when they were shipped, even if such bill be an order bill.

Sec. 27. That an order bill may be negotiated by delivery where, by the terms of the bill, the carrier undertakes to deliver the goods to the order of a specified person, and such person or a subsequent indorsee of the bill has indorsed it in blank.

Sec. 28. That an order bill may be negotiated by the indorsement of the person to whose order the goods are deliverable by the tenor of the bill. Such indorsement may be in blank or to a specified person. If indorsed to a specified person, it may be negotiated again by the indorsement of such person in blank or to another specified person. Subsequent negotiation may be made in like manner.

Sec. 29. That a bill may be transferred by the holder by delivery, accompanied with an agreement, express or implied, to transfer the title to the bill or to the goods represented thereby. A straight bill can not be negotiated free from existing equities, and the indorsement of such a bill gives the transferee no additional right.

Sec. 30. That an order bill may be negotiated by any person in possession of the same, however such possession may have been acquired, if by the terms of the bill the carrier undertakes to deliver the goods to the order of such person, or if at the time of negotiation the bill is in such form that it may be negotiated by delivery.

Sec. 31. That a person to whom an order bill has been duly negotiated acquires thereby—

(a) Such title to the goods as the person negotiating the bill to him had or had ability to convey to a purchaser in good faith for value, and such title to the goods as the consignee and consignor had or had power to convey to a purchaser in good faith for value; and

(b) The direct obligation of the carrier to hold possession of the goods for him according to the terms of the bill as fully as if the carrier had contracted directly with him.

Sec. 32. That a person to whom a bill has been transferred, but not negotiated, acquires thereby as against the transferor the title to the goods, subject to the terms of any agreement with transferor. If the bill is a straight bill such person also acquires the right to notify the carrier of the transfer to him of such bill and thereby to become the direct obligee of whatever obligations the carrier owed to the transferor of the bill immediately before the notification.

Prior to the notification of the carrier by the transferor or transferee of a straight bill the title of the transferee to the goods and the right to acquire the obligation of the carrier may be defeated by garnishment or by attachment or execution upon the goods by the creditor of the transferor, or by notification to the carrier by the transferor or by a subsequent purchaser from the transferor of a subsequent sale of the goods by the transferor.

A carrier has not received notification within the meaning of this section unless an officer or agent of the carrier, the actual or apparent scope of whose duties includes action upon such notification, has been notified; and no notification shall be effective until the officer or agent to whom it is given has had time, with the exercise of reasonable diligence, to communicate with the agent or agents having actual possession or control of the goods.

Sec. 33. That where an order bill is transferred for value by delivery, and the indorsement of the transferor is essential for negotiation, the transferee acquires a right against the transferor to compel him to indorse the bill, unless a contrary intention appears. The negotiation shall take effect as of the time when the indorsement is actually made. This obligation may be specifically enforced.

Sec. 34. That a person who negotiates or transfers for value a bill by indorsement or delivery, unless a contrary intention appears, warrants—

(a) That the bill is genuine;

(b) That he has a legal right to transfer it;

(c) That he has knowledge of no fact which would impair the validity or worth of the bill;

(d) That he has a right to transfer the title to the goods, and that the goods are merchantable or fit for a particular purpose whenever such warranties would have been implied if the contract of the parties had been to transfer without a bill the goods represented thereby.

Sec. 35. That the indorsement of a bill shall not make the indorser liable for any failure on the part of the carrier or previous indorsers of the bill to fulfill their respective obligations.

Sec. 36. That a mortgagee or pledgee or other holder of a bill for security who in good faith demands or receives payment of the debt for which such bill is security, whether from a party to a draft drawn for such debt or from any other person, shall not be deemed by so doing to represent or warrant the genuineness of such bill or the quantity or quality of the goods therein described.

Sec. 37. That the validity of the negotiation of a bill is not impaired by the fact that such negotiation was a breach of duty on the part of the person making the negotiation, or by the fact that the owner of the bill was deprived of the possession of the same by fraud, accident, mistake, duress, loss, theft, or conversion, if the person to whom the bill was negotiated, or a person to whom the bill was subsequently negotiated, gave value therefor in good faith, without notice of the breach of duty, or fraud, accident, mistake, duress, loss, theft, or conversion.

Sec. 38. That where a person, having sold, mortgaged, or pledged goods which are in a carrier's possession and for which an order bill has been issued, or having sold, mortgaged, or pledged the order bill representing such goods, continues in possession of the order bill, the subsequent negotiation thereof by that person under any sale, pledge, or other disposition thereof to any person receiving the same in good faith, for value and without notice of the previous sale, shall have the same effect as if the first purchaser of the goods or bill had expressly authorized the subsequent negotiation.

Sec 39. That where an order bill has been issued for goods no seller's lien or right of stoppage in transitu shall defeat the rights of any purchaser for value in good faith to whom such bill has been negotiated, whether such negotiation be prior or subsequent to the notification to the carrier who issued such bill of the seller's claim to a lien or right of stoppage in transitu. Nor shall the carrier be obliged to deliver or justified in delivering the goods to an unpaid seller unless such bill is first surrendered for cancellation.

Sec. 40. That, except as provided, in section thirty-nine, nothing in this Act shall limit the rights and remedies of a mortgagee or lien holder whose mortgage or lien on goods would be valid, apart from this Act, as against one who for value and in good faith purchased from the owner, immediately prior to the time of their delivery to the carrier, the goods which are subject to the mortgage or lien and obtained possession of them.

Sec. 41. That even any person who, knowlingly or with intent to defraud, falsely makes, alters, forges, counterfeits, prints or photographs any bill of lading purporting to represent goods received for shipment among the several State or with foreign nations, or with like intent utters or publishes as true and genuine any such falsely altered, forged, counterfeited, falsely printed or photographed bill of lading, knowing it to be falsely altered, forged counterfeited, falsely printed or photographed, or aids in making, altering, forging, counterfeiting, printing or photographing, or uttering or publishing the same, or issues or aids in issuing or procuring the issue of, or negotiates or transfers for value a bill which contains a false statement as to the receipt of the goods, or as to any other matter, or who, with intent to defraud, violates, or fails to comply with, or aids in any violation of, or failure to comply with any provision of this Act, shall be guilty of a misdemeanor, and, upon conviction, shall be punished for each offense by imprisonment not exceeding five years, or by a fine not exceeding $5,000, or both.

Sec. 42. First, That in this Act, unless the context of subject matter otherwise requires—

"Action" includes counterclaim, set-off, and suit in equity.

"Bill" means bill of lading governed by this Act.

"Consignee" means the person named in the bill as the person to whom delivery of the goods is to be made.

"Consignor" means the person named in the bill as the person from whom the goods have been received for shipment.

"Goods" means merchandise or chattels in course of transportation or which have been or are about to be transported.

"Holder" of a bill means a person who has both actual possession such bill and a right of property therein.

"Order" means an order by indorsement on the bill.

"Person" includes a corporation or partnership or two or more persons having a joint or common interest.

To "purchase" includes to take as mortgagee and to take as pledgee.

"State" includes any Territory, District, insular possession, or isthmian possession.

Sec. 43. That the provisions of this Act do not apply to bills made and delivered prior to the taking effect thereof.

Sec. 44. That the provisions and each part thereof and the sections and each part thereof of this Act are independent and severable, and the declaring of any provision or part thereof, or provisions or part thereof, or section or part thereof, or sections or part thereof, unconstitutional shall not impair or render unconstitutional any other provision or part thereof or section or part thereof.

Sec. 45. That this Act shall take effect and be in force on and after the first day of January next after its passage.

BILL OF SALE

A document which conveys title to, or right or interest in, personal property from the seller to the buyer.

BILLS DISCOUNTED

The aggregate of notes, acceptance and bills of exchange which a bank has discounted for its customers, as distinguished from loans; the title of an account in the general ledger which controls the Bills Discounted Ledger (q. v.), to indicate the total bills discounted.

BILLS DISCOUNTED LEDGER

A subsidiary ledger in which the details of all notes, acceptances and bills of exchange discounted are classified by customers so that the amount and nature of the liability of each borrower on this class of paper can be readily ascertained. It is also known as the Liability Ledger (q. v.).

BILLS DISCOUNTED OVERDUE

The aggregate of notes, acceptances and bills of exchange, which were not paid at maturity, and held separately awaiting collection, legal action, or writing off as a loss. Paper which is not paid at maturity is deducted

from the bills discounted account and added to bills discounted overdue, since the former contains only unmatured items. This term is also the title of a controlling account in the general ledger. (See Bad Debts.)

BILLS DISCOUNTED REGISTER

A journal or register in which notes, acceptances, and bills of exchange discounted are entered numerically and chronologically. It contains the first complete record of each note, etc., discounted, and is a permanent record. After notes are recorded in this register they are posted in the Liability Ledger (q. v.).

BILLS FOR COLLECTION

See Foreign Collection Items.

BILLS IN A SET

Bills of exchange, and accompanying documents, e. g., bill of lading, are usually issued in duplicate, and sometimes in triplicate. (For further information, see Bill of Lading, and First of Exchange.)

BILLS PAYABLE

Notes or acceptances upon which a business is the principal debtor as shown by its books; aggregate sum due to trade creditors as evidenced by notes or acceptances held by them; a controlling account in the general ledger to indicate the total of notes and acceptances which the business is bound to pay at their maturity.

The term also applies to the sum which a member bank has borrowed from the Federal Reserve bank of its district or on its own collateral note. Member banks may obtain advances from a Federal Reserve Bank on their promissory notes for periods not exceeding 15 days, secured by the deposit or pledge of U. S. Government securities; and on their promissory notes for periods not exceeding 90 days, secured by eligible paper (notes, drafts, bills of exchange or bankers' acceptances) all such advances to be made at rates established by the Federal Reserve Banks, subject to review by the Board of Governors of the Federal Reserve System.

If any member bank to which such advances have been made shall, during the continuance of such advances and despite official warning from the Federal Reserve Bank or of the Board of Governors, increase its outstanding "security loans" (loans secured by collateral in the form of stocks, bonds and other securities, other than Government securities), such advances shall immediately become due and payable, and such member bank shall be ineligible to be a borrower at the Federal Reserve Bank for such period as the Board of Governors of the Federal Reserve System shall determine. Temporary carrying or clearance loans made solely for the purpose facilitating the purchase or delivery of securities offered for public subscription shall be excluded from consideration as such security loans. (Sec. 13, par. 8, Federal Reserve Act.) (See Repurchase Agreement.)

BILLS RECEIVABLE

Notes and acceptances given by customers, usually in payment of merchandise as shown by the books of a business; aggregate sum due from trade debtors evidenced by notes and acceptances upon which they are the principal debtors; a controlling account in the general ledger to indicate the total of notes and acceptances on hand, and which the principal debtors thereon are bound to pay at maturity.

BIMETALLISM

The free concurrent coinage of two metals, usually gold and silver, without limitation as to quantity at an established coinage or mint ratio into coins of full legal tender power. A distinction is sometimes drawn between bimetallism and the double standard. Bimetallism differs from the double standard in that in bimetallism the Government mints are open to free coinage of either metal without limit. Under the double standard while coins of both metals are endowed with full legal tender powers, only one is freely coined, the other being coined on Government account only.

BLACK FRIDAY

September 24, 1869. At this period the balance of trade was heavily against the United States. Since gold was rapidly flowing out of the country, and the United States Treasury had discontinued the sale of gold, Jay Gould, then President of the Erie Railroad and bold speculator, attempted to get a corner on the merchantable stock of gold, and to compel those who had sold it short, to cover at dictated prices. He organized a pool and the joint-venture plan was put into operation. The price was forced from 133 to 162 in about 20 days, the highest price being attained on Black Friday. Thereafter the price quickly receded to normal.

BLAND-ALLISON ACT

An act passed February 28, 1878, which required the Treasury Department to purchase at the market price not less than $2,000,000 nor more than $4,000,000 of silver bullion a month for immediate coinage into standard silver dollars of 412 1/2 grains at the mint ratio of 15.988 to 1. The act was a compromise measure between those in favor of the remonetization of silver and its opponents. As first introduced it provided for the Free Coinage (q. v.) of silver, but was later amended to read as stated above. About $25,000,000 in silver dollars were coined annually for the ensuing twelve years, thus adding huge quantities of overvalued silver dollars to the currency. The act provided for the deposit of silver dollars in the United States Treasury and the issue of a corresponding amount of silver certificates redeemable in the silver dollars deposited as security. The Bland-Allison Act was repealed in 1890, and superseded by the Sherman Silver Purchase Act (q. v.).

BLANK INDORSEMENT

An indorsement in blank specifies no indorsee and an instrument so indorsed is payable to bearer, and may be negotiated by delivery. (Sec. 34 Uniform Negotiable Instruments Law; Sec. 64, N. Y. Negotiable Instruments Law.) The signature of the indorser, without additional words, is a sufficient indorsement. (Sec. 31, Uniform Negotiable Instruments Law; Sec. 61, N. Y. Negotiable Instruments Law.) See Indorsement.

BLANK TRANSFER

An assignment or transfer of stock in blank. (See Assignment, Assignment in Blank.)

BLANKET MORTGAGE

A mortgage which covers all the property or group

of properties of a corporation and given to secure a single debt. A blanket mortgage has about the same significance as a closed mortgage (q. v.). A large number of the mortgages of railroad and public utility corporations contain a clause in the deed of trust known as the "after-acquired-property" clause, which stipulates that not only the present owned property but that any future acquired property becomes subject to the mortgage. Bonds secured by a blanket mortgage of this type constitute a lien against all present and future acquired property of a corporation, which has no power to issue additional bonds against the property of equal rank as a lien with those already outstanding.

BLOCK

This term has two meanings:

(1) A large amount of stocks or bonds sold or offered for sale; a multiple of a full lot of stock, e. g., 1,000 shares, 6,000 shares, or of bonds, e. g., $200,000 par value.

(2) A lot, batch, or bundle of checks deposited for credit with a bank together with their relative deposit slips for sorting into (1) self-checks, (2) clearing house checks, (3) non-clearing house or messenger checks, and (4) transit checks, and for proving with the relative deposit slips. (See Block System.)

BLOCK SYSTEM

A system also known as the "batch" system, used in the receiving teller's, mail teller's and clearing house (check) departments of a bank for sorting and proving checks against their relative deposit slips, etc. It is a system of preliminary accounting employed in most banks of any importance to save time in proving customers' deposits before the deposit slips are posted to the individual (customers') ledger or ledgers.

When deposits are received over the receiving teller's window the receiving teller usually verifies only the cash. The checks are scrutinized only when the number is small, and to note the regularity of indorsements, etc. The verification of the footing of the deposit slip with the checks is performed after the entry is made in the depositor's pass book by a special group of clerks, very often organized into a "block department".

A "block consists of a group of checks, usually numbering from 100 to 400, together with their relative deposit slips. To prove a block, the checks are first sorted into the divisions required by the conditions in each particular bank, e. g., self-checks, clearing house checks, messenger or non-clearing house checks, checks drawn on the U. S. Treasury, postal money orders, matured coupons, etc. After this sortation process is finished, an adding machine total of the checks is secured by divisions. Another adding machine total of the deposit slip footings is secured, which if the "block" proves, must equal the total of the checks.

A "block" is a relatively small unit of work complete in itself. Blocks can be proved as deposits come in instead of waiting until the receiving teller's window closes for the day. If errors occur, each block being an independent or closed unit of work, they can be discovered comparatively easily, since they are confined to a part of the work instead of all of it. It is necessary to re-examine and prove only the block in which the error exists, instead of re-examining the entire amount of deposits.

A typical form of block proof is illustrated below.

BLOCKED CURRENCY

A currency designated for a special use, as distinguished from a free universal use. A blocked currency arises from the decision of a Government to withhold payments from various classes of foreign creditors, and is used as a means of controlling its exchange and trade movements. In the years 1933-35, Germany represented a prominent example of the use of blocked exchange. In addition to free marks, a number of special types of "blocked" marks were established to be used only for such purposes as the German financial authorities might designate. Because the blocked marks were restricted, they were cheaper than free marks, and this rule is applicable to any blocked currency or exchange. The extent to which a blocked currency is discounted from the free exchange depends upon the degree to which its use is restricted.

BLOTTER

A term commonly given among bank and brokerage bookkeepers to an original entry record of transactions, e. g., securities sales blotter, securities withdrawals blotter. A journal or temporary record of transactions which are later posted to a ledger.

BLOCK PROOF

In proving deposit tickets, clerks must number the deposit tickets, and sign this proof.

BLUE CHIP

A stock market term, taken from poker game terminology, used in a reference to stock issues commanding high prices (particularly in relation to earning power) relative to other stock issues. A stock to which a high degree of popular esteem or preference is attached so that it is relatively high-priced. In the game of poker, where white, red and blue chips are used, the blue chips represent the highest value. So a blue-chip stock is an active, leading well-known stock with wide appeal, but for which a price premium is exacted by the market because of these qualities. The term was especially applied in the 1928-1929 boom, to such issues as Allied Chemical, American Can, du Pont, General Electric, Woolworth, etc.

BLUE-SKY LAWS

A popular name to designate the laws enacted by various states to provide for (1) the issuance of securities, (2) the flotation or sale of a particular issue or block of securities, and (3) the regulation of the business of dealing in securities. The main purpose of blue-sky laws is to prevent fraud in the sale and disposition of stocks, bonds, and other securities, and to protect the investing public, especially the inexperienced, from doubtful, fraudulent and worthless security promotions. These laws are an outgrowth of the recognition of the fact that the principle of "caveat emptor" leaves the improvident and credulous public at the mercy of unscrupulous promoters, tipsters and stock salesman who purvey doubtful or worthless securities.

Kansas in 1911 was the first state to enact a blue-sky law, and this was amended in 1913. It was followed by similar acts in other states, twenty-two of which were passed in various states in 1912-1913. Today nearly all States have blue-sky laws, most of them of the "preventive" type, as contrasted with the punitive type, such as the Martin Act in New York State.

The typical blue-sky law prohibits the issuance or sale of securities, except under conditions with certain exceptions and exemptions for certain classes of securities, e. g., government, state and municipal bonds, and also for certain types of transactions and persons. The security dealer must obtain an annual license which is granted after the dealer has answered an exhaustive questionnaire. Securities affected by the act may not be offered or sold without a permit from the state based upon the findings of some state official, e.g., superintendent of banks, or secretary of state, who must be satisfied that the proposed offering of securities will not "constitute a fraud" or "work a fraud" upon the purchaser, and that the "proposed plan of business and proposed contracts contain and provide for a fair, just and equitable plan for the transaction of business, and in his (the official's judgment), promises a fair return on the stocks, bonds and other securities offered for sale by it."

Effective functioning of blue-sky laws was seriously impaired by unfavorable Court decisions in the interpretation of the acts, and by their own lack of severity in provisions or administration. Accordingly, the Federal Securities Act of 1933 (q. v.) for the first time provided for effective national regulation of security issuance and sale. The Securities Act of 1933 does not eliminate but rather supplements the working of the State blue-sky laws, which continue to operate within their particular jurisdictions.

New York state passed a new blue-sky law, effective June 1, 1925. This law, also known as the Martin law, is Article 23-A (Sections 352-359h) of General Business Law, added by Chapter 649, Laws of 1921 and amended in 1923, 1925, 1926, 1928 and 1935. This law is administered by the Attorney-General, who upon complaint or otherwise, may require a securities dealer to file a statement as to all the facts and circumstances surrounding any attempt to defraud the public by misrepresentation, fictitious or pretended sales of securities, make an investigation and subpoena and examine witnesses and documents, institute an action to enjoin such fraudulent practices and to appoint a receiver for the properties, and to examine all persons against whom action has been taken.

Dealers in securities are required to file certain notices in the Department of State, one known as the "state notice" and a second notice concerning the securities offered for sale, for publication in the state bulletin. No dealer may sell or offer for sale to the public within New York state as principal, broker or agent any securities until the dealer has a notice containing his name and business or post office address. This notice must be filed by all dealers. In addition to this notice, a further notice must be filed respecting the securities offered for sale unless they fall within the exempted class. This additional notice contains all the information given in the first notice, and also the name of the security which is to be sold or offered for sale, the name and post office address of the organization which has issued or is to issue the security, and if it is a corporation the state or country of incorporation.

The following securities are exempt from the provision relating to the publication of the additional notice: Securities of the United States and foreign governments, National banks, Federal land banks, joint-stock land banks and National farm loan associations, securities issued or guaranteed by public service corporations including railroad, securities of state banks and trust companies, securities which are a legal investment for savings banks or trust funds, and securities underwritten or sold by a corporation under the supervision of the superintendent of banks of New York. The act also exempts securities, other than common stock, upon which there has been no default in the payment of principal or interest for five years immediately preceding, and preferred stock upon which dividends have been paid for five years. A bond and mortgage sold as an undivided whole is likewise exempted.

No additional publication of notice is required for securities which were fully listed on January 1, 1925, upon any exchange in New York state. Securities listed after that date become exempt upon publication by the exchange of the prescribed notice.

The text of the New York state blue-sky law, approved June 1, 1925, will be found under the title Martin Act.

BOARD

A term which refers to the board in a commission house upon which stock market quotations are posted, and also refers to the stock market itself. In 1929 an electrically controlled device for posting quotations concurrently with their appearance on the ticker was introduced. This mechanism is called a Teleregister (q. v.).

The New York Stock Exchange is sometimes called

the Big Board, and the New York Curb Exchange the Little Board. (See Board Room.)

BOARD LOT

The unit of trading upon an exchange. Depending on the activity of the particular stock, the unit of trading for stocks on the New York Stock Exchange and New York Curb Exchange may be 10 shares, 25 shares, 50 shares, or 100 shares. The unit of trading in bonds is one bond of $1,000 par value. (See Baby Bonds, Odd Lot.)

BOARD OF DIRECTORS

See Directors.

BOARD OF TRADE

A name frequently adopted by an organization formed to promote community, industrial and commercial interests, also known as Chamber of Commerce. The title is also sometimes given to a special exchange, e. g., Chicago Board of Trade (q. v.).

BOARD ROOM

The customers' room of a broker's office where quotations from the principal markets, e. g., Stock Exchange, Board of Trade, etc., may be seen immediately after the transactions are consummated. Tickers from the various markets are installed in these rooms. The "tape" can be magnified by a tape screen for view by the entire board room by means of such an apparatus. Quotations are posted directly from the tape to the board either by manual methods, ranging from use of removable cards to blackboard chalk posting, or by mechanical methods, such as the electrical Teleregister (q. v.).

BOB

English colloquialism for the shilling. (See Shilling.)

BOBTAIL POOL

A pool in which the members act independently of one another and not through its manager. It is an informal pool in which each member closes out his contracts as he pleases, instead of the pool acting as a unit. (See Pool.)

BOERSE

The German and Dutch spelling of Bourse (q. v.)

BOLIVAR

See Foreign Moneys —Venezuela.

BOLIVIANO

See Foreign Moneys —Bolivia.

BOLSA

The Spanish spelling of Bourse (q. v.)

BONANZA

The Spanish word for prosperity and originally applied in finance to a fortunate discovery of a rich mine, the exploitation of which made the discoverer wealthy. It is now applied colloquially to any enterprise which earns an unusually large return on its invested capital.

BOND

An interest-bearing certificate of debt, being one of a series constituting a loan made to, and an obligation of, a government or business corporation; a formal promise by the borrower to pay to the lender a certain sum of money at a fixed future date with or without security, and signed and sealed by the maker (borrower); a promise to pay two things: (1) a principal amount on a stated future date, and (2) a series of interest payments, usually semi-annually during its life. "All subdivided interest bearing contracts for the future payment of money that are drawn with formality whether they are secured or unsecured, whether the interest is imperitive under all conditions, or not, as in the case of income bonds" (L. Chamberlain: The Principles of Bond Investment).

The difference between a bond and promissory note is aptly explained by F. A. Cleveland (Funds and Their Uses) as follows: "The only way that a bond is distinguished from an ordinary promissory note is by the fact that it is issued as part of a series of like tenor and amount, and, in most cases under a common security. By rule of common law the bond is also more formal in its execution. The note is a simple promise (in any form, so long as a definite promise for the payment of money appears upon its face), signed by the party bound, without any formality as to witnesses or seal. The bond, on the other hand, in its old common-law form, required a seal and had to be witnessed in the same manner as a deed or other formal conveyance of property, and though assignable was not negotiable. This is still the rule with many jurisdictions." A bond differs from an investment note only in the time which it has to run before maturity. Ordinarily the dividing line is five years; if the term of the funded debt exceeds this period, the issue is called bonds; if within this period, notes.

A bond differs from a share of stock in that the former is a contract to pay a certain sum of money with definite stipulations as to amount and maturity of interest payments, maturity of principal, and other recitals as to the rights of the holder in case of default, sinking fund provisions, etc., whereas a stock contains no promise to repay the purchase price or any amount whatsoever. The shareholder is an owner; a bondholder is a creditor. The bondholder has a claim against the assets and earnings of a corporation prior to that of the stockholder, and while the bondholder is an investor, the stockholder speculates on the success of the enterprise. The former's claim is a definite contractual one; the latter's claim is contingent upon earnings.

Numerous classifications of bonds are possible. The following classifications have been selected as the most important and useful:

1. Character of obligor. (a) Civil bonds. Examples: Government bonds, state bonds, municipal bonds, etc. (b) Corporation bonds. Examples: Railroad bonds, public utility bonds, industrial bonds.

2. Purpose of issue. Examples: Equipment bonds, improvement bonds, school bonds, terminal bonds, refunding bonds, adjustment bonds, etc.

3. Character of security. (a) Unsecured. Examples: Civil bonds, corporate debentures. (b) Secured (1) Personal security. Examples: Indorsed bonds, guaranteed bonds. (2) Lien security. Examples: First Mortgage bonds, general mortgage bonds, consolidated mortgage

bonds, collateral trust bonds, chattel mortgage bonds.

4. Terms of payment of principal Examples: Straight maturity bonds, callable bonds, perpetual bonds, sinking fund bonds, serial bonds.

5. Evidence of ownership and transfer. Examples: Coupon bonds, registered bonds, registered coupon bonds.

Bonds may also be classified according to tax exemption, conditions of payment of interest, convertibility, eligibility for investment by savings banks, insurance companies and trust funds, eligibility for securing government deposits, etc.

Specific kinds of bonds are described under separate titles, e. g., Adjustment Bonds, Bearer Bonds, Collateral Trust Bonds, Debenture Bonds, Extended Bonds, First Mortgage Bonds, General Mortgage Bonds, etc.

For bibliography on bonds, see Investment. (See Bond Circular, Bond Values Tables, Coupons, Investment, Investment Market, Investment Media, Investment Securities.)

BOND ACCOUNTS

The bond accounts of a bank are listed under General Ledger (q. v.). (See Securities Ledger.)

BOND AMORTIZATION

See Amortization.

BOND CIRCULAR

An advertisement issued by a bank, syndicate or bond house offering bonds for sale, or for the purpose of influencing purchases in bonds. The term "bond circular" since the Securities Act of 1933, which requires Registration Statement (q. v.) and Prospectus (q. v.) to be filed on new offerings of securities, still continues to be applied to descriptive data issued on any "exempt security" (q. v.). Banks (whether or not members of the Federal Reserve System) may still underwrite U.S. Government, and state and municipal securities. A bond circular usually contains a description of the offering in detail. The elements of a well-planned bond circular are: title of the bond and brief description of its security: dates of issue, maturity and interest payments; denomination and form; amount authorized and amount issued; state and Federal income taxes: conditions under which additional bonds may be issued; redemption price, if any; name of trustee; whether listed on stock exchange; guaranty, if any; description of properties of corporation issuing; past and current earnings and latest balance sheet; sinking fund specifications; territory of corporate operations; franchises, if any; engineer's and auditor's reports; attorney's opinion; whether legal for savings banks and trust funds; price and yield; reservation as to if, as, and when issued; reservation that orders are subject to prior sale; general reservation.

BOND CROWD

A term applied to those members of the New York Stock Exchange who specialize in the execution of orders to buy and sell bonds, and further subdivided into the Active or Free Crowd, which handles active issues; Book, Inactive or Cabinet Crowd, which handles inactive issues; Foreign Crowd; and U. S. Government Securities Crowd (q. v.).

BOND DISCOUNT

For treatment of bond discount, see Amortization, and Discount (4).

BOND HOLDER

An owner or holder of bonds, whether coupon bonds, (q. v.), which are negotiable bonds payable to bearer; or registered bonds (q. v.), which are registered in the name of the owner either as to principal and interest or principal only. The bondholder is a creditor of the issuer. (See Bond.)

BOND HOUSE

A firm engaged in underwriting, distributing and dealing in bonds, primarily, and generally also other securities. (See Investment Banker.)

BOND INTEREST PAYMENTS

Most bond interest dates, particularly of fixed interest bonds, are semi-annual, such as January 1st and July 1st, February 1st and August 1st, etc. Interest of income bonds, particularly those issued in connection with railroad reorganizations is usually payable once a year, usually in March or April, when allocation of available income of the preceding calendar year, is determined in accordance with indenture provisions. A minority of fixed interest bonds have quarterly interest dates. (See Coupon Bonds, Quarterly Disbursements, Registered Bonds.)

BOND MARKET

See Investment Market.

BOND OF INDEMNITY

A written instrument in which the signer (bondsman) guarantees to protect another party against loss. It is usually used in securing a corporation against loss in the case of presentment in the future of a security lost by the owner and reissued by it. It is also used to protect the drawee bank when the drawer issues a stop-payment order against a certified check.

BOND RATINGS

Measures or yardsticks of investment standing. Bond rating systems have been employed for a number of years as a guide to the relative investment strength of particular issues. Such systems are now offered as a service to investors by Moody's Investors Service. Standard & Poor's Corporation, and Fitch Investors Service.

The purpose of such ratings is to furnish a simple and readily comprehensible guide to the relative merit and standing of a bond. Bonds may and do vary in merit from little or no value to highest class, and in between there is a wide range of intermediary differences These shades of difference are graded or rated on a more or less scientific basis which assigns weights to the various elements that enter into the investment

quality of a bond, namely, margin of safety in earnings, stability of earnings, asset value, mortgage (lien) position, marketability, etc. The resultant, or statistical rating determines the position or grade to which the bond is assigned, although the strict statistical rating is sometimes modified by giving weight to imponderables, the modification being called the final rating.

Bond ratings of these recognized rating services have assumed increased importance to banks as the result of the Bank Investment Regulations of the Comptroller of the Currency (See Comptroller's Regulation), and the bank examination procedure announced June 27, 1938 by the Secretary of the Treasury, the Board of Governors of the Federal Reserve System, the directors of the Federal Deposit Insurance Corporation, and the Comptroller of the Currency, for appraisal of bonds in bank examinations. Under this procedure, Group I securities are marketable obligations in which the investment characteristics are not distinctly or predominantly speculative. This group includes general market obligations in the four highest grades, and unrated securities of equivalent value. The Comptroller of the Currency in enforcing the bank investment regulations, and the Federal Deposit Insurance Corporation in its examination of banks define the term "investment securities" to include only security obligations of banking quality. The rules which have been adopted with regard to securities rated by any one of the three recognized rating services, are as follows:

1. A security rated by only one service will be designated as of banking quality if rated within the first four grades by that service.
2. A security rated by only two services will be designated as of banking quality if rated within the first four grades by both services.
3. A security rated by three services will be designated as of banking quality if rated within the first four grades by two of those services.

Key to Moody's Bond Ratings is as follows:

Aaa—Bonds which are rated Aaa are judged to be of the best quality. They carry the smallest degree of investment risk and are generally referred to as "gilt edge." Interest payments are protected by a large or by an exceptionally stable margin and principal is secure. While the various protective elements are likely to change, such changes as can be visualized are most unlikely to impair the fundamentally strong position of such issues.

Aa—Bonds which are rated Aa are judged to be of high quality by all standards. Together with the Aaa group, they comprise what are generally known as high grade bonds. They are rated lower than the best bonds because margins of protection may not be as large as in Aaa securities or fluctuation of protective elements may be of greater amplitude or there may be other elements which make the long term risks appear somewhat larger than in Aaa securities.

A—Bonds which are rated A possess many favorable investment attributes and are to be considered as higher medium grade obligations. Factors giving security to principal and interest are considered adequate but elements may be present which suggest a susceptibility to impairment sometime in the future.

Baa—Bonds which are rated Baa are considered as lower medium grade obligations, i. e., they are neither highly protected nor poorly secured. Interest payments and principal security appear adequate for the present, but certain protective elements may be lacking or may be characteristically unreliable over any great length of time. Such bonds lack outstanding investment characteristics and in fact have speculative characteristics as well.

Ba—Bonds which are rated Ba are judged to have speculative elements; their future cannot be considered as well assured. Often the protection of interest and principal payments may be very moderate and thereby not well safeguarded during both good and bad times over the future. Uncertainty of position characterizes bonds in this class.

B—Bonds which are rated B generally lack characteristics of the desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.

Caa—Bonds which are rated Caa are of poor standing. Such issues may be in default or there may be present elements of danger with respect to principal or interest.

Ca—Bonds which are rated Ca represent obligations which are speculative in a high degree. Such issues are often in default or have other marked shortcomings.

C—Bonds which are rated C are the lowest rated class of bonds and issues so rated can be regarded as having extremely poor prospects of ever attaining any real investment standing.

In the Standard & Poor's bond quality ratings system, interest-paying bonds are graded into eight classifications ranging from A1+ for the highest quality designation through A1, A⁻, B1+, B1, B, C1+ to C1 for the lowest. Bonds on which no interest is being paid, either because of default or because of "income" characteristics, are given C, D1 and D ratings. United States Government bonds are not rated, but are considered as a yardstick against which to measure all other issues.

A1+—Bonds rated A1+ are the highest grade corporate obligations. They possess the ultimate degree of protection as to principal and interest. Marketwise, they may be expected to move with interest rates and hence are desirable investment media for institutions and individuals seeking maximum safety.

A1—Bonds rated A1 also qualify as high grade obligations, and in the majority of instances differ from A1+ issues only moderately in the various elements of safety. A1-rated Bonds, too, move with interest rates and hence are appropriate media where safety is a prerequisite.

A—Bonds rated A are regarded as upper medium grade. They have considerable investment strength but are not wholly free from possible adverse effects of changes in economic conditions. However, interest is regarded as secure and, by and large, principal appears relatively safe. They predominantly reflect money rates in their market behavior, and to some extent also, business conditions.

B1+—The B1+, or medium grade, category is borderline between definitely sound obligations and those wherein the speculative element begins to predominate. These bonds have adequate asset protection and normally are covered by satisfactory earnings. Their susceptibility to changing conditions, particularly to lengthy depressions, necessitates constant watching. Marketwise, the bonds are as responsive to business conditions as they are to interest rates. The group is the lowest which qualifies for commercial bank investment.

B1—Bonds given B1 rating are regarded as lower

medium grade. They have some investment characteristics, though not enough to warrant an investment rating. In the case of utilities, interest is earned consistently but by narrow margins. In the case of other types of obligors, charges are earned on average by a fair margin, but in poor periods deficit operations are likely. These bonds fluctuate widely with business conditions.

B—Bonds rated as low as B are speculative. Payment of principal and interest cannot be assured, though frequently bonds in this group continue paying interest even though it is earned only on a cash basis. The issues move primarily with the equity market.

C1+ and C1—Bonds rated C1+ and C1 are outright speculations, with the lower rating denoting the more speculative. Interest is paid, although in the case of C1 ratings the bonds may be on an income basis and the payment may be small.

C—This rating is reserved for income bonds on which no interest is being paid, and for the best defaulted issues.

D1 and D—All bonds rated D1 and D are in default, with the D symbol assigned to issues which appear to have little recoverable value.

Quality ratings are not assigned to stocks by either Moody's or Standard & Poor's, but Fitch's assigns quality ratings to both bonds and stocks. Market ratings are assigned by Standard & Poor's to stocks, as follows: Buy, Above Average, Average to Below, and Switch. Standard & Poor's Stock Ratings express the relative degree of market attraction at time of publication. They are designed to characterize the current stock market position of individual stock issues and are never a guide to the fundamental quality of the security or the strength of the company represented.

BOND REGISTER

An original entry record kept by a bank or trust company for entering the details of each purchase or sale of bonds belonging to the investment account. From the register or journal, postings are made to the bond (or securities) ledger. This title is also applied to the record kept by a corporation of its bonds sold direct, and to the records of the registrar of bonds, such as a bank or trust company, when acting in that capacity for a corporation which has issued registered bonds. (See Securities Ledger.)

BOND VALUES TABLE

Tables of bond yields or bond values which assist in computing bond yields to maturity, or in calculating the price or value of a bond necessary to afford a given yield to a given maturity.

Various types of tables are available. In computing bond yields to maturity, the Rollins tables show the value to the nearest cent of a bond of specified maturity bearing interest rates of 2%, 2 1/2%, 3%, 3 1/2%, 4%, 4 1/2%, 5%, 6% and 7%, and yielding from 2% to 7%. Below is reproduced a sample from the 20 years maturity table, interest payable semi-annually, by reference to the table, it is apparent that a 20-year 4% bond, interest payable semi-annually, purchased at 103.50 will yield 3 3/4% to maturity.

By means of "interpolation," or calculation based on proportion of differences, exact yields not directly given by the table may be calculated. For example, the yield to maturity of a 20-year 4% bond, interest payable semi-annually, purchased at 104, is not directly given by the table. However, the table does show nearest prices of 104.21, at which yield to maturity is 3.70%; and 103.50, at which yield to maturity is 3 3/4%. The differences are 0.71 in price and 0.05% in yield. Since the given purchase price, 104, is 0.50 greater than 103.50, it will therefore yield 50/71 of 0.05% less than 3 3/4%; and conversely, will yield 21/71 of 0.05% more than 3.70%. In either case, the answer is 3.7148%, or rounded out, 3.72%.

Similarly, it may be desired to calculate the price or value of a 20-year 4% bond, interest payable semi-an-

PER CENT PER AN.	3%	3½%	4%	4½%	5%	6%	7%

BOND VALUES TABLE

nually, necessary to afford a 3 3/4% yield to maturity. By reference to the table, it is apparent that the price is 103.50. Where the exact price is not directly given by the table, it may be calculated by means of interpolation. For example, it may be desired to calculate the price or value of a 20-year 4% bond, interest payable semi-annually, necessary to yield 4.85% to maturity. The nearest prices given are 89.79, at which the yield is 4.80%; and 88.90, at which the yield is 4 7/8%. The difference of 0.075% in yield is equal to the difference of 0.89 in price. Therefore, the difference of 0.05% between 4.80% and the required yield of 4.85% is equal to a difference of 0.593 in price (0.05/0.075 of 0.89, or expressed in ratio form, 0.075:0.89 as 0.05:0.593). This indicates a price of approximately 89 1/4 (89.79 less 0.593, or 89.197). (See Yield.)

BONDED DEBT

Funded Debt (q.v.); the fixed debt of a government or business corporation represented by bonds.

BONDS AS LEGAL INVESTMENTS

See Legal Investments for Savings Banks, Legal Investments for Trust Funds, Legality of Securities, Legal Opinion, Life Insurance Company Investments.

BONUS

A gift; gratuity; something which is given free in addition to what is called for by a contract. (See Bonus Bonds, Bonus Stock.)

BONUS BONDS

Bonds issued in payment of, or to raise money for, promoters' services, or bonds issued by a municipality to induce a manufacturing industry to locate, or a railroad to enter, the town. The validity of such bonds is questionable. As investments these bonds are to be avoided. This title is sometimes also given to Soldiers' Bonus Bonds, as Soldiers' Adjusted Compensation Bonds, issued by various states to raise funds to pay bonuses to veterans of the World Wars. (See Railroad Aid Bonds.)

BONUS STOCK

Shares of stock given as a bonus to purchasers thereof; for instance, a certain percentage of common stock is sometimes given with purchases of bonds or the preferred stock of a corporation. This is tantamount to selling bonds or stock at a discount. The laws of some of the states prohibit the issuance of bonus stock, or else make the holder liable for the par value thereof. (See Founders' Stock.)

BOOK

A stock exchange term referring to the specialist's book which contains the limited order to buy and sell the stocks in which the specialist (q. v.) specializes. As limited orders are conveyed to the floor for execution at prices away from the prevailing market levels, they are entered (quantity and price) on the buying or selling side of the book of the specialist who handles the transactions in the issue in question. By reference to the book where orders are arranged in order of price, it is possible to ascertain quickly the number of shares wanted at each level down, and the number offered at each step up.

BOOK CREDIT

See Open Account.

BOOK CROWD

A section of the bond trading department of the New York Stock Exchange (q. v.), also called the Inactive or Cabinet Crowd, which handles inactive bonds. See Bond Market, Cabinet Crowd, Free Crowd.

BOOKKEEPING

See Bank Bookkeeping.

BOOKS

See Bank Bookkeeping.

BOOKS CLOSE

A term to indicate the day on which the transfer books of a corporation close in order that the transfer agent may make a correct list of the stockholders who are entitled to receive the dividend declared but not yet paid. "Books close" refers to such closing of the transfer books of the corporation and not to the "ex-dividend" date. The method of delivery of securities determines the ex-dividend dates on security markets. Most Exchanges, including the New York Stock Exchange and the New York Curb Exchange, use the three day delivery plan. Contracts made "regular way" are settled on the third full business day following the day of execution of the transaction. A holiday intervening between day of the transaction and the settlement day postpones the settlement day by that one full day. Thus, stocks sell "ex-dividend" on the second full business day preceding the stockholders of record date, or "books close" date; when the stockholders of record date falls on a holiday or a Saturday, the stock is ex-dividend on the third preceding full business day. All transactions that take place in the stock on the ex-divident date, other than those "for cash", are ex-dividend, the dividend being reserved to the seller, and the market price thus reflecting the deduction for the dividend. (See Closing the Books.)

BOOKS OPEN

A term to indicate the day the transfer books of a corporation are open for the transfer of stocks, after having been closed over an interval for the purpose of determining the stockholders of record who are entitled to receive dividends, or to vote, etc. (See Books Close, Stock Transfers.)

BOOK VALUE

The value of a business as a whole, or of one of its assets, as shown by its accounting records. For instance, the book value of a bond is the amount at which it is carried on the books. Originally it should be entered at cost. Subsequently the amount may be changed to bring it into agreement with its amortized value (q.v.). Similarly, the book value of a fixed asset is original cost, plus additions and improvements, less reserve for depreciation and less retirements, although frequently

fixed assets are arbitrarily marked down below true book values.

The book value of a corporation is its net worth. Where there are various classes of owners, book value is sometimes expressed in terms of dollars per share of its common stock, after deducting the value of the preferred stock at liquidation preference. The surplus whether free, e. g., available for dividends, or set aside in equity reserves, belongs to the common stockholders. Thus a corporation that has common stock totaling one million dollars (10,000 shares of $100 par value), surplus of $600,000, and an equity type reserve of $200,000, has a book value of $180. The book value of no-par common stock is found by dividing the amount of the capital plus the true surplus and reserves by the number of outstanding shares.

The book value of a partnership is equal to the sum of the partners' capital accounts plus undivided profits, if any. The book value of a sole proprietorship is shown by the proprietor's capital account after adjustment for profits or losses, contributions or withdrawals.

BOOM

A movement characterized by industrial and commercial activity, rising prices, and sentimentally by optimism and speculative enthusiasm until unwarranted high levels are reached, culminating in a reaction. Booms are both specific and general. There may be specific booms in land, stocks, bonds, or grain, acting independently of each other. A general boom is one in which the value of all properties securities and commodities rise sympathetically. (See Business Cycle, Inflation, Prosperity.)

BORDERLINE ROAD

In analysis of railroad securities, a term used to indicate railroad which is in a marginal position, i. e., having a weak credit position or low earning power as indicated by narrow margin of coverage of fixed charges. (See Railroad Bonds.)

BORROWED BONDS

Bonds are sometimes borrowed by one bank from another with or without commission because of a shortage of bonds eligible to secure Government deposits, or to serve as collateral for loans with a Federal Reserve bank, in its possession. An account should be set up in the general ledger to show the liability for borrowed bonds, if any.

Bonds, like stocks, are sometimes borrowed by brokers in order to arrange for delivery when short sale contracts have been made by customers. (See Short Sale.)

BORROWED STOCK

A term applied to stock borrowed by brokers in order to make delivery on short sale contracts executed for customers. (See Short Sale.)

BORROWER

A person or concern to which money is loaned. There are as many classes of borrowers as there are classes of loans. (See Loans.)

BORROWING PEAK

A term applying to the period of a business when its borrowings from banks normally stand at the highest figure of the year. Most businesses are seasonal in character and require more capital at some periods than other. The periodic recurrence of the heaviest demand for working capital is called the seasonal peak and the borrowing peak is reached at this time. Bank credit and loan officers know when the borrowing peak for each class of trade occurs and plan to meet the requirements of their customers accordingly. While the borrowing peak varies among merchants and manufacturers, the borrowing peak for the largest number of enterprises occurs in the fall of the year.

BORROWING POWER

The capacity of an individual, firm or corporation to borrow, or to procure accommodation at a bank. (See Credit.)

BOSTON LEDGER

A form of ledger, also known as the progressive ledger, which has been almost universally adopted throughout banking practice. Instead of giving a page to each account, as in the case of a balance ledger, the names of the accounts (usually 20 to 30 on a page) are written or printed in alphabetical order vertically down the ledger sheet, with occasional spaces allowed for inserting new names. Preferably the names should be printed down the center of the page. The days run horizontally across the width of two pages, the column for each day being divided to provide for debit and credit postings.

The advantages of the Boston ledger are that it provides immediate availability of the balance of each account, which is carried forward each day and can be ascertained at a glance; quickness in posting and proving; and saving of space. Since there are about 20 to 30 accounts on a page, it is not necessary to thumb so many pages in order to locate a given account, as in the case of the balance ledger.

Its disadvantage is its inflexibility. It must be renewed frequently, not only because each page provides for a limited number of days, but also to allow for changes in titles of accounts.

BOSTON STOCK EXCHANGE

Organized on October 13, 1834, and, with a single exception, has continued its activities uninterruptedly from that date. The exception represented the period from July 30 to December 10, 1914, and was the result of the chaotic conditions precipitated by the beginning of the World War.

The original name adopted was the Boston Stock and Exchange Board. As soon as the Board was properly organized, the members assessed themselves $100 each as an initiation fee. This was later advanced to $200, and again increased to $400, and still later to $2,000, as the Exchange grew in size and importance. It was not until about 1885 that memberships, or "seats" were considered to have a transferable value. Since April 11, 1911, the Exchange has been located at 53 State Street. On January 18, 1892, a Stock Exchange

Clearing House was organized, the second of its kind in the country.

For the first time in the history of the Boston Stock Exchange, an incorporated securities firm was admitted to full membership on June 23, 1941. Thus, the Boston Stock Exchange became the first of the larger national securities exchanges to extend full membership to an incorporated firm. This departure from traditional Stock Exchange membership requirements was made possible by a change in the Constitution of the Boston Stock Exchange, which provided as an additional safeguard for investors that corporations becoming members of the Exchange shall segregate in separate bank accounts cash balances held for customers in the same way that Stock Exchange unincorporated member firms earmark securities held in safekeeping for customers.

As of June 30, 1946, 388 issues of 321 issuers were traded in on the Boston Stock Exchange, of which 226 issues were admitted to unlisted trading privileges (q. v.), and 135 issues were fully registered. Over 82% of the stock issues were traded in on other exchanges. Bond issues totaling 26, all fully registered, were traded in, over 53% of which were traded on other exchanges. For the year ended June 30, 1946, market value of volume on the Boston Stock Exchange totaled $216,080,000, largely in stocks, $216,019,000 on 5,384,000 shares; bond volume totaled $47,000 ($36,000 principal amount), and volume in rights and warrants totaled $14,000. (See National Securities Exchanges.)

BOTTOM

When average prices reach the lowest level in a major swing, the market is said to be touching bottom or dragging bottom. The bottom usually is reached when, or shortly before, a business depression is at its worst, confidence impaired, sales and earnings small, prices low, and buying power limited. It is recognized by a period of dullness and small price fluctuations, following a long, consistent, downward trend in prices. It is characteristic of the market to make two low dips at either end of the low level, before the reverse trend sets in. This is known as the double bottom, and is regarded as an indication that the downward price movement has been concluded. Inasmuch as the bottom marks the lowest ebb of business, it also heralds the beginning of the next major swing upward. (See Business Cycle, Movement, Speculative Cycle, Swings.)

BOTTOM DROPPED OUT

A sharp decline in prices occurring when the market is already believed to be well liquidated, or touching bottom, thereby creating a panicky condition.

BOTTOM PRICE

The lowest price; the price at which a single security, or the market average, reaches the lowest point in a single day's trading, or in a major or minor movement.

BOTTOMRY

A loan secured by a lien on a vessel. (See Bottomry Bond.)

BOTTOMRY BOND

A document by which the master of a ship pledges the vessel as collateral for a loan. This may become necessary when a ship is in the foreign port and certain repairs are indispensable to enable it to continue its voyage, and the master has no other means of raising funds. A master has no authority to bind a shipowner, except in case of necessity, and the lender must use caution to see that the repairs are urgent. Sometimes the master pledges both the vessel and its cargo for a loan. In this case the document is a respondentia bond. (See Respondentia.)

BOURSE

A name which applies quite generally to the stock exchanges in the principal cities of continental Europe. "Boerse" is the Dutch, and "Bolsa" the Spanish spelling. The word is usually capitalized in order to distinguish it from the French "la bourse," which means "the purse."

Generally, the European Bourses are active and operating except those in occupied countries. (See Paris Bourse.)

BOURSIERS

The accredited members of the Paris Bourse (q. v.).

BRANCH BANKING

The system of banking in which a banking institution conducts branches or district offices at locations other than at the main or head office, as distinguished from independent banking. In many foreign countries, notably in Canada, England, and France, the branch system of banking prevails. In Canada, 10 chartered banks furnish banking facilities throughout the Dominion through over 3,000 offices. In England, 75 per cent. of the banking business is handled by five banks, some of which have 1,500 or more branches. The Bank of France is required to have at least one branch in each French Department.

In the United States, on the other hand, there is no nation-wide branch banking, and banking is largely conducted by local institutions, owned by local capital, managed by resident officers, and having a single office. This characteristically unit type of banking dates back to lack of provision for branch banking in the original National Bank Act of 1863, and to the 10% tax on State bank note circulation effective in 1866, which had the effect of driving many State banks into the national banking system. Although under the National Bank Act, these converting State banks could keep their existing branches, many chose either to discontinue their branches or organize their branches into separate unit banks. In 1909, the controversy over the merits of branch banking was again revived with passage of the Branch Banking Act of California, which led subsequently to development in that state of the large State-wide branch banking system of the Bank of Italy of San Francisco, predecessor of the present Bank of America National Trust & Savings Association. Such development of State branch banking and the growth of large business units contributed to liberalization of the National banking laws, particularly by the Pepper-McFadden Act (q. v.) of 1927, which completely revised Section 5155, Revised Statutes, relating to branch banking powers of National banks, and authorized the establishment of branch banks within the limits of city or

town of location if such branches are expressly authorized to State banks in that locality. Later, the Banking Act of 1933 (q. v.) further liberalized branch banking powers by permitting National banks to establish State-wide branches if such is affirmatively permitted for State banks, subject to maintenance of minimum capital requirements varying as to population.

Besides having powers to establish domestic branches, national banks possessing capital and surplus of $1,000,000 or more may under Section 25 of the Federal Reserve Act establish branches in foreign countries and U. S. possession in furtherance of foreign commerce, and may invest a maximum of 10% in aggregate of paid-in capital stock and surplus in the stock one or more banks or corporations organized under Federal or State laws and principally engaged in international or foreign banking or engaged directly or indirectly in banking in U. S. possessions or foreign countries.

State banks and trust companies are usually permitted to organize a limited number of branches in the state of incorporation. Certain restrictions are imposed, such as minimum capital, territory, and number of branches per unit of population. In some states, state banks and trust companies are also permitted to establish branches in other states and in foreign countries. In New York state, for instance, state banks and trust companies may establish branches in another state or in a foreign country, upon approval of the Superintendent of Banks in New York state, and if permitted by the banking officials of the other state or foreign country. To qualify, however, the institution must have a combined capital and surplus of at least $1,000,000. The branch banking laws of the various States, as summarized by the Board of Governors of the Federal Reserve System, indicate that 18 States permit State-wide branch banking, and 17 additional States permit branch banking within limited State areas. Nine States specifically prohibit branch banking, and 5 other states have no legislation regarding branch banking.

As of November 30, 1947, there were 14,077 banks and 4,113 branches and offices on which checks are drawn, in the United States.

Branch banking is to be distinguished from Chain Banking (q. v.) and Group Banking (q. v.). As defined by the Board of Governors of the Federal Reserve System, branch banking is a type of multiple office banking under which a bank as a single legal entity operates more than one banking office. Chain banking refers to the type of multiple office banking in which the operations or policies of at least three independently incorporated banks are controlled by one or more individuals, such chain systems being generally built around a key bank. Group banking is the type of multiple office banking in which three or more independently incorporated banks are controlled directly or indirectly by a corporation, business trust, association, or similar organization, generally popularly called a "holding company" The Banking Act of 1933 (q. v.) requires any such "holding company" controlling a member bank to obtain a voting permit from the Board of Governors of the Federal Reserve System before voting any stock of such member bank. Furthermore, the holding company affiliates must agree to subject themselves to the laws applicable to the individual bank, and are required to build up reserves in cash or readily marketable assets to at least 12% of the aggregate par value of the bank stock owned by them.

The branches of a bank are considered separate and distinct. Checks drawn on a particular branch are usually not payable at another branch or at the main office. If deposited for credit at another branch, they are cleared through the clearing house, in the same manner as a check drawn on a separate institution. Similarly, notes payable at a branch office may not be presented for payment at the head office or any other branch office.

Federal Reserve Banks are authorized by the Federal Reserve Act to establish branches both at home and abroad. Twenty-four branches of the Federal Reserve Banks are already in operation in the United States, but none has been established in foreign countries to date.

The advantages claimed for branch banking over independent banking are greater unity of policy, uniformity in regional interest rates, larger capital behind each office, shifting of funds to where they are most needed, permits small localities to be served, mobilization of reserves for the general benefit, expert supervision from the home office, and smaller overhead costs. The years immediately following the Pepper-McFadden Act were marked by an increase in bank consolidation brought about by the enabling provisions of the above-mentioned act; also a wide-spread movement to achieve "unified" banking through creation of bank holding companies for control of groups of state banks and trust companies. Examples of such still existent are the Transamerica Corporation and the Marine Midland Corporation. (See Bank of England, Canadian Banking System, Federal Reserve Bank Branches, Foreign Agencies, Foreign Branches, Pepper-McFadden Act.)

BRANCH BANKS

See Branch Banking.

BRANCH OFFICES

See Branch Banking.

BRANCHES

See Branch Banking.

BRASSAGE

The term used to designate the charge made by a Government for coining bullion, which charge is equal to or less than actual cost of coinage, as contrasted with seigniorage (q. v.), which is a charge sufficient to net a profit. England abandoned brassage charges in 1666 and the United States in 1875. In recent years, the term has become of academic interest, with the end of gold coin-

age and circulation of gold coin., Since U. S. Treasury Order of December 28, 1933, requiring surrender of gold coin in circulation, and the Gold Reserve Act, effective January 30, 1934, permanently ending circulation of gold coin, minting of gold coin for circulation has ended. (See Alloy, Coinage, Mint, Seigniorage.)

BREAK

An expression used to indicate a sudden and sharp undermining of prices occurring on a stock or other exchange. An abrupt fall in market quotations.

BREAK EVEN

An expression meaning to conclude a transaction, purchase and sale, or vice versa, with neither a profit nor a loss.

BREAK IN THE MARKET

See Break.

BREAK-UP VALUE

A term synonymous with liquidating value (q. v.), used particularly in connection with public utility holding company securities subject to liquidation or integration plans under the Public Utility Act of 1935 (q. v.), and indicating the actual or estimated market or fair values of assets per share applicable to each class of security according to its priority in the capitalization.

BRETTON WOODS AGREEMENT

The Articles of Agreement adopted by the international monetary conference of 44 nations which met at Bretton Woods, New Hampshire, July 1-22, 1944. These Articles proposed the establishment of two international institutions, the International Monetary Fund (q.v.) and the International Bank for Reconstruction and Development (q. v.), as part of the economic foundation for a peaceful and prosperous post-war world advocated by the United States, the proposals having been the outgrowth of three years of study by the technical staffs of the Treasury, State Department, Board of Governors of the Federal Reserve System, and other agencies of the U. S. Government. The United States adopted the Articles of Agreement by the Bretton Woods Agreement Act, which became law on July 31, 1945. The Articles of Agreement were signed in Washington, D. C. on December 27, 1945 by representatives of nations whose subscriptions to the Fund totaled 80% of subscriptions, thus enabling the Fund and the Bank to come into existence. Function of the Fund is to maintain orderly currency practices in international trade, while function of the Bank is to facilitate extension of long term investments for productive purposes.

BRIDGE BONDS

Bonds issued to finance the construction of bridges, either public bridges, or privately owned and toll bridges, by public bodies and municipalities, railroads and private bridge corporations.

BRING OUT

To place a new issue of securities on the market by an investment house or syndicate; to make a public offering of a new issue.

BRITISH BANKING SYSTEM

See Bank of England, Joint-Stock Banks.

BRITISH TREASURY BILLS

See Treasury Bills.

BROAD MARKET

A stock market expression used to denote that a large proportion of the stocks listed are being traded in. Broadness and activity accompany each other and usually indicate public participation. A broad market, as opposed to a narrow market, also applied to a particular stock, and indicates that frequent bids at close prices exist for that stock, that the sources of demand for it are many and diverse, and that trading in it is comparatively active.

BROKEN LOT

Same as Odd Lot (q. v.).

BROKER

An intermediary or middleman who brings together buyers and sellers of the same security or commodity, and executes their orders, receiving a commission or brokerage therefor. A broker is a specialist, and accordingly well versed in the technique of his particular market, knowing the sources of demand and supply, and being an expert on prices and price trends. There are many kinds of brokers, e. g., stock, grain, cotton, produce, note, ship, real estate, mortgage, arbitrage, insurance, discount, money, etc.

The relation between customer and broker is that of principal and agent, and in most cases, e. g., stock exchange broker, the broker is a special agent.

A stock exchange broker is a member of the stock exchange, and is bound not only by law but also by the rules of the exchange. Cash and margin accounts may be carried. On cash accounts, the broker must have an Information or Signature Card signed, giving residence, occupation, citizenship and two references. On margin accounts, besides the Information Card, the broker must have the customer's Margin Agreement, permitting the rehypothecation of his securities and the sale out of his account for lack of margin. On margin accounts, the broker advances the marginal balance, charging the customer interest on the balance until the customer resells the stock or pays off the loan and takes up the stock. The stock certificates are held for the customer by the broker as collateral for the money loaned. Ordinarily, when an account falls below the margin required by law, a margin call is sent out, and if there is no immediate response, the broker at his discretion may sell sufficient stock from the account to place it in properly margined position. Customers carrying margin accounts also sign the Security Loan Consent and the Communication Consent. An employee of a member firm may solicit margin transactions by calling personally upon a customer at his home provided the customer has previously given express permission in writing for such communication (also provided the customer's home is not located more than a reasonable distance away from location of the broker's office). Cash or margin accounts will not be accepted for persons under 21 years

of age. A member firm may take or carry a margin account in which an employee of a bank, insurance company, broker, or investment firm is interested provided the prior written consent of the employer is obtained. Under no circumstances may a registered employee of a member firm guarantee a customer against loss in his account.

Many stock brokerage houses are also investment bankers, the business of which is somewhat diverse. The following distinction may be made. Brokers execute orders for their customers on a commission basis as much they do not own or sell securities. Dealers buy securities (other than new issues) for their own account or for distribution among their clientele. Participating distributors obtain allotments of new issues from underwriting syndicates and distribute them among investors. Underwriters usually a group of investment bankers) buy an issue of securities at wholesale from the issuing corporation and obligate themselves to purchase any part of the issue that they may fail to dispose of to participating distributors during an agreed upon period. Originators are promoters of new issues of new companies, but do not necessarily underwrite them.

Under New York Stock Exchange rule effective to December, 1939, all member firms carrying customers' accounts are required to furnish to customers on demand copies of their last condensed financial statement. There are four of these statements annually, of which one must be based upon the audit by independent public accountants required by rules of the Exchange. This audit is made at least once yearly without prior notice to the member firm, and includes the verification of accounts and assets, including securities held for safekeeping. Under rule effective to July, 1939, no member firm carrying margin accounts may engage in market operations as the result of which the market value of securities long exceeds the firm's working capital with certain exceptions. This rule in addition forbids general partners of a member firm carrying customers' accounts from purchasing securities on margin either through their own firm or any other broker or dealer. Short sales made by general partners in such a member firm must be margined 100% of the market value. Thus, purchases for cash only may be made. Beginning in April, 1940, the minimum capital requirements of member firms were substantially increased, minimum working capital of at least 6⅔% of the firm's total money obligations to others being required.

Condensed statement of financial condition of one of the largest New York Stock Exchange member firms as of August 30, 1939, based on audit by independent public accountants and certified by these accountants, follows:

ASSETS

Current Assets:		
Cash in banks and on hand		$ 10,831,977.20
Segregated under Commodity Exchange Act:		
Cash on deposit	$ 1,210,021.05	
Investments in United States Government securities ($3,100,000 on deposit as margin on commodity contracts at face value or approximate market value	3,000,000.00	
Clearing funds and similar cash deposits		1,958,642.65
Deposits on account of securities borrowed		169,500.00
Receivable from other brokers or dealers:		
Securities sold but not delivered		2,301,373.61
Equities in commodity accounts		155,480.50
Receivable from customers:		
Cash accounts (since cleared)		5,095,995.41
Margin accounts (secured)		51,032,835.11
Commodity trade accounts		142,433.71
Securities owned by Firm—at market value:		
United States Government securities		11,876,584.71
Municipal securities		2,560,532.30
Other securities		326,446.11
Miscellaneous current assets		715,574.70
Total current assets		$141,642,699.15
Other Assets:		
Seats and memberships—at market value		763,910.00
Office furniture and equipment (depreciated value)		581,688.74
Prepaid expenses		61,923.70
Sundry unsecured receivables		35,258.64
Total		$143,085,480.23

LIABILITIES

Current Liabilities:		
Money borrowed on securities		None
Deposits on account of securities loaned		$ 13,101,400.00
Payable to other brokers or dealers:		
Securities bought but not received		2,317,780.74
Equities in commodity accounts		16,549.56
Payable to customers:		
Credit balances		72,159,183.13
Cash accounts (since cleared)		3,497,999.53
Margin accounts (secured)		11,305,965.77
Equities in commodity accounts		22,628,998.02
Securities sold but not yet purchased—at market value		278,171.69
Dividends and interest payable and unclaimed		267,193.30
Miscellaneous current liabilities		1,307,019.63
General Partners' credit balances (includes undistributed profits)		3,891,091.15
Total current liabilities		$127,771,352.51
Reserve—For Contingencies		914,127.72
Capital Funds:		
Subordinated Notes	$ 1,750,000.00	
Net worth	12,650,000.00	$14,400,000.00
Total		$143,085,480.23

BROKERAGE

A charge made by a broker for executing the order of his customers. The basis of the charge usually is arranged beforehand, and may be a percentage of the selling price, a fixed fee, or a fixed fee per unit of sale. This term has been replaced largely by the word Commission (q. v.).

BROKERS' BOARD

A name sometimes given to a stock exchange because only broker members are admitted to the floor.

BROKERS' LOANS

Loans made to brokers and dealers in securities by banks, for the purpose of purchasing or carrying securities, and in the aggregate representing the amount required to finance the floating supply of securities and the margin requirements of speculative traders in securities. Also called "street loans" or " call loans."

Great public interest in brokers' loans as alleged syphoning off of bank credit to finance market speculation led to regular publication of brokers' loans statistics beginning in 1926. At present, although the interest in brokers' loans is not as great as formerly because of high margin requirements and restriction and control of loans on securities by banks, three statistical series are most in use: 1. For volume of brokers' loans in the New York City money market, the series on "loans for purchasing or carrying securities" of New York City member banks, subdivided as "to brokers and dealers" and "to others," and published weekly for reporting member banks in New York City. 2. End of month figures on debit and credit balances of member firms of the New York Stock Exchange carrying margin accounts. 3. For inclusive figures on security loans of member banks, the quarterly Member Bank Call Report's classification of "loans on securities, except to banks," further classified as "to brokers and dealers" in New York City and outside New York City, and as "to others." Current figures on all three series are available in the monthly Federal Reserve Bulletin.

Between October, 1928 and October, 1929, total security loans are estimated to have increased from $12,825 million to $17,115 million, including increase from $2,749 million to $2,824 million in bank loans to brokers and dealers; increase from $6,375 million to $7,875 million in bank security loans to other customers; and sharp increase from $3,701 million to $6,416 million in loans to brokers and dealers by "others," meaning lenders other than banks and thus beyond control of the banking authorities. The pyramiding of this security market credit and its subsequent deflation led to imposition of restrictions on security loans of banks and also prohibition to banks of loans for the account of others, as well as inauguration of margin requirements. The Banking Act of 1933 and the Securities Exchange Act of 1934 prohibited banks from acting as agents for depositors in extending security loans; the Board of Governors of the Federal Reserve System under the Banking Act of 1933 can fix the percentage of a member bank's capital and surplus that may be loaned on securities, as well as limit rediscount privileges of banks that continue to expand security loans after official warning to desist; and pursuant to the Securities Exchange Act of 1934, the Board of Governors of the Federal Reserve System may fix maximum loan values on registered securities, thus imposing margin requirements. By Regulation "T", relating to extension of credit by brokers and dealers, and effective October 1, 1934; and Regulation "U", relating to loans made by banks for the purpose of purchasing or carrying listed securities, and effective May 1, 1936, the Board of Governors of the Federal Reserve System now exercises close control over margin requirements and security loans. (See Call Loan, Call Money Market, Federal Reserve Board Regulations.)

BROKERAGE OFFICE ORGANIZATION

A complete and well-equipped stock commission house is organized with the following departments: (1) customers' room containing quotation boards for all active stocks, stock and bond tickers of the various exchanges, bulletin board and news ticker, and representatives to take orders and furnish information; (2) telephone division for answering inquiries and taking orders for execution by those who cannot visit the customers' room; (3) correspondence division for taking care of business and inquiries received by mail; (4) private wire system (for wire houses) to connect home office with branch offices and correspondents and available for orders, quotations, and news; (5) statistical department to provide information and figures on all corporations whose stocks or bonds are listed; (6) order department which transmit orders from the office to the floor of the exchange for execution, giving report of executions, quotations, and open orders (monthly); (7) accounting department which (a) figures and posts buying and selling orders as executed and mails notices of such executions, (b) records receipts and disbursements of cash, (c) record loans from banks with supporting collateral, together with substitutions of collateral and comparisons, collects and credits dividends and coupons, (d) records the receipt, delivery and transfer of securities purchased and sold through the Stock Clearing Corporation or directly, (e) handles customers' ledgers, figures margins, and sends margin notices when additional sums are required to protect the customer's equity, and (f) renders monthly statements of accounts. The accounting department is under the supervision of the cashier, who is responsible for cash, loans, and receipts and deliveries of securities.

BRONZE COINS

One-cent pieces, sometimes known as coppers, and as pennies, are the only bronze coins now minted in the United States. One-cent pieces currently outstanding consist of the following variations in content: (1) 95% copper, 4% tin, 1% zinc; (2) 95% copper, 5% zinc; (3) 70% copper, 30% zinc (coined briefly during World War II). They were made full legal tender by the Thomas

Amendment of May 12, 1933 (q. v.) and Public Resolution No. 10 of June 5, 1933 (q. v.). Previously, pennies were legal tender only up to 25¢ in any one payment. Coinage of two-cent bronze pieces was discontinued in 1864.

BUBBLE ACT

The name given to an act passed in England as early as 1720 in an effort to restrain promoters from selling stocks to the public in fanciful and visionary enterprises as a result of widespread losses occasioned by the "Mississippi Bubble," and other foreign trade and land failures. This act was a forerunner of our modern Blue-Sky Laws (q. v.).

BUCKETEER

A stock exchange, grain, cotton or other broker who does an illegitimate business. (See Bucket Shop.)

BUCKET SHOP

A dishonest and illegitimate brokerage house, which usually operates in stocks, grain or cotton. The essence of bucket-shop operations is the non-execution of customer's orders, or, if executed, the stocks are again bought or sold through a "house" account, or "dummy" account, so that at the end of the day's business no securities are held. The bucket shop takes a position in the market opposite that of the customer, and since the prevalent attitude of the amateur speculator is that of a Bull (q. v.), the position of the bucket shop is normally that of a Bear (q. v.). Consequently, a falling market is profitable for the bucket shop, while a rising market is apt to precipitate it into bankruptcy. The bucket shop is thus a place where the broker bets against the customer without his consent. It is a place where wagers are made on security quotations, and dealings are in profits and losses rather than in the securities themselves. Whereas the legitimate broker merely acts as agent for his customer and executes his orders accordingly, the bucketeer stakes his judgment against that of the customer.

The success of the bucket shop consists in misleading its customers, accepting inadequate margins, upon the ability to get stock exchange quotations, and upon a falling market.

In their original form, bucket shops were merely quotation betting places, since stocks were actually neither bought nor sold. The broker merely made bookkeeping entries and kept accounts with customers as if orders were executed. Dealings of bucket shops, therefore, had no effect in the making of stock prices. This old type of bucket shop became obsolete by 1916 as a result of the Hughes investigation of 1909 and the stricter legislation that ensued. In the bear market of 1919-1921, bucketeering again flourished under a more subtle and artful guise. The bucketeer actually executed orders to buy and sell stock, but immediately reversed the transaction through various "dummy" accounts (perhaps names of actual individuals) so that no actual position existed. A rising market began in the autumn of 1921, and by early 1922 many bucket shops came to grief when customers asked for delivery of the securities they had bought upon payment of the debit balance.

Anti-bucket shop laws have been enacted in most of the states, and the rules of every reputable exchange expressly prohibit the bucketing of orders, violations being punishable by expulsion. In addition, the Securities and Exchange Commission, through its regulations and visitorial powers, and dealer associations, through their self-policing, make the bucket shop a vestige of the past.

BUCKETING

See Bucket Shop.

BUDGET

A term originally applied to an itemized schedule of estimated government receipts from taxation and expenditures covering the fiscal year, prepared in advance as a guide or control for government finances. The use of the term is now extended to apply to any estimate of income and expenses, whether for a government, business, or household.

The purpose of a budget is to control expenditures with a view to keeping them in proper relationship with income and with one another, i. e., to co-ordinate the financial plans and estimates in advance, in order to enable the management to check up actual with projected operations, and to provide for discrepancies as they occur. The business budget idea has been adopted by most progressive concerns in recent years as a scientific means of co-ordinating all activities, and predetermining profits.

The business budget is usually prepared by the treasurer or comptroller, acting in conjunction with a planning department, or a committee of department heads. Estimating expenses and sales is based upon the experience of former years modified by a consideration of current trade conditions and sales policy. A budget may be complete or partial, i. e., a master budget or sub-budget. A master budget comprehends the entire range of financial activities, while a partial budget is limited to estimates for a single department, e. g., advertising.

The finances of the United States Government are controlled by a budget under the supervision of the Director of the Budget. (See Bureau of the Budget, National Budget.)

BUDGET BUREAU

See Bureau of the Budget.

BUILDING AND LOAN ASSOCIATION

A moneyed corporation similar in organization to a savings bank and designed to encourage saving and to permit its members to acquire homes on easy terms. The New York banking law defines a building and loan association as: "A domestic moneyed but non-stock corporation organized for the purpose of encouraging industry, frugality, home-building, the saving of money by its members, the accumulation of savings, the lending of such accumulations to its members, and the repayment to each member of his savings when they have accumulated to a certain sum, or at any time when he shall desire the same, or the association shall desire to repay the same. The term, 'savings and loan asso-

ciation,' shall include every corporation, company or association doing business in this state and having for a part of its title or name the words 'building association,' 'building and loan association,' 'building and mutual loan association,' 'savings and loan association,' 'Savings association,' 'co-operative loan association' or 'co-operative bank' and every corporation, company or association whose shares are wholly or in part payable by a cumulative fund in regular or periodical installments.''

They are the oldest form of co-operative credit institutions whose operations are almost exclusively confined to the local zone which they serve, and besides the titles mentioned above in the New York banking law are known as homestead aid associations, mutual loan associations and building societies.

There are various plans of operation, e. g., the serial or Pennsylvania plan, and the permanent or Ohio plan, but all are modifications of the same principle. The associations are capitalized by selling shares to members on the installment plan. Certain weekly or monthly sums are due until the full amount paid with interest accrued equals the maturing value, which usually ranges from $100 to $200. Shares are given two values, a holding or actual value, and a withdrawal value. At maturity the actual value is the par value, and is the value upon which loans, not exceeding 85 per cent. thereof, are made. The withdrawal value is less than the actual value, and is the amount the owner may withdraw prior to the maturity of the share. In the Ohio plan, however, shares are continuously issued, and no penalties are imposed for withdrawal before maturity, since it is the intention under this plan to encourage non-borrowing members to purchase shares for the sake of the interest.

Under the auction method of awarding loans, when accumulations are sufficient they are loaned to the member who offers the highest rate of interest, i. e., the highest bonus in addition to the regular rate, with the shares as collateral, which are assigned to the association. In the meantime interest is paid upon the loan along with unpaid installments on the stock until it matures, when it is applied against the principal of the loan and any balance is returned to the member. Under the Ohio plan, there is a uniform interest rate to all, and loans may be made to persons having little or no stock in the association.

Many building and loan associations have now become members of the Federal Home Loan Bank System (q. v.), either by retaining their present organization or by converting into Federal savings and loan associations (q. v.), under charters issued by the Federal Home Bank Board of Washington, D. C. On June 27, 1934, under the National Housing Act, the Federal Savings and Loan Insurance Corporation was created to insure up to $5,000 savings and investment accounts. Insurance is optional for state-chartered savings and building and loan associations, but is mandatory for all Federal Savings and Loan Associations.

BULGE

A stock market expression to denote a small and sudden, but unsustained, advance in security prices.

BULL

A common term used among operators in various markets, and applied to a person who believes that security or commodity prices will rise, and who buys on that assumption.

Bulls are market optimists and take a favorable or constructive view of business conditions. On the grain and cotton markets, however, a bull may be one who expects a rise in prices through a blight, flood, drought, frost, or some other unfavorable development that causes higher prices by creating a shortage.

One may be a bull on a particular security, but without being "bullish" on the entire market. It is said that some persons are always bulls and some persons are always bears. The successful trader is likely to be neither one nor the other, but adjusts his attitude, whether it is "bullish" or "bearish" to fundamental conditions.

BULL MARKET

A market in which the bulls are in ascendancy and optimism and rising prices prevail. In such a market short selling is reduced to a minimum, sales being confined largely to long stock. While there are always technical reactions in a bull market, due to profit-taking on long stock and scattered short selling, there is always the expectation that the market will move to higher levels. The term usually applies to long-term swings of the market. In the past, the average bull market in stocks has run about two years. Recent bull markets have been those of 1904-1905, 1908-1909, 1915-1916, 1918-1919, 1922-1929 and 1942-1946. (See Speculative Cycle.)

BULLION

Metal in the mass; gold or silver in the crude or in the form of bars, lumps, ingots, or nuggets, whether of standard or other fineness, as distinguished from minted coins, which are known as specie. Gold bullion, usually in the form of bars, is employed in the settlement of international balances, its value being determined by its weight and fineness. (See Assay Office, Coinage, Mint.)

BULLION BROKER

A person or firm which deals in gold bullion for the purpose of supplying bankers and exporters who require it for the purpose of shipment, i. e., settling foreign trade balances, or to take advantage of a higher price in a foreign market. Sales are also made to jewelry and dental manufacturers. Since January 30, 1934, private gold holdings, either coin or bullion, are forbidden except in limited amounts for licensed purposes. Gold may still be held by the Federal Reserve Banks under earmark for the account of foreign central banks or governments, but such gold is not part of the monetary gold stock of the United States, which is all held by the Treasury.

BULLION POINTS

See Gold Points.

BULLION VALUE

The commercial or market value of a coin as metal, as distinguished from its face or coin value. Under the traditional gold standard, with unlimited gold coinage, the bullion or commercial value of gold coin was equal (allowing for any abrasion) to the face value of the coin. In the United States, various Treasury Orders in 1933 retired gold from circulation, and the Gold Reserve Act

of 1934 transferred title to all gold held by the Federal Reserve Banks to the Treasury. The bullion value of silver coins (dollars, half dollars, quarters and dimes), and of minor coins (5¢ and 1¢ pieces), is considerably less than the face or coin value, the difference being dependent upon the current market price of the metal contained in these coins. Under Act of May 12, 1933, all coin and currency of the United States were made full legal tender for all debts, public and private. (See Gold Standard, Silver Dollar, Token Money.)

BUNCHED

This term has two meanings:

(1) An expression used to denote consecutive sales of the same security at the same or different prices recorded on the tape of a stock exchange ticker.

(2) When brokers combine orders from different customers for execution in a single transaction, they are said to be "bunched." This practice is contrary to the rules of the New York Stock Exchange.

BUNCO

The practice of cheating or swindling by so-called confidence men, who play upon the credulity and avarice of their victim. After winning the confidence of the intended victim, the favorite practices are to induce him to purchase worthless stock, to cash a "bogus" check, or impose counterfeit money upon him. (See Swindling.)

BUNCO GAME

See Bunco.

BUOYANT

A stock market expression used to denote that prices have a rising tendency.

BUREAU OF ENGRAVING AND PRINTING

One of the bureaus of the Treasury Department and located in Washington, D. C. Its function is to design, engrave, print and finish the various kinds of United States paper money, United States Government securities; postage, revenue and customs stamps, and United States War Savings Stamps. It also engraves and prints pension certificates, commissions, disbursing officers' checks, warrants, transportation requests, drafts, etc. (See Treasury Department.)

BUREAU OF STANDARDS

See National Bureau of Standards.

BUREAU OF THE BUDGET

Created by Act of Congress passed June 10, 1921, the Bureau of the Budget was originally set up in the Treasury Department, but in 1939 was transferred to the Executive Office of the President. The Bureau is under the supervision of the Director of the Budget. Primary duty of the Bureau is to assist the President in the preparation, supervision and control of the budget, but its work also extends to coordination of Executive agencies, conducting research in efficiency and economy of operation of Government departments, and similarly assisting the President in managerial and fiscal matters.

BUREAU OF TRUSTS

One of the bureaus in the former Office of Alien Property Custodian. Functions of the Office of Alien Property Custodian were transferred in 1946 to the Department of Justice, where it now operates as the Office of Alien Property. The "Terminal Report" of the Alien Property Custodian in 1946 reported that the Office had seized property valued at $300,000,000, giving it direct or indirect control over assets valued at nearly $500,000,000, as well as controlling 45,000 patents and inventions, at least half a million copyrights, and many other valuable interests. Most of this property was seized during hostilities, but some was seized after termination of the war as part of the program to eliminate all interests in property in the United States owned by hostile German and Japanese nationals. However, legislation passed in 1946 permits the return of property to non-hostile persons such as nationals of countries which were occupied by the enemy and the payment of debt claims of American residents against the former enemy owners of seized assets.

BUSINESS BAROMETERS

Trade data; indices of industry and commerce; statistical indicators of business conditions; fundamental and comparative business statistics by which business volume, activity, credit supply, price trends, profit prospects and investment opportunities may be measured. Like weather barometers which forecase meteorological conditions, business barometers may also be used as instruments to forecast business, credit and investment tendencies.

A vast amount of statistical data relating to business is now prepared in the United States by the Government, co-operative trade associations, individual businesses, trade journals, and private economic and statistical bureaus engaged in the business of business analysis and forecast. While the United States has made important progress in statistical compilations and is probably ahead of any other nation, from the viewpoint of the barometrician the gaps in business data still leave much to be desired.

Business barometers when analyzed and interpreted by trained business men and business analysts afford a basis for the scientific appraisal and forecast of business conditions and prospects which is particularly useful in business planning. The chief risks of business consist of estimating consumption, production costs, and prices. Sales policies and the production programs largely depend upon knowing probable sales and prices in advance. In a word, the business man is in a position to eliminate much of the risk of business if he can successfully forecast price trends which are equally important on the buying and selling sides. In the lumber industry, for instance, the necessary barometers for accurately predicting future price trends on the supply side would be: (1) production, (2) shipments, (3) accumulated stocks on hand, (4) invisible stocks, (5) cost of production, and (6) raw material reserved. On the demand side the barometrician would want to have the following data: (1) current orders, (2) current deliveries, (3) purchasing power, (4) potential demand as shown by trade reports from the customary markets, e. g., building, furniture, vehicles, etc., and (5) changes in public taste.

Barometers are sometimes divided into three classes—business, investment, and credit. While the separation may be advantageous from some points of view, it should be recognized that they are mutually interdependent. Good business conditions depend upon

favorable credit conditions; likewise security prices are dependent upon the state of business and credit.

New York Stock Exchange quotations probably constitute the best single "all-purpose" business barometer because they represent the composite judgment of hundreds of business men, investors and professional speculators. The history of price movements on the New York Stock Exchange shows that these movements anticipate with amazing accuracy business and profit trends in the United States. Stock exchange price movements usually foreshadow or "discount" changes in the business situation from three to nine months ahead, and if properly interpreted became a valuable barometric index of future conditions. It also indicates the channels in which capital may be most profitably invested, as well as the errors of promoters, bankers and financiers in the misapplication of capital.

Business barometers are sometimes subdivided in four classes: (1) measures of business activity (volume of trade), (2) measures of production, (3) measures of consumption, and (4) measures of price trends and profit prospects. While these are naturally dependent on one another, it may prove useful to keep them distinct. They are presented as follows:

MEASURES OF BUSINESS ACTIVITY (VOLUME OF TRADE)

1. Railroad gross earnings.
2. Car loading.
3. Bad order cars.
4. Bank clearings.
5. Debits to individual accounts.
6. Imports and exports.
7. United States postal receipts.
8. Steel shipments.
9. Port clearances and idle shipping tonnage.
10. Shipments of grain and live stock.
11. New enterprises.
12. Gasoline consumption.
13. Employment.
14. Chain-store and mail-order house sales.
15. Sales of representative department stores.
16. Cotton cloth production.

MEASURES OF PRODUCTION

1. Government crop reports of estimated and actual yields.
2. Pig iron.
3. Steel ingots.
4. Copper.
5. Building contract awards (permits).
6. Bituminous coal.
7. Lumber.
8. Crude petroleum.
9. Active cotton spindles.
10. Kilowatt hours generated by public utilities.
11. Automobile production.
12. Boot and shoe production

MEASURES OF PRICE TRENDS AND PROFIT PROSPECTS

1. Index numbers of wholesale prices. (See Index Numbers.)
2. Prices of basic commodities, e. g., grains, cotton, steel, pig iron, copper, petroleum, coal, rubber, live stock, lumber, silk, etc.
3. Average prices of bonds and stocks.
4. Reports of earnings of basic industries, public utilities and railroads.
5. Dividend disbursements of key industries.
6. Business failures.
7. New Domestic capital issues.
8. New incorporations.

CREDIT BAROMETERS

1. Excess bank reserves.
2. Federal Reserve System ratio of reserves to liabilities.
3. Ratio of deposits to loans for member banks.
4. Money rates for: (a) call loans, (b) time loans, (c) bankers' acceptances, (d) commercial paper, (e) open market transactions.
5. Federal Reserve rates of rediscount.
6. Federal Reserve notes in circulation.
7. Official estimates of monetary stock.
8. Gold movements.
9. Gold production.

INVESTMENT BAROMETERS

1. Money rates.
2. Average bond prices.
3. Average stock prices.
4. Municipal bond sales.
5. Activity of the New York Stock Exchange.
6. New capital issues.
7. Refunding issues.

BUSINESS CYCLE

An interval which embraces alternating periods of business prosperity and depression. It is one of the most significant phenomena of the capitalistic system and appears to be an outgrowth of our modern credit system in which production takes place in advance of consumption. Business volume and commodity prices do not remain constant, but are subject not only to seasonal variation, but to long-term fluctuations. In other words, business travels in waves, and excesses of activity appear to be counteracted by excesses of depression.

(1) Crisis—This is the turning point or decisive moment which marks the collapse of the period of prosperity, inflation, extravagance and high prices. It is usually initiated by a buyers' strike as a reaction from high prices. Crisis is likely to be followed by a panic. This is primarily a financial phenomenon characterized by a collapse of the credit structure, universal demand for money payments, lack of confidence in the ability of debtors to pay debtors to pay debts, and usually by a series of important business, brokerage and banking failures. Banks are the storm centers of panics, since everyone is experiencing difficulty in securing an ade-

quate supply of cash. If important failures occur, "runs" are likely to be made upon the banks, and a great strain is placed upon the banking system.

(2) Emergency Liquidation—Following the crisis (and panic if there is one) comes a period of emergency liquidation. During the previous period of prosperity production has been at a high rate, leading to an overstocking of goods at high prices. When the crisis announces the end of the period of high prices, businesses are eager to unload or to "get out from under" before prices decline further. There is, moreover, an oversupply of goods and a shortage of cash. Quantities of goods are, therefore, placed on the market for what they will bring.

(3) Depression—This is a period of "hard times" in which the disturbance in the normal equilibrium between supply and demand is still felt. Prices are low and efforts are made to work off the excess of goods. There is a drastic curtailment of production, resulting in widespread unemployment, reduction or elimination of profits, accumulation of money supply through the deflation of credit, and a general practice of economy. There is a constant "feeling for the bottom" in the price movement.

(4) Readjustment—When the bottom of the price movement has been struck, the period of readjustment begins. It is characterized by irregular and uneven price movements which are in process of stabilization and harmonization; also by sharp competition, lower production costs, elimination of the of the inefficient (numerous business failures) but with the return of more cheerful sentiment.

(5) Recuperation or revival—The period of readjustment blends so imperceptibly into the recuperative phase that the latter is not easy of detection. By this time the deflation process has been completed, bank reserves are high and interest rates are low. Lower prices begin to stimulate demand, first noticed at the retail stores. Recuperation may be hastened by such propitious events as bumper crops, increase in foreign trade, or a boom in building. The increase in retail demand communicates itself to the wholesaler, jobber and manufacturer, until normal conditions reappear.

(6) Prosperity—The economic forces which account for the revival also account for prosperity except that they act more intensely. As the demand for goods increases industry picks up, more labor and capital are employed, as a result of which purchasing power is increased. This, in turn, stimulates demand, and because stocks have become depleted production and deliveries lag behind orders. This condition leads to increased production costs and contract renewals at higher rates. As costs advance, prices, wages, rents and interest rates rise. A large volume of business is being done on a rising market and business men are making large profits and laborers high wages. For a time, at least, the prosperity is cumulative, since purchasing power increases in proportion.

(7) Over-extension and speculation—Unfortunately the period of prosperity does not last. It contains elements of danger. Sooner or later businesses find existing facilities inadequate to supply the demand. This leads to an expansion of facilities acquired at high costs. Output is increased, but also at higher costs. The program of expansion has tightened credit and raised interest rates, but the lure of profits due to rising markets, provides a powerful incentive for business to produce at the maximum. Prices rise, profiteering sets in, extravagance in consumption appears, and credit becomes inflated. In the final stages, costs rise more than selling prices, due to the decline in the efficiency in labor, rising raw material prices, and higher interest rates. Speculation for further rise in prices tends to make prices rise higher than warranted, finally resulting in a buyers' strike. This leads to a crisis.

While a business cycle is a rhythmical phenomenon, it has no definite periodicity, e. g., three years, seven years, or twenty years. No two business cycles are alike, but rather consist of a different combination of factors.

In reviewing the history of business cycles, crises, panics and depressions in the United States, it must be borne in mind that the causes of fluctuations in business are highly controversial and only imperfectly understood. Many hypotheses have been advanced since business recessions first appeared in American history and innumerable panaceas have been proposed. An outstanding authority, Wesley C. Mitchell in "Business Cycles and Unemployment," wrote:

"Fifteen times within the past one hundred and ten years, American business has passed through a 'crisis.' The list of crisis years (1812, 1818, 1825, 1837, 1847, 1857, 1873, 1884, 1890, 1893, 1903, 1907, 1910, 1913, 1920) shows that periods between successive crises have varied considerably in length. Further, no two crises have been precisely alike, and the differences between some crises have been more conspicous than their similarities. It is not surprising, therefore, that business men long thought of crises as 'abnormal' events brought on by some foolish blunder made by the public or the government which is often summed up by the newspapers in a picturesque phrase 'the Jay Cooke panic' of 1873, 'the railroad panic' of 1884, 'the Cleveland panic' of 1893, 'the rich man's panic' of 1903, 'the Roosevelt panic' of 1907.

"Longer experience, wider knowledge of business in other countries, and better statistical data have gradually discredited the view that crises are 'abnormal' events, each due to a special cause. The modern view is that crises are but one feature of recurrent 'business cycles.' Instead of a 'normal' state of business interrupted by occasional crises, men look for a continually changing state of business . . . in a fairly regular way. A crisis is expected to be followed by a depression, the depression by a revival, the revival by prosperity and prosperity by a new crisis. Cycles of this sort can be traced for at least one century in America, perhaps for two centuries in the Netherlands, England, and France, and for shorter periods in Austria, Germany, Italy, Spain, and the Scandinavian countries. Within a generation or two similar cycles have begun to run their courses in Canada and Australia, South America, Russia, British India and Japan.

"At present it is less likely that the existence of business cycles will be denied than that their regularity will be exaggerated. In fact, successive cycles differ not only in length but also in violence, and in the relative prominence of their various manifestations. Sometimes, the crisis is a mild recession of business activity as in 1910 and 1913; sometimes it degenerates into a panic as in 1873, 1893, and 1907. Sometimes the depression is interrupted by an abortive revival as in 1895, sometimes it is intensified by financial pressure as in 1896 and 1914. Sometimes the depression is brief and severe as in 1908, sometimes it is brief and mild as in 1911, sometimes it is both long and severe

as in 1874 to 1878. Revivals usually develop into full-fledged prosperity, but there are exceptions like that of 1895. Prosperity may reach a high pitch as in 1906-1907 and 1916-1917 or may remain moderate until overtaken by a mild crisis as in 1913 or a severe panic as in 1893."

In their latest work, "Measuring Business Cycles" (1946), Profs. Arthur F. Burns and Wesley C. Mitchell find little or no confirmation in statistics on cycle duration that business cycles have undergone noteworthy secular changes. Their study shows that in the years 1908-1933, the average duration of a business cycle lasted 42 months, as compared with 61 months in the years 1854-1885, and 42 months for the middle period studied. Within each period, moreover, the variance of duration was similar, ranging from 29 months for the shortest and 63 months for the longest in the period 1908-1933, as compared with 30 months for the shortest and 99 months for the longest in the period 1854-1885. "It is possible that a lasting change has taken place in the character of the business cycle since 1914," the authors note, "but we do not have as yet a sufficient number of cyclical observations to establish the result with confidence." Some evidence is also found, although termed far from conclusive, that cyclical fluctuations in the United States have intensified.

Profs. Burns and Mitchell also find that the 1933-1937 period consisted of a single cyclical expansion which "unlike past recoveries in this country were subject to repeated political shocks." The extent to which Government can or should intervene in an attempt to iron out the business cycle has been a matter of great contention in recent years by economists and politicians alike since the deficit financing and spending program of the Roosevelt Administration was first tried in an effort to "prime the pump."

BUSINESS FORECASTING SERVICES

If cycle movements of prices in commodities, securities and money actually occur, as explained under the term Business Cycle (q. v.), and business conditions and price movements are subject to analysis and interpretation as explained under the term Business Barometers (q. v.), then price movements become, in part at least, amenable to scientific forecast. While most business men recognize the validity of the principles underlying the business cycle and the importance of watching business barometers, few regard themselves as capable of analyzing and interpreting available data first hand. Business forecasting has, therefore, become a specialized profession.

Various organizations are engaged in the business of selling business, speculative and investment forecast services. The statistical services, which provide factual descriptive data in manuals as well as interpretative services, are:

Fitch Investors Service

Moody's Investors Service

Standard & Poor's

The interpretative or economic services, in addition to the above, include:

Alexander Hamilton Institute Service

American Institute for Economic Research

American Institute of Finance
Babson Statistical Organization
Brookmire Economic Service
International Statistical Bureau
Investment Timing (National Securities & Research Corp.)
The Book of Indices (Mansfield & Porter)
United Business Service
Value Line Investment Survey

United Business Survice Features as part of its service the United Opinion Report, which collects the interpretations of the Alexander Hamilton Institute Service, American Institute for Economic Research, Babson, Brookmire Economic Service, International Statistical Bureau, Investment Timing (National Securities & Research Corp.), The Book of Indices (Mansfield & Porter), and Standard & Poor's.

Besides the above, there are active a number of interpretative and market advisory services. The Investment Advisers Act of 1940 (q. v.), effective November 1, 1940, requires registration with the Securities and Exchange Commission by individuals, partnerships, corporations or other forms of organization who for compensation engage in the business of advising others either directly or through publications or writings as to the value of securities or as to the advisability of investing in, buying or selling securities, or who for compensation and as part of a regular business, disseminate analyses or reports concerning securities.

In addition to the above services available to the public, there are many technical services usually available only professionally, such as the Argus Research Corporation service on securities, Copeland railroad traffic charts, Dun and Bradstreet confidential credit reports, National Stock and Bond Summary service, on quotations, White & Kemble mortgage maps, etc. Many brokers, commission houses and banks, such as the Cleveland Trust Company, Guaranty Trust Company of New York, National City Bank of New York and the New York Trust Company, also provide free of charge daily, weekly, or monthly publications containing business forecasting data. Finally, the financial sections of metropolitan newspapers, particularly in Annual Reviews, and financial magazines and financial newspapers (q.v.), contain both interpretative and factual business forecasting data.

Government publications, complete catalog of which is obtainable from the Superintendent of Documents, U. S. Government Printing Office, Washington, D. C., provide a primary source of business forecasting data. The survey of Current Business, published monthly by the Department of Commerce, and the annual Statistical Abstract and Commerce Yearbook; the monthly Federal Reserve Bulletin of the Board of Governors of the Federal Reserve System; and the Monthly Bulletins of the regional Federal Reserve Banks may be cited as particular sources.

Business and investment forecasting services are sold out of recognition of the fact that the largest profits in business and in speculative commitments are derived from anticipating price changes. If forecasts are accurately made they may become the source of increased profits for the subscribers. These services are usually divided in several parts in order to make an appeal to business men who are primarily interested in commodity price changes and general business conditions, to speculators who are interested in stock and commodity market prices, and to investors who are interested in investment securities.

(See Financial Magazines, Financial Newspapers, Manuals, Mercantile Agencies, Moody's Investors Service.)

BUSINESS INDEX

See Index-Numbers, New York Times Business Index.

BUSINESS INSURANCE

A generic title to comprehend any kind of insurance taken out for insurance purposes, e. g., fire insurance, liability insurance, rain insurance, plate glass insurance, use and occupancy, etc. In a special sense it applies to life insurance taken out by the heads of a large business or by wealthy men to make good the loss to the business or personal estate which would be caused by their premature death. Life insurance is a potential quick asset, and the money that becomes available when the originator or "master mind" of a business dies, providing his life has been insured for the benefit of the business, fortifies the business against loss of prestige at a possible shrinkage of credit. The theory is that the insurance money will tide the company over the transition period until the successors in the business prove to their business clientele that the business can be carried on as competently as before. (See Insurance.)

BUSINESS MAN'S INVESTMENT

Bonds or stocks of intrinsically sound companies, the earnings of which, and, therefore, security values, are affected by business conditions and must be constantly watched. Such investments are suitable only for persons in close touch with business conditions, and who are able to interpret the effect of changes in business conditions upon such holdings. (See Business Man's Risk.)

BUSINESS MAN'S RISK

A risk such as is involved in a business or security, the income from which is uncertain, but which promises large returns under favorable management. A risk which a business man is warranted in taking because of his knowledge of business conditions, the management of the concern in which the investment is made, and his ability to protect himself in case of unfavorable developments. But while a business man is justified in taking such a risk it would be an unwise risk for others not familiar with these facts. (See Business Man's Investment.)

BUSINESS PAPER

A term to designate that class of Commercial Paper (q. v.) which is given in payment of merchandise and discounted by the payee at his bank. Trade acceptances may be classified as business paper.

BUSINESS RESERVE

A reserve, usually designated "reserve for contingencies," created of earnings of a company and set aside against possible adverse contingencies or emergencies, e. g., business depression, damage suits, death of an important officer, unusual operating losses, or to provide ready capital to take advantage of sudden business opportunities. This reserve is usually invested in high-grade marketable securities bearing a fair interest

return. The plan of building up such a reserve is steadily gaining favor among well-conducted companies. Such a reserve may tide a business over a period of financial or business strain, stabilize dividend payments, or enable it to exploit opportunities as they may occur.

BUSINESS RISK

An expression used by credit men in contra-distinction to moral risk and property risk. The business risk is that element of a credit risk which depends upon the business ability of the managers of the concern under consideration. The chief test of this risk is capacity to produce profits over a period of time. In measuring or testing a business risk the credit man investigates the following points: (1) Is the business sound, legitimate and stable, or illegitimate and risky? (2) Is the volume of business declining, advancing or stationary? (3) Are modern production and sales methods being used? (4) What reputation does the product of the concern enjoy in the trade? (5) What has been the ratio of profits to invested capital for, say, the past five years? (6) What is the (a) range of fluctuation of gross profits, (b) percentage of operating expenses to gross profits, (c) range of fluctuation of this percentage, (d) margin of profits above operating expenses, and its range of fluctuation? (See Moral Risk, Property Risk.)

BUSINESS SOLVENCY

A condition which exists when the total assets of a business exceed the total liabilities, as distinguished from Financial Solvency (q. v.). A business may have business solvency and yet be financially insolvent. From the standpoint of credit, a business must be solvent from both points of view, in order to qualify as a good credit risk. Net worth is the measure of business solvency and net working capital is the measure of financial solvency. (See Financial Solvency, Solvency.)

BUSINESS STATISTICS

See Business Barometers, Business Forecasting Services, Index-Numbers, Statistics. Bibliography on the subject will be found under Business Barometers and Prices.

BUTTER

See Chicago Mercantile Exchange.

BUYER'S OPTION

See Option

BUY IN

(1) Another term for "to cover" (q. v.), indicating the purchase of securities or commodity contract previously sold short.

(2) Buy in "under the rule" (q. v.) refers to the purchase of a member firm's contracts to buy and sell under New York Stock Exchange rules.

BUYING BACK

Stock which has been sold short must be bought back, or "covered" in order to complete the transaction. Buying back is purchasing a security which has previously been sold short. (See Short Sale.)

BUYING IN UNDER THE RULE

See Under the Rule.

BUYING ON A SCALE

Stock is frequently bought on a scale for the purpose of averaging the purchase price on the principle that the low point of a given market movement cannot be exactly predicted. Buying orders are placed with a broker for execution at prices representing regular intervals downward, e. g., to buy 100 shares of U. S. Steel at 90, 87 1/2, 85, 82 1/2, etc. (See averaging.)

BUYING ON BALANCE

A stock exchange or broker's expression to denote excess of buying activity. While it is true that purchases and sales in the aggregate must balance, any given broker on a single day may execute (in number of shares) more buying orders than selling orders. Commission houses with a branch organization and extensive wire connections throughout the country receive and execute a wide variety of orders during a day's session. If, after the close when the books are balanced, the house determines that their clients purchased more shares than they sold, the house is said to be a buyer on balance. If, on the other hand, executions to sell were in preponderance, the house was a seller on balance.

BUYING ORDER

An order given to a broker or banker to purchase securities, commodities, etc., with certain specifications. Among brokerage houses there are three ordinary classes of orders according to the time limit. When no time limit is specified the order is considered to be good only for the date it is given, and is known as a Day Order. Orders are also placed with instructions, Good till cancelled or Good till countermanded (G. T. C. orders). Orders may also be placed with a specified time limit, e. g., one week, or one month.

As to price, buying orders may be "at the market," or "limit" orders, i. e., a stated price may be specified. (See Orders.)

BUYING OUTRIGHT

The purchase of securities for immediate delivery for which full cash payment is made. It is the contrary of buying on a margin.

BUYING RATE

A term used among foreign exchange banks and brokers to indicate the rate at which they agree to buy foreign currency, cable transfers, or bills of exchange on foreign countries for stated maturities and amounts, as distinguished from the quoted selling rates, which obviously are higher. Different rates are quoted for cables, checks, and time bills. (See Cable Rate, Check Rate, Long Rate, Short Rate.)

BY-LAWS (OF BANKS)

As part of the organization procedure for national banks, after the directors are elected but prior to the date of the organization certificate, they must take the oath of office, after which the directors adopt the by-laws. The by-laws must not be inconsistent with the bank's articles of association or with bank law. As in the case of other types of corporations, the by-laws of banks outline the powers and duties of the officers and other details of operation of the bank. The Comptroller of the Currency furnishes a model for the by-laws available as a guide. After the officers are selected by the directors, a copy of the by-laws and signatures of the officers are forwarded to the Comptroller of the Currency.

CABINET CROWD

A section of the bond trading department of the New York Stock Exchange (q.v.), also called the Book Crowd and Inactive Crowd, which handles and facilitates trading in inactive bonds. All orders on a particular issue are written on standard-sized cardboard slips and filed in cabinets, the buy orders being filed separately in different panels of the cabinet arranged according to price and order of receipt, highest bids first on the buy orders, and lowest offerings first on the sell orders. As the market permits, the orders are executed in the order of filing, the first orders in the panel at a price being the first to be executed at that price, regardless of size.

Bibliography

Shultz, B. E.: The Securities Market and How it Works, 1946.

CABLE RATE

The rate quoted for a Cable Transfer (q.v.) as distinguished from the check (demand draft) rate, and the rate for 30,60 and 90 day bills of exchange. The cable rate is always higher than the check rate, or rate for time bills, because the bank selling the cable transfer does not have use of its funds deposited abroad as long as it would in the case of issuing a check or time draft. In the case of the check, the foreign bank cannot draw against the selling bank nor charge its account until the advice arrives (10 days to 6 weeks later), or in the case of a time draft, until its maturity. In the case of a cable transfer the selling bank's account is charged by the bank ordered to make the disbursement, just as soon as the funds are paid to the beneficiary. Thus, the cable rate may be regarded as equivalent to the check rate plus interest that is saved while the check is transiting, modified by the market situation in cable funds.

From the standpoint of a purchaser, the higher rate for a cable transfer represents the cost of the privilege of deferring the purchase of funds until actually needed abroad, and leaves him in a position to take advantage of any intervening decline in rates. The cable rate does not include the cable charges which are borne by the purchaser. (See Cable Transfer, Check Rate, Long Rate, Short Rate.)

CABLE TRANSFER

A means by which a bank or foreign exchange dealer enables its customers to remit funds abroad immediately. Suppose "A" in New York wishes to remit a thousand pounds to "B" in London. "A" will apply to a foreign exchange banker for a cable transfer ordering payment to be made to "B" in London. Upon the deposit of $4,027.50 (assuming current "support" rate), plus cable charges, the New York bank will cable its correspondent in London and authorize it to pay one thousand pounds to "B" and charge to its (the cabling bank's) account for the amount. In practice, customers having accounts with a bank maintaining a foreign exchange department do not pay for the cable transfer until the following day, or the day when the funds are paid abroad. When the cable reaches the London correspondent, the latter notifies "B" to call for the funds, and upon identification pays him.

Cable transfers may be made payable in dollars or in a foreign currency, usually the latter. When in a foreign currency, the rate quoted includes the bank's commission. For dollar cable transfers a commission (usually 1/4 of 1 per cent) is charged in addition to cablegram charges. The principle of the cable transfer is the same as the domestic telegraphic money transfer, except that in the latter, foreign exchange rates are not involved.

Cable transfers are usually dealt in by bankers in order to take advantage of temporary money market conditions here or abroad, or to provide funds for meeting withdrawals from balances held abroad.

CABLES

A general term given to communications usually in code, and particularly to orders to pay money, sent abroad over transoceanic cable lines, or by wireless. (See Cable Transfer.)

CALL

This term has four meanings:

(1) A demand for the payment of an installment on the purchase price of bonds or stocks subscribed for, the time of call usually being descretionary with the issuing organization, but sometimes according to definite prearranged dates. The subscribed but uncalled capital of a corporation may be called at any time, but only in accordance with the agreement made with subscribers when the stock was first allotted.

(2) A contract, which for a consideration, gives the holder the right to purchase from the person signing the call a specified security or commodity within a certain period at a stipulated price. A call is sold and executed by a person who does not believe that the market price of a security or commodity, within the duration of the call, will go higher than the price specified in it, and that therefore the holder will have no object in exercising his right to demand delivery of the security or commodity. Contrarywise, the buyer and the holder of the call predicts that the price of the security (or commodity) will advance during the contract period. Being primarily a speculator, and not desiring to invest his money outright, he purchases the right to buy a security (or commodity) at the stated price, and if his prediction is verified, makes a profit by calling for delivery of the security (or commodity) at a price lower than that prevailing in the market. It is often used as a form of insurance, i. e., to protect paper profits and to prevent large losses. A call is not permitted on the floor of the New York Stock Exchange, but these contracts are often engaged in outside of the Exchange and executed by stock exchange members. In London, calls are a much more customary transaction than in New York. (See Put.)

(3) Comptroller's Call (q.v.).

(4) Margin Call (q.v.).

CALL COTTON

Term applied to cotton bought or sold on call, under Call Purchase or Call Sale contracts (q.v.).

CALL LOAN

A Loan which either the borrower or lender may terminate at will. Call loans are practically restricted

to stock (and other) exchange brokers and are sometimes known as "Stock Exchange," and "street" loans. While all call loans are technically subject to immediate termination at the option of the borrower or lender, distinction should be made between loans at "sharp call" and at "slow call." In the former, the right of the lender to call is used without fear or favor. They are "cold-blooded." In the latter, there is an informal tacit understanding that the loan will not be called except as a last resort. Many stock exchange loans run for months without being called.

In New York Stock Exchange practice, if a lending bank wishes to call a loan, notice must reach the borrower before 12:30 P.M. in order to compel payment upon the same day; otherwise payment need not be made until the following business day. On the other hand, if a borrower wishes to liquidate a call loan, negotiations for payment must be made before 1 P.M. in order to avoid liability for another day's interest. The statutory limit on interest rates does not apply to demand or call loans made to corporations, partnerships or individuals on stock exchange collateral in amounts in excess of $5,000. Consequently, the call loan rate may be made higher than 6 per cent., and in 1929 was actually as high as 30 per cent. Moreover, corporations are debarred from pleading usury.

(See Bankers' Loans, Call Money Market, Demand Loan, Renewal Rate.)

CALL LOAN RATE

The rate at which money lent at call bears interest. This is subject to change each day, if the renewal rate is changed. (See Call Money Market, Renewal Rate.)

CALL MONEY

Money lent by banks, usually to stock exchange brokers, which may be called, i.e., demand may be made for payment, at any time. Call Money is also known as day-to-day money, and as demand money. (See Call Loan, Call Money Market.)

CALL MONEY MARKET

A part of the mechanism of a stock exchange, by which brokers are provided with call funds secured by stock exchange collateral to meet their requirements. New York is the principal call loan center of the country, and New York banks are the chief suppliers of this form of credit. Sums are also usually invested in call loans by New York banks for the account of interior bank correspondents. Since 1935, loans for the account of out-of-town banks have been low in volume, and the Securities Exchange Act of 1934 prohibits banks from making loans to brokers for the account of others than banks, so that most of the volume of loans to brokers and dealers in New York City by New York City banks has been for own account.

In New York City, call loans are negotiated by the lending banks either directly with the borrowing brokers, or through the agency of the "money desk" at the Stock Exchange. The latter is the customary practice. The call loan renewal rate is determined each day at about 11 a.m. by the Stock Clearing Corporation, based on anticipated supply and demand during the day. Banks having money to lend are not required to offer it at the established rate, but may offer it for more or less.

The call money market offers a convenient investment medium for surplus or temporarily idle funds, or funds which a bank desires to keep in liquid condition. Since call loans are repayable at the option of the lender or borrower within 24 hours, a bank can make a commitment without endangering its cash reserve position, or without losing the opportunity of investing the funds at a higher rate on a time basis, should a favorable market eventualize. Next to cash, and balances on deposit with other banks, call loans usually represent a bank's most liquid asset.

The amount which a bank can invest in call loans depends upon its immediately available uninvested surplus funds. Banks which habitually enter the call money market, defer making their offerings until they determine the amount of their other commitments for the day. The first step in this procedure is to ascertain the ratio of cash reserve to net demand deposits in order to see that it meets the legal requirements. This in turn will depend upon whether the clearing house balance for the day is a net debit or credit. When the bank determines how much money is at its disposal for call loans, it communicates with the money desk on the floor of the Stock Exchange, giving instructions to the clerk to offer the sum on the board, either at the established rate, or some other specified rate.

Funds offered by banks at the money desk in the exchange, are allocated among the borrowing brokers in accordance with their needs, and in order of their application. Lending banks exercise no prerogative in choosing their borrowers. The rule is that unless a bank gives instructions to the contrary, it must accept the names which the clerk at the money desk reports back. A bank cannot refuse to lend because it dislikes a particular borrower, although it can call the loan the next day, if it chooses. Were it not for this rule, confusion in making call loans would be unmanageable. Some brokers, moreover, would certainly fail to get the accommodation they need. Consequently, the offerings are apportioned among the brokers without favor, provided they are Stock Exchange members and can furnish satisfactory collateral. This policy is essential if the brokers are to continue in business.

In extraordinary situations in the past, when not enough money has been offered to satisfy the brokers' demand, a money pool has been formed. Some influential banker is appointed as chairman of a bankers' committee, and his duty is to raise the deficiency by practically compelling the banks having the highest reserves to contribute to the pool. Such a condition occurs only during times of great credit stringency.

In so doing, banks protect themselves as well as the brokers, since failure of important brokerage houses tends to precipitate a panic and a collapse of security prices, which form the collateral behind the brokers' loans. For these reasons, brokers must be adequately provided for. Otherwise, they would soon fail because of inability to finance the commitments of their clients. It is almost unwritten law in Wall Street that "no brokerage house with really good collateral will be allowed to fail for lack of accommodation."

Some amount of brokers' loans are arranged on a time basis, in the market for time loans, consisting of collateral loans for 30 to 180 days. Brokers who assist in negotiating these loans receive a small commissionwhereas the brokers negotiating call loans at the exchange call money desk receive nothing. The advantage of lending time money to stock exchange brokers is that the bank can select its borrowers and the rates are somewhat above those for all loans, reflecting the time factor.

For 1947, Stock Exchange collateral loan renewals averaged 1.38%, compared with 1.16% for 1946 and 1% for 1945. The average rate on 90-day Stock Exchange time loans was increased from 1-1/4% to 1-1/2% beginning August 2, 1946. These rates compare with 1947 average rates of 1.03% for prime commercial paper, 4-6 months, and 0.87% average for prime 90 day bankers acceptances, and with 1947 average rate on new issues of U. S. Treasury 3-month bills of 0.604% and 0.88% for 9-12 month certificates of indebtedness.

Bibliography

Blaisdell, W. M.: Financing Security Trading, 1936.

CALL PURCHASE

A contract for the purchase of commodity, commonly used in cotton trading, under which the price is fixed by the seller in the future. This fixing of the price is at the "call" of the seller, and is set within a certain number of points above or below the price of a specified future on the day of fixing the contract price. (See Call Sale.)

CALL REPORT

Statement of condition of a bank submitted in response to calls by the supervisory authorities: Comptroller of the Currency for national banks, Federal Reserve Banks for state member banks, Federal Deposit Insurance Corporation for insured non-member banks, and state banking authorities for state banks and trust companies. The call report is submitted on a specified form in accordance with instructions, in response to legal requirements, generally three or four times annually, and thus is usually called the "legal" statement, as contrasted with the "condensed" statement of condition voluntarily published by banks. Statistics on national banks based on their call reports are collected and published by the Comptroller of the Currency in his Abstract of Reports of Condition of National Banks, and similar statistics on all member banks, both national and state member banks, are collected and published by the Board of Governors of the Federal Reserve System in the Member Bank Call Report. Similar abstracts and statistics are collected and published by State banking departments and the Federal Deposit Insurance Corporation. (See Bank Statement, Comptroller's Call, Member Bank Call Report.)

CALL SALE

The reverse of the Call Purchase (q.v.). A Contract for the sale of a commodity, generally used in cotton trading, under which the price is to be fixed by the buyer in the future. This fixing of the price is at the "call" of the buyer, and is set within a certain number of points above or below the price of a specified future on the day of fixing the contract price.

CALL OF MORE

A London Stock Exchange term to denote an option which gives the holder the right to call for an additional amount of stock equal to the amount named in the contract at the same price.

It is "the premium paid for the rate of calling or putting stock at some future date at a stipulated price, is sometimes included in the price at which a transaction is done, for the same date, in firm stock; thus a 'giver' of option money will buy a certain amount of stock firm for delivery, say two months ahead, at a figure sufficiently over the current market price for that period to carry with it the option of calling a like amount at the same price. This transaction in options is known as buying stock 'Call of more'." (Higgins: The Put and Call.)

CALLABLE

A term applying to securities subject to the right of an obligor or issuer to prepay before maturity in the case of bonds and to retire at any time on specified notice in the case of preferred stock. A penalty usually attaches to such right in the form of a premium over par in the case of bonds, and a premium over liquidation preference in the case of preferred stock. (See Callable Bonds.)

CALLABLE BONDS

Bonds which may be called for redemption, i. e., retired before compulsory maturity, as a result of the option exercised by the debtor, recited in the face. Bonds are frequently issued subject to call, i. e., redemption in whole or in part on any interest date, upon proper notice. Because of annoyance to investors, the issuer exercising the right of redemption is usually forced to pay a premium upon redemption, i. e., some specified amount above par value. This is to compensate the investor for the disadvantage he is put to in keeping track of his investment and of seeking a new investment medium, perhaps on less favorable terms, and for loss of interest in case notice of redemption escapes the attention of the holder, since these bonds do not bear interest after the redemption date. Callable bonds are not likely to reach a market price above that at which they are subject to call, unless they enjoy a conversion privilege of converting into stock.

There are several reasons why a debtor organization may wish to retain the redemption privilege when issuing its bonds. It is possible that the issue may be refunded at a lower rate because of a relaxation in money rates, or for sinking fund purposes. The issuer may also desire to modify its scheme of financial organization, or to finance an expansion, and therefore to consolidate its mortgages.

As the result of the era of controlled low money rates inaugurated by the Roosevelt Administration, many corporations took advantage of the call feature in their high coupon bonds to call them and replace these issues in whole or in part by low coupon issues, thus creating substantial refunding savings. Yet such was the pressure of funds available for investment and the continued drift of money rates toward lower levels, that these low coupon issues immediately went to premiums, as the following table as of June, 1947 indicates for representative new issues:

Standard & Poor's Quality Rating of A1+:	Call Price	Current Price

Callable bonds are also known as Optional Bonds and Redeemable Bonds. (See Optional Bonds.)

CALLED BONDS

Bonds which have been called for redemption (by lot or otherwise). (See Callable Bonds.)

CAMBISM

Another term for Cambistry (q.v.).

CAMBIST

A person skilled in the exchange of foreign moneys; one who is able, on the basis of current quotations, to determine the cheapest method of remitting to a foreign country; a dealer or expert in foreign exchange.

The term is also applied to a table or manual used in computing foreign exchange transactions, prepared by a cambist, in order to save time in computing each transaction separately. This manual exhibits the principal currencies of the world, their weight, fineness, and equivalent values. (See Cambistry.)

CAMBISTRY

The science of exchange of foreign currencies particularly with reference to determining the cheapest method of remitting to a foreign country. Cambistry involves a knowledge of the various countries of the world; weights, measures, and fineness of metals used as a basis of coinage in various countries; the methods of dealing in bullion; assaying operations; issuance of bills of exchange, international checks, and postal money orders; commercial parities; and computations in the arbitration of exchange.

(See Arbitration of Exchange, Foreign Exchange, Foreign Moneys.)

Bibliography

Escher, Franklin: Modern Foreign Exchange, 1932.

CAMPAIGN

In "free" markets, prior to the securities Exchange Act of 1934, a type of "organized speculation" or "demonstration" in a security or group of securities, sometimes for the purpose of depressing values, but more frequently to raise values for the purpose of attracting public participation so that stocks can be distributed at the higher levels. A campaign usually implied more or less fictitious activity and fluctuations in a stock in order to draw speculative attention to it, together with the dissemination of news and rumors upon it, favorable or unfavorable, according to the purpose of those conducting the campaign.

Under the Securities Exchange Act of 1934, manipulation of security markets is prohibited as far as feasible, with "pegging" for stabilization of markets subject to regulations.

CANADIAN BANKERS' ASSOCIATION

An incorporated body with powers and duties prescribed in an amendment passed in 1900 to the Canadian Banking Act. It is the medium through which the banking opinion of Canada finds expression, and in addition, the Association has had active functions, some of which were specified in the Act. Among these active functions some of which have been curtailed since organization of central banking in Canada, have been supervision of the note issues of chartered banks, of central gold reserves and clearing houses, and of banks in receivership. Changes in interest on deposits, imposition of service charges on deposit accounts and other operating functions have also been uniformly set through the Association. It also takes an interest in the education of the younger staff of the banks and provides instruction and examinations for junior and senior bank officers. The "Canadian Banker" is also published.

CANADIAN BANKING SYSTEM

Commercial Banking: Commercial banking in Canada is conducted by ten banks, chartered under the Bank Act, which maintain a total of over 3,000 branches or sub-agencies throughout Canada and in foreign countries, mainly in Newfoundland, the West Indies, and Central and South America. It is this branch banking characteristic which features Canadian commercial banking. Since 1900, the number of chartered banks has been reduced by a few failures and a large number of amalgamations from 38 to present total of 10. However, there has been no bank failure since 1923, and holders of bank circulating notes have experienced no loss since 1881.

Canada, with its large territory and small population, has been particularly suitable for the operation of branch banking. The head offices of the banks themselves do not take or lend funds, all the banking business being done by the branches, and each branch being given considerable independence. However, for most efficient utilization of funds, reserves may be shifted from one branch to another to meet any currency needs or to meet demand for loans. In this way, many small villages enjoy the facilities of a branch bank which otherwise would be unable to support an independent bank.

Formerly, the chartered banks had the right and power to issue and reissue circulating notes, but this was cancelled on January 1, 1945, and the sole circulation privilege now is in the Bank of Canada, the central bank. The Bank of Canada regulates the statutory cash reserves of the chartered banks, which are required to maintain not less than 5% of their deposit liabilities, payable in Canadian dollars, in reserves with the Bank of Canada, which may consist of deposits or notes of the Bank of Canada.

It is estimated that about 80% of Canada's business

Statistics of Individual Chartered Banks as of Oct. 31, 1946, with Totals for Selected Years from 1900 (Source--"Canada 1947")

Bank and Year	Branches in Canada and Abroad[1]	Total Assets	Liabs. to Share-holders	Liabs. to the Public	Total Liabs.	Loans and Discounts	Total Deposit Liabs.[2]
Bank of Montreal	444	1,844	78	1,765	1,843	361	1,693

Note.--Annual figures are averages from the respective monthly statements except in the case of the numbers of branches which are as at December 31.

[1] As at December 31 of previous year. Does not include sub-agencies which numbered 621 in 1945.

[2] Excluding inter-bank deposits.

[3] 1911.

transactions are financed by checks, rather than bank notes or coin, so that the chartered banks fill an active function in Canadian business. The banks conduct, in addition to commercial banking, a savings deposit business. Early in 1946, an agreement was made with the Government recognizing the link between savings deposits and holdings of market issues of Government securities. The banks agreed that their investments in Dominion Government direct and guaranteed issues (other than Treasury bills, deposit certificates and Treasury notes) would not average more than 90% of the amount of their Canadian personal savings deposits. The banks also agreed that their earnings on such bonds should not exceed the cost of operating their savings business by more than a moderate profit margin. This agreement, according to the 1947 Annual Report of the Bank of Canada, placed the chartered banks, in respect of their savings business, in approximately the same position as if they were separate savings institutions carrying 10% of their deposits in the form of cash and other non-earning assets.

The chartered banks are joint stock banks, privately owned and managed, but operating under uniform control and supervision. The banking system outdates the Canadian Confederation itself, formed in 1867, as the oldest chartered bank, for example, the Bank of Montreal, was established in 1817. Its charter followed closely that drawn for the first Bank of the United States by Alexander Hamilton, who had been influenced by his knowledge of the English and Scottish banking systems. The first bank charter in the Maritime Provinces, that of the Bank of New Brunswick, was by contrast influenced by the New England banking laws. When the Dominion of Canada was established in 1867, banks were authorized to continue their existing provincial charters until 1871, when the first Dominion Bank Act was passed and made bank charters subject to renewal every ten years. There are now just ten banks

UNITED STATES-CANADIAN BANK COMPARISON

United States	Canada
Type of Bank	
National banks, members of Federal Reserve System, and 48 separate state banking systems.	One type of charter, granted by the Dominion Government.
Number of Banks	
About 14,700.	Ten
Branches	
About 4,300 branches and offices, restricted at most to state-wide.	About 3,200 branches and agencies. May be located anywhere in Dominion, and in foreign countries.
Territory Covered	
Localized as to territory.	Diversified as to territory. May cover entire Dominion.
Control	
Divided into Federal Reserve System and 48 different State Systems.	Centralized. Dominion law applies to the 10 chartered banks and the same regulations apply over the entire Dominion.
Type of Business Conducted	
Commercial banking business and trust business closely associated. Security affiliates divorced in 1933.	Commercial business only. Loans made upon short term assets. Only commercial banks are allowed to use the work "bank." Investment houses and houses selling securities are entirely divorced from the banks themselves.
Control	
Local economy in banking provides for local business expansion in proportion to local resources only. This policy is alleged to stimulate community pride at the expense of financial strength.	Centralized control of banking policies at head office at each of the 10 banks. Tends to prevent over-expansion and speculation in rapidly growing cities having considerable financial strength and on the other hand develops new territories in Western Canada which would otherwise have been much slower in developing.
Directors	
Directors do not always "direct."	Directors influential in determining policies of bank Reports of attendance of directors is mailed to stockholders with annual report.
Failures 1920-1932	
About 10,000. Liabilities of failed banks 1920-1932 over $4,000,000,000.	One. Liabilities of failed bank, $18,500,000.
Capital Required	
National Banks, $50,000 in places of 6,000 or less, and up; some States have minimum requirements as low as $10,000.	$500,000 with $250,000 paid in.
Diversification of Loans	
Likely to be restricted by both locality and industry.	Diversified by industries and geography.

chartered under the Bank Act, and these together with two long-established savings banks, and the Bank of Canada with its subsidiary, Industrial Development Bank, are the only institutions in Canada legally entitled to the term "banks" or to use the term "banking" in connection with their business. Supervision of Canadian banks is exercised by the Minister of Finance, who may call for statements of condition at any time, and to whom monthly statements of assets and liabilities are submitted. Periodic bank examinations are not required, although provision is made for an annual audit by qualified auditors appointed by stockholders of the bank, who make the report for the stockholders. The auditors are selected from a group designated by the general managers of the banks and approved by the Minister of Finance.

Appended herewith is a brief comparison of banking in the United States and Canada, for quick reference. Also appended is tabulation of statistics of individual chartered banks.

CANADIAN COMMODITY EXCHANGE

An exchange organized in Montreal on October 22, 1934, to deal in silver "spot" and future contracts, following the nationalization of silver in the United States. The Exchange operated until institution of the Foreign Exchange Control Board in accordance with the Exchange Fund Order in 1940. There has since been no free market in silver, all silver transactions being cleared through the Foreign Exchange Control Board at the official rates.

CANCELLATION

An annulment or rendering void or inoperative of financial instruments, e. g., bonds, coupons, stocks, and checks, upon their payment and retirement, or transfer. The term also applies to termination of open orders for the purchase or sale of securities.

For the purpose of protecting themselves against fraud and possible presentation of a bond which may have become lost and in the illegal possession of the holder, it is incumbent upon the issuers of bonds to exercise reasonable care in their redemption and that of the accompanying coupons. A customary procedure is to provide a blank book for each issue of bonds, one page each being devoted to a single bond, below which spaces are numbered to correspond with each of the originally attached coupons. When coupons have matured and been paid off, they are cancelled and pasted in the blank spaces, according to serial number. Likewise when the bond itself has matured and been redeemed it is pasted in the space provided for it. In this way it is possible for the issuer to furnish evidence that the entire obligation has been extinguished, and that no bonds or coupons are outstanding.

Cancellation of bonds and coupons is also sometimes accomplished by cremation. (See Cremation of Bonds.)

CANCELLED CHECKS

Checks which the drawee bank has paid and cancelled. Checks are cancelled by the drawee bank on the day they are paid and charged to the drawer's account. They are usually cancelled or "cut" by means of a perforating machine which punches the following words: "Paid Date..... Name and Clearing House number of paying bank." Cancelled checks are kept in the records of the bank until the end of the month when they usually are delivered to, or called for by the customer, together with the monthly statement.

When a check is paid, it becomes the property of the drawer, but the paying bank is entitled to retain it as a voucher until the statement of account has been submitted to and reconciled by the customer, and agreed to as correct.

Cancelled checks furnish the best evidence of the payment of money and should be preserved by the drawer as receipts, or vouchers. (See Statement Department, Voucher, Voucher-Check.)

CANDAREEN

A Chinese coin. (See Foreign Moneys - China.)

CANNED GOODS EXCHANGE

See Commercial Exchange of Philadelphia.

CAPACITY

One of the three elements of Credit (q.v.).

In weighing a credit risk it is important to satisfy oneself that the management is capable and competent. The test of capacity is called the business risk among credit analysts. The most important test for measuring the business risk is the detailed operating statement showing sales, expenses, and profits (or losses) over a period of years. The final criterion of business capacity, and one that can be reduced to a mathematical basis, is whether good profits on a fairly stable basis have been made over a sustained period. On a strictly scientific basis, therefore, the measurement of the business risk can best be determined by a study of the comparative profit and loss statements taken over a period of years. The particulars to be observed in judging capacity of a business are:

1. Pertaining to personnel and methods - Managerial ability, one-man business vs. group management, modernness of methods, knowledge of financial and credit principles, knowledge of markets and sales promotion principles, use of budget system, degree of co-operation of official personnel, relations with employees.

2. Pertaining to equipment - Location of business with reference to raw materials and markets, modernness of plant equipment, cost system installed and utilized, research department.

3. Pertaining to product - Stability of demand for products, reputation of products in the trade.

4. Pertaining to results - Stability of gross sales, stability of gross and net profits, per cent. of returns to gross sales, margin of profits over total expenses, per cent. of uncollectibles to net sales, per cent. of net profits to net sales, per cent. of net profits to capital invested.

(See Business Risk, Credit.)

CAPITAL

This term has four meanings:

(1) In the economic sense, it is equivalent to capital

goods, i.e., the store of produced goods (physical) quantity rather than money value) saved, or wealth represented by the surplus of production over consumption. In other words, it is a short expression for capital goods or capital value, especially that portion of wealth set aside for the furtherance of productive enterprise. "Capital is every product which is used or held for the purpose of acquiring wealth" (Ely, R.T.: Outline of Economics.)

Economists distinguish between production goods and consumption goods. The former are instruments of production, or intermediate wealth employed in the manufacture of consumable goods or services. Thus, buildings, factories, machinery, equipment, railroads, etc., represent production goods. Consumption goods, on the other hand, comprise goods destined for immediate use, e. g., food, clothing, stocks of merchandise on retailers' shelves, personal service, etc.

(2) In the accounting sense, capital is synonymous with net worth and is measured by the excess of assets over liabilities. This is true irrespective of the form of business organization. In a sole proprietorship, capital is represented by the account or accounts which indicate the accountability of the business to the owner; in a partnership by the sum of the partners' account; and in a corporation by the sum of the various capital stock accounts, surplus and undivided profits. (See Capital Stock.)

(3) In business, a distinction is made between working capital and fixed capital. Working Capital (q. v.) also known as liquid assets which in the ordinary course of business will be converted into cash, e. g., merchandise, accounts receivable, notes receivable, etc. Fixed capital, on the other hand, corresponds roughly to the economists' notice of production goods, and consists of assets which in the ordinary course of business, will not be converted into cash, but used for carrying on the business. It is "locked up" or "sunk" into fixed assets, e. g., land, buildings, machinery, equipment, etc.

(4) In credit analysis, the Property Risk (q. v.).

Bibliography

H. G. Moulton: The Formation of Capital, 1935.

CAPITAL ACCOUNT

The account which denotes the amount of the owner's investment in a business. It represents net worth. It is known as proprietorship account in the case of a sole proprietorship, as partners' accounts in the case of a partnership, and as capital stock in the case of a corporation. (See Capital, Capital and Revenues Expenditures, Capital Stock.)

CAPITAL AND REVENUE EXPENDITURES

The proper accounting treatment of expenditures as between capital expenditures and revenue expenditures is difficult in actual practice, and various theories in law and accounting have been evolved. The most commonly accepted theory is that capital expenditures are those which, whether paid out of the proceeds of sale of capital issues, or from earnings, permanently and substantially increase the property value and therefore earning power of the concern which incurs them. They represent improvements, additions, or betterments, and therefore may be considered as chargeable to asset or property accounts.

Revenue expenditures, on the other hand, are those incurred which bring in no property and no enhancement of property presently held.

CAPITAL AND SURPLUS

A term frequently used in the condensed statement of condition of a bank to indicate the bank's financial strength. The two accounts, capital and surplus, are combined because the surplus account of a bank corresponds to capital surplus, and like capital stock, is not available for the payment of dividends. The surplus account should be distinguished from Undivided Profits, which corresponds to the earned surplus account of industrial and mercantile corporations, and which is available for dividends.

The amount of combined capital and surplus is important because the limitation upon loans to one customer is based thereon, in the case of National banks, member banks of the Federal Reserve System (in so far as Federal Reserve Bank rediscount of such paper is concerned), and some of the non-member State banks. Under the banking laws of some states, e. g., New York, the combined capital and surplus for this purpose includes undivided profits. (See Capital Stock, Undivided Profits.)

CAPITAL ASSETS

Another Term for fixed, slow, or permanent assets. (See Fixed Assets.)

CAPITAL INVESTMENTS

Investments of funds in capital or fixed assets, or in non-marketable securities, as distinguished from funds invested in liquid, or short-term assets.

CAPITALISM

Or the capitalistic system, is that by which the means of production and distribution are managed and owned by private enterprise under open competition, free markets, freedom of contract (subject to legal restrictions), and with the profit motive operating as the incentive. Capital is represented by plants, factories, mills, mines, transportation and power systems, stores and shops - all the means by which goods and services are produced and distributed. It is a highly intricate system of organization calling for specialization, cooperation, and division of labor and occupation. Any efficient economic organization needs capital, and when capitalism is contrasted with socialism or communism, the question is not one of abandonment, but who shall own the means of production. Under socialism, the means of production would be owned, or at least largely controlled, by the State, whereas in communism the means of production would be collectivized, i.e., owned communally.

Capitalism, as known in the leading industrial nations in the past 150 years, has built up an improved industrial and business technology under private enterprise. Private Capitalism, against bureaucratic capitalism, lays claim to superiority for these reasons, mainly based on competition:

1. Provides a system of rewards and incentives which elicits the best capacities in each individual.
2. Competition of prices insures a "right" price, and a steady flow of goods at the rate the market will absorb them.
3. Provides incentives for invention, better methods, lower production costs and selling prices.
4. Tends to keep the most skilled and efficient managements in business, and to eliminate the unfit.

CAPITAL ISSUES

Corporate or governmental obligations the proceeds of which have been invested in fixed or capital assets, or to add to the permanent working capital or available funds. Stocks, bonds, debentures are capital issues, as distinguished from notes and accounts payable, commercial paper outstanding, trade acceptances, payable, etc., which are current liabilities, and are in reduction of current assets. Capital issues are those that are sold to furnish the permanent or long-term funds needed permanently to carry on business or government undertakings. The amount of stocks and bonds that may be issued is limited by a corporation's charter and by-laws (See Bond, Capital Stock.)

CAPITAL LIABILITIES

The long term debts of a corporation representing the combined capital stock and bonded debt. Capital liabilities are practically equivalent to capitalization, but differ from fixed liabilities in that the latter include long term debts due to creditors and not to stockholders.

CAPITAL RATING

One of the ratings given by a mercantile agency in appraising the net worth of a business concern. It is intended to show the amount of capital invested in the business, although it is generally understood to indicate "the commercial value of the par value of the assets which the firm rated may be considered to have in its business, all things being taken into consideration." (See Credit Rating.)

CAPITAL STOCK

The stock of a corporation issued to its stockholders for money or property, or out of accumulated earnings. The entire capital stock of a corporation is divided into a number of equal parts of shares, usually with a specified par value, the exact amount authorized being fixed by the certificate of incorporation. A corporation is not obliged to issue all the stock authorized. Any amount of the authorized capital stock not issued is known as unissued stock. Issued and outstanding shares of stock are certificates of ownership held by the purchasing stockholders, representing their interest in the corporation, and capital stock is the aggregate of these shares.

The capital stock of a corporation represents its nominal value, as distinguished from its actual or property value. It represents the amount of the corporation's accountability to its stockholders, but uncollectible by them through legal procedure, as distinguished from the corporation's liability to outside creditors. It is share capital as distinguished from loan capital. (See Authorized Capital Stock, Common Stock, Preferred Stock, Full Paid Stock, Deferred Stock, Stock Certificate, Stockholder.)

CAPITAL TURNOVER

A credit term used especially among bank credit men to indicate the rapidity with which the capital (net worth) of a business is turned over, e. g., if the sales are $1,500,000 and the invested capital $1,000,000, the capital turnover is 1-1/2. It is a "vitality" index and each business has a capital turnover normal to itself. In general, the higher the turnover the healthier the condition which is disclosed. If comparative balance sheets show a falling ratio, an accumulation of idle capital is indicated. A rising ratio is favorable up to a certain point beyond which it indicates excessive borrowing, thereby making the Ratio of Debt to Net Worth (q. v.) unfavorable. (See Statement Analysis.)

CAPITALIZATION

The aggregate of the authorized par value of the stocks and bonds of a corporation, although in some jurisdictions capitalization is legally defined as the total value of the authorized capital stock. The amount of the capitalization may or may not be represented by an equivalent property value, although the latter often exceeds the capitalization. Surplus forms a part of the capital but is not represented in the capitalization.

The term capitalization is also sometimes applied to the rate-making base or value of property upon which a fair rate of return is calculated.

There are several bases of capitalization, viz.: (1) Cost of property less depreciation; (2) Cost of duplication; (3) cost of replacement on the basis of the present state of the technical arts; (4) capitalization of earning power; and (5) "prudent investment" theory.

The capitalization of a public utility corporation is usually regulated by the public service commission of the state in which it is located, if intrastate in nature, and by the Federal Power Commission, if operations are interstate.

CAPITALIZATION OF EARNING POWER

One of the bases for determining the proper capitalization or value of a business property. This method implies that a business property may be regarded as an income-producing unit in the same manner as for example, a bond or stock. Accordingly, the value of a business is equal to the present worth of an indeterminable series of probable incomes discounted at a rate of interest, currently earned for properties of the same class. Thus, a property which yields an average annual net income of $1,000 is worth $10,000 if discounted at 10 per cent. ($1,000 divided by .10); $12,500 if discounted at 8 per cent.; $16,666 2/3 if discounted as 6 per cent; or $20,000 if discounted at 5 per cent.

CAR LOADINGS

Railroads of the country report each week the number of cars of freight loaded on their lines and received from connecting railroads. The total is reported to the Association of American Railroads, which, in turn, compiles and releases the information publicly. Few gauges of business volume are more accurate, since the figures show the physical volume of goods moving from producers to consumers and from producers to producers. Unlike bank clearings or bank debits, they need no correction for changes in the price level. Representing deliveries on previous orders, they do not promptly report current business undertakings, but the lag is not more than from two weeks to a month.

Loadings are sub-classified into eight divisions, namely (1) coal, (2) coke, (3) grain and grain products,

(4) forest products, (5) live stock, (6) ore, (7) merchandise less than carload and (8) and miscellaneous. The latter two classifications comprised about 60 per cent. in 1946 of the total, and are barometric of the volume of goods passing into consumption. With this classification it is possible to gain some idea of changes in the larger divisions of industry.

Another classification is territorial, as follows: (1) New England (2) Central East, (3) Great Lakes, (4) Pocahontas, (5) Southern, (6) North West, (7) Central West, (8) South West. Changes in conditions in different sections of the country can thus be detected by comparison with preceding periods.

CAR TRUST

See Equipment Trust.

CAR TRUST BONDS

See Equipment Trust.

CAR TRUST CERTIFICATE

See Equipment Trust.

CARAT

This term has two meanings:

(1) As a unit of weight (quantitative measurement) it is equal to 3-1/6 grains troy, and is used to weigh precious stones, particularly diamonds.

(2) As a unit of quality (qualitative measurement) it is used among goldsmiths, jewelers and assayers, to denote the fineness or purity of gold or other metal, being the 24th part of any weight, e. g., pure or fine gold is 24 carat. A ring which by weight is half gold and half copper is 12 carats fine. The term "18 carat gold" means that the gold is 18/24 fine, i. e., 18 parts pure gold and 6 parts alloy.

CARE OF SECURITIES

There are two principal means to provide for the safekeeping of securities: (1) rental of a safe deposit vault or box; and (2) placing them under the custodianship of a bank or trust company. In the former arrangement, the securities remain under the depositor's exclusive supervision and control, while in the latter, they are in a bank or trust company's custody but always immediately available and subject to the orders of the owner. There has been no known instance of loss of securities deposited in a safe deposit vault where the depositor has a covering contract. Modern construction of safe deposit vaults offers too many obstacles for the operations of even the most scientific burglars. For all practical purposes these vaults are fire, water, burglar and mob proof. No such guarantees are provided by ordinary office safes, some of which even fail to provide for protection against fire.

In any event, wherever securities may be kept, the holder should make a detailed descriptive record to include number, denomination, name of issue, date of issue, due date, name of issuing organization and name of person to whom issued, if any. In case of loss, theft, or destruction by fire, or other cause, means are then available, whereby the securities may be identified, recovered, or replaced. In case securities are deposited in a safe deposit box, or held in custody by a bank or trust company, this list will be useful on many occasions and perhaps save trips to the bank. This will be true when the depositor wishes to know dividend or interest dates, or numbers in case bonds are called for previous redemption.

Registered bonds offer means of protection against loss since interest and principal are payable only to the person in whose name the bonds are registered on the books of the issuing organization. Notice of loss, however, should promptly be made in order to prevent assignment and transfer. There is no way of protecting the owner of coupon bonds in case of loss, although quick action and co-operation with the Treasury Department or Federal Reserve bank sometimes leads to the recovery of lost Government bonds. In case these bonds are lost the owner should immediately notify the Secretary of the Treasury at Washington and Federal Reserve bank of his district, giving a full description. The same notification should be sent in case of loss of registered bonds. Upon satisfactory proof of loss and the filing of an indemnity bond, a duplicate will be issued. Duplicates for coupon or registered bonds destroyed, wholly or in part, or so defaced as to impair their value to the owner will be issued upon fulfillment of the requirements of the Secretary of the Treasury, including the filing of an indemnity bond.

In case stocks are lost or stolen, notify the issuing corporation, and place a Stop Transfer Order (q. v.) with its transfer agent.

In case of loss of a municipal bond notify the treasurer of the municipality and the distributing investment banking house. If a corporation bond is lost notify the treasurer of the corporation. If a real estate mortgage is lost notify the attorneys who executed it. One purpose of Recording Acts is to preserve on public file the evidence of real estate conveyances, including mortgages.

(See Custodianships, Safe Deposit Company, Vault.)

CAREY ACT BONDS

Bonds issued by authority of the National Carey Act passed by Congress in 1894 (amended 1896) in order to encourage the reclamation of arid lands in the western states. Slowness in reclamation of arid areas under the Carey Act later led to the National Reclamation Act of 1902, by which the Federal Government stepped into the role of financier for irrigation projects through a reclamation fund built up from proceeds of sale of public land in the seventeen arid and semi-arid western states. Under the provisions of the Carey Act each of the eleven states affected had the right to select one million acres of land within its borders and to control the irrigation, and aid in settlement, cultivation and sale of such land, to bona fide settlers in tracts not exceeding 160 acres to any one person. Following its enactment, the states quickly passed bills enabling them to take advantage of the federal statute. Most of these bills authorized state officials to receive and pass upon requests of any person, company of persons, association, or incorporated company applying to construct irrigation systems, but with the requirement that the engineering plans should be approved by the state engineer and be subject to state inspection.

Bonds were thus issued by private enterprises but were secured by mortgages given by the settlers on the land, together with their water rights, and in addition such security as may exist in the irrigation system itself.

Carey Act bonds were always first liens upon land and water rights, and in many cases were secured by property having a value several times that of the issue of bonds against them. They were in no sense guaranteed by Federal or a state government, but were entitled to a somewhat better rating than other classes of

irrigation bonds. They partook of the characteristics of a mortgage, semi-municipal, and industrial bond combined. (See Irrigation Bonds.)

CARRIERS

A general term used to denote companies engaged in transportation, e g., railroad, express, steamship, street railway, subway, etc. It is particularly used in stock market terminology to designate railroads. (See Common Carrier.)

CARRY

This term has three meanings:

(1) To hold securities; to be "long" of stock.

(2) To supply funds to a customer, especially when it becomes necessary for a bank to renew the notes of its borrowers in order to tide them over a difficult period.

(3) When a broker furnishes funds to customers who trade by margin accounts represented in the difference between the purchase price of the securities (or commodities) and the customer's partial payment thereon, the broker is said to carry the securities which he holds as collateral for the customers' loans.

CARRY-OVER

This term has two meanings:

(1) A London Stock Exchange term to signify delay in settlement of a stock exchange contract from one settlement day to the next.

(2) A term used to apply to the stock of some staple commodity, e. g., wheat held in elevators, warehouses, or on farms over another year, i. e., beyond another harvest.

CARRYING BROKER

The term applied to the broker or commission house carrying a client's account.

CARRYING CHARGES

This term has two meanings:

First read Carry.

(1) The interest charged by brokers for money lent to customers in carrying securities on margin; the cost of borrowing money from a broker to carry securities purchased on margin account. Customarily, the broker under current low money rates will credit interest at the rate of 1/2 of 1% on funds left with the firm pending investment if and when such funds are invested through the broker; and interest is charged on debit balances at rates as low as can be obtainable from any source.

(2) The cost of carrying commodities held in a warehouse for speculation or otherwise, such as, charges for storage, insurance, haulage and loss of interest on the investment.

CARRYING-OVER DAY

A London Stock Exchange term meaning contango day, or postponed day of delivery.

(See Backwardation.)

CARTEL

An anglicised term for the German term kartel, which is similar, if not identical to the American industrial combination or trust. Before World War I, the cartel movement grew in Germany with great rapidity. Contrary to the situation in this country, the cartel was encouraged in Germany by favorable legislation. The purpose of encouraging the German cartel movement was to build up the German export trade. By means of developing large scale, cheap, and efficient production in finished manufactures, the cartels were often able to undersell foreign competitors.

While the cartel was a fairly well known economic development in Europe before World War I, its vigorous resumption in post-war years, coupled with the equally important tendency toward industrial mergers and consolidations, made it a factor of outstanding economic importance. The American is apt to view the European cartel from the standpoint of its possible effect on American trade. To the European, however, the cartel was first an attempt to reconstruct industry on the Continent, and only secondarily an effort to penetrate the foreign markets occupied by others.

The great weakness in European industry was a discrepancy between the productive capacity and consumption. On the whole, industries of Europe were well equipped for their operations, partly due to the stimulus of the war years. An over-taxed and impoverished population, however, did not offer an adequate market. The cartel was an outgrowth of mass production, and its object was to restrict competition. It could do this by three methods: (1) by allocating territories for market purposes; (2) by fixing prices; or (3) by actually restricting production. To be effective, an international cartel requires a very high degree of industrial organization within the countries represented. In Europe, therefore, there was a marked tendency toward growth of large monopolistic corporations. For the most part, the industries concerned involved production of raw materials or use of patents applied to raw materials (chemicals) - functions which lend themselves readily to close control under consolidated companies.

Most of the great corporations in Europe were those which were dominant in one of these two fields. For example, the Vereinigte Stahlwerke (United Steelworks) of Germany, the second largest steel company in the world and one which controlled 50 per cent. of the German output; I. G. Farbenindustrie, one of the largest corporations in the world, with a great range of products chiefly of a chemical nature; Courtaulds, Inc., of Great Britain in the rayon industry, and the Imperial Chemicals, Ltd.; Alumonum Francaise in France. The world aluminum industry was controlled almost entirely by one American company, one British company, one French company and one German state enterprise. These illustrations are cited merely to indicate that throughout the range of industries of this kind, there are one or two companies which constitute the controlling factor in their country.

With this internal organization as a basis, the cartel agreements between entire industries in different countries were facilitated. It is estimated that when World War II began, over 200 international cartels controlled over 30% of international trade, particularly in rubber, tin, steel, chemicals and quinine.

Most of these cartels were concerned with the production of a raw material such as steel, or a chemical product involving a patent, such as linoleum and rayon. Germany was a member of practically every one of these cartels while the United States was a member of various cartels, apparently chiefly motivated by the purpose of developing foreign trade.

The predominant position of Germany in the cartel movement was in keeping with that country's preeminence in industrial development on the Continent of Europe, and was related also to the trend toward indus-

trial amalgamation previously referred to. In no country in the world was industry so highly organized and so closely controlled as in Germany. France, Belgium and Switzerland followed Germany's lead, although lacking the same extensive industrial organization. Great Britain also participated in the cartel agreements of continental Europe.

The effect of the cartel movement in general throughout Europe served to facilitate a system of "managed" production and distribution, and it has been but a further step to inaugurate the trend towards nationalization of key industries now characteristic of Great Britain and continental countries. In occupied Germany, Great Britain announced that in August, 1946, it had seized through the British Control Commission the key German steel firms, Krupp, Stinnes, Vereinigte Stahlwerke (United Steelworks), and break-up of the I. G. Farbenindustrie combine also appeared to be policy of the American occupation authorities until early in 1948, further decartelization measures were ordered discontinued.

CARTWHEEL

A colloquialism for the United States silver dollar.

CASH

This term has three meanings:

(1) As a noun, money; circulating medium; coins and paper money that pass freely as currency, i. e., from bearer to bearer without indorsement. Checks, matured coupons and due bills are frequently counted as cash because they are easily converted into money. Nothing should be regarded as cash, however, which does not constitute immediate purchasing power. (See Money.)

(2) As a verb, to convert a negotiable instrument, such as a check, money order, or matured coupon, into money; or vice versa, to give the holder money for such an instrument. (See Cash Items, For Cash.)

(3) A Chinese coin. (See Foreign Moneys - China.)

CASH ACCOUNT

An account in the ledger which summarizes the cash transactions of a business, the left or debit side representing receipts and the right or credit side, disbursements. The balance represents cash on hand. A cash account with a bank is really an account receivable, but is usually shown in a balance sheet as cash.

CASH ASSETS

Assets appearing in a financial statement represented by actual cash on hand (in a safe or petty cash drawer), and the sum of the bank deposits.

CASH BOOK

A cash journal; an account book in which cash transactions are chronologically recorded.

CASH BUYING

A term to indicate the purchase of securities or commodities outright, i. e., buying outright, or paying cash in full for immediate delivery.

CASH COMMODITY

A term analogous to "spot commodity", denoting a commodity which is available and ready for delivery, i. e., on the spot. (See Spot, Spot Price.)

CASH CREDIT

A credit established by a depositor who is permitted to borrow by creating an over-draft. This is a common practice in England and Scotland. "Permission to run an overdraft secured by good bondsmen, limited in amount and to be reduced to small proportions, if not entirely repaid, at certain times" (Phillips, C. E.: Bank Credit.)

CASH DISCOUNT

A reduction in price offered by a business selling goods on credit to encourage prompt payment. Cash discounts vary in the different trades, and according to the terms of credit offered. Almost without exception, however, cash discounts are offered where payment is made in advance of the time allowed by the terms of credit. In most trades the terms of credit are normally 30 days and bills are supposed to be paid within that period, but a 2 per cent. discount is allowed if paid in 10 days. In some trades a greater cash discount is available upon the payment of spot cash. Cash discounts for anticipation of payment in advance of the credit terms frequently range from 12 to 18 per cent. a year. In some lines of business the margin of net profit may be so slight that profits depend upon taking advantage of all cash discounts offered.

The keen business man takes advantage of cash discounts and it is one of the functions of commercial banks to furnish working capital for this purpose. The business, the statement of which does not show the practice of regularly discounting bills, sometimes has difficulty in obtaining loans because it shows itself not to be cognizant of all the commercial advantages open to it, and therefore not a good business risk.

CASH DIVIDEND

See Dividend.

CASH GRAIN

Grain purchased for cash in full for immediate delivery; same as spot grain. (See Spot.)

CASH ITEMS

Checks, drafts, notes, or acceptances deposited with a bank for immediate credit, but which are subject to cancellation of credit in case they are not subsequently paid. Items deposited, other than money, over the receiving teller's window are cash items. (See Collection Items.)

CASH LETTERS

See Letters.

CASH ON DELIVERY

A purchase made with the understanding that the goods will be paid for when delivered.

CASH RESERVE

All banks are required by law to keep cash reserves

against deposits. Member banks of the Federal Reserve System are required by the Federal Reserve Act to maintain a legal reserve with the Federal Reserve bank of their district which varies according to location of the member bank and nature of deposits. As of February 27, 1948, the reserve required to be maintained against net demand deposits by member banks in central reserve cities was increased from 20% to 22%; similar reserve requirement for reserve city banks was kept at 20% and that of "country" banks (those not in a reserve or central reserve city) was kept at 14%. Reserve requirement against time deposits was also kept uniform for all member banks at 6%. (See Federal Reserve System, Reserve.)

The Federal Reserve Act does not require that member banks shall maintain reserves of cash in their own vaults. Any cash kept in a member bank's vault does not count as its legal reserve, and consequently these banks keep on hand only sufficient cash to meet current counter, or "over the window" requirements. Since the reserve with the Federal Reserve bank earns no interest, the amount of cash in a member bank's vault is likely to be kept at the lowest figure consistent with safe and conservative banking policy. Vault cash is held down only to anticipated needs, which will vary with the day of the week, seasonally and according to location and type of depositors. It is not usually necessary to keep more than this amount, since additional sums can be easily obtained through rediscounting, or borrowing from the Federal Reserve bank.

Cash reserve requirements of state banks and trust companies, not members of the Federal Reserve System, vary according to the laws of the state of incorporation. The range is from 10 per cent. to 25 per cent. with a strong predominance for 15 per cent.

Most states permit state banks and trust companies to keep more than half of their reserve with depositories designated by the Superintendent of Banking having specified sizes (see Reserve for details of State reserve requirements).

CASH TRADE

A transaction in securities, grain, real estate, etc., in which cash in full is paid for immediate delivery, possession, and title. (See For Cash.)

CASHIER

A term commonly applied to a person who receives and disburses money for a business. In banking, an officer who is responsible for the custody of the bank's assets and whose signature is required on all official documents. While other higher officers of a bank may delegate their authority, or act as "dummies," a cashier never does so, even in the largest banks. His duties vary according to the size of the bank. Usually he is the chief administrative officer and has direct charge of the bank's operations, and corresponds to the general manager in a mercantile or industrial establishment. Among large banks the duties of the cashier are so numerous that Assistant Cashiers are appointed to administer separate assigned functions and have authority to sign instruments in the same manner as the cashier.

CASHIER'S ACCOUNT

See Cashier's Check.

CASHIER'S CHECK

A bank's own check; a check drawn upon a bank and signed by its cashier, or assistant cashier, being a direct obligation of the bank. Cashier's checks are issued to borrowers when loans are made in lieu of a deposit credit or actual cash, sold to customers for remittance purposes, and issued in payment of the bank's own obligations, money transfers, etc. When a cashier's check is issued it becomes a credit, and upon its return through the clearing house or otherwise, a debit to the cashier's account. Cancelled cashier's checks are preserved as vouchers in the bank's files.

CASUALTY INSURANCE

The classification applied to insurance other than life or fire and marine insurance, and including such lines as automobile liability, workmen's compensation and accident and health, the three largest lines for volume, and miscellaneous lines such as automobile property damage, liability other than automobile, automobile collision, fidelity, surety, plate glass, steam boiler, etc. (See Insurance.)

CATS AND DOGS

An expression used to denote highly speculative securities. It is particularly applied to non-income-bearing stocks of uncertain or no value; stocks acknowledged to be a gamble because the underlying properties are not yet developed, and which are worthless as bank collateral.

CATTLE GRADES

See Grades.

CATTLE LOAN COMPANY

A company organized for the purpose of lending its credit to cattlemen for the purchase, raising, and marketing of cattle or other live stock, and referred to in the Federal Reserve Act as livestock loan companies. They are sometimes separate companies, but in most instances are affiliated with, or owned or controlled by state or national banks, located at or near the large stock yards, or in producing centers. In many instances these institutions are connected with banks specializing in the live stock business, and use the same building and officers. As affiliates, these companies are excepted from the restrictions contained in Section 23-A of the Federal Reserve Act as to loans and investments to affiliates or collateral loans on their obligations, the ordinary restrictions on loans and investments being applicable.

The function of a cattle loan company is to relieve the commercial banks from the burden of carrying cattle paper, which under normal circumstances, amounts to millions of dollars. Very often these companies act as middlemen between cattlemen-borrowers and the ultimate investors, i. e., the banks in the large centers. Some classes of cattle paper are also eligible for rediscount and for market purchases by the Federal Reserve banks. (See Cattle Loans.)

CATTLE LOANS

Loans made for the purpose of financing the cattle industry, which includes the purchase, or breeding, feeding, grazing, fattening, and marketing of cattle. They may be divided in three classes, feeder, stocker, and dairy loans. Feeder loans are made on beef steers ready for the last stage of feeding prior to their sale as finished beef. These loans range from 3 to 6 months' maturity. Stocker loans are made on cows for breeding

purposes, and on young calves. They usually have a 6 months' maturity, subject to 3 or 4 renewals, and require about 50 per cent. margin. Dairy loans are made for the purchase of high grade cows and pure bred sires for the purpose of improving the dairy business. Their usual maturity is 6 months, subject to 4 or 5 renewals.

The procedure in making cattle loans is as follows: (1) application of the borrower; (2) sworn statement of the financial condition of the borrower; (3) inspection of borrower's cattle with reference to location, brands, number, approximate weight per head, etc.; (4) search of records to ascertain whether any liens against borrower's real or personal property exist; (5) execution of chattel mortgage in which the market value is usually at least 20% above the amount of the loan, and (6) execution of the note.

Under Section 5200 of the Revised Statutes, which contains limitations on loans by National banks (also applicable to state Member banks) to one person, obligations of any person in the form of negotiable instruments secured by shipping documents or instruments of title covering livestock or giving a lien on livestock, which are secured 115% by such collateral, are entitled to another 15% of capital and surplus in addition to the basic 10% of capital and surplus limitation. (See Cattle Loan Company.)

CEDULE

In Europe, where the warehouse receipt is issued in duplicate, the "receipt", also called the "cedule", copy, used in transfers or assignments, as compared with the "warrant" or "bulletin" copy, used as collateral for loans. In the United States, the warehouse receipt is not so issued in duplicate. (See Warehouse Receipt.)

CEILING PRICES

Maximum prices established by the Office of Price Administration under the Emergency Price Control Act (January, 1942) as amended, which authorized stabilization of prices and rents, and Executive Orders issued thereunder. Under the Act, purposes of this wartime legislation were defined as "to stabilize prices and to prevent speculative, unwarranted, and abnormal increases in prices and rents; to eliminate and prevent profiteering, hoarding, manipulation, speculation, and other disruptive practices resulting from abnormal market conditions or scarcities caused by or contributing to the national emergency; to assure that defense appropriations are not dissipated by excessive prices; to protect persons with relatively fixed and limited incomes, consumers, wage earners, investors, and persons dependent on life insurance, annuities, and pensions, from undue impairment of their standard of living; to prevent hardships to persons engaged in business and to the Federal, State and local governments, which would result from abnormal increases in prices; to assist in securing adequate production of commodities and facilities; to prevent a post emergency collapse of values;..."

The Price Administrator was authorized, after consultation with representative members of the industry so far as practicable, to promulgate regulations fixing prices of commodities which "in his judgment will be generally fair and equitable and will effectuate the purposes of this Act" when, in his judgment, their prices "have risen or threaten to rise to an extent or in a manner inconsistent with the purposes of this Act."

The Act also directed that "So far as practicable, in establishing any maximum price, the Administrator shall ascertain and give due consideration to the prices prevailing between October 1 and October 15, 1941, (or if, in the case of any commodity, there are no prevailing prices between such dates, or the prevailing prices between such dates are not generally representative because of abnormal or seasonal market conditions or other cause, then to the prices prevailing during the nearest two-week period in which, in the judgment of the Administrator, the prices for such commodity are generally representative)... and shall make adjustments for such relevant factors as he may determine and deem to be of general applicability, including ... Speculative fluctuations, general increases or decreases in costs of production, distribution and transportation, and general increases or decreases in profits earned by sellers of the commodity or commodities, during and subsequent to the year ended October 1, 1941."

Later, by the Amendatory Act of October 2, 1942, the President was directed to stabilize prices, wages and salaries "so far as practicable" on the basis of the levels which existed on September 15, 1942, except as otherwise provided in the Act. Accordingly, by Executive Order, the President directed "all departments and agencies of the Government" "to stabilize the cost of living in accordance with the Act of October 2, 1942."

By its Price Regulations, the OPA proceeded to administer price ceilings and regulations of all levels from producer to consumer. Constitutionality of the Emergency Price Control Act was upheld in Yakus v United States (1944), from which the above legislative outline is quoted, as a valid delegation of legislative power to control prices.

On November 9, 1946, by Presidential order, all controls on prices, wages and salaries, with the exception of ceilings on rents, sugar and rice, were discontinued, and as of early 1948, rents remain as the only vestige of wartime price control.

Ceiling prices are to be distinguished from daily trading limits, imposed upon regulated commodity exchanges by the Commodity Exchange Administration (see Commodity Exchange Act).

CENT

The coin of lowest denomination in the United States, being equivalent in value to one-hundredth of a dollar. Its composition is 45.6 grains of copper and 2.4 grains of alloy, or 95% copper and 5% alloy. During the 1946 fiscal year, the cent pieces coined were composed of 95% copper and 5% zinc. The bulk of cent coin circulation consists of the bronze cent (95% copper, 4% zinc and 1% tin). During the World War II years, the copper-zinc cent (copper 70% and zinc 30%) and the zinc-coated steel cent (steel with zinc coating on each side, 0.0005 inch) were temporarily coined as metal conservation measures. Formerly, the cent piece was legal tender up to 25¢ in any one payment, but the Thomas Amendment of 1933 and the Joint Resolution of Congress of June 5, 1933 expressly provided that all coins and currencies of the United States shall be legal tender for all debts, public and private, public charges, taxes, duties and dues. (See Token Money.)

CENTAVO

A name given to a coin in many countries including Argentina, Chile, Colombia, Guatemala, Honduras, Ecuador, Bolivia, Mexico, Peru, Nicaragua, Philippine

Islands, Portugal, Paraguay and Salvador. In all of these countries the centavo is the hundredth part of the standard coin, e. g., the hundredth part of a peso in Mexico and in the Philippine Islands. (See Foreign Moneys.)

CENTESIMO

The coin of lowest denomination in Italy, Panama and Uruguay, being equal to the hundredth part of the standard coin in each of these countries, e. g., one hundredth part of a lira in Italy. (See Foreign Moneys.)

CENTIME

The coin of lowest denomination in France, Belgium, Switzerland, Monaco, Haiti and Algeria, French Morocco and Tunis, being equal to the hundredth part of the standard coin of each of these countries, e. g., one hundredth part of the franc in France, Belgium. Switzerland and Monaco. (See Foreign Moneys.)

CENTIMO

The coin of lowest denomination in Spain, Venezuela and Costa Rica, being equal to the hundredth part of the standard coin of each of these countries, e. g., one hundredth part of the peseta in Spain. (See Foreign Moneys.)

CENTRAL BANK

A bankers' bank; a bank which holds the main body of bank reserves of a country, and which is the ultimate reservoir of credit. These banks are usually characterized by the following features: (1) keep the banking reserves of all or a majority of the commercial banks; (2) rediscount and loan against high-grade commercial paper for member banks; (3) perform numerous fiscal services for the Government; (4) given a monopoly of bank note issue; (5) control the gold reserve of the country; (6) assist in check collection; and (7) are subject to coordination of credit policy and other Governmental regulation.

However, a central bank is not absolutely restricted to dealings solely with banks. Business is frequently conducted directly with the public, particularly in the case of the Bank of France. The Federal Reserve banks may also now make direct loans to business.

Appended herewith is a tabulation of gold and foreign exchange reserve requirement of foreign central banks, as prepared by the Board of Governors of the Federal Reserve System.

While the central bank idea is best typified by the above examples, the Federal Reserve System in the United States exemplifies a slight variation of the principle, since in the latter, twelve regional banks are substituted for a single central bank. (See Federal Reserve System, Regional Bank.)

CENTRAL BANK FOR CO-OPERATIVES

See Bank for Co-operatives.

CENTRAL FILE

A file around which the work of the New Business and Advertising Departments revolves, and in which complete detailed information concerning each of the bank's customers and prospects is recorded. The file cabinet is usually provided with 7 x 10 inch cards ruled and printed on both sides. One card is allotted to each customer or prospect.

The purpose of the central file is to reveal what services and departments each customer is utilizing and fails to utilize, what the average monthly deposits and loans are, what the commercial agency and credit department ratings are, and what advertising literature has been sent. Briefly, its intent is to disclose the possible sources of new business. If the cards are kept up to date, they become an almost indispensable adjunct to an aggressive new business policy.

(See New Business Department, Publicity Department.)

CENTRAL FILE CARD

See Central File.

CENTRAL RESERVE CITIES

According to the National Bank Act and reaffirmed by the Federal Reserve Act, New York and Chicago are central reserve cities. St. Louis was formerly a central reserve city, but was reclassified as a reserve city by the Federal Reserve Board, effective July 1, 1922. The Federal Reserve Board has power "to add to the number of cities classified as Reserve and Central Reserve Cities or to reclassify existing Reserve and Central Reserve Cities, or to terminate their designation as such." Member banks located in central reserve cities are required to carry higher reserves against net demand deposits than banks in reserve and undesignated cities. (See Reserve Cities, Reserve.)

CENTRAL RESERVE CITY BANKS

Member banks located in the Central Reserve Cities (q. v.).

CERTIFICATE

See Certificate of Analysis, Certificate of Deposit, Certificate of Incorporation, Certificate of Indebtedness, Certificate of Inspection, Certificate of Origin, Clearing House Loan Certificate, Gold Certificate, Hypothecation Certificate, Receiver's Certificate, Silver Certificate, Stock Certificate.

CERTIFICATE OF ACCOUNTS

Also known as audit certificate, the certificate issued by auditors or certified public accountants after examination of the accounts of a concern. The certification attests as to the correctness and vertification of the accounts in accordance with accepted accounting principles, and notes if necessary any departure from accepted principles.

The following is an example of a 1948 certificate of the accounts of a leading corporation by a leading firm of certified public accountants:

Gold and Foreign Exchange Reserve Requirement of Foreign Central Banks

(Source -- Federal Reserve Bulletin for January, 1948)

Central bank of	Liabilities of central bank against which gold or foreign exchange reserves are required.	Minimum required reserves (Per cent)		Status of reserve requirements, valuation of reserves, and qualifying provisions
		In gold	In gold and/or foreign exchange	
Argentina	Notes and other demand liabilities.	20	25	In effect. Required reserves may consist of net gold and foreign exchange. Not more than one-tenth of required reserves may consist of inconvertible exchange. Method of valuing reserves is not specified in central bank legislation. Deposits held by member banks for account of Central Bank are not included as liabilities in computing Central Bank's reserves. If reserves fall below 33 per cent during specified periods, all profits of Bank are assigned to general surplus fund.
Australia		(1)	(1)	
Austria		(1)	(1)	
Belgium	Notes and other demand liabilities.	30	40	Suspended by Government in Exile on May 1, 1944: suspension confirmed by Regent in decree of January 24, 1945. (Inoperative throughout German occupation, and formally suspended on March 6, 1942 by Germans authorities.) Gold is valued at 49,318 Belgian francs per kilogram of fine gold (equivalent to 1,533.961 francs per troy ounce).
Bolivia	Notes in circulation and demand deposits in Issue Department.	.....	50	In effect. Required reserves may consist of gold and of deposits abroad freely convertible into gold or other currencies. Gold and deposits payable in gold are valued at parity (equivalent to 1,470 bolivianos per troy ounce of fine gold); other deposits in foreign currencies are converted at the Bank's official buying rate. Reserve requirement may be lowered to 25 per cent, depending upon variations in export value.
Canada		(1)	(1)	
Chile	Notes in excess of fiduciary issues, and deposits.	.....	50	Suspended since February 15, 1941. Reserves may consist of gold and net deposits payable in gold in New York or London. Gold is valued at 0.0286668 grams of fine gold per peso (equivalent to 1,085 pesos per troy ounce). Cashiers' checks and dividends declared but not yet paid are included with deposits against which reserves were required. Before suspension, reserves were permitted to fall below stated minimum, subject to a tax.
China	Notes	[2]60		Suspended de facto. Silver may be included in required reserves. Method of valuing reserves is not specified in central bank legislation.
Colombia	Notes	30		In effect. Method of valuing reserves is not specified in central bank legislation. By Law No. 128 of 1941, reserve requirement against notes was

Central bank of	Liabilities of central bank against which gold ot foreign exchange reserves are required.	Minimum required reserves (Per cent) In gold	Minimum required reserves (Per cent) In gold and/or foreign exchange	Status of reserve requirements, valuation of reserves, and qualifying provisions
Colombia --Continued				provisionally reduced from 50 to 30 per cent and penalty for reserve deficits was suspended.
Costa Rica		(1)	(1)	
Czechoslovakia	Notes and other demand liabilities.	25	.....	Suspended de facto. Prior to German occupation, gold was valued at 31.21 koruny per milligram (equivalent to 996,587 koruny per troy ounce); however, present method of valuation is not known. Before suspension, reserves were permitted to fall below stated minimum, subject to payment of a tax.
Denmark	Notes	20	25	Suspended for consecutive one-year periods since 1940. Gold held abroad is limited to 5 per cent of note issue. Foreign exchange held as reserve must be net and in form of non-interest-bearing demand deposits in central banks. Gold bullion and foreign coin are valued according to provisions of the Coinage Act of 1873 (2,480 kroner per kilo of fine gold, which is equivalent to 77,137 kroner per troy ounce, although present parity equivalency is 167,965 kroner per troy ounce). Foreign exchange may not be valued above the market rate. Before suspension, reserves were permitted to fall below stated minimum with Government consent.
Dominican Republic	Notes and other demand liabilities.	12 1/2	2 50	In effect. Central Bank was created October 1947. Dollar exchange may temporarily be substituted for minimum gold requirement. In addition to gold and foreign exchange, reserves may include foreign government securities and country's net credit balance with International Monetary Fund. Net reserves are computed by deducting foreign exchange obligations of Bank on a graduated basis, depending upon their maturity. Gold is valued at 35.00 Dominican pesos per troy ounce of fine gold. Foreign exchange is valued at cost. If reserves fall below 50 per cent, Superintendent of Banks must impose a tax of one-half per cent per month on deficit.
Ecuador	Notes and other demand liabilities.	28	35	In effect. Required reserves consist of net gold and freely convertible foreign exchange. Gold and foreign exchange are valued at cost or market price, whichever is lower.
Egypt	Notes	50	.....	Suspended de facto since 1916. Government has suspended "provisionally" requirement that entire reserve be in gold and at present permits inclusion of British

		In gold	In gold and/or foreign exchange	
Iceland -Continued				6,352.19 kronur per kilogram (equivalent to 197.575 kronur per troy ounce; although present parity equivalency is 227.110 kronur per troy ounce).
India (and Pakistan).....	Notes		40	In effect for both India and Pakistan at present Gold must represent not less than 400 million rupees of required reserves, and at least 85 per cent of gold reserve must be held at home Foreign exchange is limited to deposits at Bank of England, sterling bills, or British Government securities maturing within five years. Gold is valued at one rupee per 8.47512 grains of fine gold (equivalent to 56.636 rupees per troy ounce; although parity equivalency is 115.798 rupees per troy ounce). Securities are valued at current market rate. Reserves may, with Government consent, fall below stated minimum, subject to payment of a tax. (The Reserve Bank of India is still bank of issue for Pakistan. After March 31, 1948, notes issued in Pakistan by the Bank will be the liability of Government of Pakistan, rather than of Bank. After September 30, 1948, Pakistan will assume entire responsibility for its note issue, although Reserve Bank of India notes not yet converted will continue to be accepted by Government of Pakistan until March 31, 1949.)
Ireland (Erie)..	Notes		[2]100	In effect. Required reserves may consist of gold, British currency, sterling deposits in the United Kingdom and British Government securities. Securities are valued at market rate; method of valuing other reserves is not specified in central bank legislation.
Italy	Notes and other demand liabilities.	.....	40	Suspended since July 22, 1935. Only foreign exchange freely convertible into gold may be included in reserves. Gold is still valued at prewar parity of 21,381.227 lire per kilogram of fine gold (equivalent to 665.031 lire per troy ounce; however, present parity of lire has not yet been established).
Japan		(1)	(1)	
Mexico	Notes and other demand liabilities.	.....	[2]25	In effect. Net gold and foreign exchange and net credit balance with International Monetary Fund must represent at least 80 per cent of required reserves; remainder may be silver. Gold and foreign exchange are valued at market price, unless the Administrative Council of the Bank decides to use cost price if this is lower. Silver is computed at Council-fixed in-

Mexico -Continued				ventory value providing this does not exceed international market value.
Morocco	Notes	11 1/9	33 1/3	Suspended de facto since 1941. Dollar balances in New York may be included in "gold reserve"; only assets in French francs are included in foreign exchange reserve. Gold is valued at 134,027.9 francs per kilogram of fine gold (equivalent to 4,168.734 francs per troy ounce).
Netherlands ...	Notes and other demand liabilities.	[2]40	.....	Suspended since October 1, 1945. (Suspended from March 1942 by German authorities.) In addition to gold, certain silver coin may be included in reserves. Eighty per cent of required reserve must be held at home. Gold is valued at 2.970 guilders per kilogram of fine gold (equivalent to 92.377 guilders per troy ounce; however, gold parity of guilder as communicated to International Monetary Fund is 92.8498 guilders per troy ounce).
Netherlands Indies	Notes and other demand liabilities.	[2]40	.....	In effect. In addition to gold, silver may be included in reserves. Gold is valued at 2,121 guilders per kilogram of fine gold (equivalent to 65.970 florins per troy ounce). Governor General may determine what part of required reserves must be held at home.
New Zealand ..	Notes and other demand liabilities.	.....	25	In effect. Reserves consist of net gold and foreign exchange. Gold may not legally be valued above market rate; however, it is currently undervalued, since reserve consists primarily of coin carried at "face value," i. e., one gold sovereign valued at one New Zealand pound. (One sovereign contains 7.3224 grams of fine gold, equivalent to 4.24772 sovereigns per troy ounce.) Government may modify or suspend reserve requirements.
Nicaragua.....		(1)	(1)	
Norway	Notes in excess of 425,000,000	100	.....	Suspended since 1940. Reserves must be held at home. Gold is valued at 4,960 kroner per kilogram of fine gold (equivalent to 154.273 kroner per troy ounce; however, gold parity of krone as communicated to International Monetary Fund is 173.697 kroner per troy ounce). Notes in excess of gold reserve plus authorized fiduciary issue are subject to tax. At present, note issue exceeds authorized issue plus gold, and the Government has waived payment of tax: because of this waiver, requirement is considered here to have been suspended.

Norway -Continued				Authorized fiduciary issue may be increased by action of the King and Storting.
Paraguay		(1)	(1)	
Peru	Notes and other demand liabilities.	.....	[2] 50	In effect. National silver currency may be included up to one-fifth of reserve. Bankers' acceptances may be also be included. Foreign exchange liabilities to banks abroad are treated as deposits in computing reserve requirements. Gold and foreign exchange are valued at cost price, with exception of 16,338.71115 kilograms of gold which are valued at 2,373.8 soles per kilogram (equivalent to 525,301.701 troy ounces valued at 73.833 soles per troy ounce. Gold parity of sol as communicated to International Monetary Fund is 227.500 soles per troy ounce). Bankers' acceptances are carried in reserve at no more than 90 per cent of their face value. If reserves fall below 50 per cent, a progressive tax is levied on average daily deficit; this tax reaches 12 per cent per annum when reserves fall to 35 per cent or lower, with an additional 1 1/2 per cent per annum on each percentile below 35 per cent.
Poland		(1)	(1)	
Portugal	Notes and other demand liabilities.	25	50	In effect. Reserves consist of unencumbered gold and net foreign exchange. Gold is valued at cost.
Siam		(1)	(1)	
South Africa	Notes and other demand liabilities.	30	.....	In effect. One-half of reserve must be held at home. Reserve is valued at 172 South African shillings per troy ounce of fine gold (however, gold parity as communicated to International Monetary Fund is 173 shillings and 8.367 pence per troy ounce). Government may suspend reserve requirements.
Spain		(1)	(1)	
Sweden	Notes up to 150,000,000 kronor.	100	.....	In effect. Gold reserve may not fall below 150 million kroner. Right of note issue is determined by adding to gold reserves the smaller of following amounts: 1. gold reserve plus 2.5 billion kronor, or 2. secondary note cover (consisting of net foreign exchange plus specified domestic assets). Gold is valued at 2,480 kronor per fine kilo-
	Notes in excess of 150,000,000 kronor.	(1)	(1)

(Source -- Federal Reserve Bulletin for January, 1948)

Central bank of	Liabilities of central bank against which gold or foreign exchange reserves are required.	Minimum required reserves (Per cent) In gold	Minimum required reserves (Per cent) In gold and/or foreign exchange	Status of reserve requirements, valuation of reserves, and qualifying provisions
Sweden -Continued				gram (equivalent to 77.137 kronor per troy ounce); for purpose of computing right of note issue, however, gold is valued at market price.
Switzerland ...	Notes	40	.....	In effect. Since 1940, reserve may include gold held abroad. Gold is valued at 4,869.8 francs per kilogram of fine gold (equivalent to 151.468 francs per troy ounce).
Turkey		(1)	(1)	
United Kingdom	Notes in excess of fiduciary issue of £ 1,400,000,000.	100	.....	In effect. Fiduciary issue (now authorized in amount of 1,400 million pound sterling) represents all but a negligible fraction of total note issue of the United Kingdom. Increases or decreases in fiduciary issue may be authorized by Treasury at request of Bank of England. In addition, Bank may issue notes up to amount representing gold coin and bullion held in issue Department; notes so backed are now outstanding to value of approximately 250,000 pounds sterling. Gold is valued at 172 shillings and 3 pence per troy ounce of fine gold (however, gold parity as communicated to International Monetary Fund is 173 shillings and 8.367 pence per troy ounce).
Uruguay	Notes	[2]100	.....	In effect. Note issue is limited to sum of paid-up capital of Bank, gold stocks, silver holdings up to 12 million pesos, and non-Government rediscount paper. Gold is valued at one peso per 0.585018 grams of fine gold (equivalent to 56.5854 pesos per troy ounce).
Venezuela	Notes and other demand liabilities.	45	50	In effect. Gold in vaults may not represent less than 50 per cent of reserves; exchange holdings not more than 10 per cent. Balance may be in gold held abroad. Gold is valued at U. S. market price converted at 3.061 bolivares per dollar (equivalent to 107.135 bolivares per troy ounce of fine gold; however, gold parity as communicated to International Monetary Fund is 117.250 bolivares per troy ounce). Method of valuing foreign exchange is not specified in central bank legislation.

1 No minimum reserve requirement in gold or foreign exchange.

2 May legally include other specified assets.

NOTE.-The data presented in this table are based on the most recent information available at the time of preparation; in some instances, however, the data may incorrectly state the present character and status of reserve requirements. Countries for which available information is known to be inadequate have not been included.

"To the Board of Directors and Stockholders:

We have examined the statement of financial condition of X Company and subsidiary companies at December 31, 1947 and the related statement of operations for the year. Our examination was made in accordance with generally accepted auditing standards and included such tests of the accounting records and other supporting evidence and such other procedures as we considered necessary in the circumstances.

Consistent with the policy followed by the company for years prior to 1940, which policy was discontinued in that year due to war conditions, the financial statements of subsidiaries operating in certain foreign countries have again been consolidated with our approval with those of the parent company for the year 1947.

In our opinion, the accompanying financial statements present fairly the position of the consolidated companies at December 31, 1947 and the results of their operations for the year in conformity with generally accepted accounting principles applied on a basis consistent (except as noted in the preceding paragraph) with that of the preceding year.

Certified Public Accountants."

CERTIFICATE OF ANALYSIS

One of the documents which an importer may require a foreign seller to accompany the bill of exchange drawn against a shipment as prescribed by the terms of the relative letter of credit. It is intended to protect the importer by a certificate that the merchandise ordered from a foreign seller conforms in all respects to specifications. This is especially important in the purchase of chemicals, drugs, precious metals, jewels or other merchandise, where the value, quantity, quality, fineness, or chemical constituency must meet exacting requirements.

A certificate of analysis is usually certified by an expert, such as a chemist or assayer, although it may be certified by the shipper. It usually contains a statement as to the quantity, quality, fineness, or other exact details of the shipment, and is sometimes sworn to before a notary public.

CERTIFICATE OF DEPOSIT

A receipt for the deposit of funds in a bank of which there are two classes, demand and time. Demand certificates of deposit are payable on demand, and time certificates of deposit are payable on a specified date, or so many days after date, upon proper indorsement. These time certificates are similar to savings deposits, but have a definite maturity, and are evidenced by a certificate instead of a passbook entry. Time certificates of deposit may bear interest, and are, therefore, a convenient means of investing temporarily idle funds, which otherwise would be unemployed. Certificates of deposit are usually negotiable, and when properly indorsed, may serve as security for a loan. Banks are required to keep reserves against demand and time certificates of deposit corresponding to reserve for demand and time deposits, respectively.

As defined by Regulation "D" (revised effective January 1, 1936) of the Board of Governors of the Federal Reserve System, a time certificate of deposit means a deposit evidenced by a negotiable or non-negotiable instrument which provides on its face that the amount of such deposit is payable to bearer or to any specified person or to his order: (1) on a certain date, specified in the instrument, not less than 30 days after the date of the deposit, or (2) at the expiration of a certain specified time not less than 30 days after the date of the instrument, or (3) upon notice in writing which is actually required to be given not less than 30 days before the date of repayment, and (4) in all cases, only upon presentation and surrender of the instrument. A deposit with respect to which the bank merely reserves the right to require notice of not less than 30 days before any withdrawal is made is not a "time certificate of deposit" within the meaning of the above definition.

The following is a typical form of Certificate of Deposit:

No .... Bank
New York .....19....
.....has deposited in this Bank
.....Dollars
payable to the order of .....
on the return of this certificate properly indorsed.

$..... ....
Teller Cashier.

CERTIFICATE OF INCORPORATION

The charter or franchise which the original incorporators of a company receive from the Secretary of State of the state of incorporation, legally empowering it to act as a corporation. (See Capital Stock.)

A certificate of incorporation for each type of bank or trust company must be applied for from the proper authority. Application for a National bank charter is made to the Comptroller of the Currency. Organizing state banks and trust companies apply to the proper state authority known under different titles, e. g., Superintendent of Banks (New York),Commissioner of Banking (Massachusetts), Auditor (Illinois). A typical certificate of incorporation for all types of banking institutions contains the following information; (1) name of bank, (2) location, (3) capital and number of shares, (4) name, address, financial worth, and number of shares of each stockholder, and (5) that the certificate is made in order to take advantage of either the National or state banking laws. The certificate is executed in duplicate; one copy for the Comptroller of the Currency (or state banking department), and the other for the bank. (See Articles of Association, Bank Organization.)

CERTIFICATE OF INDEBTEDNESS

A short term note, corporate or civil, representing floating indebtedness. A corporate certificate of indebtedness, is merely an unsecured promissory note, the holder having a general creditor's recourse against the general assets. The United States Treasury Certificates of Indebtedness are short-term civil notes or debentures, issued for the purpose of keeping the Treasury supplied with funds in anticipation of tax collections. The short title for these notes is Treasury Certificates.

CERTIFICATE OF INSPECTION

This certificate, or combined certificate of weight and inspection, is a document which an importer may require the foreign seller to accompany the bill of exchange drawn against the shipment in accordance with the terms of the relative letter of credit. It is prepared

by a trade association or concern authorized to make inspection and tests, and gives a description of the goods shipped by packages, boxes, barrels, weights, contents, markings, etc., but without prices. This instrument is frequently required in the shipment of heavy and bulky materials and differs from a certificate of analysis in that the latter usually applies to goods of high value and small bulk.

CERTIFICATE OF ORIGIN

A certificate sometimes required by an importer to insure that merchandise has originated in a country in which it was intended to be purchased, and is not being relayed through another country. An importer sometimes desires to protect himself against purchasing goods of a belligerent country, which may masquerade as coming from another. A certificate of origin contains practically the same information as a seller's invoice, gross and net weight stated, but prices omitted.

In peace times the chief purpose of this certificate is to protect the most favored nation clause in the customs tariff.

CERTIFICATE OF PROTEST

See Notarial Protest Certificate.

CERTIFICATE OF STOCK

See Stock Certificate.

CERTIFICATE OF WEIGHT

See Certificate of Inspection.

CERTIFICATED STOCKS

Those amounts of a commodity which are stored in warehouses approved by a commodity exchange, and which are certified as being deliverable on futures contracts. (See Futures.)

CERTIFICATION DEPARTMENT

The department of a bank which certifies checks. Among small banks checks are certified at the paying teller's window, but larger banks maintain a separate window or windows, usually adjacent to the paying teller's window, whenever the volume of certification business is sufficiently large to warrant a separation of functions. The certification of checks is a part of the paying teller's functions, because certifying a check is equivalent to paying it. (See Certified Checks.)

CERTIFICATIONS

See Certified Check.

CERTIFIED CHECK

A check which certifies that the signature of the drawer is genuine and that the depositor has sufficient funds on deposit for its payment. The amount certified is then set aside for the express purpose of paying the check and payment cannot be refused because of insufficient funds. When a bank certifies a check, it is absolutely bound to pay it. It becomes an obligation of the bank instead of being an order on the bank.

When a check is presented at the window for certification, the drawer's account in the ledger is first inspected to see that sufficient funds are on deposit to cover the amount which is immediately deducted from the drawer's credit balance before the check is certified. Certification consists of stamping or writing across the face of the check the word, "Certified" or "Accepted," together with the date, the bank's name, and signature of the officer authorized to make certification. The negotiable instruments law states that "where a check is certified by the bank on which it is drawn, the certification is equivalent to an acceptance." (Sec. 187, Uniform Negotiable Instruments Law; Sec 323, New York Negotiable Instruments Law.)

Since a certified check becomes an obligation of the bank, when a check is certified the drawer's account is reduced (charged) and "Certified Checks" account (in the general ledger) is increased (credited). When certified checks are returned through the clearing house or other channels, the account, "Certified Checks" is reduced (charged). Thus the balance of this account represents the total certified checks outstanding.

Although a bank is not obliged by law to certify checks for its customers, among the banks in the larger cities, especially in New York, certification business forms a very important service, especially for customers who deal in securities. Certified checks are also extensively used in those types of business where it is important to receive the equivalent of cash, without at the same time using cash, such as in brokerage and security transactions, payments of loans, and real estate transfers.

A check may be certified at the instance of either the holder or drawer. Certification at the instance of the holder releases the drawer and all indorsers from further liability (Sec. 188, Uniform Negotiable Instruments Law; Sec. 324, New York Negotiable Instruments Law.) They are out of the transaction entirely and the holder has recourse only against the bank. Should the bank fail, the holder of such a certified check has no cause of action against the drawer. Where a bank certifies a check at the instance of the drawer, however, the latter is not released from liability. Should the bank upon which it is drawn fail before the check is presented for payment, the holder still has recourse against the drawer.

CERTIFIED PUBLIC ACCOUNTANT

An accountant to whom a state has given a certificate to the effect that he has met its requirements as to age, education, experience, and technical qualifications, as shown by the fact that he has passed the prescribed examination. The holder of such a certificate is permitted to use the designation, "Certified Public Accountant," or the letters "C. P. A.," as an abbreviation, within the state of issue. The public practice of accounting is not limited by law to certified public accountants.

There is a diversity among the various states in examination requirements. The most stringent qualifications are required by New York, the first state to issue certified public accountant certificates, Pennsylvania, Illinois, and Massachusetts.

CESTUI QUE TRUST

The beneficiary of a trust, or the person in whose favor a trust operates. The cestui que trust holds the equitable title to an estate, while the trustee holds the legal title. (See Trusts.)

CHAIN BANKING

As defined by the Board of Governors of the Federal Reserve System, "chain banking" indicates a type of multiple office banking in which the operations or policies of at least three independently incorporated banks

are controlled by one or more individuals. This control may be accomplished through stock ownership, common directors, or in any other manner permitted by law. Generally speaking, chain systems are built around a key bank that is considerably larger than the other banks in the chain. (See Branch Banking, Group Banking.)

CHAIN STORE ORGANIZATIONS

Development of chain stores in the United States was a sequence rather than a direct accompaniment of mass production methods. By furnishing many retail outlets, served by central warehouses, all under one general control, chain store organizations as a form of mass merchandising is the inevitable answer to mass production. While the movement began in the nineties, the F. W. Woolworth 5 & 10 cent chain being the oldest of the important systems, a rapid expansion began in the decade 1921-1930; so rapid, in fact, that by 1929 competition among various groups effected a retardation of sales growth and profit margins.

In principle, chain stores offer an ideal plan of distribution of standardized non-perishable merchandise, the demand for which is constantly recurring, and in which the style factor is unimportant. Chains are particularly adapted to the following lines: five-and-tens, groceries, apparel, candy, gasoline stations, department (variety merchandise), drugs, shoes, restaurants, sporting goods, radio and music, photograph studios and tobacco. By eliminating middlemen, credit customers, advertising, deliveries (not always), elevator service and expensive overhead charges, the aim is to place merchandise in the hands of the consumer at a minimum of increase between manufacturing cost and selling price. Its advantage over independent retail merchandising lies chiefly through ability to buy at lower costs and in achieving a more rapid turnover of inventories.

Chain store growth has been chiefly due to an increase in the number of units rather than in sales per store; also because spread of chains has been from the cities to the smaller country towns. Total retail sales of chain stores and mail order houses in 1946 were $20,971 million, or 22% of all retail sales. The largest volume of chain store and mail order business is conducted by the food group (35% of total chain store and mail order house volume), followed by 28% by the general merchandise group, and 12% by the apparel group. The 1946 total of $20,971 million compares with $12,434 million in 1941, $6,618 million in 1933, and $10,412 million in 1929.

A report issued by the Federal Trade Commission in December, 1934, showed that nearly 20 per cent. of each dollar spent in retail stores by the consumer went to chain stores, with a wide variation in the proportion of retail sales of chain stores in different states of the Union, ranging from as low as one dollar in fourteen in Mississippi, to one dollar in four of total retail sales in the District of Columbia.

More than half of the chains reporting to the commission operate from two to five stores each. This group operates less than 5 per cent. of all the chain stores. However, chains with 1,000 stores or more comprise less than 10 per cent. of the total number of chains, but account for approximately one-half of the total number of chain stores and about 40 per cent. of the total volume of chain store sales. Largest among the groups are the Great Atlantic & Pacific Tea Co., the Kroger Grocery & Bakery Co., and the Safeway Stores, Inc., which operated in 1930 nearly 25,000 retail grocery stores. Their total sales were almost $1,600,000,000. During that year, the Great Atlantic & Pacific Tea Co. alone operated 15,788 stores, with total sales of $1,065,000,000.

Naturally the growth of chains has been largely at the expense of the independents. The independent retail merchant naturally has watched this development with some concern. Mr. Edward A. Filene, the head of one of the largest department stores in the country, has gone as far as to predict that chain stores will drive the individual merchant out of business and that chain department stores will be the next step in this procedure. In production, industry has witnessed the passing of home handicraft in favor of the small factory; and the consolidation of the small factory into the large industrial organization. It may be that merchandising will follow the same line of progress, but it would still have a long way to go, as evidenced by the following ratios of chain store and mail order sales to total retail sales: 1946, 22%; 1941, 22%; 1933, 27%; and 1929, 21%.

Such a transformation would, of course, be gradual. It will depend chiefly upon economy. The margin of profit has been declining. Low production costs are essential in industry, and here the expense of distribution and marketing is an increasingly important factor. If chain stores can sell more cheaply, they will probably outlive the personal and special service with which the independent store largely attracts its patrons.

The Chamber of Commerce has estimated that the costs of doing business for chain stores are about the same as for the independent units. Here there is no particular advantage for the chain system. But in buying the chain store has a decided advantage, both because it buys directly from the producer and because it buys in large quantities. The independent store usual ly buys from a wholesaler, which adds to its cost.

Standardized operations have made it possible to centralize chain store control. A trained staff, that in numbers would formerly have been needed for a single large store, can successfully control the operation of fifty or more chain units. Detailed accounting systems keep the executives informed as to the progress or lack of progress of the individual stores. Perpetual inventories keep them in close touch with changes in public demand.

The replacing of many executives by a few, the centralizing of purchasing power, and the high degree of specialization attained, provide the chain unit with expert management at a low cost. By a strictly cash and carry policy, collection risks, the cost of credit departments, and the heavy cost of delivery systems are all eliminated. All of these elements combined tend to reduce overhead and make possible attractive prices. It is these elements that often make it possible for a chain store to sell merchandise, at a profit, at prices that virtually defy competition. They all aid in bringing about the desired result, viz: the placing of popular goods in the hands of the consumer at the lowest possible price.

In the earlier days chain store sales were made largely to those who sought cheap merchandise. But the public has come to realize that the variety chain unit, through the size and efficiency of its organization, now offers goods of high quality at prices which mean a real saving. This condition is building an ever-increasing volume of repeat business for the chain store. The

chain store using modern, advanced methods, now serves all classes of patrons. The thrifty purchaser, no matter of what financial status, will turn to the store which assures the best values. As in the case of the better class patron, the manufacturer at first turned with hesitancy to the chain store as an outlet for his products. Nowadays the best of a manufacturer's products are as available to the chain store as they are to his own jobbers, and frequently the chain store is quoted the better price. In any of the larger chain stores it is possible to purchase innumerable trade-marked articles of the leading manufacturers of the country.

In no line of merchandising is efficient management more important than in chain store operation. Upon the judgment and experience of the central executive staff depends the success of every store. The progress of the various organizations is the best indication of the character of their management. The elements of good management which contribute to their progress are fourfold: (1) purchases have to be so handled as to assure the organization a quick turnover and its customers good quality at attractive prices; (2) store locations have to be selected carefully; (3) a system of attractive display and successful selling has to be constantly improved to secure a maximum turnover; and (4) soundness of financial policy is essential to the maintenance of good credit, steady expansion and increased earnings.

CHAMBER OF COMMERCE

A "merchants' forum"; a title sometimes adopted by an organization formed to promote industrial and commercial interests of a city or state. The Chamber of Commerce of the State of New York, the oldest and most important organization of its kind in the world, was formed in 1768. "Its special function is to promote and protect the interests of the commerce of the city and State; and its membership, while including bankers and brokers, is composed largely of merchants and manufacturers and officers of industrial and railroad corporations. But so closely is commerce bound up with the money and security markets by ties of mutual interests, the big merchants being directors in banks and corporations and the bankers having, in many cases, an influential voice in the direction of the leading industrial and mercantile companies, that it is not easy to draw the line separating commerce from finance" (S. S. Pratt: Work of Wall Street).

CHANCELLOR OF THE EXCHEQUER

See Exchequer.

'CHANGE

An abbreviation for stock exchange.

CHARACTER

One of the elements of a credit risk and usually regarded as the most important. It is the most difficult element to appraise because it is varied and often elusive and untangible. It is a personal equation and represents the Moral Risk (q. v.). Some of the factors investigated in appraising character or the moral risk are as follows: (1) Reputation or standing for business honesty, (2) attitude toward obligations - promptness in paying debts, (3) personality and standing in social community, (4) record in antecedent business connections, (5) reputation of immediate business associates, (6) gambling and speculation tendencies, (7) social and political ambitions, (8) observance of accepted code of business ethics, such as welching on contracts in adverse markets, engaging in unfair competition, truthfulness in advertising, circulation of false rumors or statements, taking advantage of uninformed, (9) bankruptcy record, (10) fire record, (11) police record, and (12) civil court record. (See Credit.)

CHARGE OFF

See Write Off.

CHARGE TICKET

A bank bookkeeping form or posting medium on which the complete details of a transaction leading to a debit entry in a ledger account are described.

CHARGES

A term to denote the sum of expenses involved in the execution of an order, or in the shipment of goods, and includes such items as commission, interest, insurance, cable charges, freight, haulage, warehousing, etc. (See Carrying Charges.)

CHARTERED ACCOUNTANT

An English title corresponding roughly to Certified Public Accountant in the United States. A chartered accountant holds a certificate from the Institute of Chartered Accountants which states that he has passed the examination given by that body and is qualified to practice public accounting. (See Auditing, Certified Public Accountant.)

CHARTER-PARTY

A written agreement by which the owners of a vessel or their agents place it at the disposal of a merchant (shipper), the charterer, for the carriage of a full cargo of merchandise. A charter-party may hire the services of the vessel and its crew for a single voyage or a number of voyages, or for a definite time.

CHARTIST

A stock market trader or student who interprets action and predicts future action of prices, usually over the immediate future, from the graphic record of price and volume movements. Although chart patterns are often criticized as a guide to trading, because they record and do not motivate market fluctuation, to the extent that traders do base their trading on chart studies, a market following is thereby created to influence market action.

CHATTEL

A legal term to signify any tangible movable article of personal property as distinguished from fixed or real property. Chattels include movable goods of all kinds capable of transfer by delivery, e. g., portable machinery, furniture, live stock, merchandise, etc., or tangible personal property, as contrasted with choses in action (q. v.), which are intangible or representative forms of personalty. Sometimes the distinction between real property and chattels is difficult to make. Uncut forests are real property, while cord wood and growing and harvested crops are chattels.

CHATTEL MORTGAGE

A mortgage with chattels instead of real property given as security. Movable goods such as railroad equipment, portable machinery, furniture, live stock, grain, etc., are the usual chattels pledged in a chattel mortgage. Since it denotes that other credit resources have been exhausted, chattel mortgages are very often the sign of weakness in a credit risk.

CHEAP MONEY

An expression used to denote money procured at low interest rates; same as Easy Money (q. v.).

CHECK

As defined by the Negotiable Instruments Law (Sec. 185 of Uniform Negotiable Instruments Law; Sec. 321 of New York Negotiable Instruments Law), and by the British Bills of Exchange Act, a check is: "A bill of exchange drawn on a bank, payable on demand." Commentators usually treat checks under the general classification of bills of exchange, but checks differ from bills of exchange also in that they purport to be drawn against a deposit, and are always payable on demand.

As defined by the Federal Reserve Board of Governors (note to Regulation J, revised effective January 4, 1936), a check is "a draft or order upon a bank or banking house, purporting to be drawn upon a deposit of funds, for the payment at all events of a certain sum of money to the order of a certain person therein named, or to him or his order, or to bearer, and payable on demand"

Other definitions of a check are: (1) a written order drawn by a depositor upon his bank to pay a sum of money to a designated party; (2) an order on a bank (drawee) by a depositor (drawer, maker or payer) to pay a certain sum of money to a third party (Payee); (3) an order upon a bank or banker for the payment of money to a stated party out of funds credited to the acaount of the drawer. While a check from a legal point of view is an order calling for the payment of money, in actual practice it is rather an order for transferring bank credit used as a substitute for money from one account to another.

The essential elements of a check are: (1) The words of negotiability--"order" or "bearer" --express or implied. The phrase "Pay to the order of" imparts negotiability to the check and makes it an unconditional promise to pay upon demand. The single word "Pay"if used makes such a check not negotiable, i. e., payable only to the person named as the payee; (2) name of payee--person in whose fa vor the check is drawn. Checks are sometimes made out payable to Self, Currency; Bearer or Cash, which makes them payable to bearer; (3) amount payable in figures; (4) amount payable in written words; (5) name and location of the drawee bank; (6) signature of drawer or maker. In the case of some corporations the signature and counter signatures of designated officers are necessary. The signature is the final touch without which the check is valueless; (7) indorsement. The check should be indorsed as drawn, either in blank or by a special or other indorsement.

The non-essential but convenient elements of a check are: (1) location (name of city in which maker or drawer is located); (2) date of drawing the check; (3) number of the check; (4) transit number, indicating the name and location of the drawee bank according to the universal numerical transit system.

In cashing checks, the paying-teller observes the following points to insure against irregularities, informalities, or discrepancies which, if unnoticed, might involve the drawee bank in a loss; identification of presenting party; date; filling; alterations; signature (authority to sign and forgery); stop payment; financial responsibility; whether a home debit or drawn on another bank; indorsement.

Checks should not be dated ahead (post dated), otherwise they are in effect, time bills of exchange. Checks should be presented for payment "within a reasonable time after issue or the drawer will be discharged from liability thereon to the extent of the loss caused by the delay." (Uniform Negotiable Instruments Law, Sec. 186; New York Negotiable Instruments Law, Sec. 322.) Banks usually refuse to honor checks more than six months old. These are known as stale checks (q. v.), since when checks are not presented within a reasonable time after they are drawn there arises a presumption of irregularity. The date is not an essential element of a check, and an undated check is valid.

The amount written in words should agree with the amount written in figures and when there is a discrepancy between the two the amount denoted by the words is the sum payable.

A bank is usually responsible to its customer for paying raised or altered checks. A number of mechanical devices have been invented to prevent the fraudulent alteration of checks. (See Check Protecting Devices.)

A bank is not required to make a partial payment on a check whenever the drawer has insufficient funds to his credit to make payment in full. Checks made payable to Cash, Currency, or Self, legally require no indorsement when presented by the drawer, but as a matter of practice, paying tellers request indorsement as a type of receipt. In case the drawer himself does not present the check so drawn, the indorsement of the presentor, the drawer's representative, should be requested by the paying teller.

Checks may be classified according to method of collection into five groups: (1) checks drawn on the bank in which they are deposited for credit or cashed over the paying teller's window, known as, "own checks," "self checks," or "home debits"; (2) checks drawn on banks in the same city and which will be paid through the clearing house, known as "clearing house checks"; (3) checks drawn on banks, corporations, and individuals in the same city which are not members of the clearing house and which must be presented for payment either through the city collection department of the clearing house, or directly by messengers; (4) checks drawn on banks located at various out-of-town points which must be collected through the Federal Reserve Clearing System, or through correspondents or other collecting

agents, known as out-of-town checks, transit checks, or foreign checks, and (5) checks drawn on, or issued by a bank located in a foreign country. (See Alteration, Cashier's Check, Certified Check, Check Book, Checking Account, Credit Instruments, Crossed Check, Date, Filling, Forged Instruments, Forgery, Indorsements, Negotiable Instruments Law, Signature, Traveler's Check, Voucher-Check.)

Brady, J. E.: The Law of Bank Checks, 1933.

CHECK BOOK

A book containing blank checks furnished by banks to depositors who have checking accounts from which funds on deposit may be withdrawn. Check books are usually available in several different styles, from which the depositor may select the most convenient for his purposes. These styles vary from those suitable for carrying in the pocket to desk check books with three or more checks to a single sheet. Some check books are issued with stubs to enable the depositor to keep account of his transactions, i. e., deposits and withdrawals, to determine the balance, and to reconcile the balance as shown by his check book with the monthly statement as submitted by the bank. The stubs of the check book, if they contain a record of all deposits and payments by check constitute, in effect, a duplicate cash book.

In providing blank checks, as a matter of service to its large accounts which draw a large volume of checks, banks usually print the customer's name and business thereon. Such check books and loose blank checks should be safe-guarded by depositors to prevent dishonest persons from securing blank checks and forging signatures to them.

CHECK DESK

A name sometimes given to the bookkeeping and statement departments of a bank, so called because checks received through the paying and receiving teller's window and through the clearing house are posted to the appropriate accounts in the customers' ledgers and statements of account.

CHECK PROTECTING DEVICES

Mechanical devices designed to prevent check raising and alteration of the payee's name. Several types of machines now on the market have succeeded in minimizing the fraudulent alteration of checks. One type mechanically bruises the portion of the check into which the words and figures are injected in indelibile ink into the fibre of the paper. The paper is also bruised over the payee's name to prevent erasure and insertion of a wrongful name. Another type cuts the words and figures into the check by means of small perforations. Another method of protection is to indicate on the margin of the check, or just above the signature, by imprinting the words, "Not over $....." Postal money orders are protected on the left hand margin by a figure which represents the maximum amount payable. These devices are simple and inexpensive methods of guarding against losses arising through the raising of checks and banks should educate business houses in their use. Checks are also protected by the use of various kinds of so-called "safety" paper designed to expose fraudulent attempts at alteration, whether by acid, knife, or erasure. Such paper is provided with ingrained fine watermark lines and by special surfacing which is sensitive to all types of alterations.

CHECK RATE (CHEQUE RATE)

The basic rate in foreign exchange transactions from which all other rates are computed. Foreign exchange rates are quoted for cables, checks and time bills of 30, 60, 90 day and other maturities. The check rate is the rate quoted for checks as distinguished from the others. It is less than the cable rate, but more than the rate for time bills, for the reasons explained under the subject Cable Rate (q. v.). It is also known as the demand rate. (See Foreign Exchange, Gold Points, Long Rate, Short Rate.)

CHECKING ACCOUNT

A bank account against which checks may be drawn against credit balances. A checking account is to be distinguished from a savings account in which deposits may be withdrawn only upon presentation of the passbook in which deposit and withdrawal entries are made. From the bank's stand-point, checking accounts represent demand deposits, because subject to check and, therefore, to immediate withdrawal. Savings accounts represent time deposits which are not subject to check and for which notice of intention of withdrawal from 30 to 60 days may be required. Checking accounts do not draw interest, since under the Banking Act of 1933, demand deposits do not draw interest.

The advantages of a checking account are: (1) removes risk of losing money and making wrong change, (2) prevents possibility of paying same bill twice (since cancelled check is an absolute proof of payment), (3) prevents possible loss through robbery, (4) provides instantaneous check of financial position, (5) permits an analysis of receipts and expenditures and thereby budgetary control, (6) aids in determining income-tax liability, (7) prepares for establishing more important banking relationships, e. g., borrowing capacity; and (8) wins prestige in business relationships.

CHECKING COMMERCIAL PAPER

First read Commercial Paper.

Among banks in the larger cities a considerable amount of commercial paper is bought for investment. Since at least one half of commercial paper is one-name paper its strength depends upon the financial responsibility and assets of the maker as disclosed by the fifancial statement. For this reason the note broker selling commercial paper is required to furnish a current statement of his client's business. The credit department of a bank in considering the purchase of commercial paper must conduct an investigation, i. e., "check" the paper.

An investigation leading to a recommendation of purchase must show (1) a favorable condition as disclosed by the analysis of a recent statement; (2) favorable reports from other banks which have had experience with the name in question, (3) favorable reports from the trade, preferably several creditors and debtors and a competitor; (4) favorable mercantile agency reports. (See Commercial Paper, Note Brokers, Statement Analysis.)

CHEQUE

Another spelling for Check (q. v.), but principally

used in connection with travelers' cheques.

CHERVONETZ

A post-revolutionary Russian coin of the Soviet regime, equal to ten gold rubles. The Russian unit is the ruble, with a nominal value of 19¢. (See Foreign Moneys.)

CHICAGO BOARD OF TRADE

The most important grain exchange in the United States, incorporated under a special act of the Illinois Legislature in 1859, but existing as a voluntary association since 1848. The objects of the Board of Trade as set forth in its rules are: (1) to maintain a commercial exchange; (2) to promote uniformity in the customs and usages of merchants; (3) to inculcate principles of justice and equity in trade; (4) to facilitate the speedy adjustment of business disputes; (5) to acquire and disseminate valuable commercial and economic information; (6) to secure to its members the benefits of cooperation in the furtherance of their legitimate pursuits.

The Board of Trade as a price barometer enables the market to act as a price stabilizer. A free futures market is the best automatic brake ever invented, for it puts on the brake against every unwarranted bulge and every unwarranted drop in price. This is the reason that the world's greatest grain futures market, the Chicago Board of Trade, handles important buying and selling orders from all the grain centers of the world. Even Winnipeg, the world's greatest cash wheat market, normally must place a large share of its grain futures contracts on the Chicago market, because Chicago is a wide market. Being a wide market it normally absorbs a large volume of trades without violent price disturbances. A free grain market, therefore, represents a true consensus of informed market opinion on world grain values. In other words, a free grain market is the world's wheat price barometer, and therefore is in a true sense a price stabilizer. Chicago handles the bulk of trading in grain futures in the United States; and also handles more grain futures than foreign grain exchanges. But before Chicago could have a futures market there had to be two other things: ample storage facilities subject to Board of Trade rules; and thoroughly dependable inspection, grading and standardization of grain.

The Board of Trade does no business itself, trading being restricted to the membership, which is not limited. Non-members must do business through a member, for which privilege the non-member pays a commission of $15 to buy or sell one contract unit in wheat. Management of the Board of Trade is vested in a board of directors which includes the president and two vice-presidents. The charter provides for the adoption of rules which may be enforced by the board of directors. The rules, by-laws and regulations have become elaborate, and are designed to control methods of trading, administration and membership discipline. Administration is partly conducted by committees, two of which, the Committee on Arbitration and Committee of Appeals, are provided for in the original charter and are elected by the membership.

Both cash ("spot") and futures trading are conducted. The Chicago Board of Trade is designated as a futures market by the Secretary of Agriculture under the Commodity Exchange Act. Futures trading is conducted in the "pits" or rings on the trading floor, for each of the principal commodities traded in. Because of the noise during trading, a system of trading by signs has been ingeniously evolved. Cash or spot trading takes place at long rows of tables lining the entire north wall of the trading floor. Every trade is cleared through the Board of Trade Clearing Corporation. Pit reporters, stationed in the "pulpit" of the pit, note down every point change in prices, which fluctuation is transmitted to a central office and from there retransmitted to quotation tickers all over the country. The "broad tape" ticker also broadcasts general market information.

Trades are in regular contract units of 5,000 bushels, or in lesser units, called "job lots", of 1,000 bushels for all grains except 2,000 bushel job lot for oats. Commissions are proportionately higher on job lots than on regular contracts. Commissions charged to non-members are: Barley, oats, rye and wheat, $15 per regular contract to buy or sell; lard, $20; and cotton, graduated scale depending on price ($8.75 when price is 30.01¢ to 35¢ per lb.). Trading at present is conducted in barley, corn, cotton, lard, oats, soy beans and wheat (rye trading was suspended in 1946). Under Commodity Exchange Administration regulations, price fluctuations are limited to daily trading limits above and below previous day's close. (See Futures, Hedging, Pit, Speculation.)

CHICAGO MERCANTILE EXCHANGE

A commodity exchange, located at 110 North Franklin Street, Chicago, Illinois, designed for trading in futures of butter, eggs and potatoes. Thus, facilities are offered for hedging in these commodities by interested merchants. Organization, by-laws and rules are similar to those of the Chicago Board of Trade.

The Chicago Mercantile Exchange is designated under the Commodity Exchange Act by the Secretary of Agriculture as a futures market for butter, eggs and potatoes. Futures market in onions is also conducted.

Butter Futures.--Storage butter contract unit is one carlot of 300 tubs (19,200 lbs.), the minimum fluctuation being 5/100¢ per lb. or $9.60 per contract. Non-member commission to buy or sell one contract is $50. Daily trading limit is 3¢ per lb. above or below previous close. Basis grade is 90 score or higher, of one creamery make, no churning under 90 score. Butter under 88 score is not deliverable. Trading in standard fresh butter contract (butter which has not remained in cold storage more than 29 days) is also transacted.

Eggs Futures.--Contracts are of two types, the Refrigerator Egg Contract and the Fresh Egg contract. Contract unit is one carlot (600 cases or 18,000 dozen). Minimum fluctuation is 5/100¢ per dozen, or $9 per contract. Commission rate for non-members is $45 per contract to buy or sell. Daily trading limit is 2¢ above or below previous close. Eggs sold on February, 1948 and subsequent contracts must meet the requirements of the tentative U. S. specifications and weight classes for wholesale grades of shell eggs established by the U. S. Department of Agriculture, Production and Marketing Administration, on September 19, 1947.

Potatoes Futures.--Contract unit is 450 bags, or 45,000 lbs. Minimum fluctuation per regular contract is 1¢ per 100 lbs., or $4.50 per contract. Daily trading limit is 25¢ per 100 lbs. above or below previous close, or 50¢ per 100 lbs. maximum range. Commission to non-members to buy or sell one contract is $15.

Onion Futures.--Contract unit is 40,000 lbs. in 50-lb. sacks, on which minimum fluctuation is 1¢ per sack, or

$8 per contract unit. There are no daily trading limits. Commission to non-members to buy or sell one contract is $20.

CHIEF CLERK

A name given to an executive position created in some banks, the function of which is to administer clerical routine. The chief clerk is a bank office manager and is responsible for seeing that the work of the bank, not directly in charge of department heads, is smoothly and promptly performed, that all operations move on schedule, and that proper supplies and equipment are furnished. Many of the operations of a bank, such as clearing, collections, mail, statements, etc., must be handled with great promptness and it is the chief clerk's duty to see that all engagements are met. In some banks he also acts as personnel officer, and is in charge of employment, transfer, and training of employees.

CHOSE-IN-ACTION

A law term which denotes a claim or right to personal property not in one's possession, as distinguished from property actually in one's possession, known as chose-in-possession. A claim arising out of a breach and which can be collected only by an action at law, e. g., an open account which the debtor refuses to pay.

CHRISTMAS CLUB

A savings bank account established for the specific purpose of arranging for systematic savings in advance of Christmas for Christmas expenditures. Usually these accounts are established early in the year for release before Christmas. Each depositor must assent to the by-laws of the Club.

CINCINNATI STOCK EXCHANGE

Like other exchanges, this exchange has as its object: (1) to maintain high standards of commercial honor and integrity among members, (2) to promote and inculcate just and equitable principles of trade and business, and (3) to furnish rooms and other facilities for the convenient transaction of business.

The Cincinnati Stock Exchange is a registered securities exchange under the Securities Exchange Act of 1934. For the fiscal year ended June 30, 1946, total market value of securities traded in on the Exchange was $12,397,000, consisting of $12,325,000 market value in stocks, on 386,000- share volume, and $72,000 in rights and warrants. Thus, it is one of the smaller registered exchanges. A total of 85 issues of 64 issuers were listed, of which only 9 were accorded unlisted trading privileges. The majority of issues traded are local issues, as only one-third of issues traded in were traded on one or more other exchanges. Most of issues traded are stocks, as only three bond issues were listed.

CIPHER CODE

Originally a method of communicating secret written messages unintelligible to third parties-despatched by mail, telegraph or cable. The term is now applied to telegraphic or wireless messages transmitted, not in long-hand, but by a shorthand key or code, and primarily to secure condensation and economy rather than secrecy. Most international banking codes are in general use and the keys are accessible to all, so that secrecy is not the primary object. Anyone taking the pains can secure a translation and where secrecy is important, private codes must be employed.

Code messages not only secure economy by making one five-letter word the equivalent of a phrase or sentence, but accomplish five purposes: (1) economy, as explained above; (2) safety (in making payments a test word is used so that paying bank may know that the cablegram is authentic); (3) accuracy (the message must prove); (4) simplicity (the message can be boiled down to a few words), and (5) efficiency (time is saved in writing and sending the message). As an example of the economy effected by sending messages in code, an illustration taken from one of the International Banking Codes is given: "SHANY AYFAX".

SHANY means: "We accept your rate and will pay on next Friday to your correspondent in Christiania for your account."

AYFAX means: "Kroner seventy thousand."

The principal international codes are: Lieber's Five-Letter American Telegraphic Code, Western Union Code, Bentley's, Complete Phrase Code, Improved, Peterson's International Banking Code, Lloyd's Bank Code. Special private codes are often arranged by banks for exclusive use in transactions with correspondents and branches in foreign countries.

Code messages involving the transfer of funds or other items of value are tested, i. e., supplied with a word or number computed by a complex formula known only to the sender and receiver. It can thus be proved to be authentic. (See Cable Transfer, Test Number.)

CIRCULAR

See Bond Circular, Prospectus.

CIRCULAR LETTER OF CREDIT

See Traveler's Letter of Credit.

CIRCULATING ASSETS

Same as Current Assets (q. v.)

CIRCULATING BANK NOTES

See Circulating Notes.

CIRCULATING CAPITAL

Capital invested in Current Assets (q.v.).

CIRCULATING MEDIUM

All forms of money which have the quality of currency i.e., pass from bearer to bearer without indorsement. Circulating medium is the proper term for what is ordinarily called currency and is one of the mediums by which the exchange of goods and services take place. In the United States, it includes the following kinds of currency: Federal Reserve notes, silver certificates, subsidiary silver and minor coin, which constitute the bulk of circulation, the only other type of circulation being issued regularly being United States notes. Federal Reserve Bank Notes and National Bank Notes are in process of retirement. Gold coin and gold certificates since 1934 have not formed part of domestic circulation, gold certificates being held by Federal Reserve Banks and Agents. (See Money.)

CIRCULATING NOTES

A term applied to Federal Reserve bank notes and National bank notes, also known as circulation, both of which are in process of retirement. (See Bank Note,

Federal Reserve Bank Notes, National Bank Notes.)

CIRCULATION

Another term applied to circulating bank notes. (See Circulating Notes.)

CIRCULATION STATEMENT

Published each month by the Treasury Department, the Circulation Statement of United States Money reports: (1) Total stock or amount of each type of coin and paper currency outstanding; (2) amounts held by the Treasury and the Federal Reserve Banks; and (3) amounts in circulation excluding the amounts held by the Treasury and the Federal Reserve Banks. (See Money Circulation.)

CITY BONDS

See Municipal Bonds.

CITY COLLECTION DEPARTMENT

The department of a bank which received sight and time drafts, checks, notes, and acceptances "over the window" from local depositors and from out-of-town correspondents for collection within the city. The city collection department handles collection items only, i. e., those which are credited to depositors' accounts only when, and if, actually collected. (See Country Collection Department.)

CITY COLLECTIONS

See Collection Items.

CITY ITEMS

A term used in banking practice to denote checks, drafts, notes, or acceptances drawn on a bank, individual, firm, or corporation located in the same city as the bank where they have been deposited for collection, either through the clearing house or by messenger.

CIVIL BONDS

Bonds issued by a Government or political sub-division thereof, e. g., Federal Government, state, county, municipal, district, precinct, dependent territory, as distinguished from corporation bonds. Civil bonds are supported by the good faith and taxing power of the issuing governmentality and are rarely secured by a specific pledge of collateral. (See Bond.)

CIVIL LOANS

Loans made by a Government or political sub-division thereof. (See Civil Bonds.)

CLASS BONDS

Same as Classified Bonds (q. v.).

CLASS I RAILROADS

Railroad companies, including switching and terminal companies, having annual operating revenues (total gross revenues) in excess of $1,000,000. (See Railroad Earnings.)

CLASS II RAILROADS

Railroad companies, including switching and terminal companies having annual operating revenues (total gross Revenues) from $100,000 to $1,000,000. (See Railroad Earnings.)

CLASS III RAILROADS

Railroad companies, including switching and terminal companies, having annual operating revenues (total gross revenues) below $100,000. (See Railroad Earnings.)

CLASSIFIED BONDS

Bonds of the same corporation issued in series, e. g., Series A, Series B, Series C, etc., differing as to interest payment or issue or maturity date.

CLASSIFIED STOCK

Stock of the same corporation issued in series, the first in the series having rights prior to the others, e. g., first preferred stock, second preferred stock, third preferred stock, or Class A, Class B, or Class C Common Stock.

CLAYTON ACT

An Act passed on October 15, 1914, the general purpose of which was to prohibit abuses of large business combinations. It is applicable to banks in that it regulates interlocking directorates of banks. The Sections of the Clayton Act relating to banks, Sections 8 and 11, have been amended seven times since original passage, the last amendments being incorporated in the Banking Act of 1933 and the Banking Act of 1935.

Section 8, as amended, states that no director, officer or employee of any member bank of the Federal Reserve System shall be at the same time a director, officer or employee of any other bank, National or State, except that the Board of Governors of the Federal Reserve System may by regulation permit such service for not more than one other such bank. This general prohibition does not apply to the following: (1) banks in which the United States controls more than 90% of the stock; (2) banks in formal liquidation; (3) foreign banking corporations organized under Section 25 of the Federal Reserve Act; (4) Banks controlled by stockholders of member banks; (5) Banks located in places other than the same or contiguous and adjacent to the location of the subject bank; (6) Banks not engaged in the same class of business; and (7) Mutual savings banks.

Section 11, as amended, charges the Board of Governors of the Federal Reserve System with enforcement of the Act's Section 8 applicable to banks. In accordance therewith, the Board has issued Regulation L, latest revision of which is dated January 4, 1936. (See Federal Reserve Act.)

CLEAN BILL OF EXCHANGE

A bill of exchange not accompanied by shipping documents, such as bill of lading, insurance certificate, etc., and therefore unsecured. Bankers' bills are usually clean. (See Bill of Exchange.)

CLEAN BILL OF LADING

One which does not lessen the issuing transportation company's liability by such restricting clauses as, "Said to contain-", "Shipper's load and count", etc., or which refers to packages as not being intact. (See Bill of Lading.)

CLEAN BOND

A coupon bond that bears no indorsement or marks, as distinguished from a marked bond. (See Stamped Security.)

CLEAN CREDIT

A letter of credit issued by a bank against which the designated foreign seller may draw a bill without documentary support. The issuing bank engages to accept a clean bill, if otherwise drawn in accordance with the

conditions imposed by the relative letter of credit. A clean credit is granted only to concerns of the highest credit standing. (See Letters of Credit.)

CLEAN DOCUMENTS

See Clean Bill of Lading.

CLEAR

This term has four meanings:

(1) Checks are cleared through the clearing house, i. e., collected or passed through for payment. (See Clearing House.)

(2) Active securities are cleared through a stock exchange clearing house. (See Stock Clearing Corporation.)

(3) A legal expression meaning free from incumbrance.

(4) A vessel clears a port only after notice has been given of its intended departure and examination and leave by the Customs' officials has been given. Clearance papers constitute a certification showing that a vessel bound for a foreign port has fulfilled the requirements of the law and has authority to leave port.

CLEARANCE PAPERS

See Clear.

CLEARANCES

1. The process of effecting clearings in clearing house practice. (See Clearing House.)

2. Vessel clearances are the right of vessels to depart from a port, as evidenced by certificate obtained from the collector of the port, certifying to compliance with customs, health, and other port regulations.

3. The customs entry of goods. Every import of goods into the United States, unless expressly exempted, must be "entered" by filing on the required forms with the customs house, whether or not duty-free.

4. Also, the total volume of commodities shipped out from a port for a particular date.

(See Customs House, Customs Duty, Customs Ports.)

CLEARING CONTRACTS

In the operation of clearing contracts traded in on commodity exchanges, the process of substituting principals to transactions, thus facilitating settlement of accounts. (See Futures.)

CLEARING HOUSE

A voluntary association of banks located in the same city joined together to facilitate the daily exchange of checks, drafts, and notes among its members, instead of separate exchanges being made directly by each bank with the others. "A clearing house may be defined as a device to simplify and facilitate the daily exchanges of items and settlements of balances among the banks and a medium for united action upon all questions affecting their mutual welfare. The tendency has been marked, especially in recent years, to include within the legitimate field of clearing houses all questions affecting the mutual welfare of the banks and the community as a whole."

The following data, prepared by the New York Clearing House, describe the historical and statistical aspects of the New York Clearing House.

The New York Clearing House is a voluntary association of banks located in the City of New York. The Constitution of this association states as its object "the effecting at one place of the daily exchanges between the members thereof and the settlement of the balances resulting from such exchanges, the promotion of the interests of the members, and the maintenance of conservative banking through wise and intelligent co-operation."

Origin

The Clearing House idea as applied to banks, originated in London, England, as far back as 1773 and it was not until 1853 that the New York Clearing House was formed, which was the first institution of its kind in this country; although some twenty years prior thereto, Albert Gallatin, a prominent banker of his time and an able economist, suggested to his banking associates the establishment of a Clearing House in New York similar to that maintained in London, England. Between the years 1849 and 1853, the number of banks in New York City increased from 24 to 57, this following the increase of business incident to the discovery of gold in California, and this increase in the number of local banks made it very necessary that some plan be worked out which would bring about a more prompt settlement of balances between banks. At that time all banks presented checks of each other by hand and for a while settlement had been made in gold and bank notes. From this arrangement the plan of weekly settlement was developed but this was not found to be satisfactory or adequate for various reasons.

Daily and Annual Totals

The first exchange was made on October 11, 1853, and the amount of checks exchanged on that day totaled $22,600,000. Ninety-four years later, that is, October 10, 1947, the total exchanges at the Clearing House amounted to $1,285,000,000. Beginning with the simple exchange of checks, this act of co-operation on the part of the banks has led to others increasingly important and has demonstrated over and over again the value of banking organization.

In the ninety-four years existence of the Clearing House, checks to the stupendous amount of $10,291,000,000,000 have been exchanged. The total in the fiscal year ending September, 1947, was approximately $357,000,000,000 which is an average of $1,295,000,000 each working day. On five occasions in 1928, fifty-one in 1929, five in 1930, two in 1945, five in 1946, and four in 1947, the daily exchanges exceeded $2,000,000,000. The largest exchange on record was made on October 31, 1929 when the total reached $3,853,000,000. It is worthy of note that the exchanges exceeded the $3,000,000,000 mark on four other days during that year.

The following are the largest daily totals recorded in subsequent fiscal years ending September 30th:-

1931	January 3	$1,863,000,000
1932	October 2	1,428,000,000
1933	June 16	1,045,000,000

There are 259 reporting Clearing Houses in the United States and the clearings of the New York Clearing House represent about 51 per cent of the total clearings for the entire country.

SUMMARY OF VARIOUS EXCHANGES

When the Clearing House started operations there was but one exchange, 10 o'clock each morning. In February, 1918, it was found necessary due to the accumulation of checks at the 10 o'clock exchange to have another exchange at 9 o'clock, and in January, 1922 at the request of a few of the larger banks, a third exchange was instituted at 8 o'clock in the morning to take care of the early morning mail. Items sent through the exchanges which were unpaid, were returned to the depositing banks during the day and in order to handle this part of the work, a special return item exchange at 3 P. M. was started in September, 1917. With the growth of the City and the increase in the number of branch offices of members, many of them some distance from the main offices, it was found that some other plan would have to be worked out in order to take care of the tremendous volume of checks accumulating in and distributed to the various offices each day. Consequently in August, 1926, a number of changes were made in the rules and constitution of the Clearing House providing among other features for the establishment of a night exchange at the Clearing House, which is open for the delivery and receipt of packages of members from 5 o'clock in the afternoon until 3 o'clock in the morning. The Coupon Exchange which takes place at 9:15 each morning was also provided for at this time.

In October, 1929, an exchange for Stock Certificates between Transfer Agents and Registrars was inaugurated with two sessions daily - 8:30 A. M. and 11:30 A. M., and in June, 1930, a third session was added at 10:45 A. M.

In 1942, due to a change in the arrangement for redemption of Postal Money Orders, the Clearing House inaugurated a plan to handle such items which are payable at certain out-of-town points for the member banks through the City Collection Department.

DAY'S OPERATIONS AT THE CLEARING HOUSE -- VARIOUS EXCHANGES

In order to give a picture of the entire day's operation at the Clearing House, it would no doubt be interesting to briefly take a day commencing at 8 o'clock in the morning and continuing through until 3 o'clock the following morning.

EIGHT O'CLOCK EXCHANGE

At 8 o'clock the vault room, where the night exchange takes place, is opened and deliveries are made to member banks of packages received from other members following the close of business the preceding day. The banks receiving items at this time do not maintain night forces and consequently have not called for their packages earlier in the morning.

At the same hour there is an exchange going on in the Exchange Room between fourteen of the larger banks. This is the 8 o'clock exchange and the banks participating use it for the clearance of checks which have arrived in the early morning mail after the items have been taken to the Midnight Exchange.

EXCHANGE FOR STOCK CERTIFICATES

At 8:30 A. M. representatives of the Transfer and Registrar Departments of the member and clearing non-member banks and three outside institutions meet at the Clearing House at which time the Transfer Agents deliver stock certificates to the Registrars for registration, the certificates being securely tied in bundles and marked with the names of the delivering and receiving banks. This exchange which lasts fifteen minutes closes at 8:45 A. M.

NINE O'CLOCK EXCHANGE

Then follows the 9 o'clock exchange in which most of the member banks participate. This also takes care of the mail items which have been received from the Post Office at various hours from 2 A. M. on and including mail and night deposits.

POSTAL MONEY ORDERS

Also at 9 A. M. the member banks deposit money orders which are drawn on, or payable at certain out-of-town points. Due bills are issued to the member banks for the amount of the deposit less the cashing fee imposed by the New York Post Office, and the orders are then presented for payment by the City Collection Department to the New York Post Office. The due bills issued to the member banks and check received in payment from the Postmaster offset each other when cleared through the 10 o'clock exchange the following business day.

COUPON EXCHANGE

At 9:15 A. M. the members again assemble for the Coupon Exchange where coupons payable at the various member banks, having been sorted into envelopes under the name of the paying bank, are presented to these banks and receipts taken which are redeemable through the 10 o'clock exchange the following day. This Coupon Exchange was started in September, 1926, and for the year ending September, 1947, coupons amounting to approximately $458,000,000 were paid through it or about an average of $1,659,000 a day, the largest day being slightly over $6,372,000. This exchange usually takes about ten minutes from the time the banks are assembled to their dismissal. Coupons from approximately 12,000 bond issues are paid through this exchange. The Clearing House obtains each month from its members lists of coupons due and payable, and distributes these lists arranged in alphabetical order to the members and others interested.

TEN O'CLOCK EXCHANGE AND METHOD OF SETTLEMENT

At 10 o'clock all the members assemble again for the principal exchange and, as in the case of the other exchanges, all checks are sorted into envelopes under the name of the member bank on which the checks are drawn. The representatives of the various banks take places at their desks in the Clearing Room; The Settling Clerks standing behind the desks and the Delivery Clerks standing in front of the desks with the packages all arranged in order ready to start upon the signal from the gallery. When the signal has been given the Delivery Clerks pass forward from desk to desk and as soon as the Settling Clerks receive the packages, they record the amount thereof on the sheets and the messengers take them to their banks. The Clearing House is furnished with the total of the amount brought to be exchanged by each bank and, after the Settling Clerks

record the incoming packages, a total is also furnished of the amount received and the balance or difference, either debit or credit. These figures are tabulated on a sheet by the Clearing House Proof Clerk and when a proof has been made and announced the various clerks are dismissed. Fines are imposed on the member banks if they fail to arrive promptly at the opening hours of these exchanges. Settlement at the 10 o'clock exchange, or final exchange, includes all items delivered or exchanged subsequent to the 10 o'clock exchange of the preceding business day.

The balances, debit or credit for each bank, are listed by the Clearing House and a memorandum furnished to the Federal Reserve Bank which makes the necessary adjustments or settlements through the accounts of the member banks on its books. The balances required to settle the enormous daily clearing of checks amount to about 21 per cent. of the total exchanges; the remainder being adjusted by offset. Prior to the establishment of the Federal Reserve Bank these balances were settled in cash at the Clearing House. By 1 P. M. each day the Federal Reserve Bank confirms to the Clearing House that all balances have been adjusted.

CITY COLLECTION DEPARTMENT

While the 10 o'clock exchange is in process in the Clearing Room, the members are bringing into the City Collection Department items drawn on the various institutions on this list. These represent foreign banking houses, investment brokers and bankers, railway companies, insurance companies, and commercial concerns, the number totaling approximately 96. This department enables the member banks to send all such items to a central point (the Clearing House) and receive payment in one check. The packages containing these items are sorted by the Clearing House staff and delivered to the authorized representatives of the firms and corporations drawn on. By 1:30 P. M. the Clearing House receives a certified check in payment which is used as an offset against the due bills handed to the members upon receipt of their packages in the morning. These due bills and checks are cleared through the 10 o'clock exchange of the following morning. This department was established in 1917 and the names on the list are, of course, very carefully selected.

EXCHANGE FOR STOCK CERTIFICATES SECOND SESSION

At 10:45 A. M. daily, a number of the representatives of the Transfer and Registrar Departments of the member banks meet for the second session of this exchange to return registered stock certificates from the Registrars to the Transfer Agents. This is an informal exchange, opening at 10:45 and lasting fifteen minutes each business day and is preliminary to the regular exchange for Stock Certificates at 11:30 A. M.

EXCHANGE FOR STOCK CERTIFICATES THIRD SESSION

From 11:30 A. M. to 12 noon each business day representatives of the Transfer and Registrar Departments of member banks and a number of banks not members of the Clearing House again meet for the purpose of returning stock duly registered from the Registrars to the Transfer Agents, subject to the same regulations as to wrapping and marking as govern the other two sessions.

The exchanges for Stock Certificates have proved to be of great assistance to the Registrar and Transfer Departments of the participating institutions, a large proportion of the deliveries being handled through this channel.

RETURN ITEM EXCHANGE

Items, included in the packages of the various check exchanges, which are not paid are either returned by hand directly to the bank presenting them, or, if $5,000 or under, may be sent through the 3 P. M. Return Item Exchange with the additional provision that items $1,000 and over returned for endorsement or informality must be certified by the returning bank. As an alternative arrangement such certified items may also be returned through the Midnight Exchange. Information regarding "Not Good" items being returned by branches of members located at some distance from the main offices, or in what is known as the "Outlying Zone," if $5,000 or under, is given by telephone to the main office, where a form of confirmation of advice is prepared and sent through the Return Item Exchange, with the item coming through the Midnight Exchange. "Not Good" demand items for less than $1,000 each may be returned through the Mid-night Exchange without previous notice provided that such items over $100 bearing out-of-town endorsement must be protested. All return items, however, over $5,000 are sent back by messenger the same day.

MIDNIGHT EXCHANGE

Promptly at 5 o'clock in the afternoon the Midnight Exchange opens in the vault room and as each bank finishes the work of the day, checks on all the other members after having been sorted and totaled are brought to the Clearing House and deposited, a list of the envelopes being made in duplicate, the Clearing House receipting and returning one copy, keeping the other. These envelopes are sorted in the Vault Room into boxes for the various member banks to which they are addressed. This procedure continues until midnight and promptly at that hour and continuing until 3 o'clock in the morning, deliveries are made to the banks with night forces which call at the Clearing House Vault Room and receive packages that have accumulated in their boxes. The Clearing House staff list these as delivered and take receipts. Banks are permitted to send packages to the Clearing House for this exchange until 2 A. M., and receive their packages from 12 o'clock midnight until 3 A. M. No bank may make more than two deliveries to the Clearing House although they may call for their packages as often as they care to within the prescribed hours. At the closing hour all packages on hand are checked against the record of the number received and delivered, and locked in the vault to be taken out five hours later (8 A. M.)for delivery to the representatives of the banks not maintaining night forces.

It is estimated that about 69 per cent. of the total of the entire day's clearings goes through the Midnight Exchange or, measuring this volume in another way, approximately two tons of checks are handled by the night force after regular banking hours.

OTHER CLEARING ARRANGEMENTS

This fairly well covers the day's operations at the Clearing House, and these exchanges include all checks on members received by the 24 member banks and their 395 branches in addition to the Federal Reserve Bank and the City Collection Department of the Clearing House. There are 3 banks and trust companies known

as clearing non-members that make their exchanges through members under constitutional provisions, thus making a total of 424 banks, trust companies and branches whose items are cleared through the Clearing House. All other Greater New York banks clearing items drawn on New York Clearing House member banks make use of the Federal Reserve Bank, which, as a clearing member of the Clearing House makes use of the facilities to the fullest possible extent for the clearance of items on member banks received by it. The Federal Reserve Bank through its Manhattan-Bronx and Brooklyn Collection Arrangement, also clears items drawn on 38 local banks that are not members of the Clearing House. This arrangement is very similar to the City Collection Department of the Clearing House except that in the latter case the list is principally non-banking institutions, except agencies of foreign banks, while the Federal Reserve Bank confines its list to banks. A few institutions that do not make use of the Federal Reserve Bank or the Clearing House for the clearance of their items, pay on presentation over the counter.

There are about 68 commercial banks of various sizes in Greater New York with assets of approximately $27,812,000,000, the assets of the Clearing House institutions representing about $26,210,000,000 of this total, or approximately 94 per cent.

STATISTICAL DEPARTMENT

This department at the Clearing House compiles the daily, weekly and annual figures of clearings and balances; also weekly reports and other reports of members. In addition a compilation is made of the quarterly State Banking Department and Comptroller of the Currency bank reports showing the assets and liabilities in detail of all banks in Greater New York. These are distributed to the members and other banking institutions as well as individuals.

Since June, 1930, the Clearing House has issued a booklet containing a complete list of paying agents of coupons in Greater New York covering all issues not taken care of in the monthly coupon list issued in connection with the Coupon Exchange for members of the Clearing House. This booklet is revised annually and distributed to the member banks and others interested.

To facilitate the handling of redemption advices sent through the Return Item Exchange, a Directory containing branch information as to number or symbol, address, telephone number, etc., is issued and revised periodically. The Clearing House also prepares the total clearings of all reporting Clearing Houses in the United States annually. Information covering many subjects is collected and filed at the Clearing House and this material is used quite freely by the member banks, statisticians and financial writers.

MEMBERSHIP

Membership in the Clearing House Association requires a minimum capital of $1,000,000. Applications for membership are approved by a Committee on Admissions and then presented to a meeting of the Association. After approval of the application, payment of an admission fee of $5,000, and signing the Constitution, the new member is accorded the facilities of the Clearing House.

EXPENSES

The expenses of the Clearing House are assessed against each member bank on the basis of the total dollar amount of checks brought by each institution in relation to the total amount of the exchanges of all members for the year.

MANAGEMENT

The Clearing House occupies its own building which was erected in 1896 at 77 Cedar Street. The executive officers are the Manager and Assistant Managers. The Manager, under the control of the Clearing House Committee, has immediate charge of the Clearing House building and the transaction of all business of the Clearing House. The Clearing House Committee is composed of senior bank officers, the members serving two years, a new Chairman being elected every year. The following make up the present Clearing House Committee:

J. Luther Cleveland, Chairman
Chairman of the Board, Guaranty Trust Company

W. Randolph Burgess,
Vice-Chairman of the Board, National City Bank

George Whitney,
President, J. P. Morgan & Co. Incorporated

William S. Gray, Jr.
President, Central Hanover Bank and Trust Company

E. Chester Gersten,
President, Public National Bank and Trust Company

Winthrop W. Aldrich, President of the Association
Chairman, Board of Directors, Chase National Bank
Elected Oct. 1947

The President of the Association is elected every two years and this is an office that is very highly regarded in the banking fraternity and one that is considered an honor to hold. The President of the Association is ex officio member of the Clearing House Committee.

CLEARING HOUSE AGENT

A member of a clearing house which clears the checks of another bank which is not.

CLEARING HOUSE BALANCE

The total of the debit and credit balances at a clearing house each day as distinguished from the aggregate of checks, debits and credits. A report of the clearing house totals and balances is published daily in the financial section of the local newspapers.

CLEARING HOUSE BANK RETURN

See Clearing House Statement.

CLEARING HOUSE CERTIFICATES

J. G. Cannon writes there were two kinds of clearing house certificates: (1) those secured by a deposit of gold coin; and (2) those secured by a deposit of collateral securities. The former were employed in ordinary times as a means of settling clearing house balances solely as a measure to economize time, labor and expense, by minimizing the risk in handling large sums of money. The latter, properly called Clearing House Loan Certificates (q. v.) were employed in times of financial disturbance or panic. Both were used exclusively for

the purpose of settling clearing house balances among the members of the association.

CLEARING HOUSE COMMITTEES

The New York Clearing House Association has four standing committees which are elected annually from the officers of members. These committees are as follows: clearing house committee, conference committee, committee on admissions, and nominating committee. The clearing house committee is the most important and its duties consist of the following: (1) to appoint the manager and all necessary employees; (2) to collect moneys and supervise expenditures; (3) to establish rules and regulations not provided for in the constitution; (4) to examine the members of the association; (5) to establish rules regarding collections on out-of-town banks and fixing the rates to be charged therefor; and (6) to establish a scale of fines for errors, disorderly conduct, and other irregularities. (See Clearing House).

CLEARING HOUSE EXCHANGE RATES

Rates of exchange (usually minima) established by a Clearing House Association, which members thereof are bound to observe, penalties being provided for violations. The original establishment of uniform exchange rates for Clearing House members in New York City grew out of the severe competition of members for deposits, many banks receiving checks drawn on out-of-town points for deposit at par, ignoring any exchange charge. This arrangement seemed unfair in view of the fact that Southern and Western banks continued to charge exchange for checks received for deposit and drawn upon New York banks, with the result that the New York banks sustained losses through collection of these checks at par. Accordingly, the New York Clearing House Association, in the interests of conservative banking, and in order to discourage circuitous routing of items, and to place all members on an even plane of competition, originally prescribed minimum exchange charges. This schedule of rates was established by the Clearing House Committee and was revised from time to time. In this schedule, points in adjoining states were par points, and many points further away were discretionary, i. e., the rate of exchange was discretionary with the bank receiving the item for deposit.

The rate of exchange upon items that must be collected in out-of-town points depended upon three variables, viz: (1) the kind of item, i. e., whether checks and drafts, banker's acceptances, or other items (banker's acceptances received a preferential rate); (2) whether the bank on which the item is drawn is located in a Federal Reserve bank city (or branch city), or elsewhere (the former being accorded a lower rate), and (3) the mail time between the point of deposit and the point of collection.

In July, 1926, the New York Clearing House revised its constitution to abolish exchange charges. As a result of the facilities for the collection and payment of checks at par by the Federal Reserve System, par collection being a condition of membership in the System, the great majority of banks now remit on checks at par. (See Clearing House, Domestic Exchange, Par List.)

CLEARING HOUSE LOAN CERTIFICATES

An emergency form of currency for use in settling clearing house balances only, issued at times of shortages in currency in the past before organization of the Federal Reserve System. The New York Clearing House reports:

"Ten times in the history of the New York Clearing House have the members pooled their resources to make available to the business public the largest possible supply of credit. This was arranged through the issuance of Clearing House certificates, the first issue being in 1860 when Abraham Lincoln was elected President of the United States, and again in 1873, and the third time in 1890. This was closely followed by the Panic of 1893 denoting the end of the boom period of railroad and city building in the west, and again in 1907 when runs on certain New York banks caused withdrawals of deposits on a large scale and the so-called money panic was the result, there being a lack of legal provisions for the issuance of currency to meet the unusual demands. The next issuance of Clearing House certificates was in 1914 at the outbreak of the World War, when the Stock Exchange was closed for several weeks. With the establishment of the Federal Reserve System and the provisions for the issuance of Federal Reserve Notes the currency situation has been made very flexible and thus able to take care of any emergency which might arise."

Under the Federal Reserve System, which provides for rediscounts and elastic currency, it is doubtful whether Clearing House Loan Certificates will ever again be needed. The real explanation for the necessity to resort to these certificates in the past lay in an organic defect in the National banking system, viz., failure to provide for Elastic Currency (q.v.), which expands and contracts with the needs of business.

CLEARING HOUSE PROOF

A proof of each day's clearings at a clearing house as determined by the clearing house manager, as the result of the clearing process. This proof shows the amount brought to and received from the clearing house by each member, and the credit or debit balance of each. The proof is secured by reaching an agreement between the total debits and credits, and between the total debit and credit balances.

In the New York Clearing House (and a few others), a certified copy of the clearing house proof is used as a journal entry by which the balances due to or from each member may be adjusted through the books of the Federal Reserve bank. In New York City a total of approximately $357 billion in checks were cleared for the fiscal year ending September, 1947, an average of $1,295 million each working day.

A facsimile of the New York Clearing House Proof is reproduced on page 126.

CLEARING HOUSE RETURN

Same as Clearing House Statement (q. v.).

CLEARING HOUSE SETTLEMENT

Payment by a bank of its debit balance to, or receipt of its credit balance from, the clearing house. It is really an adjustment by each bank with all other banks of the association of their mutual claims against one another. Payment of balances may be effected in a variety of ways. (See Clearing House.)

CLEARING HOUSE SETTLEMENT SHEET

A sheet prepared by each member of a clearing house association showing the amount of checks, etc., which it holds against each other bank of the association, and which will be presented for collection at the next clear-

ing. The total of this sheet, i. e., the aggregate of claims against other members, represents the bank's credit balance at the clearing house. (See Clearing House.)

CLEARING HOUSE STATEMENT

A statement issued periodically, usually once a week, by the larger clearing house associations, which displays in condensed and detailed form the financial condition (loans, investments, legal reserve, vault cash, demand and time deposits) of the member banks.

The weekly detailed statement of the New York Clearing House Association was discontinued beginning with the week ended March 31, 1928, except information as to deposits, capital and undivided profits. It had been published regularly since the organization of the Clearing House in 1853. Discontinuance was decided upon because of the realization that the returns no longer served a useful function. Formerly the aggregate position of the New York Clearing House banks was regarded as extremely important information because it reflected the banking strength of the country as a whole, since practically all interior banks maintained deposits in New York. It was, in fact, practically the only display of bank data available weekly.

Since the passage of the Federal Reserve Act, which compels all members to keep their reserves in the Federal Reserve banks, it was the opinion of the Clearing House officials that the weekly statement of condition of the clearing house member banks was only of local interest, and useless as portraying the financial status of banks on a country-wide basis. It was cited that ample data regarding current banking conditions are now provided by (1) the weekly Federal Reserve statement (combined and individual), (2) condition of member banks in leading cities (weekly) as reported by the Federal Reserve Board of Governors (3) weekly reports of the Federal Reserve Board of Governors on loans to brokers secured by stocks and bonds, (4) monthly report of brokers' loans issued by the New York Stock Exchange, and (5) weekly reports of Federal Reserve Board of Governors on debits to individual accounts. The latest revised form of weekly statement issued by the New York Clearing House Association members is shown herewith. (See Bank Statement on page 128.)

CLEARING STOCKS

Stocks which may be cleared through the Stock Clearing Corporation (q.v.)

CLEARING MEMBER BANK

A bank which is not a member of the Federal Reserve System, but which may collect its out-of-town checks, etc., through the Federal Reserve Check collection system. Banks can become clearing members by keeping a balance with the Federal Reserve bank of their district against which incoming collections may be charged. A further qualification is that clearing members must agree to accept all checks drawn on, and presented against them, at par. All 6,921 member banks and 5,108 non-member banks as of November 30, 1947 were on the par list, as compared with 2,048 non-member banks not on the par list. (See Federal Reserve Check Collection System, Par Clearances, Par List.)

CLEARINGS

See Bank Clearings.

CLIQUE

An informal group of persons or financial interests who work for a common end, and as applied to stock speculation, in former "free markets" before the SEC, a group organized to manipulate the price of a security, or group of securities. In financial reviews, bull cliques and bear cliques were often referred to as groups of individuals interested in forcing prices up or down. A clique differed from a pool in that there was no formal written agreement, nor was the management of the clique in the hands of a particular person. In a clique there was merely an informal understanding that a certain stock was to be exploited, while in a pool, there was a written agreement in which the profits or losses are shared by the members. Under the Securities Exchange Act of 1934, manipulation of security markets is prohibited, such as matched orders or "wash sales", and short sales, stop-loss orders, price-pegging and stabilizing are placed under Securities Exchange Commission control and regulation, which thus hits directly at former clique practices. (See Manipulation, Pool.)

CLOCK LOCK

See Time Lock.

CLOCK STAMP

A device for imprinting the hour and day of arrival upon all mail and other matter received. Such a stamp is useful for future reference purposes and to test the efficiency and speed in filling orders or answering letters.

CLOSE

In commodity exchange trading, the short period of time just before the end of the market session, when all trades are officially declared to be executed at or on the close.

Also, the last recorded price for a security or commodity, also called the "last", for a particular trading session. (See Closing Price.)

CLOSE (CLOSED) CORPORATION

A corporation, the shares of which are held by a few persons, usually officers, employees, or others close to the management, and which are rarely offered to the public.

CLOSE MONEY

Money obtained at fairly high interest rates. Close money rates are not as high as for Tight Money (q.v.).

CLOSE PRICES

An expression used to describe the stock market when changes in prices between successive transactions are small fractions, or when the final bid and asked quotations differ by small fractions.

CLOSED MORTGAGE

A mortgage which precludes further indebtedness on the property which it pledges as security, i.e., the limit which can be borrowed under the mortgage has already been attained. Such a mortgage is advantageous to its purchaser or to bond holders whose security consists therein. (See Mortgage.)

CLOSED OUT

An expression used to refer to the clos-speculative account has been sold out against his consent because

of insufficient margin, or to indicate that a business has been disposed of or liquidated.

CLOSING AN ACCOUNT

When a bank account is closed as shown by a complete withdrawal of the deposit balance, notice is sent by the bookkeeper (ledger clerk) to the new business department and credit department for their information and records. The reason for closing an account is usually ascertained, if possible, and recorded. Frequently a letter is written, or a representative sent to the customer in the interest of ascertaining the cause of withdrawing the account and to attempt to secure a reinstatement thereof.

CLOSING ENTRIES

In accounting, the journal entries which for the particular period close out the nominal accounts, combine their net balances into summary accounts, and close out the summary accounts to profit and loss account, for final transfer to the capital accounts.

CLOSING PRICE

The price at which the last sale of each stock, bond, or commodity is effected daily on a stock or produce exchange. These prices are quoted in the daily newspapers, usually with the opening (first) high, and low prices of the day. The net change in price of a security as reported from day to day is the difference between the closing prices of successive days.

CLOSING THE BOOKS

An expression used to refer to the closing of stock transfer books on a date fixed by the board of directors of a corporation at the time dividends are declared, in order to determine the stockholders of record, i. e., those entitled to received dividends. The last date for transferring stock in order to participate in the dividend is the day the books close, the following day the stock being sold ex-dividend. Closing the books enables the transfer agent to prepare a list of the stockholders so that dividends may be sent to the stockholders of record. (See Stockholders of Record, Stock Transfers.)

CLUB ACCOUNTS

Deposit accounts of unincorporated organizations, such as clubs, societies and groups. As in the case of corporation accounts, the bank should obtain and file resolution by the organization specifying the officers who are authorized to sign checks, together with signature card. (See Signature Department, Signatures.)

COALERS

An expression which refers to those railroads, a large part of the freight traffic of which consists in hauling coal. The chief roads which haul anthracite are the Reading, Lehigh Valley, Pennsylvania, Delaware & Hudson, Erie, Delaware, Lackawanna & Western, Central R.R. of New Jersey. The largest carriers of bituminous are the "Pocahontas" Region roads -- Chesapeake & Ohio, Norfolk & Western and Virginian; Baltimore & Ohio, Pennsylvania, Louisville & Nashville, New York Central and Illinois Central.

CO-ASSIGNEE

A joint Assignee (q. v.).

COCOA EXCHANGE

See New York Cocoa Exchange.

CODE

See Cipher Code.

CODICIL

A written addition to a will; a testamentary instrument altering or supplementing an existing will. It is neither necessary nor customary to have the codicil written on the same paper as the will, or attached to it, but it must be executed with the same formalities as the will itself, e. g., if the laws of the state require attestation by three witnesses for the will, the codicil requires the same number. (See Will.)

CO-EXECUTOR

One of two or more executors; a person, bank, or trust company appointed to act as executor jointly with another. (See Executor.)

COFFEE EXCHANGE

See New York Coffee and Sugar Exchange.

COINAGE

The process of identifying, by stamping a piece of metal intended to be used as money, by a sovereign power, i. e., a national government. When metal was first coined, only the obverse face was stamped with an image of the sovereign, with an indication of the weight. In the process of evolution, to prevent clipping, the reverse side was also stamped, and finally to prevent trimming the edges, the edges were milled. The purpose of coinage is to avoid inconvenience and delay in each act of exchange. Since coinage is a governmental certification of the weight and fineness, of coins, the necessity of testing the weight and fineness of metal, when used as a medium of exchange, is obviated. Good coinage involves the following requisites: easy recognition of denomination, easy identification of the issuing Government, certification of weight and fineness, difficulty of being counterfeited or altered; difficulty of being abraded. (See Abrasion, Brassage, Free Coinage, Gratuitous Coinage, Milling, Mint, Money, Seigniorage, United States Money.)

COINING RATE

See Mint Ratio.

COINS

First read Coinage.

Metallic money as distinguished from paper money; metal stamped by a governmental authority, for use as money, as distinguished from bullion, or metal in the mass. United States coins have a design, composition, weight and fineness fixed by statute and are manufactured only by the Federal government under the supervision of the Director of the Mint (q. v.), and may be classified as silver pieces, fractional or subsidiary silver coins, and minor coins (gold coins have been absent from circulation since 1934, when they were withdrawn from circulation.) (See United States Money.)

CO-INSURANCE

A sharing of insurance risk between insurer and insured, depending on the relation of the amount of the policy and a specified percentage of the actual value of the property insured at time of loss. The co-insurance clause of a fire insurance policy ordinarily provides that in the event of loss, the insurer shall be liable for no greater proportion of the loss than the ratio of the sum of the policy to the specified percentage (usually

80%) of the actual value of the property insured at the time when the loss is incurred. Consequently, it is in the interest of the insured to keep up insurance coverage, as the lower the amount of the policy in relation to the percentage of actual value specified, the greater will be the insured's co-insurance at time of loss. (See Insurance.)

COLLATERAL

Security given by a borrower to a lender as a pledge for payment of a loan. The collateral is deposited with the lender, and may be used to satisfy the claim of the lender in the event of failure of the borrower to meet the debt at maturity.

Any kind of property which has a ready and stable market can be employed as collateral, but the collateral value of different kinds of property is subject to wide variation depending upon a number of factors. The principal kinds of collateral are: real estate, bonds, stocks, notes, acceptances, certificates of deposit, passbooks, chattels (including grain and live stock), bills of lading covering readily marketable and non-perishable staples, warehouse receipts, assigned book accounts, and trust receipts. Some kinds of property are ineligible to serve as collateral because they have no ready market and their value unascertainable.

The chief factors bearing upon the value of property as collateral are: readiness and steadiness of market, activity of market, ease of transfer of title, degree of fluctuation of market value, and character of the collateral. The collateral or hypothecary value of property is the ratio of the amount which can be borrowed to its market value. The collateral value of real estate normally ranges between 40 and 66-2/3 per cent. National banks are not permitted to lend more than 50 per cent. upon improved real estate, and 60 per cent. of appraised value if the loan is amortized 40 per cent or more. Such limitations do not apply to real estate loans insured under Title II of the National Housing Act. Savings banks in New York State may lend 60 per cent. upon improved and 40 per cent. upon unimproved property.

Securities form an important class of collateral because of their extreme marketability. Under the Securities Exchange Act of 1934, the Board of Governors of the Federal Reserve System was empowered to regulate maximum loan value on registered securities by banks and members of national securities exchanges or firms doing business through them. Regulation T of the Board, applying to extension of credit by brokers and dealers on non-exempt registered securities, became effective October 1, 1934. Latest requirements, effective February 1, 1947, prescribe margin requirements (difference between market value, 100%, and maximum loan value) at 75% for extensions of credit by brokers and dealers in listed securities and for short sales. Margin requirements were 100% for the period January 21, 1946 to January 31, 1947. Regulation U, effective May 1, 1936, applies to the extension of credit on any stocks by banks for the purpose of purchasing or carrying registered stocks, and imposes similar maximum loan values. (See Federal Reserve Regulations, Hypothecary Value, Loans, Security.)

COLLATERAL HEIR

See Heir.

COLLATERAL LOAN

A short-term loan for which the borrower has deposited with lender some kind of collateral security, such as bonds, stocks, warehouse receipts, etc., which may be sold to satisfy the debt, if not paid at maturity.

COLLATERAL MORTGAGE BONDS

Collateral Trust Bonds (q. v.), which are secured by a deposit of mortgage bonds; bonds which are in turn secured by a deposit of mortgage bonds, and therefore indirectly secured by a mortgage. The title has sometimes proved to be a misnomer, because the security is sometimes stocks or bonds not constituting a direct lien.

COLLATERAL NOTE

A note evidencing a loan secured by collateral, generally stocks, bonds mortgages, or other notes. (See Note.)

COLLATERAL SECURITY

Property security as distinguished from personal security. (See Collateral, Personal Security, Security.)

COLLATERAL TRUST BONDS

Bonds secured not by real property but by a deposit in trust of securities, usually bonds and sometimes stocks. A parent company which owns bonds or stocks of its subsidiaries may use them as collateral against an issue of its own bonds. The investment value of collateral trust bonds depends upon the margin of safety, or excess value of the collateral above the collateral trust issue, range of fluctuation in the price of the collateral, protection offered by the deed of trust, and the general credit standing of the issuing corporation.

COLLATERAL VALUE

See Collateral, Federal Reserve Board Regulations (Regulations T and U), for discussion of collateral value on securities.

Qualities of commodities which influence collateral value are: grading, perishability, marketability, and steadiness in demand. Judged by these requirements, many commodities qualify as sound collateral for bank loans. In the leading commodities, in which commodity exchanges maintain active markets in futures, an additional protection to the bank is the requirement that the borrower hedge a position in the commodity loaned on, by sale of a futures contract in the commodity. (See Hedge.)

COLLECTION (COLLECTING) AGENT

A bank acting as agent or correspondent located in another city with which another bank has completed arrangements for the collection of checks and other items drawn on points in the former's locality, and for the conduct of other business.

COLLECTION CHARGES

Charges made by a bank for the collection of checks, coupons, drafts, notes and acceptances, drawn upon banks, corporations, or individuals at points outside the city in which the sending bank is located. Local clearing house associations usually fix a minimum compulsory collection charge for items drawn on out-of-town points, when cashed, or deposited for credit at its member banks. This charge is made to compensate for the loss of interest upon the money while the check is in process of collection, and is based upon the amount, and time necessary to collect the item.

Federal Reserve banks, through their transit departments, collect out-of-town checks for member banks, or any bank which agrees to pay checks drawn on it at par (known as clearing member banks), without charge.

(See Federal Reserve Check Collection System.)

When out-of-town checks are collected through regularly established collection agents on a prearranged basis of reciprocity or otherwise, the charge for collection is fixed at the discretion of the collecting bank. (See Domestic Exchange, Free Items.)

COLLECTION CLERK

A bank clerk responsible for discharging the details in connection with the collection of checks, drafts and other items drawn on out-of-town points. Where the volume of out-of-town checks is large, a separate department known as Collection or Transit Department, is created. (See Transit Department.)

COLLECTION DEPARTMENT

The collection department of a bank has functions which are more complicated than those of the clearing and transit departments. Among items handled by the collection department are: presentment for payment of coupons, notes, drafts or acceptances at proper places of presentment; surrendering of documents attached to drafts, etc. upon payment or acceptance; presentment of periodical "file collections" on installment contracts or notes secured by collateral, involving such part payments; and handling of any items, such as checks, notes, drafts and acceptances, which are not collectible by the clearing or transit departments.

Each collection item is given individual care, as mishandling might lead to legal implications. Each collection is given a separate number, which facilitates tracing and reference in correspondence or advices. Items are carefully recorded with complete description. The work of the collection department in large banks is often subdivided into subdivisions as to items or as to local, out-of-town, incoming from other banks, file, and other collections.

Bibliography

Chapin, A. F.: Credits and Collections (rev.ed.),1935.
Jones, T. C.: Clearing and Collections, Foreign and Domestic, 1931.

COLLECTION ITEMS

Checks, drafts, notes, or acceptances deposited with a bank for credit only if and when collection and payment is made, as distinguished from Cash Items (q. v.), which are credited to the customer's account upon receipt, but which are subject to cancellation in case of non-payment. Most items deposited are cash items. Collection items are those where some doubt is entertained by the depositor of their eventual payment, and they are therefore accorded individual treatment, each item being given a special number, for the purpose of identification, and a separate deposit slip describing it in detail. Collection items may be divided into four classes: (1) City Collections (q. v.) - items drawn on banks, corporations, or individuals within the City; (2) country collections - items drawn on out-of-town banks, etc.; (3) special collection items, with special documents attached, e. g., bills of lading, mortgages, stocks and bonds; and (4) foreign collections - items drawn on banks, etc., located in foreign countries.

COLLECTION LEDGER

A ledger, also known as "float" ledger, constituting a part of the bookkeeping records of a bank transit department for the purpose of temporarily holding charges to various banks for checks and other items while in transit, or process of collection. Separate ledgers are provided for items forwarded for collection to Federal Reserve banks and those forwarded directly to collecting agents. The collection ledger is usually a Boston or progressive type ledger, with an extra column placed next to the debit column so that the availability date of each posting may be indicated.

By reference to the collection ledger, it is possible to ascertain the amount of items in process of collection through the Federal Reserve check collection system and through country correspondents or collecting agents. These amounts are tied up with the general ledger through the accounts entitled, Due from Federal Reserve bank, Collections, and Due from Banks, Collections, respectively. As items are collected, the collection ledger accounts are credited and the Federal Reserve bank or country correspondent is debited.

COLLECTION LETTER

A letter of transmittal or deposit slip accompanying a collection item, i. e., one to be credited to the sender's account only if and when collected. Collection items are treated individually, given a separate collection number for identification purposes, and only one is listed on a single collection letter.

Collection letters are usually form letters and if complete, contain the following information: name of collecting agent, date forwarded for collection, name of sender (owner), sender's collection number, name of maker or drawer, where payable, maturity date if the item is a note or acceptance, whether the item is to be protested or not, amount, special instructions.

COLLECTION NUMBER

The number assigned to a collection item, in the accompanying collection letter and by which it is identified in subsequent correspondence and the records. (See Collection Letter.)

COLLECTION PERIOD

The number of days that the accounts and notes receivable represent when compared with the annual net sales. Annual net sales represent the volume of business for 365 days. The collection period represents that part of the 365 days which the total of accounts and notes receivable bears to the net sales.

COLLECTION TELLER

A bank teller who supervises the collection of checks and other items deposited for credit only if and when collected. (See City Collection Department, Country Collection Department, Collection Clerk, Transit Department.)

COLLECTIONS

See City Collection Department, Clearing House, Collection Items, Country Collection Department, Coupon Collection Department, Federal Reserve Check Collection System, Federal Reserve Interdistrict Collection System, Messenger, Note Teller, Transit Department.

COLON

See Foreign Moneys- Costa Rica, Salvador.

COLONIAL BILLS

A term which applies to bills of exchange drawn on the colonies of Great Britain, including Australia, South Africa, and the Far East. Since most Australian banks carry balances in London, these bills have a particular-

ly good market in that center, and are payable in sterling.

Colonies of the continental European countries settle their trade balances usually in the currency of the mother country. Bills drawn on the colonial territories of France and Holland are payable in francs and guilders, respectively, and are treated in a manner similar to that accorded British colonial items.

1. An association of individuals or corporations for the furtherance of some project.

2. A trust, pool or other association of two or more individuals or corporations having the objective or monopoly in the manufacture or distribution of a particular commodity. (See Pool, Trust.)

COMMERCE DEPARTMENT

See Department of Commerce.

COMMERCIAL AGENCIES

See Mercantile Agencies.

COMMERCIAL AGENCY REFERENCE BOOKS

See Mercantile Agencies.

COMMERCIAL AGENCY REPORTS

See Mercantile Agencies.

COMMERCIAL BANK

A name given to one of the classes of non-governmental banking institutions under Bank (q. v.). Commercial banks are designed primarily to finance the production, distribution, and sale of goods, i. e., to lend short-term funds, as distinguished from the service of lending long-term or capital funds. The bulk of deposits of commercial banks consists of demand deposits which are invested in short-term loans. National and state banks are the best examples of commercial banks, although in most states trust companies are also permitted to engage in commercial banking. Private banks are usually commercial banks.

COMMERCIAL BAR

See Assay Bar, Export Bar.

COMMERCIAL BILLS

Bills of exchange arising out of commercial transactions as distinguished from clean bankers' bills, travelers' letters of credit, travelers' checks, remittance drafts, finance bills, etc. (See Foreign Bills of Exchange.)

COMMERCIAL BORROWERS

Merchants (wholesalers and retailers) who borrow on short-term notes largely to finance inventories, or who realize on notes and accounts receivable by discounting them.

COMMERCIAL CREDIT

(1) A term used to indicate credit furnished to manufacturers, wholesalers, jobbers, and retailers - those engaged in the manufacture and distribution of commodities. Commercial credit is distinguished from personal, banking, public, agricultural, and investment credit. (See Credit.)

(2) A transaction involving the use of a commercial letter of credit. (See Letters of Credit).

COMMERCIAL CREDIT COMPANIES

Concerns also sometimes known as credit or finance companies, engaged in the business of lending on or buying and collecting installment contracts and open book accounts from manufacturers and merchants. These companies themselves are often substantial borrowers from banks, although their paper itself is not eligible paper within the meaning of Regulation A of the Board of Governors of the Federal Reserve System. (See Assigned Book Accounts.)

COMMERCIAL CREDIT DOCUMENTS

A generic term for instruments used in connection with commercial loans, such as bills of lading, etc. (See Bill of Lading, Trust Receipt, Warehouse Receipt.)

COMMERCIAL DISCOUNTS

This term has two meanings:

(1) Notes given to lending banks by mercantile firms upon which interest is paid in advance.

(2) Cash discounts offered by a seller to a purchaser to encourage the payment of invoices in advance of the maturity allowed by the terms of credit. (See Cash Discount.)

COMMERCIAL EXCHANGE OF PHILADELPHIA

An exchange originally revived for dealing in canned goods futures on May 7, 1934, in the Bourse Building at Philadelphia. This exchange is a revival of the former Corn Exchange Association of Philadelphia established in 1854 and known under that name until 1868, when the present designation was applied.

COMMERCIAL FAILURES

See Failures.

COMMERCIAL LETTER OF CREDIT

See Letters of Credit.

COMMERCIAL LOANS

See Loans.

COMMERCIAL PAPER

All classes of short term negotiable instruments (notes, bills, and acceptances) that arise out of commercial, as distinguished from speculative, investment, Real estate, personal or public transactions; short-term notes, bills of exchange, and acceptances arising out of industrial, agricultural, or commercial transactions, the essential qualities of which are early (three to six months) maturity, automatic or self-liquidating power, and soundness in origin and purpose of use. According to the Federal Reserve Board "this class of paper should represent in every case some distinct step or stage in the productive or distributive process—the progression of goods from producer to consumer."

In a narrower sense, commercial paper consists of notes, etc., maturing in less than one year which are the direct obligations of issuing mercantile or industrial corporations or co-partnerships, and are sold through the medium of note brokers, principally to banks in the larger financial centers, and to a smaller extent to insurance companies and business corporations. Commercial paper denominations range from $2,500 as a minimum to $50,000 or more as a maximum. In order to obtain the widest investment field the most frequent units range between $2,500 and $10,000, $5,000 being the most customary denomination and six months the most customary maturity. Rates vary according to the credit standing of the issuer and money market conditions. Rates early in 1948 ranged from 1 1/4% for

prime names up to 90 days, to 1 3/8% for prime names, 3 to 6 months, and 1 1/2% for lesser known names.

Commercial paper borrowing is for the purpose of buying or carrying stocks of merchandise to be quickly resold, and may be regarded as a convenient method of financing inventory purchases at the seasonal peak. Four classes of commercial paper usually appear in the open market, viz.: (1) unsecured single name, which accounts for most of the total; (2) double name, including trade paper, i. e., promissory notes given in settlement for goods purchased and indorsed by the seller, and non-trade paper bearing indorsement, and (3) collateral notes representing a minor portion of the total outstanding. As reported by dealers, and including some finance company paper sold in the open market, total commercial paper outstanding was $287 million in December, 1947. Volume in recent years has declined in reflection of shortage of paper coming out on the market, as compared with totals of $500 to $800 million outstanding in the middle '20s.

The advantages of issuing commercial paper from the standpoint of the borrower are five-fold:

(1) To obtain cash with which to take advantage of cash discounts offered by trade creditors. Credit terms differ among various trades but almost without exception cash discounts are offered where payment is made in advance of the term allowed. In the wholesale grocery trade, for instance, it is customary to allow 2 per cent. for payment within ten days, or net 30 days. In some trades a better discount may be allowed for spot cash. At any rate, discounts and anticipations frequently range from 12 per cent. to 18 per cent. a year. Since commercial loans are available at anywhere from 2 1/4% to 6%, and 18 per cent. can be gained by taking advantage of cash discounts, a minimum margin at the rate of 12 per cent. is made upon capital invested in merchandise. Cash discounts should therefore always be taken, since money seldom performs a greater earning service.

(2) To establish national credit. Many enterprises which issue commercial paper are nationally known organizations that have created a national market for their product through widespread advertising campaigns. In such cases, the issuing of commercial paper may be an expedient for establishing a national credit reputation.

(3) To keep a reserve of borrowing power at local banks. Local banking connections may not be able (on account of lack of capital),to supply adequate funds, or if able to supply funds perhaps not at as favorable rates as can be secured through the issue of commercial paper. Local money market may be tight, whereas in other sections conditions may be relatively easy. By issuing commercial paper a concern may keep its borrowing power in the local market in reserve for an emergency, and meanwhile can test out various other markets where its commercial paper may be sold at the cheapest rates. Unexhausted bank "lines" should always be sufficient, however, to cover commercial paper borrowings.

(4) To borrow at cheaper rates than is possible at home.

(5) To establish a broader market for the paper than is possible at home. Commercial paper may be sold anywhere, the function of commercial paper houses and note brokers being to find the most advantageous markets.

The advantages of commercial paper from the standpoint of buyers are four-fold:

(1) The risk is relatively slight. Note brokers who distribute commercial paper maintain extensive credit files and paper which they buy is subjected to rigid examination. Note brokers could not long continue in business if commercial paper borrowers from whom they have made purchases, could not meet their maturities. Commercial paper purchases, therefore, are arranged only with concerns which have a firmly established earning power, current assets sufficient to justify the aggregate of borrowing, a reasonably high Current Ratio (q. v.), and a favorable reputation as to personnel, management, and quality of product.

(2) There is no moral obligation to renew commercial paper, i e., insistence on payment at maturity, and refusal to make new loans does not subject the lending bank to the danger of loss of any business advantage. This differs from loans made to a bank's customers which oftentimes must be renewed, where there is no justification for it except as a protection to the bank or as a favor to the borrower.

(3) Commercial paper furnishes a good investment medium when the demand for funds is slight from other sources. Many banks, corporations, and individuals invest in commercial paper because of its soundness and quick convertibility.

(4) Commercial paper often returns a better rate than loans to customers.

The alleged disadvantages of commercial paper purchases are that they are usually single-name paper which does not evidence on its face the purpose for which the proceeds will be used. These disadvantages are more apparent than real wherever the reliability and financial responsibility of the maker are first class.

Commercial paper is usually purchased on an option running from 10 to 20 days. Within this option period the prospective buyer retains the right to return any notes that he regards as undesirable, the purpose of the option period being to give the buyer the opportunity of ascertaining the credit responsibility of the maker. (See Limitations on Bank Loans, Note Brokers.)

Ward, Wilbert: Bank Credits and Acceptances, 1931.

COMMERCIAL PAPER HOUSE

See Note Brokers.

COMMERCIAL PAPER NAMES

A term used among bank credit men in referring to corporations and partnerships which habitually borrow through the open market by issuing commercial paper. (See Commercial Paper.)

COMMERCIAL PARITIES

See Foreign Exchange.

COMMERCIAL STOCKS

Stocks of grain reported at leading grain centers, as reported by the Department of Agriculture. These reports are of interest to the trader in commodities as bearing on the supply and demand situation.

COMMISSION

In general, compensation paid by a principal to an agent for services rendered in that capacity. The charge made by banks or brokers for various services rendered customers. Commissions are charged by

broker members of the various exchanges for buying and selling securities, commodities, etc. Commission schedules for executing orders on the various exchanges are given under titles, as follows: New York Stock Exchange, New York Curb Exchange, New York Cotton Exchange, New York Coffee and Sugar Exchange, Chicago Board of Trade, Commodity Exchange Inc.

Banks charge a commission for acting as custodian, fiscal agent, registrar, stock transfer agent, various trust services, issuing letters of credit, accepting drafts drawn under letters of credit, etc.

Note brokers charge a commission for selling commercial paper and money brokers for placing time loans.

COMMISSION CREDIT BUREAU

A special mercantile agency, the service of which is confined to release of credit information upon textile and dry goods names, including all branches of these trades.

COMMISSION HOUSE

A brokerage concern a member or members of which are also members of a stock or other exchange and executes orders to buy and sell on such exchange or exchanges, as distinguished from exchange members who trade only for their own accounts.

COMMISSION TRADE

A transaction in which the legal relationship is that of principal (customer) and agent (broker), and in which the broker is compensated for his services by a commission. No commission is charged in transactions wherein a dealer acts as principal in the transaction with the customer, or where the broker acts solely as agent for another. Commissions charged customers on transactions on security and commodity exchanges are regulated by minimums established by the exchanges. (See Commission.)

COMMISSIONER OF BANKING

See State Banking Department.

COMMISSIONS, SCHEDULE OF

See Commission.

COMMITMENT

A pledge or engagement; a contract involving financial responsibility or a contingent financial obligation to be performed in the future, e. g., an obligation to pay for subscribed stock on call, to take up bonds subscribed or purchased on the delivery date, or orders entrusted to a broker for buying and selling securities.

COMMITTEE IN LUNACY

A person appointed by a court, usually upon the initiative of relatives, to administer the affairs and protect the estate of a person adjudged to be a lunatic. The term is synonymous with Conservator (q. v.), the terminology used varying among the states.

COMMODITIES

About 31 commodities are now provided with organized futures markets. For grains and cotton these markets have existed for approximately 100 years. Coffee and sugar futures markets have been in existence since 1877. However, most of the futures markets have been organized within comparatively recent years, and include butter, copper, cocoa, cottonseed oil, cottonseed meal, eggs, hides, lard, lead, onions, pepper, potatoes, rubber, silk, soy beans, soy bean meal and oil, tin, wool tops, and zinc.

See under Chicago Board of Trade, Chicago Mercantile Exchange, Commercial Exchange of Philadelphia, Commodity Exchange, Inc., New Orleans Cotton Exchange, New York Cocoa Exchange, New York Coffee and Sugar Exchange, New York Cotton Exchange, and New York Produce Exchange.

COMMODITY CREDIT CORPORATION

A Government corporation, incorporated in Delaware in 1933 by authority of the National Industrial Recovery Act, for an original term of two years. By successive amendments to the Act of January 31, 1935, the corporation's life has been extended to June 30, 1948; and further extensions will no doubt occur in view of the corporation's importance as a supporter of agricultural commodity prices. The Delaware charter is a broad one, empowering the corporation to engage in buying, selling, lending and other activities with respect to agricultural commodities, producers thereof and related facilities.

Original capital was $3,000,000, which was increased to $100,000,000 in 1936. Under legislation enacted in 1938, the Secretary of the Treasury must restore any impairment of capital below the $100,000,000 level as of June 30th each year. Borrowing power of the corporation is limited to $4,750,000,000, and obligations issued are guaranteed by the United States. An assured market is provided for the corporation's obligations by the provision that the Secretary of the Treasury is authorized to buy any obligations if not sold in the security markets. As of June 30, 1947, obligations outstanding totaled $40,000,000.

In 1939, the corporation was transferred to the Department of Agriculture, and it thereafter became the basic financing agency in the Production and Marketing Administration created by the Secretary of Agriculture in 1945 to centralize these activities.

As of June 30, 1947, total assets were $1,436,000,000, making the Commodity Credit Corporation the largest credit agency in the Department of Agriculture. As of that date, cash totaled $533 million; loans receivable, $110 million; commodities, supplies and materials, $369 million; other assets, $63 million. Obligations outstanding, all guaranteed by the United States, totaled $40 million; other liabilities, $695 million; and net worth, all owned by the United States Government, $700 million.

Under the various enabling statutes, the corporation makes mandatory loans on the 6 basic commodities, which are cotton, corn, wheat, tobacco, rice and peanuts (used as nuts); and also on the 14 non-basic or "Steagall" commodities, which are hogs, eggs, chickens, (with certain exceptions), turkeys, milk, butter-fat, dry peas and edible beans of various varieties, flaxseed, soy beans and peanuts for oil, potatoes, cured sweet potatoes, American-Egyptian cotton. In addition, after providing for the mandatory commodities, loans on other commodities: wool, naval stores, sugar beets, sugar cane, fruits and vegetables for processing, etc. Support loans on the 6 basic commodities are made at 90% (92-1/2% for cotton) of parity, which ratios under present statutes continue through December 31, 1948, when unless extended, the original ratios of 52%-75% in the Agricultural Adjustment Act of 1938 will reapply. Loans on the Steagall commodities would also cease on December 31, 1948 unless extended, and are also of the

non-recourse type as on the basic commodities, involving no required redemption by the producer if the market declines, but giving the corporation the right to call the loan at any time and take over the commodity. The corporation also acts as purchasing agent for various Government procurement programs, and as agent in import and export activities. (See Agricultural Adjustment Act of 1938, Basic Commodities, Department of Agriculture, Farm Credit Administration, Production and Marketing Administration.)

COMMODITY EXCHANGE ACT

An Act, amendatory and auxiliary to the Grain Futures Act, and approved June 16, 1936. The Act created a Commodity Exchange Commission (consisting of the Secretary of Agriculture, Secretary of Commerce, and the Attorney General), whose functions in regulating commodity exchanges dealing in future contracts are similar to those of the Securities and Exchange Commission in regulating security exchanges. The Commodity Exchange Commission is given broad powers to regulate commodity trading in "contract markets," and to prevent abuses of over speculation, manipulation, bucketing, wash sales, cheating, and false reports. Commodities affected are wheat, cotton, rice, corn, oats, barley, rye, flaxseed, grain, sorghums, mill feeds, butter, eggs and Irish potatoes.

The Act requires futures commission merchants and brokers to register with the Secretary of Agriculture and to keep customers' deposits carefully separated on their books from their own funds and be prepared at all times to account for such deposits separately. All registrations shall expire on December 31 of the year for which issued and shall be renewed upon application unless the registration has been suspended or revoked after notice and hearing. Exchanges and warehouses where commodities are stored for future delivery shall be open to inspection, together with their records, by representatives of the Departments of Justice and Agriculture. Records of trades must be kept three years.

Provides that trading may be suspended for six months on any Exchange which fails to comply with any provision of the act.

All provisions of the act authorizing the registration of futures commission merchants and floor brokers, the fixing of fees and charges therefor, the promulgation of rules, regulations, and orders and the holding of hearings precedent to the promulgation of rules, regulations and orders, took effect immediately. All other provisions of the act took effect on September 14, 1936.

The Commission has power to fix limits of trading in order to curb excessive speculation. At the outset the Commission fixed 200,000 bushels in any one grain future as the maximum position for a single house or customer; positions in excess of that amount must be reported as special. The Commission has since set limitations on both the amount of speculative trading permitted to any one person for any one day; and on amount of the speculative net position held at any one time. Reports are required of daily transactions in grain (volume), and amount of open contracts outstanding. Violations of the act are termed a misdemeanor and subject to a fine not exceeding $10,000, or imprisonment for one year, or both. Administrators of the Act claimed that its purpose is to prevent abuses, and is not calculated to work a hardship on commission houses doing business in a legitimate manner.

COMMODITY EXCHANGE, INC.

The successor, by merger in 1933, of the facilities of four former commodity exchanges, to wit:

New York Hide Exchange
National Metal Exchange
National Raw Silk Exchange
New York Rubber Exchange

This exchange, located at 81 Broad Street, New York City, was opened for the business of dealing in futures in crude rubber, raw silk, hides, silver, copper and tin. Trading in silver futures was discontinued in 1934, following the nationalization by the United States of silver. Since organization of the Commodity Exchange, Inc., futures markets in lead and zinc have been added. Because of shortages, futures trading in copper, lead, silk, tin and zinc has had to be temporarily suspended.

The merger of the four Exchanges created one central market on which forces of supply and demand are centered, thus providing not only a broader market, but one which offered the greatest conveniences for traders and dealers in each commodity.

Among the advantages which this consolidation offered were the following:

1. An increased value for hedging operations to the producer, dealer and consumer.
2. A broader market through the concentration of active trading in several commodities on one floor.
3. Enhanced liquidity and greater facility in financing operations.
4. Concentration of buyers and sellers from all sections of the world in one market-place, tending to establish true representative values in price terms of the commodities dealt in.
5. Enlarged and more serviceable facilities for all who are interested in the marketing of the several commodities.

Memberships in the Exchange are held by individuals who represent a cross-section of the rubber, silk, hide and metal trades and most of the well-known brokerage and commission firms. Among the trade members are leading producers, merchants and manufacturers. Only individuals are eligible for membership on the exchange. A partnership, if a general partner thereof is a member of the exchange, or a corporation, an executive officer of which is a member, may have their business transacted at the rates of commissions for members. A member cannot confer this privilege of his membership upon more than one firm or corporation at any one time. Membership of the exchange is divided into six groups, as known as the Rubber Group, the Silk Group, the Hide Group, the Metals Group, the Commission House Group, and the Non-Trade Group.

The Exchange is managed by a Board of Governors elected from the Hide, Metal, Rubber, Silk, and Commission House Groups. Commissions to non-members for buying or selling per contract are twice the rate for members, and run at the following rates: copper, $30 when price is 20¢ or above (graduated according to price); hides, $20 when price is 10¢ per lb. and over (graduated according to price); lead, $15; rubber, $20; silk, $14.50 when price is $1.75 to $2.24-1/2 per lb. (graduated according to price); tin, $15; and zinc, $15.

See Copper, Hides, Lead, Futures, Rubber, Silk Tin, Zinc Futures.

COMMODITY EXCHANGES

Organized markets for futures contracts in commodities, which also conduct cash or spot trading.

The Commodity Exchange Act (q. v.) places under regulation of the Commodity Exchange Commission and Commodity Exchange Administration futures markets in cotton, wheat, corn, rye, oats, barley, grain, sorghums, soy beans, lard, cottonseed oil, soy bean oil, butter, eggs, potatoes, mill feeds, cottonseed meal, soy bean meal, flaxseed, peanuts, peanut oil, rice, tallow, and wool tops (not wool). Leading commodities and principal futures markets therefor are:

Hoffman, G. W.: Futures Trading Upon Organized Commodity Markets, 1932.

COMMODITY PAPER

As originally defined by the Federal Reserve Board (Regulation A, Series of 1917) commodity paper is a "note, draft, bill of exchange, or trade acceptance accompanied and secured by shipping documents or by a warehouse terminal, or other similar receipt, covering approved and readily marketable, non-perishable staples properly insured."

In later revisions of Regulation A, the elements of commodity paper are governed by the term "sight drafts secured by bills of lading". A Federal Reserve Bank may discount for any of its member banks bills of exchange payable at sight or on demand which: a. are drawn to finance the domestic shipment of non-perishable, readily marketable, staple agricultural products; and b. are secured by bills of lading and other shipping documents conveying or securing title to such staples.

COMMODITY PRICES

Prices for commodities are quoted either on a cash ("spot") basis, or on a future basis, the difference being measured by the carrying charges involved in carrying the commodity for the period of the future delivery.

Base period prices of commodities are those which prevailed for a particular past period specified in legislation, and which multiplied by the parity index, determine the parity prices for the commodities. Government loans for support and stabilization purposes to producers and others are made at legislatively specified ratios of parity prices, generally 90% of parity. Ceiling or maximum prices were imposed by the Office of Price Administration during World War II on most spot commodities and also on various futures markets (no ceilings set on cotton and rye futures, for example).

Farm prices are the average prices received by farmers for all grades of a commodity sold on the 15th of each month, and are reported monthly by the Department of Agriculture. Average prices received by farmers for grains, for example, compare as follows:

	Cents per bushel				
Year	Wheat	Corn	Oats	Barley	Rye
1925	162.0	112.0	54.0	82.4	126.2
1930	107.5	77.3	43.1	53.9	85.7
1935	89.3	85.3	54.6	80.2	73.1
1937	123.6	100.6	52.7	90.4	97.9
1938	88.6	52.2	30.0	54.0	64.1
1939	57.1	45.1	26.3	38.0	34.7
1940	84.5	53.2	36.3	45.9	56.7
1941	73.0	56.0	33.3	42.5	43.6
1942	106.1	72.7	50.2	60.8	65.2
1943	117.5	88.0	52.5	68.3	61.3
1944	146.0	113.0	77.5	108.0	111.0
1945	146.0	107.0	72.1	102.0	109.0
1946	154.0	110.0	71.7	109.0	150.0
1947	191.0	121.0	79.6	136.0	218.0

Source--U. S. Department of Agriculture

(See Base Period Prices, Ceiling Prices, Parity Index, Parity Prices, Spot Prices.)

COMMODITY RATE

The rate of interest charged upon commodity paper. (See Commodity Paper.)

COMMON CARRIER

A company authorized to undertake transportation as a regular business, e. g., railroads, steamship companies, express companies, traction lines, etc. Common carriers are subject to the basic law of public callings and as such must (1) furnish services to all who apply;

(2) provide adequate facilities for all; (3) charge reasonable rates; and (4) charge equal (non-discriminatory) rates. This law is also applicable to all public service corporations.

COMMON SIZE STATEMENT

The 100% of common size statement facilitates credit analysis and comparison of statements by reducing all items in assets and liabilities to a percentage of the total assets and total liabilities. This method enables the analyst to compare quickly the current statement with past statements for a single company, and to compare the subject company with other companies, large or small, as the common size statement reduces the individual asset or liability dollar figures to a common comparable basis of percentages. Customarily, in common size comparison forms, the dollar amounts are shown side by side with the common size percentages, as the dollar amounts have an interest and validity of their own. (See Statement Analysis.)

COMMON STOCK

That part of the capital stock of a corporation which represents the last claim upon assets and dividends, as distinguished from Preferred Stock (q. v.). Dividends upon common stock may not be paid until interest upon all bonds, floating indebtedness, and dividends on preferred stock issues, have been met. Common stockholders bear the greatest risk, but usually have the greatest control, and are entitled to the largest profits, if earned, since dividends are contingent upon earnings.

The value of common stock usually is subject to wide fluctuations, due to variations in earnings. Common stock must therefore be classified as a speculation rather than an investment as a general proposition, depending upon soundness and seasonability. For the tests of soundness of stocks, see Industrial Stocks.

In England shares of common stock are known as ordinary shares. (See Capital Stock, Stock, Stock Certificate.)

COMMUNISM

Literally, common or collective ownership of property; the abolition of private property, individual initiative and profits. The implements of production, land, mineral deposits, utilities, etc., would be owned by the local or central government, and the products be distributed on the basis of need. Except on a small scale, and as trial "utopias," a complete communistic state has never been in practical operation, although post-revolutionary Russia exemplifies the nearest approximation thereto. In Russia, however, private property and trade for profits under certain restrictions is allowed under the "N. E. P." (New Economic Policy) announced in August, 1921. Moreover, recognition is made of differential skills and wage-payments.

Modern communism finds its origin in the "scientific socialism" of Karl Marx (1818-1883), whose monumental work "Das Kapital" and his Communist Manifesto have become the "bible" of modern communists, including those of Soviet Russia. Marx's scientific socialism is based on a materialistic, or economic, interpretation of history. Capitalism, according to Marx, breeds within itself the term of its own destruction by withholding from the workers sufficient of the product of industry to purchase the goods which the instruments of production are capable of turning out. Wherefore, a class struggle eventually would develop between the capitalist-owners of the means of production, and the wage-earners dependent upon the capitalists for the opportunity to work and a livelihood. Accordingly, the conflict would end by a social revolution when the means of production would be taken over or "nationalized" for the benefit of all.

COMMUNITY TRUST

A form of charitable trust under which gifts and money bequests are received to be applied for public purposes and administered by a bank or trust company in conjunction with an advisory board of citizens. The Community trust plan was first developed in Cleveland, Ohio, in 1914.

The community trust makes available a plan combining assurance of the effectual utilization of bequests, with adequate flexibility to adapt itself to changes which history demonstrates are sure to occur. It provides a means of meeting the varying conditions of coming years, conceding to each generation a measure of ability to administer wisely its own affairs rather than attempting what has so often failed; to divine in detail the needs and problems of all the future. It gives new significance and opportunity to the ownership of wealth. It guarantees to donors of funds a proper custody, proper management and proper distribution of income. It affords a means for the application of an accumulated fortune, in whole or in part, to the permanent service of the community. In short, it makes wealth more respected and respectable by insuring its usefulness.

The New York Community Trust was created in February, 1920, for the following purposes:

(1) The creation and development of a better community spirit and the carrying out of community purposes not otherwise possible; (2) the preservation of the principal and the proper investment and reinvestment of the funds bequeathed by charitable donors through the security of the institutions acting as trustees; (3) the ability of the trust, through its broad powers, without unreasonable delay and expense, to divert to live charities, funds left to an originally worthy, but later obsolete philanthropy; (4) the opportunity for men of small means, with no direct descendants, to make contributions to a common community fund; (5) the opportunity for men of large means, after having cared for their own, to provide that a portion of their wealth, or the residuum of their estates after the death of individual beneficiaries, shall remain intact, the income to be used for community purposes. (See trusts.)

COMPANY

See Controlling Company, Corporation, Holding Company, Investment Company, Joint-Stock Company, Operating Company, Parent Company, Trust Company.

COMPARATIVE STATEMENT FORM

A form used by bank credit men (analysts) in the process of investigating a credit risk. Such forms are not standardized, although the form approved by the Committee on Credit Systems of the Robert Morris Associates has come to be used by many banks. The purpose of the form is to permit a rearrangement and reclassification of the items appearing on a balance sheet submitted by a prospective borrower in such a way as to indicate what seems to the bank the truest exhibit of the borrower's condition. By comparing one period with another, the rate of growth or of retrogression, and changes in the amounts of the separate assets, liabili-

ties, and equities, can be pictured. (See Statement Analysis.)

COMPARATIVE STATEMENTS

Financial and income statements for consecutive years used as a basis for noting the progress or regress of a business applying for credit. (See Statement Analysis.)

COMPARISON SLIP

See Comparisons.

COMPARISONS

A periodic, reciprocal statement of purchases and sales occurring between brokers, or between brokers and bankers for collaterals held by a bank against brokers' loans, in order to determine the accuracy of the records of each. Brokerage comparisons are made daily by means of slips exchanged between the transacting brokers. Brokerage comparisons with banks are customarily made monthly by means of a reciprocal statement of collaterals held against a loan.

COMPENSATED DOLLAR

See Stabilized Dollar.

COMPENSATING BALANCES.

In connection with the extension of credit to a borrowing customer, the customary practice of commercial banks is to require an average balance of usually about 20% of the amount of the loan. Thus, when a loan credit is made to a customer's account, the customer may draw up to 80% of the amount of the credit. The practice developed over the years in order to maintain a relation between such derivative deposits or manufactured credit, and cash reserves. Maintaining compensating balance does not add to reserves or lending power of the bank, but does make available that much in remaining cash reserves not checked out, for the accommodation of other borrowing customers, and is usually explained on this ground of reciprocity. (See Average Loan and Balance File.)

COMPENSATION

Payment for services or goods. In law, the payment of damages to make an injured party whole; the money relief afforded an injured employee under Workmen's Compensation Acts.

COMPOUND ARBITRATION OF EXCHANGE

See Arbitration of Exchange.

COMPOUND INTEREST

See Interest.

COMPTROLLER

The officer of a bank who supervises the bookkeeping, accounting, auditing, and reporting procedure, and who is responsible for initiating improvements in the accounting and auditing methods. All reports, internal statistics, and data concerning the financial condition should be prepared or approved by him; and to be most effective he should report directly to the president or chairman of the board of directors. He should also be responsible for controlling all financial records and for providing a system of internal check that will guard against inaccuracies and fraud.

The comptroller must have a thorough knowledge of bank organization and operations, banking principles and law, as well as a knowledge of accounting and auditing technique. (See Comptroller of the Currency, Comptroller's Call.)

COMPTROLLER OF THE CURRENCY

An office created by the National Bank Act, the function of which is to authorize the establishment of, and to supervise and control National banks. Applications to organize all National banks are made to the Comptroller of the Currency and all National bank examinations are supervised from his office. National banks are required to make at least three annual reports to the Comptroller of the Currency and to submit to at least two regular examinations by the National bank examiners each year. The Comptroller of the Currency is under the general direction of the Secretary of the Treasury. (See Comptroller's Call.)

COMPTROLLER'S CALL

Every national bank shall, in accordance with Section 5211 of the Revised Statutes, make to the Comptroller of the Currency not less than 3 reports during each year, according to the form prescribed by the Comptroller. These reports shall be verified by the oath or affirmation of the president, or of the cashier, or of a vice-president, or an assistant cashier of the national bank designated by its board of directors to verify such reports in the absence of the president and cashier, taken before a notary public, and attested by the signature of at least 3 of the directors.

Each such report shall exhibit in detail and under appropriate headings the resources and liabilities of the national bank at the close of business on any past day specified by the Comptroller in his call. The report shall be transmitted to the Comptroller within 5 days after the receipt of a request or call therefor from the Comptroller. The statement of resources and liabilities, together with the acknowledgment and attestation in the same form in which it is made to the Comptroller, shall be published in a newspaper published in the place where the national bank is established, and proof of such publication shall be furnished.

The Comptroller also has the power to call for special reports from any particular national bank whenever in his judgment the same are necessary in order to obtain a full and complete knowledge of its condition.

The same requirements apply also to each of the national bank's affiliates other than member banks, to the end that the Comptroller be enabled to inform himself as to the effect of such affiliates upon the affairs of the national bank. Any national bank which fails to obtain and furnish any such reports required shall be subject to a penalty of $100 for each day that such failure continues. In practice, the bank is given a reasonable time to prepare and submit such reports.

Prior to June 21, 1917, state member banks were required to submit their reports to the Comptroller of the Currency, the same as national banks. State member banks now submit their reports to the Federal Reserve Banks. Each national bank sends a copy of its call report to its Federal Reserve Bank in addition to the official copy sent to the Comptroller.

COMPTROLLER'S REGULATION

The term applied to the regulation issued by the Comptroller of the Currency, effective July 1, 1938, regulating national bank purchases of investment securities pursuant to paragraph seventh of Section 5136, Revised

Statutes. Substantive portion of the regulation reads as follows:

An obligation of indebtedness which may be purchased for its own account by a national bank or State member bank of the Federal Reserve System, in order to come within the classification of "investment securities" within the meaning of paragraph Seventh of Section 5136, must be a marketable obligation, i. e., it must be salable under ordinary circumstances with reasonable promptness at a fair value; and with respect to the particular security, there must be present one or more of the following characteristics:

(a) A public distribution of the securities must have been provided for or made in a manner to protect or insure the marketability of the issue; or,

(b) Other existing securities of the obligor must have a public distribution as to protect or insure the marketability of the issue under consideration; or,

(c) In the case of investment securities for which a public distribution as set forth in (a) or (b) above cannot be so provided, or so made, and which are issued by established commercial or industrial businesses or enterprises, that can demonstrate the ability to service such securities, the debt evidenced thereby must mature not later than ten years after the date of issuance of the security and must be of such sound value or so secured as reasonably to assure its payment; and such securities must, by their terms, provide for the amortization of the debt evidenced thereby so that at least 75% of the principal will be extinguished by the maturity date by substantial periodic payments: Provided, that no amortization need be required for the period of the first year after the date of issuance of such securities.

Where the security is issued under a trust agreement, the agreement must provide for a trustee independent of the obligor, and such trustee must be a bank or trust company.

The purchase of "investment securities" in which the investment characteristics are distinctly or predominantly speculative, or the purchase of securities which are in default, either as to principal or interest, is prohibited.

Purchase of securities convertible into stock at the option of the issuer is prohibited.

Purchase of securities convertible into stock at the option of the holder or with stock purchase warrants attached is prohibited if the price paid for such security is in excess of the investment value of the security itself, considered independently of the stock, purchase warrants or conversion feature. If it is apparent that the price paid for an otherwise eligible security fairly reflects the investment value of the security itself and does not include any speculative value based upon the presence of a stock purchase warrant or conversion option, the purchase of a security is not prohibited. (See Bank Examination, Examination Procedure.)

CONCESSION

This term has three meanings:

(1) A shading or decrease in the market price of securities.

(2) A reduction in the price of a security offered to a bank or investment house which retails securities by a syndicate wholesaling securities, from the public offering price. The concession below the public offering price represents the profit to the investment dealer.

(3) The right granted to a lessee to use property of the lessor for certain purposes for a stipulated period. More broadly, any grant or lease of a property privilege made by a government for political or economic advantage to a foreign corporation or association to enable it to exploit mineral resources, to build canals or railroads, etc.

CONDENSED STATEMENT OF CONDITION

In bank statements of condition, the voluntarily published non-legal type of statement of condition, in which the individual items of resources and liabilities and groupings thereof may vary considerably from those specified from the legal or call report.. (See Bank Statement, Call Report.)

CONDITION OF MEMBER BANKS

Each Wednesday, the Board of Governors of the Federal Reserve System releases for publication the Condition of Weekly Reporting Member Banks in Leading Cities. The latest series, effective with the July 2, 1947 statement, increased and improved coverage. The number of banks reporting was increased from 371 to 441. The percentage of total commercial bank deposits represented by the series was increased from 49% to 57%, and the percentage of total member bank deposits represented was increased from 57% to 67%. The new weekly reporting series includes over 98% of the deposits of central reserve city banks, and 96% of the deposits of reserve city banks, as well as 17% of the deposits of all country member banks. Although the nominal number of cities represented was reduced from 101 to 94, therefore, the coverage was increased and improved. Figures for banks in New York City and Chicago continue to be released on the Thursday afternoon following the Wednesday report date.

The weekly condition report as of March 3, 1948, showing net change compared with preceding week and same week a year ago, is on page 140.

CONDITIONAL INDORSEMENT

See Indorsement.

CONFIDENCE MEN

Professional swindlers. (See Bunco, Swindling.)

CONFIRMATION

An order or agreement in writing to verify or confirm one previously given verbally, or by telephone or telegraph. Executions of orders to buy or sell securities are confirmed in writing by brokers to their customers.

CONFIRMED CREDIT

A letter of credit which cannot be cancelled or modified without the consent of both buyer and seller. (See Letters of Credit.)

CONSERVATOR

(1) The name given in some states to a person appointed by a court to manage the estate of an incompetent or lunatic in much the same way as a guardian administers the affairs of a ward. The conservator is charged with preserving the property and keeping it on a conservative income basis and is required to make frequent statements to the court. The death of the lunatic terminates the conservatorship.

(2) Under the Emergency Banking Relief Act, approved March 9, 1933, the Comptroller of the Currency

PRINCIPAL ASSETS AND LIABILITIES OF MEMBER BANKS

WASHINGTON, March 10 - A summary of the principal assets and liabilities of reporting member banks and of debits to demand deposit accounts follows:

(In Dollars)

ASSETS

		-------Net Change Since -----	
	Mar. 3, 1948	Feb. 25, 1948	Mar. 5, 1947
Loans and investments-total	63,494,000,000	- 563,000,000	- 193,000,000
Loans-total	23,439,000,000	- 171,000,000	+3,912,000,000
Commercial, industrial and agricultural loans	14,540,000,000	- 51,000,000	+2,630,000,000
Loans to brokers and dealers for purchasing or carrying:			
United States Government obligations	476,000,000	- 56,000,000	+ 29,000,000
Other securities	355,000,000	- 47,000,000	- 77,000,000
Other loans for purchasing or carrying:			
United States Government obligations	285,000,000	- 9,000,000	- 307,000,000
Other securities	479,000,000	.....	- 19,000,000
Real estate loans	3,569,000,000	+ 4,000,000	+ 912,000,000
Loans to banks	233,000,000	- 20,000,000	+ 82,000,000
Other loans	3,502,000,000	+ 8,000,000	+ 662,000,000
Treasury bills	2,048,000,000	- 108,000,000	+1,029,000,000
Treasury certificates of indebtedness	3,972,000,000	+ 857,000,000	+1,346,000,000
Treasury notes	2,559,000,000	- 40,000,000	- 935,000,000
U. S. bonds (including guaranteed obligations)	27,266,000,000	-1,145,000,000	-3,062,000,000
Other securities	4,210,000,000	+ 44,000,000	+ 209,000,000
Reserve with Federal Reserve Banks	12,957,000,000	+ 661,000,000	+1,517,000,000
Cash in vault	721,000,000	- 94,000,000	+ 19,000,000
Balances with domestic banks	2,301,000,000	+ 14,000,000	- 33,000,000
LIABILITIES			
Demand deposits - adjusted	47,296,000,000	- 263,000,000	+2,294,000,000
Time deposits	14,762,000,000	+ 34,000,000	+ 474,000,000
United States Government deposits	1,083,000,000	+ 81,000,000	-1,279,000,000
Inter-bank deposits:			
Domestic banks	9,026,000,000	+ 202,000,000	- 555,000,000
Foreign banks	1,361,000,000	- 7,000,000	+ 25,000,000
Borrowings	220,000,000	- 38,000,000	+ 52,000,000
Debits to demand deposit accounts, except inter-bank and United States Government accounts during current week	22,869,000,000	.....	.....

was empowered to appoint conservators for any national bank when considered necessary to conserve its assets. The conservator was empowered to allow such withdrawals by existing depositors on a ratable basis as the Comptroller might decide as safe, and to receive new deposits which would be segregated and subject to unrestricted withdrawal. The same Act permitted the reorganization of national banks, if necessary, upon approval of the Comptroller, and either of depositors holding 75% of total deposits or holders of 2/3rds of the outstanding stock or both.

CONSIGNEE

One to whom merchandise is forwarded or shipped. In freight shipments the consignee is notified by an arrival notice from the transportation company. In parcels post and express shipments, delivery is made directly to the consignee.

CONSIGNMENT

In a general sense a shipment of goods from the consignor to consignee whether the consignor is owner or merely acts as agent in their sale. In a narrower sense a shipment of goods to a commission merchant who acts as agent for the owner or for the owner and consignor, for the purpose of immediate sale according to the consignor's instructions and for his account. (See Account Sales.)

CONSIGNOR

A shipper or sender; one who ships merchandise. The consignor takes a bill of lading, express or parcels post receipt, as evidence of his shipment.

CONSOLIDATED ANNUITIES

Same as Consols (q. v.).

CONSOLIDATED BONDS

See Consolidated Mortgage Bonds.

CONSOLIDATED FIRST MORTGAGE BONDS

Bonds secured by a first mortgage on consolidated property; sometimes a misnomer for consolidated Mortgage Bonds (q. v.).

CONSOLIDATED MORTGAGE

A mortgage upon an entire unit of real property formed by the consolidation of several smaller parcels. A consolidated mortgage is not necessarily a first mortgage. It may be a first mortgage on some of the parcels

entering into the consolidated property and a second or even third mortgage upon other parcels.

CONSOLIDATED MORTGAGE BONDS

Bonds secured by a consolidated mortgage. These bonds are frequent among railroad securities, and are distinguished from divisional bonds in that the latter are secured by separate railroad properties. Consolidated mortgage bonds are similar to general mortgage bonds, and are secured by a first mortgage upon a part, and a second or other mortgage upon other parts of the company's property.

CONSOLIDATED STOCK EXCHANGE

See New York Consolidated Stock Exchange.

CONSOLIDATION OF BANKS

Under the Act of November 7, 1918, as amended by the Banking Acts of 1933 and 1935, any state bank may be consolidated with a national bank. Upon such a consolidation, or of two or more national banks the corporate existence of each of the constituent banks and national banks participating in the consolidation shall be merged into and continued in the consolidated national bank, and all of the rights, franchises and interests of each of the constituent banks and national banks in and to every species of property shall be deemed to be transferred to and vested in the consolidated national bank without any court order, deed or other transfer. This includes all rights and interests as trustee and in other fiduciary capacities as previously held or enjoyed by any constituent institution at the time of consolidation.

After approval of the Comptroller of the Currency has been obtained the consolidation agreement has been signed by the directors, approval of 2/3rds of the stockholders concerned is necessary or higher ratio if the State law so requires. Any dissenting stockholder may upon due notice and demand receive the appraised value of his stock.

The Comptroller in his instructions on consolidations has listed three possible methods of consolidation:

1. The buying bank without any increase in its own capital may absorb the assets and assume the liabilities of the liquidated bank, and pay the value of the net assets over liabilities to stockholders of the liquidated bank.

2. The dominant bank may increase its own capital by amount equal to capital of the passive bank, and offer the increased stock to the stockholders of the passive bank with consent of its own stockholders, after paying the stockholders of the passive bank the value of their stock.

3. The banks involved may be placed in voluntary liquidation, and a new bank organized to take over the business of the liquidated banks. (See Branch Banking.)

CONSOLS

A market name for perpetual British Government bonds.

The term is derived as a contraction of consolidated annuities and consolidated stock (Government bonds commonly being known as stock in England and the Continent). Consols represent the premier investment of England, just as the Government bonds of this country are the highest grade investments here. Their price is regarded as one of the chief barometers of British public credit. Most of the consols are in registered form, although bearer bonds with coupons are obtainable. (See United States Bonds.)

CONSTRUCTIVE SIDE OF THE MARKET

An expression used to denote the position taken by those who believe that business and financial conditions warrant an advance in security values and who therefore purchase securities to hold for higher prices. The "bull" side of the market.

CONSULAR INVOICE

A document usually certified in triplicate at the shipping point by a consul of the country of the destination of the shipment and forwarded by such consul to the customs officials of the port of destination. The consular invoice contains the information usually given in a seller's invoice - quantity and value - and its purpose, when required, is to inform the customs officials of the port of entry the nature of the imports expected so that they can be verified and possible fraud prevented. Imports cannot be released from the port of entry until the consular invoice has arrived unless the importer executes a bond of indemnity.

CONSUMER LOANS

See Small Loan Business.

CONTANGO

See Backwardation.

CONTANGO DAY

The first day of the fortnightly settlement on the London Stock Exchange.

CONTINENTAL BILLS

Bills of exchange drawn on banks located in European countries other than Great Britain.

CONTINENTAL CURRENCY

The Currency of European countries other than Great Britain.

CONTINENTAL RATES

Rates quoted for currencies and bills of exchange drawn on banks located in European countries other than Great Britain.

CONTINGENT FUND

In general, a fund set aside out of earnings to provide for emergencies; e. g., unexpected operating losses, shrinkage in value of inventories, damage claims, etc., or with which to provide for expansion in plant and equipment when a favorable opportunity arises; a business reserve.

The term "contingent fund" involves usually a confusion in the use of the terms "reserve fund" and "reserve". The better accounting practice is to consider a "fund" as"a sum of money or its equivalent employed in, set aside for, or available for a specific or general purpose" (Committee on Terminology of the American Institute of Accountants), and actually covered on the assets side of the statement by a corresponding segregated asset. Therefore, a "reserve" should denote merely an earmarked portion of surplus, without covering segregated asset.

In the New York State Savings Bank law this term was formerly employed for the present term Guaranty Fund (q. v.). Its function is to operate as reserve against losses and to provide for expenses after undi-

vided profits are exhausted.

In railroad accounting, the term "contingent reserve fund" occurs in the controversial recapture provisions of the Transportation Act of 1920, which provided that if any carrier "receive for any year a net railway operating income in excess of 6% of the value of the railway property held for and used by it in the service of transportation, one-half of such excess shall be placed in a reserve fund established and maintained by such carrier, and the remaining one-half thereof shall be recoverable by and paid to the Commission (Interstate Commerce Commission) for the purpose of establishing and maintaining a general railroad contingent fund." The fund thus recaptured by the Government was to be used "in furtherance of the public interest in railway transportation either by making loans to carriers to meet expenditures for capital account, or to refund maturing securities originally issued for capital account, or by purchasing transportation equipment and facilities and leasing the same to carriers."

CONTINGENT LIABILITIES

Potential liabilities; liabilities for which a business may be held, but which it never expected to be compelled to meet; liabilities which depend upon the fulfillment or lack of fulfillment of certain conditions; secondary liabilities.

Contingent liabilities may be classified in two main groups. The first group comprises definite and tangible liabilities discoverable through the accounts and records of a business. The second group are less tangible, such as conditions in the trade, likelihood of a falling market, possibility of cancellation of contracts, return of goods sent on approval or consignment, possibility of supersession of merchandise or of its quality through superior inventions or advances in industrial technology, or of possible costly litigation in protection against infringement of patents.

The first main group may be again divided into three sub-classifications:

(1) Those of a financial nature such as are usually incurred in the sale, transfer, indorsement, or guarantee of negotiable instruments, or other financial obligations. Contingent liabilities of this nature arise as a result of: (a) discount, sale, or transfer of notes receivable, trade accpetances, bank acceptances arising under commercial letters of credit, and foreign drafts; (b) indorsements of notes for affiliated or subsidiary concerns; (c) indorsement of commercial paper as accommodation party: (d) selling, pledging, or assigning of accounts receivable where the transfer attaches a contingent liability to the seller, pledger, or assignor; (c) issuing and guaranteeing letters of credit; (f) guaranteeing of payment of interest on principal of the bonds of another party; (g) accepting suretyships, including those guaranteed for others; (h) contracts for purchase of foreign exchange for future delivery; (i) liability for unpaid stock subscriptions; (j) advances against accounts or bills receivable; (k) taking up leases.

(2) Liabilities incurred as a result of agreements on contracts concerning the purchase or sale of merchandise or services. This subclassification includes liabilities arising as the result of: (a) guarantees of satisfactory performance of services or of merchandise; (b) contracts for future delivery of merchandise or plant construction, etc.; (c) guaranteed merchandise orders not subject to cancellation (including those guaranteed for affiliated or subsidiary concerns); (d) provisions for returned merchandise, rebates, trade discounts, etc.; (e) provisions for allowances for returned containers, etc.

(3) Responsibilities incurred in various manners other than by expressed agreement or contract, such as those arising as result of (a) pending lawsuits; (b) possibility of litigation, such as alleged infringement of patents, etc.; (c) pending judgments where suit has been taken on appeal to a higher court.

The second main group is impossible of further subclassification.

The credit men in the banking and mercantile world recognize that financial statements must completely set forth the contingent liabilities in order to serve as an adequate instrument upon which to judge a credit risk.

CONTINGENT RESERVE

In accounting practice, an earmarked portion of surplus or undivided profits, not allocated to any asset or liability items, and thus a true equity reserve, free and clear of any actual present needs. Thus its purpose is to meet any unanticipated needs among assets, involving revaluation or losses, and any unexpected liabilities, such as taxes or interest, not definitely known. (See Contingent Funds, Reserve, Reserve Fund.)

CONTINUED BONDS

Bonds which are not repaid at maturity but which are extended for a further definite or indefinite period with the same security, and with the same or different interest rate. They are usually known as Extended Bonds (q. v.).

CONTINUING ACCOUNT

An open or running book account in which settlements are made at regular intervals, e. g., 30 to 60 days.

CONTINUING AGREEMENT

See General Loan and Collateral Agreement.

CONTINUING GUARANTY

See Guaranty.

CONTRACT

An agreement between two or more persons enforceable at law and by which rights are acquired by one or more parties to certain acts or forbearance from acts on the part of others. A contract may be written, oral, or implied, but a written contract cannot be changed or contradicted by oral evidence.

The legal elements necessary to make a contract binding are: (1) offer and acceptance; (2) consideration, if required by law; (3) capacity of the engaging parties to contract; (4) legality of purpose; (5) reality of consent; and (6) the form required by law.

A contract may be a formal document under seal, e. g., a deed or bond; an informal document in writing but not under seal, e.g., a simple contract, or a note or check; or it may be made by word of mouth. Legal effect of the seal has been changed by statute in many States.

CONTRACT GRADES

See Grades.

CONTRACT MARKETS

Those commodity exchanges designated by the Secretary of Agriculture to trade in futures contracts and under supervision of the Commodity Exchange Adminis-

tration. (See Commodities, Commodity Exchanges, Futures.)

CONTRACTS OF SALE

Technically, agreements of sale or purchase, or agreements to sell or purchase. In commodity exchange trading, instead of awaiting delivery on a purchase and then delivering on a sale, the trader may "offset" a previous purchase by a sale for the same delivery month. (See Delivery Day.)

CONTROL ACCOUNT

A control or controlling account in accounting practice is an account in the general ledger to which are posted in totals the debits or credits shown in separate detailed accounts in subsidiary ledgers. Examples are the Accounts Receivable and Accounts Payable accounts, controlling the customers and creditors subsidiary ledgers carrying separate accounts for each customer or creditor by name. The total or balance of the controlling account is the same as the sum of the balances of the various accounts in the subsidiary ledger controlled.

CONTROLLED ACCOUNT

In security or commodity trading, an account in which trading is controlled or directed by a person other than the customer whose account it is. Many firms do not accept discretionary accounts because of the onus and responsibility involved. However, a registered employee of the New York Stock Exchange may exercise full discretion for an account, but the customer must specifically empower him to do so by a power of attorney, and a partner of the firm must approve and initial each discretionary order before it is executed.

CONTROLLED INFLATION

See Inflation.

CONTROLLING COMPANY

See Holding Company, Parent Company.

CONTROLLING INTEREST

A person or group of persons who own a sufficient percentage of the common stock of a corporation to control its policy through their majority voting power. Ownership of over 50 per cent. of the stock is sufficient for this purpose. Very often a group owning a much smaller percentage of the stock can secure working control by procuring proxies of scattered shares.

CONTROLLING RECORDS

The term applied to those classes of records of a financial nature in a bank which consists of the controlling books or accounts of the bank. (See Controlling Account.)

CONVENTION VALUES

In insurance company valuation of securities, the valuation procedure approved by the National Convention of Insurance Commissioners whereby these State authorized the use of amortized values for bonds of specified standing and average values for stocks, rather than actual market values, during the abnormal decline in security prices in the early '30s. While reporting their surplus officially on the Convention basis, many companies nevertheless noted the actual market value basis as a footnote to surplus throughout the period of depression. (See Insurance Company Statements.)

CONVERSION

The term has four meanings:

(1) In law, the unauthorized exercise of ownership over personal property belonging to another, resulting in exclusion of the owner's rights or in alteration of the personal property.

Thus, the wrongful sale of stock held as margin for a trading account by a broker without the consent of the owner-trader is conversion.

(2) The exercise of the conversion privilege attached to bonds or stocks.

For example, convertible bonds or preferred stocks may be converted into common stock, at the option of the holder.

(3) In commodity trading, the conversion contract (q.v.).

(4) In accounting, conversion cost is the comprehensive term covering labor, overhead, and materials outlay involved in processing an article into the desired intermediate or finished form.

CONVERSION CONTRACT

A type of contract in "spot" trading in which the price is tentatively designated as a futures price, but the basis grade left unspecified. Later, in accordance with the time limit agreed on, the price is to be adjusted according to the current grade at time and place of delivery in relation to the basis grade of the futures contract. (See Spot Prices.)

CONVERTIBLE BONDS

Bonds which at the option of the holder are convertible into other securities of the corporation. Such bonds are usually convertible at a certain price into preferred or common stock, and if the value of the stock into which they are converted subsequently should exceed the value of the bonds at the conversion price, the owner will find it profitable to exercise his option of converting. When bonds are convertible into stock, the stock into which they are convertible must be authorized at the time the bonds are issued. Convertible bonds have a speculative feature, and tend to fluctuate in price in accordance with the movement of the stock into which they are convertible.

The advantage of convertible bonds to the issuing corporation is the increased chance of creating a large market for their sale. A corporation is not always able to raise additional capital to advantage by the issue of stock and its bonds could be sold only at a high interest rate. To the investor, convertible bonds combine both safety of principal and possibility of enhancement in value through the conversion privilege. If the owner elects to convert, the fixed charges of the corporation are to that extent reduced.

Convertible bonds offer the investor the opportunity of combining an investment position with speculative possibilities. That is, they will sell at a level expressing the minimum credit position of the issuer, but at the same time fully reflect any advance in the stock into which the bond is convertible once the conversion price is approached or exceeded. Sometimes the conversion privilege offers a greater speculative flavor than in the stock itself, especially where conversion is allowed in a large number of shares. If a convertible bond is convertible into stock at 40, it can be exchanged for 25 shares. If the stock should sell at 50, the bond should

be priced approximately at $1,250 in order to reflect the value of the conversion feature.

CONVERTIBLE PAPER MONEY

Paper money, which according to its terms, may be redeemed at par in gold, or lawful money. Convertible paper money is distinguished from Inconvertible Paper Money (q. v.). In recent decades, because of the "maldistribution" of world stock of gold, convertibility of paper money has been eliminated or restricted, and even the United States, with the world's largest stock of monetary gold, since 1934 has withdrawn gold coin and gold certificates from circulation in accordance with the "executive gold bullion" standard adlopted. (See Paper Money.)

CONVERTIBLE PREFERRED STOCK

Preferred stock which the holder may exchange at his option for common stock at the stipulated conversion price or share exchange ratio. Usually the option cannot be exercised immediately, but only after a certain date, or in accordance with certain conditions. Convertible preferred stock may be exchanged par for par, or in other proportions as prescribed. This type of stock is attractive because it combines stability with possible enhancement of value through larger earnings. In case of large earnings the stockholder may derive a larger income by converting into common stock, but at the expense of greater risk. (See Preferred Stock.)

CONVEYANCE

A general legal term to denote an assignment, lease, settlement or covenant to surrender made by a deed, mortgage or sale. In general usage, however, the term denotes the deed by which real estate is conveyed from the seller to the buyer.

CONVEYANCING

The science and act of transferring title to real estate from one person to another. Conveyancing is that part of an attorney's business which relates to the alienation and transmission of property and other rights from one person to another and to the formulation of legal documents intended to create, define, transfer, or extinguish rights. It therefore includes the searching of titles to real estate, and the preparation of agreements, wills, articles of association, etc.

CO-OPERATIVE AGENCIES FOR CREDIT INFORMATION

There are in the United States a large number of associations which reciprocate credit information through the credit departments of their various members. Practically every trade and manufacturing association maintains a credit organization for the purpose of determining the credit standing of dealers in the trade with the view to prevent credit losses through granting credit to buyers who are financially irresponsible. Not only do various trades maintain credit organizations, but many banks in the larger cities, Chambers of Commerce and Credit Men's Associations throughout the country have established co-operative credit exchanges where information is available to members and affiliations. (See Credit Information Sources, Mercantile Agencies.)

CO-OPERATIVE BANKING

In Massachusetts, a law was passed authorizing the establishment of "Co-operative Savings Fund and Loan Associations," on May 14, 1877. In 1883, they became known as co-operative banks. From this idea sprang building and loan associations. The Building and Loan Association (q. v.), Credit Union (q. v.), Labor Banks (q. v.), Mutual Savings Bank, and National Farm Loan Associations (q. v.) are forms of co-operative banking.

CO-OPERATIVE BUYING

The co-operative movement is a twentieth century development and has grown to considerable size in Europe. It has not attained the same importance in the United States. These associations, composed of consumers, represent a joint co-operative effort similar in purpose to the American co-operative marketing associations, several of which, notably in cotton, tobacco and other agricultural products, have banded together hundreds of thousands of farmers doing a business of millions of dollars each year. One of these groups buys co-operatively; the other sells co-operatively.

Co-operative buying abroad was originally an effort to improve low purchasing power. Since purchasing power has not normally been particularly low in this country, the economic incentive is far stronger in Europe, and hence the co-operative movement there has flourished.

The high prices in this country in 1920, however, just before the deflation, spurred on the growth of these societies in the United States. Most of them were located in small towns. In the consumers' societies the members could profit by the purchase of commodities in large lots at reduced prices.

The depression of 1920-1921 and the collapse of prices resulted in checking the movement. Since then, however, it has slowly increased. There are three types of non-agricultural co-operatives, consumer, credit and workers' production societies.

Of these, the workers' productive societies are the best developed and are the least likely to expand. This type of society is composed of workers in the shop who have contributed all the capital to the enterprise and do all the work, electing a manager from among themselves. The plan has not proven particularly efficient. The credit societies, however, fill an actual need. They are formed for the purpose of extending small loans to the wage earner who is not able to use the usual sources of credit in an emergency. Savings banks and many commercial banks do not extend small loans to people of small incomes. The member of a credit society pays a fee of $1 or less and a sum to be used as capital, from which he receives interest. He can then borrow at a very low rate of interest. These "poor men's banks" are growing more rapidly than any other co-operative organization.

The consumers' societies are the largest. Membership is unrestricted, each member buying one or more shares of capital stock. Goods are sold at market prices so as to avoid arousing the hostility of the private merchant by price-cutting. The members get their returns in the form of dividends. The co-operative movement fulfills a worthy, if small, function in the business life of this country. Its scope is limited and it is well that it should grow slowly. Too rapid development of enthusiastic and badly organized ventures would only discredit the service of the more conservative societies.

COORDINATION

In new business activities of a bank, it is necessary for most effective results to have coordination of new business solicitation, advertising and other promotional activities. Usually, this may be best achieved by centralizing in a senior officer the over-all direction and responsibility for coordinated new business policy and execution. (See New Business Department.)

COPECK

Another spelling for Kopeck (q. v.).

COPPER

Probably the most important non-ferrous metal, in view of its extensive use in many industries, notably in the electrical industries, which take over 50% of all copper used in the United States. Consumption of copper in the United States normally totals about one-third of world consumption. In the past, the United States has accounted for a higher proportion of world production, but in recent years, its ratio of world production has run at about one-fourth, reflecting decrease in domestic stocks, and leading American copper companies have large interests in foreign copper producing properties, notably in Chile and Mexico. In 1945 and 1946, copper imports totaled 1,677 and 654 million lbs., respectively, compared with 1936-1938 average of 354 million lbs.

Market center for copper in the United States is in New York City, where most of output of domestic copper refineries is marketed. Futures trading in New York City is conducted on the Commodity Exchange,Inc., where the contract unit is 50,000 lbs. (25 tons), on which the minimum fluctuation is 1/100¢ per lb. (one "point") or $5 per contract. Basis grade is rough or blister copper assaying 99% or better, with six premium grades being deliverable at seller's option, highest premiums being for Electrolytic Copper or equivalent fire refined high conductivity copper (except cathodes), and Lake Copper assaying 99.90% or better. Since 1900, electrolytic copper prices in New York City have ranged in price fluctuation from high of 37¢ per lb. in 1917 to low of 4-7/8¢ per lb. in 1932. Government premiums have aided producers in recent years.

The following table shows smelter output from domestic ores and yearly average price of electrolytic copper at New York since the turn of the century:

	Smelter Output from Domestic Ores (short tons)	Yearly Average Price, Electrolytic, New York
1896-1900	265,544	*13.41¢
1901-1905	366,095	13.877
1906-1910	490,248	15.642
1911-1915	610,313	14.973
1916-1920	821,799	23.031
1921-1925	619,999	13.474
1926	869,811	13.795
1927	842,020	12.920
1928	912,950	14.570
1929	1,001,432	18.107
1930	697,195	12.982
1931	521,356	8.116
1932	272,005	5.555
1933	225,000	7.025
1934	244,227	8.428
1935	381,294	8.649
1936	611,410	9.474
1937	834,661	13.167
1938	562,328	10.000
1939	712,675	10.965
1940	909,084	11.296
1941	966,072	11.797
1942	1,087,991	11.78
1943	1,092,939	11.78
1944	1,003,379	11.75
1945	782,726	11.75
1946	594,000p	14.04**

*Lake Copper for 1896 and 1898.

Source--Department of Interior, Bureau of Mines.

(See Commodity Exchange, Inc., Coppers.)

COPPER A TIP

An expression to indicate that one acts contrary to the advice or information received in a tip. (See Tip.)

COPPERS

This term has two meanings:

(1) A nickname for United States one-cent pieces. (See Bronze Coins.)

(2) An expression used to designate the copper stocks. In the United States, the principal states for mine production of recoverable copper are Arizona and Utah. In Arizona, the Morenci Branch of the Phelps Dodge Corporation is the largest copper producer. In Utah, in the West Mountain (Bingham) district, is located the leading copper mine in the United States, the Utah Copper mine of the Utah Copper Company. (See Copper.)

CORDOBA

See Foreign Moneys - Nicaragua.

CORN

The most valuable crop in the United States, in recent years totalling 2 to 3 times the size of the wheat crop. Nearly all wheat, however, moves to market, leading to more activity in wheat trading for hedging and speculative trading operations. Only a minor portion of the corn crop is exported, which is accounted for by the fact that corn is chiefly used on the farms for fattening meat animals. The principal corn growing states in order of production in 1946 were Iowa, Illinois, Minnesota, Indiana and Nebraska.

The principal market for corn is in Chicago, on the Chicago Board of Trade, both for cash ("spot") and future delivery. Basic grade is No. 1 or No. 2 mixed corn for futures trading, for which the unit of trading is 5,000 bushels on the regular contract unit, and 1,000 bushels for the "job lot". Trading is also conducted in futures on the Kansas City Board of Trade, in similar units. On both exchanges, the minimum fluctuation is 1/8¢ per lb. or a "point". Daily trading limits are 8¢ above or below previous close on both exchanges. Government support loans on 1946 corn were $1.15 per bushel for the national farm average and at Chicago. Base period (1909 -14) price for corn is 64.2¢, which multiplied by the parity index as announced by the Secretary of Agriculture (Bureau of Agricultural Economics)

monthly, gives the current parity price for the purpose of Government support loans. The corn season begins October 1st.

The following table gives production of corn over the long term, together with average price received by farmers:

	Production (in 1,000 bushels)	Average Price per bushel Received by Farmers
1896-1900	2,523,555	28.2¢
1901-1905	2,529,114	44.0
1906-1910	2,735,480	53.1
1911-1915	2,609,562	66.0
1916-1920	2,704,768	123.4
1921-1925	2,706,506	75.3
1926-1930	2,484,935	77.2
1929	2,515,937	79.9
1930	2,080,130	59.8
1931	2,575,927	32.1
1932	2,930,352	31.6
1933	2,397,593	52.0
1934	1,448,920	81.5
1935	2,299,363	65.5
1936	1,505,689	104.4
1937	2,642,978	51.8
1938	2,548,753	48.6
1939	2,580,912	56.8
1940	2,462,320	61.8
1941	2,675,790	75.1
1942	3,131,518	91.7
1943	3,034,354	112.3
1944	3,203,310	109.0
1945	2,880,933	127.0
1946	3,287,927	136.0

CORNER

"Control or monopoly over a commodity or security to get control of or to dictate prices (Pratt, S.S.: "Work of Wall Street"). Technically, a corner occurs on a stock exchange when "shorts" cannot borrow stock, i.e., have sold more stock than the floating supply makes available for purchase. Those who have a corner can dominate the situation and dictate price terms to their unfortunate victims, the "shorts" who are forced to settle at artifically dictated prices, thereby involving heavy losses. The two important corners in stocks were the Northern Pacific corner (1901) and the Stutz corner (1920).

Corners have been more frequent in grain than in stock speculation and in most cases have proved dis - astrous for their promoters. The three great corners on the Chicago Board of Trade are known as the Hutchinson Corner (1888), the Leiter Corner (1898), and the Patten Corner (1909).

A corner has been declared to be illegal by the courts for two reasons: (1) it is a gambling transaction and contracts thereunder are therefore unenforceable; and (2) it is in restraint of trade.

Under the Commodity Exchange Act (q. v.), the Commodity Exchange Commission (Secretary of Agriculture, Secretary of Commerce and the Attorney General sets limitations both upon the amount of speculative trading done daily by any one individual and upon the speculative net position, long or short, of any speculative account at any one time, and requires the reporting to it of any holdings in excess of certain amounts. Under the Securities Exchange Act of 1934, operations of the stock exchanges and their members, and of security brokers and dealers generally, are subjected to regulation of the Securities and Exchange Commission.

CORN-HOG RATIO

The ratio between the price of corn and the price of hogs which indicates the relative profit to the farmer of either selling corn or feeding it to hogs for fattening purposes.

Comments the Secretary of Agriculture: "Sharp advances in hog prices and the record 1946 corn crop established a very favorable hog-corn price ratio early in 1947 which encouraged the feeding of hogs to unusually heavy weights and increased the output of pork and lard. A rise in corn prices, when the seasonal spring decline in hog prices occurred, caused the ratio to become less favorable, and this tended to check desired expansion in hog production. Moreover, the uncertain outlook for the 1947 corn crop during the summer tended to speed up hog marketings and caused many farmers to dispose of sows that otherwise would have been kept for fall farfowing. Accordingly, hog production for the 1948 market may not reach the goals."

CORN PIT

See Pit.

CORPORATE BANKRUPTCY ACT

As last amended and codified in 1938, the National Bankruptcy Act now embodies in Chapter X, entitled Corporate Reorganization, the procedure for reorganization of corporations. The steps involved may be summarized as follows: (1) Petition to reorganize is filed; (2) trustees are appointed by the court; (3) plan of reorganization is prepared and proposed, if continuance of the business rather than liquidation is found feasible; (4) hearings on the merits of the reorganization plan are held; (5) the Securities and Exchange Commission may be asked to submit an advisory report on the merits of the reorganization plan; (6) the plan of reorganization is approved (not confirmed at this stage) by the court; (7) security holders vote on the plan; and (8) the court confirms the plan and orders its consummation.

Upon confirmation of the plan by the court, the reorganization plan binds dissenting security holders and creditors. Under the old type of equity receivership, non-assenters were entitled to be paid off the value of their claims.

CORPORATE RECORDS

Those records of a corporation required by incorporation laws and pertaining to its corporate character. Among these are the certificate of incorporation, by-laws, book of minutes of the board of directors, stock book, stock transfer book, etc. Section 10 of the New York Stock Corporation Law requires that every stock corporation shall keep at its office correct books of account of all its business and transactions, and a stock book showing the names of all persons, alphabetically arranged, who are stockholders of the corporation, showing their addresses, number of share of stock held, the time when they became stockholders, and the amount paid thereon. (See Corporation.)

CORPORATE STOCK

In municipal financing, the term "corporate stock" is sometimes used as the title for bonds of long term ma-

turity, with sinking fund retirement and other characteristics of bonds. (See Municipal Bonds.)

CORPORATE TRUSTS

See Trusts.

CORPORATION

The principal form of modern business organization, as distinguished from the Partnership (q. v.), and sole proprietorship. It is defined by a court of law as "an artificial being, invisible, intangible, and existing only in contemplation of law. Being the mere creature of law, it possesses only those properties which the charter of its creation confers upon it, either expressly or as incidental to its very existence" (Chief Justice John Marshall, in Trustees of Dartmouth College v. Woodward).

The New York Statute (Art. I, Sec. 2, General Corporation Law) recognizes three classes of corporations: (1) public corporations (municipal, district, and public benefit corporations); (2) stock corporations (moneyed, transportation, business, and co-operative corporations) and (3) non-stock corporations (religious, membership, and any corporations other than stock corporations or public corporations).

To form a corporation, the general corporation laws usually require that three or more incorporators apply for a charter, which upon payment of the proper fees, is issued by the Secretary of State of the state of incorporation. (See Certificate of Incorporation.) A Corporation has power to conduct the business authorized by its charter, to make contracts, and to sue and be sued. It is an entity distinct from its constituent stockholders, who may sue the corporation. A corporation is owned by its stockholders, but the active management is vested in the directors, elected by the stockholders and subject to the provision of its by-laws. The directors in turn elect the officers, whose duties are usually outlined in the by-laws.

The advantages of the corporate form of organization are continuous life, large capitalization with which to secure economical operation, limited liability, continuity of business policy, divisibility of capital, and transferability of shares. The disadvantages are greater taxation, compulsion to submit to greater publicity, limitation of powers, and limitation of credit through limited liability.

CORPORATION BONDS

One of the two classes of bonds divided according to type of obligor, i. e., civil bonds and corporation bonds. Corporation bonds are obligations of a business corporation as distinguished from obligations of a governmentality (Federal, state, or municipal government.)

The soundness of corporation bonds depends upon many factors including the character of collateral offered, the character of the issuer, the nature of the industry, and stability of its earnings. The market value of corporation bonds is primarily influenced by money rates in the case of highest grade obligations, and business activity and conditions in the case of lower grade issues, while civil bonds of fiscally sound public bodies are primarily influenced by the level of money rates. (See Bond, Industrial Bonds, Investment, Public Utility Bonds, Railroad Bonds.)

CORPORATION FINANCE

That division of finance which treats of the promotion, organization, capitalization, financing, reorganization, and financial conduct of business corporations. It deals, "first, with the raising of the initial capital needed for business enterprises, what securities to issue, how and to whom they should be sold, how best to utilize the funds thus secured, together with their proper apportionment for plant, equipment, and working capital; second, with the accurate determination of profits and their allocation to dividends, surplus, sinking fund and reserves, and the enlargement of capital permanently invested." (W. H. Lough: Business Finance).

CORPORATION PAPER

Notes, acceptances, and bills of exchange issued by

corporations, as distinguished from paper issued by individuals and copartnerships.

CORRESPONDENT

A bank having direct connection or friendly service relations with another. Most banks, especially country banks, find it convenient to maintain balances with a bank in a larger city or cities, either as reserve, or as a fund against which drafts may be sold and out-of-town checks collected. A Painesville, Ohio, bank, for instance, might keep a balance in Cleveland and another in New York. Oftentimes mutual collection agreements are arranged which specify each bank's obligations and remuneration. Most of the larger eastern banks have correspondents in foreign countries.

Some of the stock exchange commission houses have out-of-town correspondents, usually local investment security firms, who procure orders which are transmitted by private wire for execution on the New York Stock Exchange, Chicago Board of Trade, etc.

COST ACCOUNTING

See Bank Cost Accounting.

COST AND FREIGHT

A term used chiefly in import and export transactions meaning that the price quoted includes the cost of the merchandise and the freight to the point of destination, but does not include insurance. The abbreviation used is "c. and f."

COST, INSURANCE AND FREIGHT

The price quoted includes not only the cost of the merchandise but also the freight and insurance charges to the point of destination. The abbreviation used is "c. i. f."

COST OF LIVING INDEX

In this statistical civilization a growing use has been made of cost of living indexes. In this country, as well as most others, attempts to compile indexes of living costs have been made. Such indexes do not tell how much it costs to live but furnish a comparison between the minimum cost of a certain standard of living from one date to another.

The official cost of living index in the United States, and one which is made the standard for many "escalator" clauses in contracts, is the consumers' price index for moderate income families in large cities, prepared by the Bureau of Labor Statistics of the Department of Labor. Components of this index are: food; apparel; rent; fuel, electricity and ice; house furnishings; and miscellaneous. The base period of 100 is the average for 1935-1939. Base period was changed during the Roosevelt Administration from 1926 to 1935-1939 average.

The base year continues to be 1926 for the widely published index of wholesale prices prepared by the Bureau of Labor Statistics. Components of this index are: farm products; foods; and other commodities hides and leather products; textile products; fuel and lighting materials; metals and metal products; building materials: chemicals and allied products; house furnishings goods; and miscellaneous. These components in turn are subdivided into 50 sub-groups.

CO-TRUSTEE

A trustee acting jointly with another or others. (See Trustee.)

COTTON

One of the principal crops and the chief export commodity of the United States. Cotton is the only completely commercial crop raised in the United States. Unlike the grain crops, a part of which are consumed on the farms, every bale of cotton fibre that is raised moves into commercial channels sooner or later.

History of American Production.-- In 1790 the cotton crop was 7,000 bales. In 1792 the crop was 13,000. From that date to 1860 record crops followed in rapid succession. In 1826, the first million bale crop was produced and in 1859 a crop of 5,387,000 bales was attained.

The period of the Civil War was marked by a cotton famine in Europe and cotton soared to unheard of prices. The high prices tempted the planters of the south who were not only bereft of their slaves, teams, and tools, but had also contracted heavy debts, to borrow more money and attempt to recoup themselves by paying former slaves to grow cotton. The rapid decline in the price of cotton from nearly a dollar per pound in 1864 to 17 cents in 1870 left them with debts which took over a half century to clear. The first record crop after the Civil War was in 1879 with 5,755,000 bales. In 1897, our production reached 10,000,000 bales. The peak of production was reached in 1926 when the world produced nearly 28,000,000 bales of cotton, nearly 18,000,000 being grown in the United States.

The following table shows the production and price received by farmers for cotton since the turn of the century:

	Production (excluding linters) per 1,000 bales of 500 lbs.	Average Price Received by Farmers
1896-1900	10,036	7.04¢
1901–1905	10,801	8.98
1906-1910	11,847	11.29
1911-1915	14,167	10.44
1916-1920	11,918	24.91
1921-1925	11,515	22.22
1926-1930	14,834	15.38
1929	14,825	16.78
1930	13,932	9.46
1931	17,097	5.66
1932	13,003	6.52
1933	13,047	10.17
1934	9,636	12.36
1935	10,638	11.09
1936	12,399	12.36
1937	18,946	8.41
1938	11,943	8.60
1939	11,817	9.09
1940	12,566	9.89
1941	10,744	17.03
1942	12,817	19.04
1943	11,427	19.88
1944	12,230	20.73
1945	9,015	22.52
1946	8,482	33.90

Source--U. S. Department of Agriculture, Bureau of Agricultural Economics.

For a century and a quarter, cotton has easily held first place among all fibers, and since 1850 United States has been the greatest producer and exporter of cotton among all countries. In previous years, United States has exported as much as two-thirds of its crop; in recent years, 40% to 50%. Cotton growing and manufacture have contributed greatly to the wealth and economic progress of the United States. Cotton uses have been more widely diversified in recent years; that is, besides clothing, it is widely employed as a basis for rayon manufacture, tire fabrics, and automobile brake linings.

For many decades, cotton growing has been a major industry in ten Southern States now having total population of about 30,000,000. Despite increased industrialization of the South and efforts to diversify agriculture, cotton remains as the most important crop in various Southern states, particularly in Texas, where the cotton crop is the most valuable crop grown in a single political subdivision in the world, representing about 53% of the total crop value of the State; and in Mississippi and Arkansas.

The largest cotton producing countries, in order of their importance, are the United States, India and Egypt. China, though a large producer, consumes domestically most of its production. United States production in 1946 dipped to only 8 1/2 million bales, compared with 22 million bales world production, but in the previous decade, the American proportion of world production ranged between 40% and 50%. Smaller amounts are also raised in Russia (where production is increasing), Mexico, Brazil, and Algeria.

Indian Cotton. - The oldest known cotton producing country is India where the plant has been grown and cotton fabrics have been made for more than 4,000 years. India and the Levant were the principal sources of cotton supplies for Europe until the latter part of the eighteenth century, when production in the United States began. The ancient limitations imposed upon cotton cultivation and manufacture made cotton more expensive than wool or linen which, with leather, provided the principal clothing material for the masses of the people of Europe to the last decade of the eighteenth century.

From time immemorial India has grown cotton. The writers of ancient Greece referred to the "tree wool" which was spun into fine muslins and brought into the Levant overland to enter the Mediterranean trade of Europe. The name calico comes from the fine woven goods of Calicut, and the products of the Dacca hand looms have, through the centuries, been recognized as the finest muslins human skill can produce.

At one time a very high quality of cotton was raised in India, but this is no longer true. Practically all of the Indian cotton is of extremely short staple, a large part being under one-half inch, and most of it dirty and harsh. Among the factors which have contributed to the deterioration of Indian cotton in the past are lack of seed selection, careless soil cultivation and improper handling of the lint. The yield of cotton per acre is lower in India than in any of the other large producing countries.

There is no Indian cotton belt, the Bombay Presidency, the Central Provinces, Hyderabad, Baroda, the Madras Presidency, the Punjab, and the United Provinces all having cotton tracts, producing distinct types. Since cotton is grown over such a vast area and since the monson and other seasonal conditions occur at different periods of the year over these areas, the sowing and harvesting seasons are diverse, the former extending from May to December in different parts of the country, and the latter from October to May and June. The bulk of the crop is marketed from January to March. However, an excellent and extensive irrigation system has been developed, particularly in the north. In other parts, such as Madras and the United Provinces, irrigation from wells is becoming important.

Egyptian Cotton. - Egypt is the third largest producer of cotton in the world and owes its important position chiefly to the high quality of cotton produced in that country. Practically all Egyptian cotton is of long staple, averaging about one and one-half inches in length, and is a dark cream color and of a silky appearance. The chief advantages which Egypt enjoys as a cotton producer are excellent soil, unsurpassed climate, and a fairly adequate supply of hard-working laborers. The fundamental handicap is limited irrigable area.

There are two types of Egyptian cotton known as Achmouni and Sakellarides. The first, grown in upper Egypt, and therefore called "uppers," is cream-colored with a brownish tinge, the fiber ranging from one and one-eighth to one and one-fourth inches. Sakellarides also known as "longs," is a type grown in middle and lower Egypt. Its fiber is of cream color and ranges from one and one-fourth to one and three-fourths inches.

Manufacture in United States. - In 1790 Samuel Slater set up the first American textile mill in Pawtucket, Rhode Island. Soon after his arrival from England, where he had been a mill hand, he constructed his machinery entirely from memory on the Arkwright principle. In 1793, the same year in which Eli Whitney invented the cotton gin, Slater built a new mill with seventy-two spindles. This may be regarded as the first complete English type cotton spinning mill in the United States.

By 1815, there were 170 mills in this country with a total of 134,214 spindles, all concentrated in the New England States. Development of mills in the South was slow at first but gathered momentum during and after World War I. At present, however, the South has superseded New England in capacity, as shown herewith:

On July 31, 1946, there were 21,578,000 spindles active in cotton, 575,000 in synthetic fibre, 393,000 on blends with cotton, and 231,000 on other fibres and blends. Of the 21 1/2 million active spindles, 16,869,000 were in cotton-growing States; 4,173,000 in New England States; and 536,000 in other states.

Among the reasons for the establishment of cotton

	1890		1922		1932	
	Spindles	Bales Consumed	Spindles	Bales Consumed	Spindles	Bales Consumed
New England	10,934,297	1,502,177	17,938,805	1,853,153	11,873,558	921,000
South	1,570,288	538,895	15,906,165	3,977,847	19,083,062	4,343,000

Active spindles cover maximum number of spindles operated for any period regardless of duration.

mills in the South, at the expense of the industry's growth in New England, may be cited relatively lower labor costs, lower taxes, at the outset, and proximity to raw material supply. The Southern mills, located near sources of supply, are peculiarly fitted to specialize in the coarser types of yarns and fabrics, requiring larger amounts of raw cotton.

Cotton mills may be divided into four classes: (1) spinning mills, which supply yarn for units outside the cotton textile industry proper, and to (2) weaving mills purchasing their yarn from independent spinning mills; (3) grey goods mills, representing more than half the total output and supplying unfinished cloth; (4) mills under taking all the operations (spinning, weaving and finishing) in the manufacture of the completed product.

Trading. - There are three kinds of cotton, short-staple, long-staple and Sea Island, each of which for market purposes is carefully graded. Basis grade for futures trading on American commodity exchanges is middling, 15/16 inch. The Secretary of Agriculture, under the Commodity Exchange Act, has designated the New York Cotton Exchange, the New Orleans Cotton Exchange and the Chicago Board of Trade as futures markets in cotton. Unit of trading is 100 bales (50,000 lbs.) on the New York Cotton Exchange and New Orleans Cotton Exchange, the latter also trading in "job lots" of 50 bales; and 50 bales on the Chicago Board of Trade. Price fluctuation is in "points" of 1/100¢ per lb., and daily fluctuation is limited to 200 points or $1,000 per contract of 100 bales above or below previous close. Maximum range in price for any one day in any one delivery month is 2¢ per lb. Base period price for cotton (1909-1914 average) is 12.4¢, which may be multiplied by the parity index for cotton announced monthly by the Department of Agriculture, to determine parity price. National average Government loan rate is 92 1/2% of the parity price.

Leading foreign cotton exchanges, normally active, are the Liverpool Cotton Exchange, La Bourse des Marchandises in Alexandria, the East India Cotton Association in Bombay, and the Bolsa de Mercadorias in Sao Paulo.

(See Cotton Futures, Cotton Futures Act, Cotton Grades, New Orleans Cotton Exchange, New York Cotton Exchange.)

Todd, J. A.: The Marketing of Cotton From the Grower to Spinner, 1934.

COTTON BILL

A bill of exchange drawn to finance an export of cotton and secured by the bill of lading. (See Bill of Exchange.)

COTTON CONTROL ACT

Another name for the Bankhead Cotton Control Act, which was repealed on February 10, 1936.

COTTON EXCHANGES

See Chicago Board of Trade, New Orleans Cotton Exchange, New York Cotton Exchange.

COTTON FUTURES

Contracts for future delivery of cotton, traded in on designated commodity exchanges. In the United States, the commodity exchanges designated by the Secretary of Agriculture as cotton futures markets are the New York Cotton Exchange, New Orleans Cotton Exchange and the Chicago Board of Trade. A cotton futures contract is a legal agreement, enforcible at law and under the rules of the exchange, to delivery or to accept a definite quantity of cotton during a specified calendar month at a stated price. Most of the terms of the contract are set by the rules of the exchange, the variables being the price and month of delivery.

For the purpose of establishing the average discounts or average premiums from basis grade for cotton, which is middling 15/16 inch, the Secretary of Agriculture also has designated the spot markets for cotton reflecting current cash or spot values of middling cotton and variations as compared with other grades. The ten spot markets designated by the Secretary of Agriculture are: Dallas, Galveston, Houston, New Orleans, Memphis, Augusta, Charleston, Montgomery, Savannah and little Rock.

Units of trading on cotton futures contracts are: New York Cotton Exchange, 100 bales (50,000 lbs.); New Orleans Cotton Exchange, 100 bales (50,000 lbs.) and 50 bales (25,000 lbs.); and Chicago Board of Trade, 50 bales (25,000 lbs.). Prices are quoted in cents and hundredths of a cent per pound. Minimum fluctuation is 1/100¢ per lb. or "point", equal to $5 on a 100-bale regular contract. Daily price fluctuation is limited to 200 "points" or $1,000 per contract of 100 bales above or below previous close. Active futures months are March, May, July, October and December deliveries, the cotton futures contract for the particular month being traded for as long as 18 months (New York). (See Cotton Futures Act, Futures.)

COTTON FUTURES ACT

An act which became effective February 18, 1915, the full title of which is United States Cotton Futures Act. The purpose of the act was to standardize the practice in trading in cotton futures, and to correct the abuses which previously existed by compelling (1) adoption of uniform standard grades as determined by the Department of Agriculture (See Cotton Grades); (2) exclusion from deliveries of cotton of inferior quality or less than seven-eights of an inch in length of staple; and (3) adjustment of differences in value of the various grades on the basis of "commercial differences" based on prices actually paid for the different grades at the various cotton markets of the country, and not upon "fixed" differences.

The Commodity Exchange Act, which originally applied to grains only, was amended in 1936 to pertain to other commodities, including cotton. Cotton futures trading is now subject to the regulations imposed by the Act and the Secretary of Agriculture, who designates the commodity exchanges that may operate contract or futures markets in cotton. These are the New York Cotton Exchange, New Orleans Cotton Exchange, and the Chicago Board of Trade. (See Cotton Futures, Futures.)

COTTON GRADES

Cotton grading depends upon three variables - color, presence of extraneous substances, and length of fiber. Grades are determined by the Department of Agriculture, and cotton is usually graded as follows:

1. White cotton - full grades: (a) middling fair, (b) good middling, (c) low middling, (d) good ordinary; half grades: (a) strict middling fair, (b) strict good middling,

(c) strict middling, (d) strict low middling, (e) strict good ordinary; intermediate grades: (a) fully good middling, (b) barely good middling, (c) fully middling, (d) barely middling, (e) full low middling.

2. Tinged Cotton: (a) strict good middling tinged, (b) good middling tinged, (c) strict middling tinged, (d) middling tinged, (e) strict low middling tinged, (f) low middling tinged.

3. Stained cotton: middling stained.

Middling cotton 15/16 inch is the basis grade, deliverable at the contract price in futures trading. Cotton deliverable against futures contract is graded for both grade and staple by a U. S. Board of Cotton Examiners. Eligible grades for delivery on futures contracts are only white and extra white between middling fair and low middling and spotted of either good middling or strict middling. Staples of 29/32 inch and 7/8 inch are deliverable at discounts, and those of 31/32 inch and 1 inch, at premiums. Any staples longer than 1 inch will receive no more than the premium for 1 inch staple. The spot markets maintained and designated by the Secretary of Agriculture for the purpose of determining the discounts or premiums (differentials) are ten in number at the present time.

COTTON SEED OIL

For every pound of cotton produced, the cotton plant produces approximately two pounds of seed. Normally about 75 per cent of this seed is crushed, producing cottonseed oil, meal, hulls and linters.

The New York Produce Exchange and the New Orleans Cotton Exchange are designated by the Secretary of Agriculture to maintain futures markets for trading in cottonseed oil, and the Memphis Merchants Exchange is designated as a market for trading in cotton seed meal futures.

Cottonseed oil is bought or sold in railroad tank-car lots on the New York Produce Exchange, for future delivery. One railroad-tank-car full is one contract, (60,000 lbs.) One or more tanks may be bought for delivery in any one of eight future months. The most active months in which the best executions may be obtained are January, March, May, July, September, December. One or more tanks may be sold for delivery in any one of eight future months, whether or not the seller actually owns the oil at time of sale, provided he will obtain it, or buy it in, before the contract to sell it matures. The price is in cents per pound - cents and hundredths of a cent - fluctuations in price are in hundredths of a cent. Each hundredth of a cent is called a point, and amounts to $6.00 a point on one tank. Daily trading limit in price fluctuation is 2¢ per pound above or below previous close.

Regular contract on the New Orleans Cotton Exchange for cottonseed oil futures is 30,000 lbs., on which the minimum fluctuation per pound is in hundredths of a cent, or $3 for a full contract unit. Daily trading limit is 1¢ per pound above or below previous close.

The following table shows production of cottonseed and farm value per ton over a period of years:

	Production per 1,000 short tons	Farm Value per ton
1909-1910	4,799	$25.07
1911-1915	6,292	20.59
1916-1920	5,295	53.28
1921-1925	5,112	33.11
1926-1930	6,593	28.83
1929	6,406	30.93
1930	6,028	22.07
1931	7,310	8.98
1932	5,815	10.35
1933	5,511	12.91
1934	4,256	33.03
1935	4,634	30.54
1936	5,472	33.30
1937	7,844	19.50
1938	4,950	21.79
1939	4,869	21.14
1940	5,286	21.72
1941	4,553	47.65
1942	5,202	45.60
1943	4,688	52.10
1944	4,902	52.70
1945	3,664	51.10
1946	3,452	71.40

COULISSE

The outside or curb market of Paris.

COUNCIL BILLS

See India Council Bills.

COUNCIL OF ECONOMIC ADVISERS

Under the Employment Act of 1946, enacted February 20, 1946 as a modification of the originally proposed "full employment" bill, the Council of Economic Advisers was organized in the Executive Office of the President. Membership of the Council consists of three members appointed by the President, with the advice and consent of the Senate, one of whom is designated as Chairman and another as vice-chairman.

Specific functions of the Council are to assist the President in the preparation of the President's Annual Economic Report to Congress, and to furnish the President with such economic studies and reports as he may request. General functions are to study national economic developments, trends and policies, and the role of the Government in promoting economic welfare; develop and recommend economic policies to foster free competitive enterprise and to maintain employment, production and purchasing power. (See National Advisory Council.)

COUNTER CASH

That part of the money stock of a bank which is entrusted to the paying teller, as distinguished from the reserve cash, i. e., the money which the bank is required by law to maintain as reserve against deposits. The counter cash, also known as till money, is taken into the paying teller's cage during the day and kept in a separate compartment of the vault at other times. It is an amount sufficient to provide for the cashing of checks, as shown by experience.

COUNTER CHECK

A special form of check, so marked, available to the depositors at the desks in the lobby of a bank for convenience in case the check book has been left at home. A counter check can be cashed only at the paying teller's

window and by the drawer thereof in person. Its purpose is to prevent swindlers or forgers from using blank checks fraudulently.

COUNTERFEIT CURRENCY

See Counterfeits.

COUNTERFEITS

Fraudulent, spurious, "bogus," or imitation money; money manufactured in imitation of genuine money. The Government has a monopoly of coinage and any private person who makes coins or paper money is a counterfeiter. Counterfeit coins consist of base metal, while counterfeit bills are made according to the processes described below.

One of the duties of paying tellers, receiving tellers, and money clerks is to detect counterfeit money, and consequently they should be skilled in the art of counterfeit detection. Counterfeits are not easily detected by the visual process. They are more easily "caught" by the feeling of the weight and texture than by the appearance. The paper furnishing the basis for paper currency is made by a secret process and is difficult to imitate. Generally the quality of counterfeit paper is inferior to the paper used by the Government, and red and blue ink lines are used to imitate the red and blue silk threads in the genuine bills.

There are three principal methods of making counterfeit bills. The first is copying bills by hand, reproducing each finest line and imitating the silk thread in the paper of the genuine issue with delicate pen and ink work. Such work is performed only by experts - probably those who have formerly been engaged in the Bureau of Engraving and Printing. Some of these notes have been so skillfully imitated as to deceive the naked eye of experts.

The second method is to engrave a steel plate from which the counterfeit bills are printed. This process is more remunerative than the first because many bills can be reproduced from the same plate.

The third and most usual process is that of photographic reproduction. The photo-engraving process bills are not as accurate as the steel engraved bills and are the easiest of all to detect. The engraving is apt to be less distinct and of lighter color than in the genuine, for the reason that the plates are made from photographs of the original and something is lost in the process.

There are two principal methods of making counterfeit coins. The first is casting from a mold; the second is stamping with a die and press. In the casting process a mold is made from a new and genuine coin. In the stamping process a die must be made and the counterfeit money is struck off with sharp blows of a heavy press. The stamping process produces better results because the impression is more clearly cut, this, in fact, being the method used in manufacturing genuine coins.

No exact formulas can be given for the detection of counterfeits. Judgment, experience, knowledge of counterfeiters' technical processes, and familiarity in handling currency are the best guides. Supplementing the guides suggested, the most competent assistance available in discovering counterfeits are publications of the Secret Service Division of the U. S. Treasury Department, and of the protective divisions of banking associations. Whenever counterfeits are discovered, the account of the customer depositing them should be charged, and the Secret Service Division of the U. S. Treasury Department notified.

Counterfeit notes found in remittances from banks are cancelled and returned for the purpose of enabling the owner to make reclamation, and after such use they must be returned to the Treasurer of the United States for transfer to the Secret Service Division of the Treasury Department.

Counterfeit notes found in remittances from individuals are cancelled and sent to the Secret Service Division. The sender is advised of the fact and informed that, if he will communicate with the chief of that division, arrangements may be made to have such notes submitted for reclamation.

Counterfeit coins found in remittances to the Treasurer are cancelled and sent to the Secret Service Division, a receipt for the same being returned to the sender, who may communicate with the chief of that division if he desires to have such coin submitted for reclamation.

Counterfeit coin received at the subtreasuries (now Federal Reserve banks) is retained, to be called for by agents of the Secret Service at certain stated periods. A receipt is issued to the sender or depositor, when desired, to enable him to make reclamation for coin so retained.

COUNTERMAND

To cancel an order which has not yet been executed.

COUNTERSIGN

See Countersignature.

COUNTERSIGNATURE

A signature denoting approval, or vouching another signature. For purposes of internal check and to locate responsibility for purchases, many corporations provide that all disbursement checks shall be signed by more than one official. Whenever a check is signed by more than one official, the additional signatures are called countersignatures. A copy of the resolution of the Board of Directors authorizing certain officials to disburse the company's funds is placed upon file in the records of the bank having the account so that the bank and its paying officers may be apprised of the proper number of signatures that should appear upon a company's checks before it cashes them, or receives them for credit.

COUNTRY BANKS

Banks located in Undesignated Cities (q. v.); i. e., banks not located in Central Reserve Cities (q. v.) or Reserve Cities (q. v.). Country banks' reserve requirements are usually less than for large city banks, e. g., country banks which are members of the Federal Reserve System since October 3, 1942 are required to maintain a 14 per cent. reserve against net demand deposits, as compared with 20 per cent. for Reserve Cities and Central Reserve Cities.

From the standpoint of collection of country checks through the Federal Reserve par collection system, country banks are those not located in a city where a Federal Reserve bank or branch is established.

COUNTRY CHECKS

Out-of-town or transit checks; also checks drawn on

banks not located in a city where a Federal Reserve bank or branch is established.

COUNTRY COLLECTIONS

See Collection Items.

COUPON

See Coupons.

COUPON BONDS

Negotiable bonds not registered in the name of the owner as distinguished from Registered Bonds (q. v.). Coupon bonds are payable to bearer, title passing by delivery without indorsement. Interest upon coupon bonds is received by clipping the attached coupons as they mature and presenting them for payment to the issuer (debtor organization), or the issuer's fiscal agent. (See Coupons, Registered Coupon Bonds.)

COUPON BOOK

See Coupon Ledger.

COUPON CHECK

See Coupon Payments Account.

COUPON COLLECTION DEPARTMENT

A division of the collection department in large banks or trust companies, especially in financial centers, to receive coupons from individual customers and bank correspondents, for presentation to and collection from the various designated paying agents. Coupons are assorted and presented to the advertised paying agents ascertained by reference to various guides and financial services which publish the names and addresses of paying agents for the principal issues of bonds. Announcements of interest payments are also frequently published in the financial newspapers.

Coupons detached from all Government bond issues are collectible through Federal Reserve banks, and coupons collectible through out-of-town paying agents, are forwarded through the mails in the same manner as out-of-town checks.

Matured coupons are accepted both for cash and for collection. If on a cash basis, the proceeds are credited to the depositor's account immediately; if on a collection basis, when and if paid.

COUPON COLLECTION TELLER

A bank teller who manages the collection of matured coupons deposited on a collection or credit basis by depositors and correspondents. The Coupon Collection Teller is the manager of the Coupon Collection Department (q. v.).

COUPON LEDGER

The ledger in which a bank or trust company, acting as coupon-paying agent, records the receipts of funds with which to pay coupons, disbursements for their redemption when presented for payment, and the numbers of coupons paid. By reference to this ledger it is possible to ascertain the sum received to pay coupons, amount of coupons presented and paid, and amount outstanding, if any.

COUPON PAYING DEPARTMENT

A department of a bank or trust company located in a financial center, which because of its special facilities, is appointed paying agent by various debtor organizations (corporations and civil divisions) for the specific purpose of paying matured coupons and bonds. This department is a specialized department for performing this distinct fiscal agent function when the volume of this business is sufficiently large to warrant the organization of a separate department.

By appointing a bank or trust company to pay its coupons, the issuer shifts the burden of making a large number of small disbursements upon an institution which has superior facilities for performing the service safely, efficiently, and economically. The debtor organization needs only to authorize its agent and to issue one check; whereas the bank or trust company is called upon to make many small disbursements when matured coupons are presented for payment by their owners, or when other banks present them in behalf of their customers.

Coupons are not paid unless the bank or trust company has been officially appointed as fiscal or paying agent or has instructions to pay from the debtor organization, or its fiscal agent, and unless funds have been deposited in sufficient amount to redeem in full the maturing bonds or coupons. Usually the institution acting as paying agent has standing instructions to pay maturing coupons at each successive maturity date. The commission for paying bonds and coupons has become standardized, and is usually 1/4 per cent. for coupons, and 1/8 per cent. for bonds.

COUPON PAYMENTS ACCOUNT

A general ledger account which represents the total coupon checks outstanding. Coupons are usually paid by the institution acting as fiscal agent by a special check, marked Coupon Check, so that coupon redemption payments may be readily distinguished from other checks issued by the bank or trust company. This account is credited when coupon checks are issued, and debited when they return through the paying teller's department, clearing house, or otherwise.

COUPON TELLER

A bank teller who manages the redemption of matured coupons when presented for payment. His function is similar to that of the paying teller except that he cashes coupons instead of checks. When coupons are presented for payment they are scrutinized to see that they are genuine and regular in all respects. Since a number of fraudulent and worthless coupons are in circulation, the coupon teller must be thoroughly familiar with the general appearance of the coupons of the most important issues in order to avoid paying worthless varieties. Among other points he must see that the bank has been authorized as paying agent, that funds have been deposited in sufficient amount to redeem the issue, that the coupons have matured, that no stop-order has been issued against them, that the correlative bonds have not previously been called for redemption, that they bear the bond number, etc. The coupon teller is the manager of the Coupon Paying Department (q. v.).

COUPONS

Certificates attached to a (coupon) bond which represent sums of interest due at stated maturities, which the bond promises to pay. Coupons are negotiable instruments which state that the debtor organization (issuer and obligor) through its paying agent, usually a

bank or trust company will pay to the bearer at maturity a certain sum of money representing interest due for a stated period upon bond No.--, of a specified issue. A bond is a contract to pay two things; a principal amount on a stated future date, and a series of interest payments, usually semi-annually but sometimes annually or quarterly, during the life of the bond. The bond itself stands for the principal, and the coupons stand for the series of interest payments due each half year, or other period, and are promises to pay just as the bond itself is. Popularly expressed, coupons are miniature or "baby promises to pay," attached to bonds which are "parent promises to pay."

The essential facts recited on a coupon, which must be identified with its parent bond, are as follows: (1) name of debtor organization; (2) name of issue; (3) face value of coupon; (4) coupon maturity date; (5) name of paying agent; (6) serial number (numerical order of the interest payment from the first of the series); and (7) number of parent bond.

Coupons are negotiable instruments, title passing by delivery without indorsement, provided ownership certificates prescribed by the Treasury Department are attached, except in the case of bonds of the United States Government, where it is unnecessary. To stop payment upon coupons, the paying agent must, as in the case of a certified check, be protected by a bond of indemnity, from the issuer. Stopping payment on coupons has sometimes been used as a technical excuse for beginning foreclosure proceedings. Without a bond of indemnity a paying agent has no legal ground for refusing to pay coupons presented except where flagrant irregularities exist.

COURSE OF EXCHANGE

A technical name applying to a schedule of quotations for bills, drafts, and checks, compiled twice a week by the principal London bill brokers who meet at the London Stock Exchange. (See Foreign Exchange.)

COURT OF CLAIMS

A court, composed of five judges appointed for life, of which one is the chief justice. This court, which sits at Washington, D. C., only, was established by an act approved February 24, 1855. Prior to that date claimants had no remedy against the Federal Government except by petition to Congress.

The court hears a wide variety of actions, all commenced by the filing of petitions.

Its jurisdiction extends to all "claims against the United States arising out of any contract with the Government or based on any act of Congress or regulation of the executive, and all claims referred to it by either house of Congress, as well as to claims for exoneration by a disbursing officer."

Under act of February 13, 1925, the court may certify to the Supreme Court any definite and distinct questions of law concerning which instructions are desired for proper disposition of a cause. It was this right which the Court of Claims exercised when the gold-clause cases of 1934 were certified to the United State Supreme Court, whose decision therein was rendered on February 18, 1935. (See Gold-Clause Decision.)

COURT TRUSTS

Trusts in which a bank or trust company acts under the appointment or order of a court. From this standpoint, trusts are classified as court trusts and private trusts.

In New York State a trust company must be designated as a depository of trust funds by the Comptroller of the State of New York, or be appointed to receive such funds pursuant to the order or direction of a court in any state, or the United States. Funds under court trusts must be invested in accordance with the court order, if specific; otherwise, the funds may be invested in any class of investments approved by the state law as legal for trustees.

COVENANTS IN MORTGAGES

Convenants are agreements or stipulations, express or implied, in contracts, deeds, leases, mortgages, etc. In the New York statutory form of mortgage (Section 258, Real Property Law), the mortgagor covenants:

1. That the mortgagor will pay the indebtedness. This covenant must be express, will not be implied.
2. That the mortgagor will keep the buildings on the premises insured against loss by fire for the benefit of the mortgagee.
3. That no building on the premises shall be removed or demolished without the consent of the mortgagee.
4. That the whole of the principal sum shall become due after default in the payment of any installment of principal or of interest for specified number of days, or after default in the payment of any tax, water rate or assessment for specified number of days after notice and demand.
5. That the holder of the mortgage, in any action to foreclose it, shall be entitled to the appointment of a receiver.
6. That the mortgagor will pay all taxes, assessments or water rates and in default thereof, the mortgagee may pay the same.
7. That the mortgagor within specified number of days upon request in person or within specified number of days upon request by mail furnish a statement of the amount due on the mortgage.
8. That notice and demand or request may be in writing and may be served in person or by mail.
9. That the mortgagor warrants the title to the premises.

In corporate mortgages of the "open" type, in which amount of bonds authorized under the mortgage is unlimited, the usual protective covenants for the benefit of bondholders are that the corporation will not issue any additional bonds beyond a prescribed percentage of new property acquired; and that additional bonds will not be issued unless the resulting total charges are earned a specified minimum. (See Bond, Open Mortgage.)

COVER

This term has three meanings:

(1) A term used to signify the purchase of stocks by short sellers to complete their contracts. To cover is to buy back stock that has previously been sold short. (See Short Sale.)

(2) A term frequently used instead of security. A loan evidenced by a promissory note is said to be covered when secured by bonds, stocks, or other collateral of equal or greater value. It is especially used in connection with the security behind different forms of paper money, e. g., cover behind Federal Reserve notes.

(3) The contingencies or risks outlined in an insurance policy for which the insurance company is liable,

e. g., a marine insurance policy provides indemnity, i. e., covers losses due to damage by fire, flood, collision, sinking, but not for losses due to riot, rebellion, or capture and seizure by an enemy. A life insurance policy covers the life of the insured.

COVERAGE

In financial statement analysis, the ratio by which assets cover specific liabilities; in income account analysis, the ratios by which earnings cover charges or dividend requirements. (See Statement Analysis.)

CREATOR

A settlor or trustor; one who creates a voluntary "inter vivos" trust, or creates a trust by will (a testamentary trust). (See Trusts.)

CREDIT

A term derived from the Latin word, Credo, meaning I believe, and usually defined as the ability to buy with a promise to pay, or the ability to obtain title to and receive goods for enjoyment in the present although payment is deferred to a future date. It therefore consists of an actual transfer and delivery of goods in exchange for a promise to pay in the future.

Modern business to a very large extent is conducted on a credit basis. The occasion for credit arises out of the nature of present day industrial processes in which a series of productive and distributive operations transpires between the beginning of production and ultimate consumption when the account is finally liquidated. Credit is the instrument by which this gap is bridged, i. e., by which each agent in the sequence of productive and distributive processes, receives payment for his contribution in moving goods to the consumption point, before consumption actually occurs. Although credit furnishes waiting power, it cannot be considered as identical with Capital (q. v.), but it makes capital mobile.

Expansion of bank credit is a necessary condition of expansion of business operations. But an overexpansion of credit may so increase the purchasing power of business men that it will merely result in enabling them to bid against one another for limited supplies of goods and materials so as to force prices above what consumers are willing and able to pay. Bank credit often expands so rapidly that it lifts the buying or investment power of business men out of line with the general buying power of the community. Because of their strategic position the banks have an unusual duty and an exceptional opportunity to give sound information and counsel to business men.

While the relationship between the volume of credit and the volume of business and the movement of prices is not always simple to interpret, it appears to be sufficiently close to make it a matter of first importance that the volume and the flow of credit should at all times be tested by the contribution which additions to the volume of credit make to the total of economic production. Additions to credits which can not be economically validated by a commensurate effect in actual production are speculative, and as such should be closely watched, so that business and industry may be maintained in a healthy state.

Granting credit depends upon the confidence which the lender places in the debtor (borrower), and is based on three essential factors, viz.: character, capacity and capital. Lending on character is known as the moral risk; on capacity, as the business risk; on capital, as the property risk.

Of these three elements character should be the most important. The personal equation transcends all others because without character and integrity no person can be trusted regardless of the ability or property he may possess. Character includes integrity of purpose, reputation for honesty, promptness in paying debts and fulfilling contracts, high standard of business ethics, record of past performances and antecedent connections, etc. Capacity involves business ability, reputation of product, soundness of business methods, particularly as evidenced by profit-making records. The real index for measuring the business risk is the detailed comparative operating statements by which the rate of return to invested capital over a period of time is disclosed. Capital is net worth - the real measure of a borrower's collateral. Property which has a ready market, whether used in the business or not, constitutes the basis of the property risk.

The most satisfactory manner of evaluating this managerial ability or capacity factor is by means of an industrial or commercial survey, a survey which goes behind the balance sheet and income statements and determines the degree to which the fundamentals of sound management have been made effective. The science of industrial engineering and the practical application of economics to business problems have now reached a state of development where, through their intelligence, many of the factors which were formerly considered intangible and impossible of measurement can now be subjected to scientific analysis and actual measurement. Such a survey should include an analysis of:

1. Orgnaization and personnel.
2. Managerial ability and stability.
3. Financial policies and methods.
4. Marketing policies and methods.
5. Manufacturing policies and methods.
6. Methods of control.

An ideal borrower or credit risk combines all three of these elements in a high degree, i. e., unimpeachable moral character, unquestioned business ability, and adequate capital. Character stands foremost, ability second, and capital third. It is safe to say that no loans will be granted where the first essential does not exist. Certainly loans will not be granted where business ability has not been proved unless adequate collateral is given.

On the other hand, if the first two elements are strong, inadequate capital may not necessarily operate as a deterrent influence.

From the banking standpoint, credit has reference to a person's or concern's power to command funds or to secure deposit credits. Persons or concerns already well known, and having an established credit reputation, are usually granted a Line of Credit (q. v.) at their banks. This line is the normal limit of accommodation. Such a line of credit is not always definitely fixed but varies from time to time in accordance with the financial standing of the borrower as shown by his financial statement, the bank's loanable resources and general money and trade conditions. (See Business Risk, Credit Balance, Credit Department, Credit Files, Credit Information Sources, Credit Instruments, Credit Insur-

ance, Mercantile Agencies, Moral Risk, Property Risk, Statement Analysis.)

CREDIT AGENCY

See Mercantile Agencies.

CREDIT BALANCE

The excess of credits over debits in an account.

A bank depositor customarily has a credit balance. A debit balance occurs only when an overdraft has been made. The amount of the credit balance represents the depositor's claim against the bank, and the bank's debt to the depositor.

Marginal accounts with a broker normally show a debit balance, because the customer is borrowing from the broker to carry stocks for which the customer has not fully paid. A credit balance exists in favor of the customer only when there is money due the customer above all claims, such as interest, commissions, taxes, etc.

CREDIT BANKS

The term sometimes applied to commercial banks, i. e., banking institutions which primarily extend credit to borrowing customers in the form of direct loans or discounts. (See Bank.)

CREDIT BAROMETRICS

A term (first used by Alexander Wall in the "Banker's Credit Manual") given to the test ratios applied by credit men in the analysis of financial statements submitted as bases for bank loans. The following ratios, discussed under separate headings are used in credit analysis work: Ratio of Current Assets to Current Liabilities (See Current Ratio); Ratio of Current Assets to Total Liabilities; Ratio of Merchandise to Sales (See Merchandise Turnover); Ratio of Net Profits to Net Worth; Ratio of Receivables to Sales (See Account Turnover); Ratio of Debt to Net worth; Ratio of Net Worth to Fixed Assets; Ratio of Net Worth to Sales (See Capital Ratio); Ratio of Merchandise to Receivables; and Ratio of Fixed Assets to Sales.

CREDIT CLEARING HOUSE

A term applied to credit interchange bureaus, the purpose of which is exchange of credit information among its members, each member thus benefiting from the records and experience of all members. Handling of inquiries may be direct, by investigation with concerns which have dealt with the subject, whereby ledger experience and opinion are obtained from firms which have had actual dealings with the subject; or indirect, by supplying the inquirer with a list of leads or references. (See Credit Interchange Bureaus, National Association of Credit Men.)

CREDIT COMPANY

See Commercial Credit Companies.

CREDIT CONTROL

Quantitative and qualitative regulation exercised by the monetary authorities over the volume and nature of credit and over interest rates. Quantitative control is effective on volume and distribution of excess reserves of the banking system and on levels of interest rates. Qualitative control is more difficult to achieve, being basically dependent upon voluntary policies of banks, but is exercisable to limited extent through regulation of margin requirements, consumer credit, and examination procedures.

The three principal powers of the Board of Governors of the Federal Reserve System are open market operations, variation in discount rates, and changes in reserve requirements. In recent years of deficit financing and heavy War financing, as well as gold imports attracted by the devaluation of the dollar, Administration fiscal policy as expressed through the Treasury has played the major role in credit control, and Federal Reserve policy has been subordinated to the aims of maintenance of low money rates and adequate excess reserves in order to finance the increased Government debt.

As the result of the inflation thus created, Federal Reserve powers have been rendered largely ineffective for control purposes. Open market operations as a practical matter must continue committed to preservation of orderly levels for Government securities, in view of the heavy volume of Government debt held by banks. Variations in discount rates would be negligible in effect as long as banks could obtain reserves by sale of Government securities in markets sustained by Federal Reserve open market operations. Changes in reserve requirements have a legal limit at present of twice the reserve requirements existing on date of enactment of the Banking Act of 1935, and the power to raise reserve requirements has been largely exhausted.

Accordingly, Vice-Chairman (former Chairman) Eccles of the Board of Governors has recommended that all commercial banks be required as a temporary measure to hold a percentage of their demand and time deposits, in addition to present reserves, in a special reserve in the form of Treasury bills, certificates and notes or cash, cash items, interbank balances, or balances with Federal Reserve Banks. Such secondary reserve requirement would be limited to a maximum of 25% on demand and 10% on time deposits, and would be applicable to all commercial banks. (See Federal Reserve System, Reserve.)

CREDIT CURRENCY

Redeemable paper money, which the Government promises to pay, but for which there is not a full specie reserve, i. e., not fully secured by a metallic reserve, e. g., the United States notes of 1863, also known as legal tenders. Unlike silver certificates, which circu-

late in lieu of an equal amount of coin, these notes are not intended as substitutes for metallic currency, but for the purpose of expanding the volume of currency. In a gold bullion standard, such as the United States, with no domestic circulation of gold coin or gold certificates permitted, credit currency is only generally secured by the gold reserve and in countries with low metallic reserves, the larger portion might be secured only by the general assets and credit of the issuing Government. Credit currency is also known as fiduciary currency.

CREDIT DEPARTMENT

Mercantile. The department of a company through which all credit orders, i. e., orders for current delivery, but with payment postponed, are passed for acceptance or rejection. The department scrutinizes new applications for credit through various credit information sources, and "checks" running or open accounts. It fixes a "line" of credit for each customer and determines and carries out the collections policies.

Bank. The department of a bank organized primarily to determine and measure credit risks, which lead to a recommendation for action when applications for loans are made. The purpose of the department is to reduce to the minimum, if not absolutely to prevent, losses arising through the failure of concerns to which money is loaned. Credit departments of many banks also reciprocate credit information with correspondent banks, trade customers, and other affiliations, and for this reason not only serve as a "checking" bureau for their own organization, but for others as well. The most important type of assistance rendered is that of presenting to the credit officers, and the loan and discount committee, such facts as are necessary to provide a basis for intelligently granting or rejecting loans, discounts, and renewals thereof, issuing letters of credit, purchasing bills of exchange, and also establishing "lines" of credit.

The work of the credit department may be broadly divided into three parts, that of gathering credit information (credit investigation), filing and storing credit information (credit files), and utilizing and distributing credit information (credit analysis). (See Credit Information Sources, Mercantile Agencies, Statement Analysis.)

CREDIT FILES

The part of a bank credit department in which credit information is recorded, classified, filed, and stored. Usually the credit information on each name is recorded in a folder and placed in a metal sectional file cabinet. In large banks credit files become very extensive in the course of time, and often contain thousands of names. The files are the backbone of the department, since they contain the raw material from which all inquiries concerning the credit standing of the names on record are answered. (See Credit Files Revision, Credit Folder.)

CREDIT FILES REVISION

Information in the credit files must be kept up to date. Information previously gathered is valuable, because it affords insight into the history of a concern or individual and these antecedent relations are always important. Yet the character and earning power of a business may change very suddenly, and consequently names upon which no new information has been recorded for one year are usually regarded as out of date and require revision if inquiries are made. Borrowing bank accounts should be revised only every second year. Trade names are revised more frequently, due to the fact that business concerns are less apt to be stable than banks, and their financial status therefore, less apt to fluctuate. Trade names are not usually revised periodically, but whenever conditions seem to warrant it. If a report is desired and the standing information is more than nine months old, a revision is usually advisable. Revision of a credit folder follows the same lines as an original investigation, viz.: direct investigation of trade and banking connections in and out-of-town, mercantile agencies, and the note broker, in case of commercial paper names. (See Credit Information Sources, Credit Investigation.)

CREDIT FOLDER

A binder or cover which contains the complete record of credit information concerning a given name. To distinguish between different classes of names, e. g., banks, trade names, public utilities, commercial paper names, etc., different colored folders are often used. Folders are filed alphabetically according to names in metal filing cabinets.

Information in the credit folder is generally classified according to some logical grouping, and separated by guides as an aid in locating the particular information desired. A typical classification of information in a credit folder is as follows: history sheet, average loans and balances, financial statements, investigation, and reports inquiries, agency reports, affiliations and subsidiaries, circulars and prospectuses, newspaper clippings, summarization.

CREDIT FONCIER de FRANCE

The principal mortgage land bank of France, which makes loans both on agricultural and urban land up to one-half the appraised value. It also discounts commercial paper.

The four largest French commercial banks are the Comptoir National d'Escompte de Paris; Credit Lyonnais; Societe Generale de Credit Industriel et Commercial; and Societe Generale pour favoriser le Developpement du Commerce et de l'Industrie en France. Largest of the "banques d'affaires" or investment banking houses are the Banque de l'Union Parisienne, Banque de Paris et des Pays Bas, Credit Mobilier and Credit Francais. (See Bank of France.)

CREDIT INFORMATION SOURCES

Sources of credit information are becoming more varied as the demand for accurate credit information and the desire to eliminate undesirable risks becomes more insistent. The sources open to a bank differ depending upon whether the subject of inquiry is a local, out-of-town, or foreign name.

In the case of local names, a credit investigator usually is sent to interview the subject of inquiry, or one of its responsible representatives, i. e., the individual or concern under investigation. The investigator also usually interviews several trade references of the subject of inquiry, including trade creditors, trade debtors, and possibly a competitor. Interviews conducted with the banking connection or connections are regarded as specially important. In the case of commercial paper names, the note broker who sells the paper of the concern is interviewed. Written inquiries may be directed to trade and banking references out of town whenever

there is reason to believe that better information may be derived from these sources. Next in importance are the financial statements - balance sheets and the profit and loss statements. Reports from the mercantile agencies are almost always available, but only information of the most general nature can be expected from them.

The records of the bank should contain valuable information on names which are customers of the bank, e. g., size of balances, method of borrowing, "lines" of credit, securities on deposit, requests for renewals, promptness in meeting maturities, allowing notes to go to protest, etc. An examination of the indorsements on cancelled checks will also reveal the purpose for which the concern is spending its money. The public record such as the judgment indexes, records of pending suits, and records of mortgages and real estate transfers are always available. Oftentimes information is contained in various financial publications, manuals, and "services." The officers of the institution usually have intimate personal knowledge of the affairs of many of their customers.

In the case of out-of-town names the same sources of information are available, except that it becomes necessary to omit personal investigation and written inquiries directed to the same sources may be submitted.

The chief credit information sources for foreign names are as follows: The principal New York banks which maintain foreign departments, and close relations with correspondent banks abroad; New York import and export houses, which are ready to furnish their clients and banking connections with information regarding names with which they do business; the foreign departments of the principal mercantile agencies; foreign chambers of commerce located in New York City, which are supported by the merchants of the countries they represent for the purpose of promoting trade relations; various trade associations, e. g., the National Association of Credit Men.

CREDIT INSTRUMENTS

Paper or documents, other than paper money supported by specie, which evidence current or long-term debt. Credit instruments include checks of all kinds, certificates of deposit, drafts, bills of exchange, notes, acceptances, money orders, letters of credit, bonds, stock certificates, certificates of indebtedness, coupons, etc.

From a legal standpoint, credit instruments may be divided into two classes, promises to pay and orders to pay. The chief promises to pay are promissory notes, trade acceptances, bonds, coupons, and certificates of debt. The chief orders to pay are checks, drafts, bills of exchange, money orders, telegraphic transfers, cable transfers, and letters of credit.

In the United States, credit instruments, particularly the check, have largely displaced the use of money. As of November 26, 1947, demand deposits totaled $85,900 million, compared with $26,600 million in currency outside banks. Total deposits were $143,800 million, which were being turned over at an annual rate of about 13.1 times (21.6 times in New York City). The extent of use of credit instruments depends upon banking facilities, business habits, general intelligence and confidence in banks. (See Credit.)

CREDIT INSURANCE

Insurance Provided against losses from bad debts arising from the sale of goods on credit. Coverage for uncollectible accounts, though far less frequent than coverage for fire losses, is equally as important, since bad accounts occur more frequently than fires and are as much a loss as destroyed or damaged merchandise.

Credit insurance does not usually indemnify the insured against all credit losses, but only for an amount in excess of the average over a certain period, say four years. Policies also usually subject the insured to certain limitations, e. g., limitations of line of credit to each purchaser, limitation of sales to purchasers having a certain commercial rating or better. (See Bad Debts, Credit, Mercantile Agencies.)

CREDIT INTERCHANGE BUREAUS

Bureaus which engage in the business of supplying credit information on the co-operative basis. In recent years, a number of credit interchange bureaus have come to take a rather prominent place in supplying credit information on trade corporations and partnerships (individuals not included). While organized chiefly for trade creditors, many banks are member-subscribers. Like trade members, banks reciprocate credit information, but not to the extent of giving precise figures, since bank credit data are considered somewhat more confidential than those of the trades.

The most important credit interchange bureau system is that of the National Association of Credit Men. This system, which embraces a country-wide system of bureaus and districts, is not organized for profit, service charges to members being fixed to cover operating costs only. Each bureau is an independent unit, and is conducted under the auspices of the officers of the local association of credit men. All the bureaus are under the direct control and supervision of a committee of the National Association of Credit Men, and the Manager of the Credit Interchange Bureau Department of the national organization. The purpose of the Interchange Bureau is to provide a means of exchanging among its members their ledger experiences with common trade creditors, and as stated in the charters of some of the bureaus, and restated by T. N. Beckman ("Credits and Collections in Theory and Practice"), "is to provide an impartial medium between debtors and creditors and between creditors themselves, to establish a system whereby those who are interested in any accounts may freely and unreservedly interchange the facts contained in their ledgers: (1) without the necessity of direct reference, each to the other; (2) without divulging the information under their own name; (3) and receiving in exchange for data contributed by them, a summary of experiences of all others interested in the account."

CREDIT INVESTIGATOR

A representative of a bank, mercantile agency, commercial paper house, or large business whose function it is to procure credit information. He is an essential part of the credit department of a large bank.

CREDIT LINE

See Credit, Line of Credit.

CREDIT RATING

A grade assigned to a business concern by a mercantile agency to denote the net worth and credit standing to which the concern is entitled in the opinion of the agency as a result of its investigation. Dun & Bradstreet, Inc., submit a capital and credit rating for each name appearing in their general reference books. The capital rating indicates the approximate amount of net capital invested, while the credit rating shows the credit grade, i. e., moral and business risk, in a relative scale.

Below will be found the capital and composite credit appraisal ratings employed by Dun & Bradstreet, Inc.

CREDIT RISK

A term applied by bankers and credit men to an individual, firm, or corporation to whom money is loaned or to whom merchandise or service is delivered on a credit basis. Wherever credit is extended it is attended with the risk of non-payment varying from practically zero to a large percentage. The degree of risk involved is determined by the credit department, and when too high is refused. By extension, therefore, the term is used to refer to anyone to whom credit is given.

CREDIT TESTS

In analysis of statements, the ratio or credit barometrics (q. v.), which serve as an effective aid in forming judgment on credit risks. (See Statement Analysis.)

CREDIT TICKET

A posting medium used in banking and brokerage bookkeeping to secure the posting of a transaction occurring in any department to the credit side of the customers' or general ledger. It carries a complete description of the transaction and is preserved for future reference.

CREDIT UNION

According to the New York banking law, a domestic moneyed stock or non-stock corporation organized for the purpose of promoting thrift among its members and for making small loans to its members at reasonable rates with or without security. In New York State, loans above $50 must be secured by collateral.

Federal credit unions were transferred from the supervision of the Farm Credit Administration to the Federal Deposit Insurance Corporation by Presidential order in May, 1942. As of June 30, 1947, there were 3,812 operating Federal credit unions. Although supervised by the Federal Deposit Insurance Corporation, Federal credit unions are not insured by that agency.

The first credit union in this country was organized in 1909. The number of Federal credit unions reporting increased from 762 in 1935 with 118,665 members, $2,224,610 in outstanding shares and $1,830,489 loans to 3,761 in 1946, with 1,302,132 members, $159,718,040 outstanding shares and $56,800,937 outstanding loans. Peak membership year was 1941, when there were 4,228 credit unions. Over half of the operating credit unions are located in the large industrial areas of New York, Pennsylvania, California, Ohio, Texas and Connecticut.

The credit union usually is built around an industrial company, local labor union, fraternal group, small community, church, etc. In the United States, the industrial type has advanced further than the agricultural.

The laws and practices in New York State governing credit unions are typical. Authorized by the Superinten-

CREDIT RATINGS EMPLOYED BY DUN & BRADSTREET, INC.

	Estimated Pecuniary Strength or Capital			Composite Credit Appraisal			
				High	Good	Fair	Limited
	(AA	Over	$1,000,000	A1	1	1-1/2	2
	(A+	Over	750,000	A1	1	1-1/2	2
	(A	$500,000 to	750,000	A1	1	1-1/2	2
*1	(B+	300,000 to	500,000	1	1-1/2	2	2-1/2
	(B	200,000 to	300,000	1	1-1/2	2	2-1/2
	(C+	125,000 to	200,000	1	1-1/2	2	2-1/2
	(C	75,000 to	125,000	1-1/2	2	2-1/2	3
	(D+	50,000 to	75,000	1-1/2	2	2-1/2	3
*2	(D	35,000 to	50,000	1-1/2	2	2-1/2	3
	(E	20,000 to	35,000	2	2-1/2	3	3-1/2
	(F	10,000 to	20,000	2-1/2	3	3-1/2	4
	(G	5,000 to	10,000		3	3-1/2	4
*3	(H	3,000 to	5,000		3	3-1/2	4
	(J	2,000 to	3,000		3	3-1/2	4
	(K	1,000 to	2,000		3	3-1/2	4
*4	(L	500 to	1,000			3-1/2	4
	(M	Up to	500			3-1/2	4

*Numerical rating: when a numeral only (1, 2, 3, 4) follows the name, it is an indication that the financial strength, while not definitely classified, is considered within the range of the ($) figures in the corresponding bracket and that a condition is believed to exist which warrants credit in keeping with that assumption.

dent of Banks upon the application of seven or more persons residing or employed in the state, membership is secured, upon approval of the individual's application, by the purchase of one or more shares of stock. Maximum par value is $25, but usually is $10 or less, some being only $1. The number of shares one member may own or control is limited. One member has but one vote in any meeting regardless of the number of shares he may hold. No member may vote by proxy.

Management is vested in a board of directors, a credit committee, and a supervisory committee. All these are elected periodically from and by the general membership, and serve without pay. The directors act on all applications for membership, determine the rates of interest, declare dividends, etc. The credit committee grants all loans and fixes terms of repayment. The supervisory committee has complete supervision over all directors, officers and committees and may suspend any of them. It inspects the securities and cash, audits the books, and renders annual reports. No member may serve on both the credit and supervisory committees.

The promotion of thrift is an important purpose of credit unions in New York and deposits not in excess of $2,000 are accepted at interest from any member. But the most important privilege is that of borrowing at reasonable rates. Loans to non-members are specifically forbidden. All applications for loans must state in writing the purpose, and must be approved unanimously by the credit committee.

As a rule, loans of $50 or less may be obtained on a promissory note without endorsement. Greater amounts must have endorsement usually and sometimes also the security of a real estate or chattel mortgage. Ordinarily the maximum lent to any one member of the largest unions is $2,000. Officers and committee members cannot borrow except upon the consent of the general membership.

When applications for loans are heavy, a credit union may borrow, generally up to 40 per cent. of its capital. Conversely, when demands are relatively slack, funds may be invested in certain legal securities or in shares of other credit unions; or deposited with certain other credit unions or certain banks.

The maximum rate to be charged on loans is limited by New York law to 1 per cent. a month simple interest. If the borrower's note is discounted by the union - the usual practice in this state - the rate of discount cannot exceed 5.9 per cent. a year with installment repayments. Some have been able to reduce their interest charge to a point approximating the rates on commercial loans.

There are several reasons why credit unions are able to operate satisfactorily. First, considering the type of business handled, the percentage of uncollectible loans is very small. In such a community organization, each member is ordinarily more than casually acquainted with the other members. Each is a stockholder, and frequently a depositor and a borrower at the same time. One who fails to meet his obligations therefore defrauds not only a fellow member but himself to an extent, and also invites ostracism.

Secondly, inasmuch as only members may borrow, the expense of credit investigation is avoided. Thirdly, the only salaried executive customarily is the Secretary-Treasurer. And when connected with labor unions, industrial companies, churches, etc., the modest quarters needed are frequently furnished rent-free. Another advantage is tax exemption.

Credit unions do not compete with the building and loan associations. One specializes in assisting members to build or buy homes - in real estate first mortgages. Large assets are needed and a wide membership. The other concentrates on short time personal credit, the intimate nature of which is best handled within a small group.

A savings bank can not make personal loans to wage earners. Laws limit its investments generally to real estate mortgages and other specified securities. The credit union plainly supplements the savings bank. Saving is made more convenient to the wage earner by the hours and place of business, and a practical element of compulsion is introduced through the sale of shares on installments. The common experience of credit union officials is that their members for the most part never before maintained savings accounts.

Bibliography

Bergengren, R. F.: Credit Union: Co-operative Banking, 1931.

CREDITOR

One to whom money or its equivalent is due.

CREDITOR COUNTRY

A country which has a trade balance in its favor, i. e., whose exports are greater than its combined visible and invisible imports. (See Balance of Trade.)

CREMATION CERTIFICATE

A certification that retired securities have been destroyed by burning; a statement signed by certain persons, e. g., trustees, committee, etc., selected or appointed that they have witnessed the total destruction by fire of the therein-mentioned securities.

CREMATION OF BONDS

Destruction of bonds by fire. One method of disposing of bonds that have been redeemed and cancelled is to burn them. This is usually the method taken when the bonds are secured by a mortgage held by the trustee for the bondholders. After the mortgage has been satisfied of record, the bonds are burned in the presence of the trustee, and a Cremation Certificate (q. v.) is executed.

CRIME OF 1873

A derisive designation applied to the coinage act of February 12, 1873, which demonetized silver by authorizing the discontinuance of its coinage as a standard coin. (See Demonetization.)

CRISIS

The collapse of a period of prosperity, i. e., the termination of a rising price trend, general optimism, inflation and speculation. It is a turning point or decisive moment at the crest of the business cycle when it becomes clear that the price structure has become top-heavy and that the next movement must be downward. It may be precipitated by a sudden realization that prices have gone too high (buyers' strike), by a sudden restriction of or stringency in the supply of credit, by an unexpected bankruptcy of some conspicuous bank or business concern, or by the outbreak of war.

A crisis should not be confused with a panic, the latter being a serious financial and credit disturbance into which a crisis may degenerate. A crisis may be fol-

lowed by a panic and is almost invariably followed by an industrial depression. (See Business Cycle.)

CROP INSURANCE

Authorized by Title V of the Agricultural Adjustment Act of 1938 (q. v.), and administered by the Federal Crop Insurance Corporation (q. v.), in the Department of Agriculture. Originally, crop insurance was provided for wheat, beginning with the 1939 crop, and was later extended to other crops.

Insurance is against loss of yield, not against loss in price, and is based on average crop yields over a long term. Coverage is lower at the beginning of the growing season and increases to full 50% or 75% on maturing crops. Risks of production, therefore, are the risks insured, such as drought, floods, pests, etc., of an unavoidable or unpredictable nature.

CROP REPORTING BOARD

Crop reporting headquarters in the Department of Agriculture at Washington, D. C. Individual reports of farmers and other producers are collected by trained field agents in each state, and forwarded to Washington, where they are assembled and collated, prepared and published in final form. Reports cover a wide range of subjects and statistics on principal agricultural commodities, including acreage planted, growing conditions, yields, prices and other factors. (See Crop Reports.)

CROP REPORTS

Periodic reports issued by official Government sources and unofficial private sources, showing the condition, acreage, estimated and actual yields of the important crops. The Department of Agriculture issues monthly reports containing current information on growing crops and crop estimates. These estimates are based upon individual reports of farmers in every county and township in the United States, collected by trained field agents in each state. After being checked, the final estimates are prepared by a crop reporting board at Washington. Information on growing crops and size of acreage on the principal agricultural products, including wheat, corn, oats, rye, barley, soy beans and many other commodities is contained in these reports. In addition, the Bureau of Agricultural Economics issues monthly farm and parity prices. The Census Bureau also issues ginning reports, monthly consumption report, mill stock report and monthly spinning activity report on cotton. The large grain brokerage houses and other commodity specialists also issue unofficial reports of crop conditions during the growing season in the principal producing states.

Besides reports on acreage planted and estimated yields, reports on weather conditions and crop damage are also available from both official and private sources. Among factors in crop damage is damage from pests, such as the boll weevil for cotton, and plant disease, such as black rust, a fungus disease which attacks spring and winter wheat, and red rust (leaf rust infection), a less damaging variety of leaf rust in wheat. During late years, rust resistant varieties of wheat have greatly reduced crop damage from this source.

CROPPER

A tenant farmer or share cropper who owns no land, no tools and no live stock. He cultivates the land of a landlord who provides him with tools, work stock and seed, usually with rations for himself and family and with a shack for shelter. When farm land values are high, farm tenancy is a necessitous condition, but the tenant should be granted such rights as will enable him to derive just compensation for maintenance and improvement of the farm property.

CROPS

See Corn, Cotton, Crop Reports, Movement of Crops, Wheat.

CROSSED CHECKS

A form of check not employed in the United States, but extensively used in England where it is recognized by law. Crossing is of two kinds, general and special. General crossing consists of drawing two parallel or transverse lines across the face of a check without the addition of any words. The words "and Company" or an abbreviation thereof, with or without the words "not negotiable" may be inserted between the lines but add nothing of significance. If the name of the bank or banker is added in a crossing, however, the check is crossed to the banker named, and is known as a special crossing.

When a check is crossed, generally the bank on which it is drawn may not pay it to any other party than to a bank, and when it is crossed specially, to no other than the banker specified in the crossing. The purpose of crossing is to prevent payment to wrongful holders and therefore to circumvent losses through forgery, since payment will not be made over the counter, but only by a deposit credit through a bank, even though the payee can establish his identity. A bank which pays a crossed check other than as specified is liable to the true owner.

CROSSED SALE

See Crossing Trades.

CROSSING TRADES

A transaction between brokers, prohibited by the rules of all securities and commodity exchanges, by which a buying order of one is offset by a selling order of the other for the same unit of the same stock or commodity. Instead of the orders being executed on the exchange, the brokers effect a cross trade between themselves. One broker, for instance, might turn over a customer's trade, say a buying order, to a second broker in exchange for a selling order placed with the second broker, instead of both brokers executing these orders in the open market.

The Commodity Exchange Act makes it unlawful to enter into any cross trades. This manipulative practice is also prohibited by the Securities Exchange Act of 1934.

CROWN

This term has two meanings:

(1) An English silver coin equal to five shillings or one-quarter of a sovereign.

(2) The anglicised version of the Krone of Norway, Sweden and Denmark. (See Krone and Krona under the subject Foreign Moneys.)

CRUZEIRO

Monetary unit of Brazil, consisting of 100 centavos. (See Foreign Moneys -- Brazil.)

CUM DIVIDEND

An English term meaning with the dividend included as distinguished from ex dividend. The buyer of a stock cum dividend is entitled to receive the pending dividend.

CUM RIGHTS

With rights included. The buyer of stock "cum rights" is entitled to exercise whatever privilege such rights carry. (See Rights.)

CUMULATIVE DIVIDENDS

Dividends on cumulative preferred stock; dividends which if not paid regularly, or in full, i. e., are in arrears, accumulate and if earned must be paid in the future, before dividends can be paid on common stock. The interest upon income bonds may also be cumulative to the extent earned. (See Preferred Stock.)

CUMULATIVE VOTING

A method of voting by which an elector or stockholder, having a given number of votes through his holdings of shares of voting stock, is entitled to as many votes as shall equal the number of such shares of stock each entitled nominally to one vote per share, multiplied by the number of directors to be elected. The stockholder may cast all of such votes for a single director or may distribute them among the number of directors to be voted for, or any two or more of them, as he may see fit (Sec. 49, New York Stock Corporation Law).

Under Sec. 5144, Revised Statutes, shareholders of National banks are entitled to the right of cumulative voting.

CURATOR

A person, bank, or trust company appointed by a court to care for the estate of an incompetent or insane person under the court's direction. (See Conservator.)

CURATORIUM

The governing board of the former Bank of Germany (q. v.).

CURB

A term applied to a stock market either originally or now carried on in the open street. Curb markets were originally unorganized markets, but most of them are now organized. The function of a curb market is to furnish a place for trading in securities which are not listed upon the large stock exchanges, because they do not meet the tests of admission. In this sense, curb markets are secondary stock exchanges and provide a place where new, unseasoned securities (shares of companies in the prospective, development or early earning period) are bought and sold. The New York Curb Exchange is regarded as a trying-out place for securities, some of which are finally "graduated" and admitted to the New York Stock Exchange. On the Boston Curb which like the New York Curb is now housed, the principal listings are mining stocks. (See New York Curb Exchange.)

CURB BROKER

A broker who transacts business on a curb market. (See New York Curb Exchange.)

CURB MARKET

See Curb, New York Curb Exchange.

CURRENCY

The quality of circulating freely; consequently, any form of money which serves as a medium of exchange and passes from bearer to bearer without indorsement.

Currency may consist of coins or paper money. United States currency consists of all kinds of metallic and paper money, but does not include checks, money orders, drafts, etc. (See Elastic Currency, United States Money.)

CURRENCY ACT OF 1900

See Gold Standard Act.

CURRENCY BONDS

Bonds, the principal and interest on which are by their terms payable in lawful, i. e., legal tender, money of the United States, as formerly distinguished from gold bonds which are payable in gold coin. The Joint Resolution of Congress, of June 5, 1933, declared that "every provision contained in or made with respect to any obligation which purports to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the United States measured thereby" is "against public policy." This Resolution further provides that "every obligation, heretofore or hereafter incurred, whether or not any such provision is contained therein or made with respect thereto, shall be discharged upon payment, dollar for dollar, in any coin or currency which at the time of payment is legal tender for public and private debts." The Resolution also provided that "all coins and currencies of the United States (including Federal Reserve notes and circulating notes of Federal Reserve banks and national banking associations) heretofore or hereafter coined or issued, shall be legal tender for all debts, public and private, public charges, taxes, duties, and dues. . ." Constitutionality of this Resolution was upheld by the U. S. Supreme Court in 1934 in the "Gold Clause Cases."

CURRENCY DESIGNS

The designs which appear upon various kinds and denominations of coins and paper money, each of which is distinctive and intended to serve as a means of ready recognition, and to render counterfeiting difficult. The denominational portraits on the various kinds of paper money operate as the only means by which raised bills can be detected, since each denomination of paper money bears a given engraved portrait. (See Denominational Portraits.)

CURRENCY SHIPMENTS

One of the functions of Federal Reserve and large city banks is to supply member (or correspondent) banks with suitable kinds and denominations of metallic and paper money. Currency shipments may be classified as paper money, coins, and orders for the transfer of money. Coins and currency are secured from Federal Reserve banks. In transferring funds, currency is shipped to a third bank for which the remitting bank reimburses itself by charging the account of the correspondent bank.

Shipments may be made by express or registered mail, depending upon the most economical method. Owing to the fact that the maximum amount recoverable on a lost registered package is $50, additional insurance must be procured when amounts in excess of $50

are so forwarded. Cost of shipment is usually borne by the consignee bank.

Federal Reserve banks, having taken over the subtreasuries since June 30, 1921, now perform all subtreasury functions, including that of providing supplies of coin and currency in proper denominations to member banks. These supplies are shipped without charge for express and insurance costs. Likewise, when member banks have excess supplies of cash on hand they are shipped to the Federal Reserve bank of the district, the latter bearing the costs.

CURRENT ACCOUNT

Same as open, continuing, and running account. (See Open Account.)

CURRENT ASSETS

Cash or other assets "which in the ordinary course of business will be converted into cash" (Greeley, H. D.: Theory of Accounts), e. g., raw materials, finished goods, accounts receivable, notes, receivable, etc. They are also known as quick, floating, fluid, and circulating assets. In analyzing statements for credit purposes, the proportion between the current assets and current liabilities, known as the current ratio, is one of the most important tests of a credit risk. (See Current Ratio, Statement Analysis.)

CURRENT DEBT

Total of all liabilities due within one year from statement date including current payments on serial notes, mortgages or other funded debts. This item includes liability reserves such as reserves for taxes, but does not include reserves for depreciation.

CURRENT DELIVERY

In commodity fu tures trading, a distant delivery becomes a current delivery on the first delivery day of the designated futures month. The seller must give prior notice of intention to deliver. Rather than take delivery, traders or speculators prefer to sell the maturing futures contract, as they are not interested in carrying the spot commodity. (See Delivery Notice.)

CURRENT LIABILITIES

Liabilities currently maturing; liabilities which must be paid within a short time, usually one year, as distinguished from Fixed Liabilities (q. v.).

CURRENT RATIO

The ratio of current assets to current liabilities which is one of the credit barometrics applied to test a financial statement submitted by a prospective borrower.

Among credit men of the old school it has always been a rule-of-thumb formula that the applicant for credit should show at least a two for one ratio between current assets and current liabilities on his financial statement. This excess of current assets is required because the lending bank, for purposes of safety, must not only regard the prospective borrower as a going concern, but also as a liquidated one. In case a business should be forced into liquidation and compelled to realize upon its current assets at forced sale, such assets would almost certainly shrink in value, while the liabilities would remain constant or even increase if contingent liabilities existed and suddenly became primary liabilities. With a two to one ratio, current assets could shrink by 50 per cent. and still be sufficient to liquidate the current liabilities. This ratio has been used because experience has shown that current assets do not usually shrink by 50 per cent., under forced liquidation, and that therefore current assets would normally be more than sufficient to pay off current liabilities, thereby leaving a margin as a factor of safety.

The two for one formula, while safe in most cases, and practical because of its simplicity, is not scientific because it does not take into consideration other significant relations, e. g., variation in business types, merchandise turnover, terms of credit, territory served, and seasonal influences. Businesses having a rapid turnover, e. g., grocery trade, may have a current ratio considerably less than two for one and still represent a better credit risk than a furniture dealer having a full two for one ratio. In the grocery trade there is a rapid turnover of merchandise for which the demand is universal so that in the event of liquidation the business would not suffer an appreciable loss through decline in value of its inventories. In the furniture business, however, a two for one ratio might not be satisfactory, since the turnover is less rapid and the shrinkage in value in the event of liquidation would be more severe. For this reason modern credit men recognize that the current ratio standing alone is not satisfactory as a credit test, but should be considered in relation to other tests given under the subject Credit Barometrics (q.v.), and discussed under the subject Statement Analysis (q. v.).

CURRENT YIELD

Current yield on a share of stock is obtained by dividing cash dividends received for one year by current market price. If a purchase has been made, the current yield on the investment is obtained by dividing the current annual cash dividend by original purchase price. Where the stock is on a regular dividend basis, it is possible to figure current yield on such regular rate for the coming year. This is more significant for the prospective purchaser of the stock than dividend for the past year. If the stock is not on a regular dividend basis, a projection for the coming year is often made on an "indicated" basis, based on most recent payments. Dividends in same stock of the declaring corporation itself are considered to afford no true yield, although often a "yield" is calculated by reference to the distribution rate. Thus, if 2 shares are distributed for every 5 shares, the "yield" is 4%.

Current yield on a bond with definite maturity is not a true yield, as it does not reflect the premium or discount involved in holding to maturity. It is obtained by dividing the coupon rate on an annual basis by current market price or original purchase price. (See Yield.)

CURTESY

See Descent, Laws of.

CUSTODIAN ACCOUNTS

See Custodianships.

CUSTODIANSHIPS

A name given to a relatively modern facility offered by the larger banks and trust companies to their customers, viz., the safe-keeping, and accounting for under instructions, of valuable, and usually income-bearing, personal property. Custodianship accounts are also known as safe-keeping, agency, and "financial secretary" accounts.

A custodianship involves the following: (1) to keep

the property intact; (2) to collect the income-interest, dividends, rents, etc., - and disburse it in accordance with instructions; (3) to redeem bonds called at or before maturity and disburse proceeds according to instructions; (4) to receive rights which may accrue on stocks; and (5) to transmit instructions for purchase and sale of securities through a broker.

A custodianship account differs from a safe deposit account in that in the former the customer's property is kept under control of the bank but always subject to the customer's orders; whereas in the latter, the property is held entirely under the control of the renter of the safe deposit box. It differs from a voluntary trust in that in a custodianship the bank or trust company acts as agent, whereas in the latter it acts as trustee. As agent the bank or trust company is responsible for the safekeeping of the property, but as trustee it is responsible for maintaining the value of the property.

The advantages of a custodianship over a safe deposit box are: (1) in addition to protection provided by the vault, the customer has a receipt of the bank or trust company for the property, which clearly sets forth what has been deposited; (2) income is collected promptly, whereas if securities are deposited in a safe deposit box, collection is frequently delayed;. (3) orders to buy and sell securities may be left for execution; and (4) financial advice is always available and customers are automatically advised of the calling of bonds, the right to convert bonds into stocks and to subscribe to new issues, the privilege of selling to sinking funds; the increasing, reduction, or passing of dividends, the reorganization, recapitalization, or merger plans of the respective companies whose securities are held; and of any fact pertinent to investments. (See Customers' Securities Department, Safe Deposit Company.)

CUSTOM HOUSE

An office established by the Federal Government at each of the principal ports and border cities where importers declare the amount or value of imported merchandise, and where customs duties are levied and paid. Vessels bound to and from foreign ports are entered and cleared by the custom house officials, who must be notified of its arrival or intended departure. No imported merchandise can leave a steamship pier until it has been examined by the custom officers.

The tax levied and collected upon imports by Customs House officials in accordance with the tariff laws.

CUSTOMER OWNERSHIP

A term applied to the ownership of stock by customers of a corporation. This method of financing was popular with public utilities in the '20s, chiefly motivated by the aim of promoting better understanding and identification of interests with the communities served. High dividend rate preferred stocks were generally the type of security thus offered, and often with the privilege of buying the security on the installment plan. With the decline in security prices which set in during the '30s, however, this method of financing lost its chief advantages, as the decline in open market prices left customers still paying on installment contracts for stock at par, and thus created ill-will under adverse conditions. Customer ownership, however, is still a method of financing of importance for smaller concerns as a means of assuring themselves of identification with large customers or suppliers.

CUSTOMERS' LIABILITY

An account appearing in a bank general ledger or financial statement as an offset to outstanding letters of credit guaranteed but not paid. This account is an asset arising from the fact that recourse may be had against customers who may fail to fulfill the obligations which they guarantee to fulfill when letters of credit are issued to them. When a bank issues a letter of credit the customer pledges to guarantee payment of all drafts drawn thereunder. In case payment is not made at maturity according to such guaranty, the bank has recourse against the customer and has the right to attach any property that he has in the bank, including deposits, securities, or other collateral, and to start an action at law to recover any balance still remaining. (See Letters of Credit.)

CUSTOMERS' MEN

Also known as registered representatives and account executives, customers' men in brokerage houses are analogous to salesmen in investment houses, and handle customers' orders, inquiries and other contacts. The New York Stock Exchange requires customers' men to register by filing a detailed personal history and to complete successfully courses and examinations in New York Stock Exchange procedure and practice. Revocation of registration occurs upon any finding of failure to observe ethical standards and adherence to principles of just and equitable trade. Customers' men may solicit marginal transactions by calling personally upon a customer at his home provided the customer has previously given express permission in writing, and provided also that the customer's home is not situated more than a reasonable distance from the office. Under no circumstances may a customer's man guarantee a customer against loss in his account. Another rule of the Exchange forbids payment of commissions to customers' men based directly upon volume of business, as this would technically constitute splitting of commissions, which is forbidden. By payment of an annual salary rather than commissions based on activity, it is believed the temptation to stimulate unwarranted activity in accounts is avoided.

CUSTOMERS' ROOM

A room in a broker's establishment, i. e., commission house, for the convenience of customers. Its chief feature is a board upon which quotations from various exchanges are posted as soon as they are printed on the tickers. (See Board.)

CUSTOMERS' SECURITIES DEPARTMENT

The department of a bank or trust company which assumes custodianship of securities and other valuables belonging to its customers. Institutions undertaking to render these facilities offer to provide the same care in protecting customers' securities as they do their own. The customers' securities department becomes a bailee, and not only assumes custodianship of customers' securities, but may receive orders to buy and sell securities in the open market. These are transmitted for execution by a regular broker.

This department also sometimes performs such services as transferring stock, exchanging temporary securities for permanent or definitive securities, and of holding securities for safe keeping while awaiting instructions of customers. Matured coupons are detached from bonds and credited to the account of customers or

checks are remitted. These services may be rendered gratuitously or for a fee. (See Custodianships, Safe Deposit Company.)

CUSTOMS DUTY

The tax levied and collected by Custom House officials in accordance with the tariff laws upon imports.

CUSTOMS PORTS

Ports where ships carrying import cargoes enter. The principal 15 customs ports in the United States in order of their importance (for January-October, 1946), based on tonnage loaded and discharged, are: New York, Baltimore, Philadelphia, Toledo, New Orleans, Houston, Norfolk, Galveston, Newport News, Boston, Port Arthur, Mobile, Chester, Newark and Perth Amboy.

CUTTING A MELON

See Melon.

CYCLE

See Business Cycle.

CY PRES DOCTRINE

From the Norman French words meaning "near to it." A doctrine applied to charitable trusts which for one reason or another cannot be carried out in exact accordance with the terms of the trust agreement. In such cases the courts may apply the cy pres doctrine, universally recognized in the common law, and direct that the trust shall be used in such a way as will most nearly carry out the original design of the donor. This doctrine is based on the principle that the state is ultimately the protector of all objects of charity.

In New York State, the cy pres doctrine has been embodied in the statute law. The law provides that no trust for religious, educational, charitable or benevolent uses which is in other respects valid, shall be deemed invalid by reason of the indefiniteness or uncertainty of the persons designated as the beneficiaries thereunder, and that if no trustee is named, the Supreme Court shall have control over all such trusts, and if in any case it shall appear to the court that the circumstances have so changed since the creation of the trust as to render impracticable or impossible a literal compliance with its terms, the court shall have power to direct that the fund shall be administered in such manner as in the judgment of the court will most effectually accomplish the general purpose of the donor. (See Trusts.)

DAILY BALANCES

See Average Loan and Balance File, Interest Balance.

DAIRY LOANS

See Cattle Loans.

DATE

The indicated day, month and year, on which an instrument is drawn. The validity and negotiable character of a check, note, draft or other negotiable instrument is not affected by the fact that it is not dated. When a time instrument is undated any holder may insert the true date of issue or acceptance. Otherwise where an instrument is not dated it is considered to be dated as of the time it was issued.

Post-dated checks, i. e., checks dated ahead, are not payable until the due date. A bank has authority to pay a check only when it is dated as of the day of presentation or a date antecedent thereto. Where the date is missing, it may be inserted and paid. Stale checks, i.e., checks more than six months old, usually should not be paid by a bank without consulting the drawer. It is intended that checks should be presented for payment within a reasonable time after their issue.

Notes should not be dated on a holiday. If a note matures on a Sunday or holiday, according to the Negotiable Instruments Law, it becomes payable the next succeeding business day. A few states have modified this provision to make such notes payable on the preceding business day. (See Section 11, 12, 13, 85 and 186, Uniform Negotiable Instruments Law; Sections 30, 31, 32, 145 and 322, New York Negotiable Instruments Law.)

DATING

See Time to Run.

DAY LOANS

Loans made to Stock Exchange brokers without security, but only for a day as a means of circumventing Overcertification (q. v.)., which is unlawful. Necessity for such day loans has been reduced greatly by operation of clearing facilities (see Stock Clearing Corporation). In settling in the morning for the previous day's transactions, brokers settled by use of certified checks. Sometimes, however, a broker did not have the necessary balance, and overcertification (q.v.) is forbidden to banks. Consequently, in order to service these brokers, it became the practice of banks to extend a temporary day loan to the broker, provided his credit standing was of the highest type, with the undertaking that as soon as available collateral resulted during the day's transactions, it would be pledged as security for the loan as in a regular call loan. A day loan is also known as a clearance loan or morning credit.

DAY ORDER

An order good for the day only; an order placed with a broker for execution on the day it is given, after which it is automatically canceled. (See Orders.)

DAY-TO-DAY LOAN

An English equivalent for call loan in the United States.

DAY-TO-DAY MONEY

Same as Call Money (q. v.).
See also Call Loan, Call Money Market.

DAYLIGHT TRADING

Transactions for the purchase of a security balanced by transactions for the sale of such security within the course of a single trading session; or short sales effected and covered on the same day.

DAYS' DATE

See Draft.

DAYS OF GRACE

A privilege to defer payment of a note, acceptance, draft or other time instrument after the indicated maturity for a number of days. Three days of grace are allowed in England and formerly in the United States. By the Negotiable Instruments Law (Sec. 85 of the Uniform and Sec. 145 of the New York law), "Every negotiable instrument is payable at the time fixed therein without grace."

Where the instrument is not payable on demand, presentment for payment must be made on the day it falls due. Where it is payable on demand, presentment must be made within a reasonable time after its issue, except that in case of a bill of exchange, presentment for payment will be sufficient if made within a reasonable time after the last negotiation thereof. (Sec. 71, Uniform Negotiable Instruments Law; Sec. 131, New York Negotiable Instruments Law.)

DEAD ASSETS

Unproductive assets; assets which produce no income, e. g., waste or unimproved land, or an industrial plant which is not operated because of obsolete or inefficient layout and facilities.

DEAL

1. For the purposes of taxes on the privilege of doing business, to "deal" denotes regularity and recurrence of transactions, not isolated or occasional trades.

2. An expression sometimes used in finance to indicate a large transaction which involves a change in ownership usually arranged without general public knowledge, e. g., a traction deal, railroad deal, or deal in some other property.

DEALER

See Broker.

DEAR MONEY

Money obtainable only at high interest rates. (See Money Market.)

DEATH DUTIES

See Estate Taxes.

DEBASEMENT

Reduction in the purity of the metal forming the coinage of a country from its original or standard fineness. One of the purposes of Government coinage is to insure maintenance of purity of its coins. Coins may be debased by individuals, but ordinarily the term refers to the former practice of Governments in taking a part of

the pure metal out of its coins and replacing it with a baser metal. No civilized commercial country has debased its coinage in modern times, knowing that the results of debasement are disastrous upon business by undermining confidence, causing high or fluctuating prices, unstable conditions, etc. The ceremoney in England known as the "Trial of the Pyx" is established by law for the purpose of insuring the maintenance of purity of the standard coin. (See Trial of the Pyx.)

DEBENTURE

A class term for all forms of unsecured, long-term debt, whether for corporate or civil (government, state or municipal) obligations, although it is usually applied to a certificate of debt issued by a corporation.

In England debentures are often specifically secured by real estate mortgages, but in the United States are secured only generally by the assets and the general credit of the obligor. The term is usually used in connection with bonds. (See Debenture Bonds, Debenture Stock.)

DEBENTURE BONDS

Bonds without any security other than the general assets and credit of the issuer. Government, state and municipal bonds, i. e., all civil bonds, are by definition debenture bonds since they are not secured by mortgages or any other specific pledge of assets. Notwithstanding this fact, civil bonds represent the highest class of investments because their payment rests upon the taxing power and general credit.

Debenture bonds issued by corporations are, as a class, not considered high-grade investments, although where the general credit of the issuer is strong, they may command a high position. Their strength depends upon the equity in the general assets, the extent of bond issues having prior liens, range of fluctuation of earnings, and margin of average earnings over prior charges. Debenture bonds are sometimes known as plain debentures.

DEBENTURE INCOME BONDS

Income bonds not secured by a mortgage or other specific pledge of assets. (See Income Bonds.)

DEBENTURE STOCK

A term infrequently used in American finance which usually applies to a special type of stock conferring rights superior to both preferred and common stock. This stock is in the nature of a prior preference or first preferred stock.

In England debenture "stock" is equivalent to debenture bonds in America.

DEBIT BALANCE

The excess of debits over credits in an account. In a bank account a debit balance occurs when it is overdrawn. In a brokerage account a debit balance indicates the net amount due to the broker from the customer, and which the customer would have to pay in order to take up his securities. Brokers charge interest on debit balances at comparable rates.

DEBIT TICKET

A posting medium used in banking and brokerage bookkeeping to secure the posting of a transaction occurring in a certain department to the customers' or general ledger. It carries a complete description of the transaction and is preserved for future reference.

DEBITS TO INDIVIDUAL ACCOUNTS

See Bank Debits.

DEBIT

A pecuniary obligation of a debtor; a sum of money one party owes to another as a result of a transaction in which value has passed to the debtor, as evidenced by verbal or written contract or agreement. A note or bond is prima facie evidence of a debt, but an open book account can become an account stated only by the debtor's admission of liability, or by the debtor's failure to deny liability or object to the account rendered.

(See Government Debt, Internal Debt, National Budget, Public Debt.)

DEBT LIMIT

See Municipal Bonds.

DEBTEE

One to whom money or other value is owing. Rarely used term for creditor.

DEBTS OF CITIES

See Municipal Debts.

DEBTOR

One who owes money or other value, whether on open account or evidenced by note, bond, or otherwise. Debtors may be classified as individual, corporate or civil (Government, state, county and municipal.)

DEBTOR BANK

An expression used to indicate a bank which is "debtor" on net debit balance to the clearing house. (See Clearing House.)

DECEDENT

A deceased person. A term used in connection with inheritance, estates, wills, etc. A decedent who has made no will is called an intestate decedent; one who has made a will, a testator.

DECENTRALIZED RESERVE SYSTEM

See Federal Reserve System.

DECIMAL COINAGE

A coinage system in which the denominations of the principal coins are decimals of the monetary unit and the denominations of all coins and paper money are even fractional parts or multiples of the unit of value. In the United States, the dollar is the monetary unit; a dime the tenth part; a cent the hundredth part; and a mill the thousandth part, each being one-tenth of the previous unit in the series. Likewise the eagle is ten times the value of a dollar.

The advantages of the decimal system are obvious as a convenience in making money calculations. Most of the monetary systems of the world are decimal systems, England being the only great nation without it.

DECIMAL CURRENCY

The currency of nations using the Decimal Coinage (q. v.).

DECLARATION OF DIVIDENDS

Dividends on stock cannot be paid unless and until de-

clared. Power to declare dividends rests solely with a corporation's board of directors, which determines the amount and date of the disbursement. (See Dividend.)

DECLINE

A term used in connection with securities and commodities to indicate a decrease or lowering of prices. Other terms employed to suggest the same meaning, either with greater or less intensity, are fall, sag, react, soften, slump, weaken, recede, drop, retreat, slip, sell off, shade off, toboggan, and break.

DEED

In general, any instrument "signed, sealed and delivered," as the act and deed of its maker. In business, however, the term usually refers to a written instrument to convey real property, i. e., to transfer its title from the seller to the buyer. There are two ordinary types of deeds, quit-claim and warranty. The person who gives a quit-claim deed gives up his own claim and rights and interest in the property conveyed without responsibility as to whether the title is perfect or imperfect; he conveys no better title than he himself possesses. On the other hand, the person who gives a warranty deed guarantees a perfect title, and in case subsequent defects appear the purchaser is entitled to recover any loss that he may thereby sustain. (See Mortgage.)

DEED OF ASSIGNMENT

A written instrument which appoints an assignee, usually a trust company, to take charge of the affairs of an insolvent business, and which prescribes the powers and duties of such Assignee (q. v.).

DEED OF TRUST

An indebture or mortgage indenture; a written or printed instrument (mortgage) in which the title to the therein described property is conveyed to a trustee, personal or corporate, who holds the property in trust for and on behalf of others, usually holders of bonds secured by the mortgage. It is a contract involving the issuing corporation (grantor and mortgagor), the trustee for the bondholders (mortgagee), and the bondholders themselves.

A deed of trust is a comprehensive and complicated instrument, and describes (1) the duties, responsibilities and compensation of the trustee; (2) the transfer of the title to the mortgaged property to the trustee; (3) the details of the mortgaged property; (4) the covenants of the mortgagor to pay the principal and interest on the bonds, and to maintain the mortgaged property in good condition, and (5) the procedure of the trustee in case of default.

DEFACED COINS

Metallic coins which have been mutilated by clipping, sweating, cutting, punching, or otherwise. Ordinary wear and tear or abrasion is not defacement. (See Abrasion, Mutilated Currency, Sweating.)

DEFALCATION

The fraudulent appropriation or abstraction of money or property entrusted to a person by reason of his employment, or held in a fiduciary capacity by such person; usually applied to public officials or officers of corporations. (See Embezzlement.)

DEFAULT

Failure to perform an engagement or to meet an obligation, and particularly applying to the failure to pay a bond or note at maturity or the interest due thereon at the stipulated interest date. Default in payment of the principal or interest on mortgage bonds, or in setting aside sinking fund installments, gives the bondholders rights and recourse under the terms of the mortgage indenture, such as right to accelerate maturity, right to institute foreclosure proceedings, and wherever default occurs in any corporate bonds, whether secured or unsecured, the right to apply for a receivership. One who fails to meet a contractual obligation to pay money is a defaulter. (See Repudiation.)

DEFAULTED BONDS (NOTES)

No default has ever occurred in United States Government bonds. State and municipal bonds have a very low default percentage. Railroad and public utility bonds have a less enviable default record, but industrial bonds have the highest ratio of default of all classes. Among foreign government bonds, numerous defaults have occurred in principal and interest (see Foreign Bondholders Protective Council).

DEFAULTER

See Default.

DEFENSE HOMES CORPORATION

A Government corporation, incorporated October 25, 1940 under authority of Act of January 22, 1932, as amended, with authorized capital of $10,000,000, all held by the Government. Capital of the corporation was supplied by the Federal Loan Administrator from funds supplied by the President for that purpose. The corporation assisted in providing housing in localities where manufacturing was necessary in connection with facilities for the War and Navy Departments. Initially, directors and officers were drawn from the Reconstruction Finance Corporation (q.v.). Subsequently, the Federal Public Housing Authority combined the corporation's housing activities and functions with a number of other agencies in the field, and in accordance with the President's Reorganization Plan No. 3, the Public Housing Administration in July, 1947 took over control and supervision.

DEFERRED ANNUITY

See Annuity.

DEFERRED AVAILABILITY ITEMS

A name given to an account appearing in the weekly Federal Reserve Bank Statement to indicate the liability offset to "Uncollected Items" listed among the assets. Uncollected items represent the amount of checks in process of collection for member and clearing member banks by the Federal Reserve banks, i. e., checks in transit and in the process of becoming converted into cash. Uncollected items are contingent assets, while the deferred availability items are contingent liabilities. (See Federal Reserve Statement, Federal Reserve Check Collection System.)

DEFERRED BONDS

Bonds upon which the payment of interest is postponed until some condition with respect to earnings has been fulfilled, or upon which the interest periodically increases to a maximum rate, after which it remains uniform.

When the payment of the principal of bonds is deferred

without changing the status of its underlying collateral, the issued is said to be extended. (See Extended Bonds.)

DEFERRED DIVIDENDS

Dividends on stock which are postponed until a fixed time has elapsed, or until a certain event has occurred. (See Deferred Stock.)

DEFERRED INTEREST

This term has two meanings:

(1) Interest, the payment of which is postponed. When bonds are sold at a discount the amount of the discount represents what the investing public demands in the way of additional interest over the periodic cash or coupon interest to pay for the added risk involved in view of prevailing rates. While from the standpoint of the investor, this represents interest paid in advance, from the standpoint of the issuing organization it represents deferred interest. For instance, if an issue of $100,000 of bonds is sold at 5 per cent. discount, the issuing organization receives only $95,000. At maturity, however, the issuing organization must pay the bondholders $100,000. The difference, or $5,000, represents a deferred interest or additional borrowing cost, which must be accumulated evenly over the life of the bonds. (See Amortization.)

(2) The delay in crediting out-of-town (transit) checks deposited by customers having accounts with interest-bearing balances for interest purposes for the number of days required to collect them. (See Interest Balance.)

DEFERRED PAYMENTS

Payments to be made in the future. All credit transactions and time credit instruments involve deferred payments, e. g., bonds and notes. One of the functions of money is to serve as a standard of deferred payments, and as such should possess stability of value. (See Money.)

DEFERRED SHARES

See Deferred Stock.

DEFERRED STOCK

Stock, dividends on which are not payable until the expiration of a fixed time, or until some certain event has occurred. In England deferred stock ranks behind ordinary stock (the English equivalent for the American common stock), and occupies the same position with regard to ordinary stock as the latter to preference stock. Founders' Shares (q.v.) is a special type of deferred stock.

DEFICIENT RESERVES

See Reserve, Taxes.

DEFICIT

Excess of liabilities over assets; the reverse of capital or net worth. The term is sometimes improperly used as synonymous with "loss" which means an excess of expense over income during a period of time. Deficit should be reserved to refer to a condition at a fixed moment of time.

DEFINITIVE BOND (CERTIFICATE)

A permanent engraved bond (or certificate) given in exchange for a temporary or interim receipt or certificate. On account of the time required to prepare engraved bonds, it is often necessary when bonds are marketed to issue temporary receipts or certificates. Temporary certificates are then exchangeable for permanent engraved bonds when issued and ready for delivery. (See Interim Certificates.)

DEFLATION

The opposite of inflation. A period or phase of the business cycle characterized by emergency liquidation, abnormal falling prices of securities and representative staple commodities, contraction of bank loans, and decrease in bank clearings, bank deposits, volume of currency, production and employment. (See Business Cycle)

DEFUNCT COMPANY

One that has ceased to exist; a dissolved company.

Under Section 29 of the General Corporation Law of New York, upon the dissolution of a corporation for any cause, and whether voluntary or involuntary, its corporate existence shall continue for the purpose of paying, satisfying and discharging any existing liabilities or obligations, collecting and distributing its assets and doing all other acts to adjust and wind up its business and affairs, and it may sue and be sued in its corporate name.

DELAYED DELIVERY ORDERS

Orders for securities on the delayed delivery basis, in which an agreed time for delivery to the buyer, such as seven days, is specified. Specifying "DD" on the order permits sellers located at points distant from New York, for example, the necessary time in which to make delivery and yet take advantage of New York market for securities. (See Methods of Trading.)

DELIVERIES

Deliveries of securities purchased upon stock exchanges must be made in accordance with the rules of the exchange. These vary according to the method of trading.

The New York Stock Exchange and most of the other stock exchanges operate under the 3-day delivery rule. Under this plan, contracts "regular way" are settled on the third full business day following the day of execution. Such transactions must be settled by 12:30 p.m. of the third full business day (transactions on Friday or Saturday are settled on the following Wednesday).

"Cash" transactions call for the payment of money and delivery on the same day on which the transaction is executed.

"Buyer's" or "seller's" options, running up to 60 days, are another method of trading, involving future delivery.

Rule 109 of the Rules of the Board of Governors of the New York Stock Exchange outlines these methods of trading and delivery and the specific rules and conditions pertaining to each.

In the event of failure to deliver, the buying broker serves a "buy-in notice" on the seller, reciting that with failure to deliver the buying broker will buy the stock himself in the open market and make delivery to his customer, holding the defaulting broker for any loss. This is buying in "under the rule" (q.v.).

To constitute a good delivery, the securities must meet certain standards, including proper assignment, with the signature of the registered owner on the certificate witnessed by a member or guaranteed by a member. (See Good Delivery.)

DELIVERY DAY

In trading in commodity futures, the delivery day is usually considered to be the first trading or business day of the month in which the future contract matures.

Ordinarily, however, the exchange authorities determine and publish the dates for each month's deliveries. For instance, the dates for December deliveries may begin November 29th and last until December 15th, thereby permitting the purchaser to call for delivery of December's contracts at any time within that period. In the case of sellers' options, delivery may be made on any business day of the month for which the sale was made.

DELIVERY NOTICE

In commodity exchange trading, the notice sent by the seller on "Notice Day" to the clearing house containing the details of the delivery he is prepared to make on the maturing futures contract for a specified commodity. The clearing house in turn passes on the notice to the person "long", or buyer. Since most traders in futures do not wish to accept delivery of the actual commodity, instructions in advance to their broker will call for reselling the contract and passing on the notice to the new buyer, who will be a person willing to take delivery. Usually, before delivery day, the trader will have given orders to his broker to transfer his long position to later futures months in the commodity. (See Delivery Day, Futures.)

DEMAND BILLS

Sight or presentation bills. (See Bill of Exchange.)

DEMAND CERTIFICATE OF DEPOSIT

See Certificate of Deposit.

DEMAND DEPOSITS

Demand deposits are defined by the Federal Reserve Board of Governors and by the banking laws of the various states to be those payable within 30 days. Demand deposits are those subject to check and which may be withdrawn by the depositor immediately and without notice of intended withdrawal. The great bulk of demand deposits are commercial deposits of corporations, partnerships and individuals. (See Deposits.)

DEMAND DRAFT

See Draft.

DEMAND LOAN

A loan which is terminable at the option of the borrower or lender, having a fixed rate of interest, but with no prescribed maturity. The term is generally used of commercial loans, but is sometimes used as the equivalent of call loan, which properly should apply only to brokers' loans. (See Call Loan.)

DEMAND STERLING

Sight bills of exchange drawn in pounds principally on banks in London, but also on banks at other points in England. (See Sterling, Sterling Exchange.)

DEMONETIZATION

To take away from a metal the power of acting as monetary standard, i. e., to strip it of free coinage and full legal tender powers; to relegate a coin serving as standard money to serve as token money. In the United States silver was demonetized by the Act of 1873, known as the Crime of 1873 (q. v.), i. e., its quality as standard money was discontinued and although it retained its full legal tender qualities, it was not freely coined. After 1873 silver was coined on government account in large quantities under the Bland Allison Act (q. v.) and the Sherman Silver-Purchase Act (q. v.), both of which were subsequently repealed. While the Act of 1873 practically demonetized silver, the Gold Standard Act of 1900 (q. v.) definitely and formally demonetized silver by reducing the silver dollar to the position of token money and making gold the standard money. The Gold Reserve Act of 1934, approved January 30, 1934, declared the coinage of gold at an end, the metal to be held in bullion form as metallic cover. (See Standard Money.)

DEMONSTRATION

A sharp advance or sudden display of activity in a stock or group of stocks. Before the regulation of stock markets, a demonstration was usually fictitious activity, and conducted by some individual trader, clique or pool for the purpose of attracting speculative attention. Under the Securities and Exchange Act of 1934, manipulation of security prices is prohibited, including activity for the purpose of creating a false or misleading appearance of active trading.

DEMONSTRATIVE LEGACY

See Legacy.

DEMURRAGE

Literally a charge for delaying. A charge made for the loss of time in detaining or stopping a freight car on a side track, or a vessel at a pier for loading or unloading beyond the specified period permitted by the carrier.

DENOMINATION

The face value of a bond, note, coupon, coin, paper money, etc. When applied to stocks, it denotes the number of shares per certificate. Bonds usually bear $1,000 denominations, although they frequently occur in denominations of $500, $100 and $50. Government bonds are sometimes issued in larger denominations, e. g., $10,000, and as high as $50,000. The denominations of coupons vary according to the interest rate of the relative bonds and the interest period.

The denomination of stock certificates is usually 100 shares. When issued in smaller amounts they are known as fractional certificates. The denominations of the various kinds of metallic and paper money are indicated under United States Money (q. v.).

DENOMINATIONAL PORTRAITS

The portraits which appear upon each denomination of the various kinds of United States paper money. Each kind of paper money carries a series of portraits, by reference to which raised bills may be readily detected. Paying tellers, receiving tellers, money clerks and others, whose duty it is to guard against accepting raised bills, should have a thorough knowledge of denominational portraits and other features of currency designs.

On July 10, 1929, the Treasury Department first introduced reduced-size paper currency into circulation and began to retire old-size currency. The purpose of the smaller currency was to secure economy in use of paper and printing, to insure the highest degree of protection against counterfeiting and fraudulent alterations, and to eliminate confusion through simplification of the number of designs compatible with the necessity for distinguishing between the five kinds of paper money. Wholly new designs on a denominational basis are now adopted. Whereas formerly the old currency bore different designs (especially portraits) for the same de-

nomination of various kinds of currency, there is now a characteristic design and portrait for each denomination regardless of kind.

A description of the essential characteristics of the designs of the present small-size currency follows: The size is 6 5/16 x 2 11/16 inches. The principle of denominational designs has been strictly followed. The back designs are uniform for each denomination irrespective of kind. The face designs, likewise, are characteristic for each denomination as regards the important protective features, with only sufficient variation in detail to indicate the kind. Three kinds of paper currency are now issued - United States notes, silver certificates, and Federal Reserve notes. The new designs are applied to all issuable denominations of all these kinds.

The portraits assigned to the faces, and the embellishments provided for the backs, of the several denominations, are as follows:

Denomination	Portrait on face	Embellishment on back
$1	Washington	Ornate One
$2	Jefferson	Monticello
$5	Lincoln	Lincoln Memorial
$10	Hamilton	U. S. Treasury
$20	Jackson	White House
$50	Grant	U. S. Capitol
$100	Franklin	Independence Hall
$500	McKinley	Ornate Five Hundred
$1,000	Cleveland	Ornate One Thousand
$5,000	Madison	Ornate Five Thousand
$10,000	Chase	Ornate Ten Thousand

The backs of present paper currency are printed uniformly in green; the faces printed in black; and the Treasury seals and the serial numbers imprinted in the following colors:

Silver certificates	Blue
United States notes	Red
Federal Reserve notes	Green

A new type of distinctive paper was adopted for the present reduced-size currency. The paper basically is of the type formerly developed but with a higher folding endurance, particularly in the cross direction, than the paper formerly in use. The use of small segments of silk fiber as a distinctive feature has been retained, but the segments are scattered throughout the sheet and not localized in rows as formerly. The reason for the change was that, as a test of genuineness, dependence may not be placed on an outstanding characteristic, which in itself, inherently affords no protection.

DEPARTMENT OF AGRICULTURE

Created by Act of Congress on May 15, 1862. The Secretary of Agriculture achieved cabinet status in 1889. Organization of the department, under the Under Secretary of Agriculture, includes: Agricultural Research Administration; Bureaus of: Agricultural and Industrial Chemistry; Animal Industry; Entomology and Plant Quarantine: Human Nutrition and Home Economics; and Plant Industry, Soils and Agricultural Engineering: Forest Service; Soil Consevation Service; Bureau of Agricultural Economics; Office of Budget and Finance; Office of Foreign Agricultural Relations; Office of Information: and Research Center.

Administrative agencies operating under the Secretary of Agriculture include:

Production and Marketing Administration.--Created by the Secretary of Agriculture on August 18, 1945, and headed by an Administrator who is also president of the Commodity Credit Corporation, which forms the essential part of the Administration.

Farm Credit Administration.--Originally created by Executive Order on May 27, 1933, has operated as part of the Department of Agriculture since July, 1939. Included in this Administration are the Federal Land Banks, Federal Intermediate Credit Banks, Production Credit Associations and Corporations, Banks for Cooperatives, Federal Farm Mortgage Corporation, and Regional Agricultural Credit Corporation.

Farmers Home Administration.--Took over on November 1, 1946 the functions of the Farm Security Administration and of the Emergency Crop and Feed Loan Division of the Farm Credit Administration.

Rural Electrification Administration.--Originally created by Executive Order on May 11, 1935, was transferred to the Department of Agriculture on July 1, 1939.

Under the Commodity Exchange Act, which is administered by the Production and Marketing Administration, the Secretary of Agriculture designates the commodity exchanges on which futures trading may be transacted, and he is a member of the Commodity Exchange Commission, consisting of the Secretary of Agriculture, Secretary of Commerce and the Attorney General, of whom the Secretary of Agriculture is the key official administering the Act and regulating the commodity exchanges.

DEPARTMENT OF COMMERCE

One of the departments of the Federal Government with Cabinet status, the Secretary of Commerce being a member of the Cabinet. The Department was originally authorized in 1903 as the Department of Commerce and Labor. In 1933, the department was segregated into the Department of Commerce and a separate Department of Labor, the Secretary of which was also given Cabinet status. The department is divided into the following bureaus: Bureau of Foreign and Domestic Commerce (consisting of the Offices of International Trade, Small Business, Business Economics, Field Service, and Domestic Commerce); Bureau of the Census: Bureau of Standards; Coast and Geodetic Survey; Patent Office; and Weather Bureau. These Bureaus are supervised by the Under Secretary of Commerce. In carrying out its functions, which are to foster, promote, and develop the foreign and domestic commerce, mining, manufacturing, shipping and fishing industries, and the transportation facilities of the United States, the Department has achieved a basic and substantial importance, particularly to foreign and domestic business. Among the Department's publications of great value are the Foreign Commerce Weekly, the monthly Domestic Commerce, and the monthly Survey of Current Business.

DEPLETION

The tendency to exhaustion of the assets of an extractive industry, e. g., mining, quarrying, oil, forestry. As coal or ore is taken out of a mine or oil is taken out of a well, the supply is reduced and progressively approaches the exhaustion point. Proper accounting treatment calls for a charge to be made on the books of extractive industries to provide for depletion of its assets so that when the exhaustion point is reached there will be funds on hand sufficient to pay the stockholders or owners in full. This involves an estimate of ore (or oil)

reserves upon which even leading geologists and mining engineers often go astray. Under the Internal Revenue Code, in the case of mines, oil and gas wells, other natural deposits and timber, a reasonable allowance for depletion is a proper deduction from gross income. Because of the difficulty in estimating these reserves, some businesses make no attempt to provide for depletion, and accordingly no depletion charges are made. Investors or speculators in mining, oil and coal securities should determine whether accounting provision for depletion has been provided. Holders of such stock, in case depletion charges are not made, should regard dividends upon their stock as a return, not only on investment but also as a partial return of investment. Those companies which pay dividends including depletion usually indicate to the stockholders for their tax returns the proportion of dividends that is accountable to depletion and thus is a return of capital, rather than ordinary income. (See Wasting Assets.)

DEPOSIT

See Deposits.

DEPOSIT BANKING

That part of commercial banking which embraces the receiving of deposits, paying them out by check, collecting checks on other banks, and remitting on checks forwarded for collection. In addition to these activities in primary deposits, commercial banks create derivative deposits through their expansion of loans and investments.(See Bank, Commercial Bank, Deposits.)

DEPOSIT BOOK

Same as Pass Book (q. v.).

DEPOSIT CURRENCY

Checks and other credit instruments deposited with a bank as the equivalent of cash. Deposit currency is a term used to describe the character and composition of the major proportion of a bank's deposits, which consists of checks, money orders, drafts, matured acceptances, matured coupons, etc., rather than actual money. It is estimated that normally approximately 90 per cent. of the business transactions in the United States are settled by means of deposit currency. It is the only perfectly elastic currency automatically expanding and contracting with the requirements of business-expanding with business activity and high prices, and contracting with inactivity and low prices. (See Credit Instruments, Elastic Currency.)

DEPOSIT INSURANCE

Antecedents of nation-wide deposit insurance were the various State deposit-guaranty laws which followed the banking panic of 1907, as follows: Oklahoma, 1907; Kansas, Nebraska and Texas, 1909; Mississippi, 1914; South Dakota, 1915; and North Dakota and Washington, 1917. Although characterized by varying terms and restrictions which inhibited the effectiveness, basic principle of these State deposit-guaranty plans was the same, the levying of assessments upon the banks for the purpose of providing guaranty for deposits. Lack of territorial diversification and financial strength of the guaranty funds soon led to heavy losses when the number of bank failures increased. (See Federal Deposit Insurance Corporation.)

DEPOSIT INSURANCE ACT

See Bank Deposit Insurance Act.

DEPOSIT INSURANCE CORPORATION

See Federal Deposit Insurance Corporation.

DEPOSIT INTEREST RATE

The rate of interest which a bank allows upon deposits. Section 19, sub-section 12, of the Federal Reserve Act, as added by the Banking Act of 1933, and amended by the Banking Act of 1935, provides that no member bank, directly or indirectly, by any device whatsoever, pay any interest on any deposit which is payable on demand, except demand deposits payable only at an office located outside of the continental United States. This prohibition against payment of interest on demand deposits extends also to deposits of the U. S. Government and its instrumentalities.

The Board of Governors of the Federal Reserve System, by sub-section 13 of Section 12 of the Act, are empowered to limit by regulations from time to time the rate of interest which may be paid by member banks on time and savings deposits. The Board is authorized to prescribe different rates for time and savings deposits having different maturities, or subject to different conditions respecting withdrawal, or subject to different conditions by reason of different locations, or according to the varying discount rates of member banks in the several Federal Reserve districts. Thus far, however, the Board has fixed uniform rates for the entire country. Maximum rates on time and savings deposits, as established by the Board of Governors in Regulation Q, have been as follows:

	Nov.1,1933-Jan.31,1935	Feb.1,1935-Dec.31,1935	Effective Jan.1,1936
Savings Deposits	3%	2 1/2%	2 1/2%
Postal Savings Deposits	3	2 1/2	2 1/2
Other deposits payable:			
In 6 months or more	3	2 1/2	2 1/2
In 90 days to 6 months	3	2 1/2	2
In less than 90 days	3	2 1/2	1

Source--Federal Reserve Bulletin.

Maximum rates that may be paid by insured non-member banks, as established by the Federal Deposit Insurance Corporation, effective February 1, 1936, are the same as those in effect for member banks. Under Regulation Q, the rate payable by a member bank may not in any event exceed the maximum rate payable by State banks or trust companies on like deposits under the laws of the State in which the member bank is located.

Another important power of the Board is to regulate the payment by member banks of any time deposit before its maturity, or waive any requirement of notice before payment of any savings deposit except as to all savings deposits having the same requirement. Time and savings deposits payable at offices located outside the United States are exempt.

This legal prohibition of interest on demand deposits and regulation of interest on time and savings deposits are the result of the competition for deposits in which banks engaged in the past. This competition was so

fierce at times that it led various clearing house associations for the purpose of protecting the members to limit interest rates paid by members, long before the Federal statutes incorporated these restrictions. (See Federal Reserve Board Regulations.)

DEPOSIT LIABILITY (LIABILITIES)

The aggregate liability of a bank to its depositors represented by its combined demand, time and other deposits, including certificates of deposit. The deposit liabilities of a bank are the largest of all liabilities, but normally should not exceed ten to twelve times the combined capital stock, surplus and undivided profits. However, in recent years of deficit financing and World War II financing of war needs, the volume of deposits has expanded to fifteen to twenty times capital funds. Since this high deposit leverage is mainly invested in Government securities, and not risk assets, the immediate situation is not serious, but the problem of high deposit leverage has the constant attention of the supervisory authorities.

DEPOSIT LINE

The average balance to the credit of a depositor's account in a bank over a given period; the average balance of deposits. This is useful in determining the profitableness of an account and in fixing the Line of Credit (q.v.). (See Average Loan and Balance File, Twenty Per Cent. Rule.)

DEPOSIT LOAN

A loan which is created by giving the borrower a credit in his deposit account against which checks may be drawn as required.

DEPOSIT RATE

See Deposit Interest Rate.

DEPOSIT SLIP

A slip upon which the details of a deposit are listed and which accompanies the deposit when handed to the receiving teller. The deposit slip is an original entry record. It is the posting medium through which the amount of the relative deposit is credited to the depositor's account in the bank's ledger. It should be made out by the depositor in each instance, and if incorrect, the depositor should be required to submit a correct one to take its place. It is non-negotiable. If a deposit is made without the pass book a duplicate deposit slip so stamped may be made out at the same time for the convenience of the depositor.

A deposit slip "is an original entry in the eyes of the law and an important document. It is the bank's record of what the depositor offers for deposit. . . . They often become exceedingly valuable for reference in case differences and misunderstandings occur as to credit dealings with depositors" (Kniffin, W. H.: The Practical Work of a Bank). Deposit slips should be retained by the bank at least until the next statement is reconciled. Some banks keep them longer, and still others; indefinitely.

DEPOSIT TICKET

Same as Deposit Slip (q. v.).

DEPOSITARY

1. A term with the same meaning as and used interchangeably with Depository (q. v.).

2. Also, the bank or trust company may act as a depositary under plans of reorganization, escrow agreements, voting trust agreements, etc., wherein the institution accepts the deposit of securities and issues certificates of deposit therefor.

DEPOSITOR

One who has a bank account; one who has funds deposited to the credit of his account in a bank. (See Deposits.)

DEPOSITORY

A bank which is designated and authorized to accept deposits of funds belonging to the Federal Government, or other governmentalities (state, county, city, etc.), court funds, trust funds, or from other banks which the latter are required by law to maintain as reserve against deposits. A bank authorized to receive Government funds is called a Government depository; if authorized to receive state funds, a state depository; if authorized to receive trust funds, a depository for trust funds, etc. A bank authorized to receive the reserve, or portion thereof, of other banks is known as a Reserve Depository (q. v.).

The Federal Reserve Act confers upon the Secretary of the Treasury the right to use Federal Reserve banks, or member banks, as Government depositories. The twelve Federal Reserve banks were appointed to act as Government depositories and fiscal agents of the Government by the Secretary of the Treasury, effective January 1, 1916. The operations of the sub-treasuries of the United States as a part of the fiscal system were required to terminate on June 30, 1921, by an Act of Congress. The sub-treasuries are now operated as a part of the Federal Reserve banks. Member banks may also be designated as Government depositories and to act as Government fiscal agents, at the direction of the Secretary of the Treasury, and deposits made in war loan accounts, although the vast majority of Government funds are deposited with the Federal Reserve banks. Non-member banks are not eligible to act as depositories except under certain conditions to receive postal savings deposits. Banks holding deposits of the United States and the lesser governmentalities are required to pledge certain required bonds as security therefor.

In New York, state banks and trust companies must be first designated and authorized by the State Comptroller before they are eligible to receive court funds. For this purpose a surety bond is required. Any bank meeting the requirements of the law is eligible to receive trust funds, which are usually required to be segregated from the strictly banking assets.

DEPOSITORY RECEIPTS

Receipts issued by a trust company or other depository evidencing the deposit of foreign securities and facilitating trading in such interests on American stock exchanges (see American Depository Receipts).

The term is also sometimes applied to certificates of deposit issued by protective committees or reorganization committees through a designated depository, usually a trust company.

DEPOSITS

Balances due to depositors of a bank; funds credited to the accounts of depositors. Deposits may be broadly classified into general, specific and special.

General deposits consist of money or Deposit Currency (q. v.). Wherever deposits are of this character the relation between the bank and depositor is that of debtor

and creditor. The bank becomes the owner of the deposit. The depositor has a claim against the bank for the amount deposited. All deposits are mingled together and become indistinguishable. The bank is in no wise bound to return the identical deposit of cash, inasmuch as it is not a Bailee (q. v.), as it is in the case of special deposits. Should a National bank fail, the general depositor becomes a general creditor and shares in the liquidating assets available for distribution proportionately with the other general creditors. The same provisions hold good in the case of state banks in most jurisdictions, although in a few states depositors in state banks have a claim prior to other creditors.

Specific deposits are those made for a specific purpose in which the bank acts as bailee, e. g., money left to discharge a note, or to purchase securities.

Special deposits consist of property other than money, e. g., bonds, stocks, notes, life insurance policies and other valuable papers, jewelry, silverware, plate, etc., left with a bank as custodian for safe-keeping and in which title remains with the depositor. Here the relationship between the bank and depositor is that of bailee and bailor. Special deposits never become the assets of the bank, and in case of failure are not applicable to the extinguishment of liabilities, but must be returned intact to depositors. Special deposits are taken under a contract of bailment, and many banks not equipped with safe deposit vaults, provide custodianship for the valuables of their depositors, giving them the same care as their own securities, but without further liability, either for a compensation or gratuitously. (See Custodianships, Customers' Securities Department, Safe Deposit Company.)

Deposits are also classified as Demand Deposits (q. v.) and Time Deposits (q. v.); as Commercial Deposits (q. v.), savings deposits, Government Deposits (q. v.), Postal Savings Deposits (q. v.); and as Individual Deposits (q. v.) and bank deposits. Individual deposits are subdivisible into Alternate Deposits (q. v.) and Joint Deposits (q. v.).

Principal types of demand and time deposits, with their reserve requirement and interest rate characteristics, are summarized in the table below:

	Member Bank Reserve Requirements	Interest Rate
Demand Deposits:		
Individuals, partnerships and corporations	22%, 20% and 14%	None
Interbank	Same	None
Public Deposits:		
U.S.Government (war loan accounts)	Same(a)	None
States and public subdivisions	Same	None(b)
		Maximum Interest Rate
Time Deposits:		
Savings	6%	2 1/2%
Postal savings	6%	2 1/2%
Other time deposits payable:		
In 6 months or more	6%	2 1/2%
In 90 days to 6 months	6%	2%
In less than 90 days	6%	1%

(a) In April, 1943, amendment to the law exempted U. S. Government war loan accounts from reserve requirements, but this exemption expired (June 30, 1947) six months after cessation of hostilities was officially declared.

(b) Until the expiration of two years after date of enactment of the Banking Act of 1935 (August 23, 1935) the prohibition of payment of interest on demand deposits of states and political subdivisions thereof, or of trust funds if the payment of interest was required by state law, did not apply.

Banking statistics in the United States prior to 1914 are not complete as to number of banks and consistency of basis of reporting. The Federal Reserve System in 1923 began the compilation of data for all banks from official sources, and carried back its series to 1914. The table on page 175 for all banks in the United States shows the trend in number of banks and deposits since June 30, 1914, the earliest call date shown in the Federal Reserve series.

DEPRECIATED CURRENCY

Currency not accepted at its face or par value, because of depreciation in exchange value resulting from unsound fiscal policies, unfavorable balance of payments, and lack of confidence; or domestically, because of lack of redemption in standard money, or suspension of redemption in standard or lawful money. Suspension of redemption of paper money may be the inevitable result of the depletion of the metallic reserves of a country, as illustrated by the case of the currencies of European countries. The depreciation of United States notes or "greenbacks" during the Civil War and until 1879 was primarily due to the suspension of specie payment coupled with over-issue.

DEPRECIATION

An accounting term to denote the shrinkage in value of an asset due to (1) physical deterioration or wear and tear: (2) obsolescence; and (3) sudden decline in market price or commercial value. The term also refers to an operating charge made to provide for the ultimate replacement of an asset at the termination of its service life, or to offset its decline in value if it is not to be replaced.

DEPRESSION

A protracted period of business dullness when activity is below normal; that phase of a business cycle which follows a crisis and period of emergency liquidation, and characterized by a drastic curtailment of production, contraction of bank credit, business inactivity, falling or bottom prices and efforts to "feel for the bottom" in the price movement, widespread unemployment, high rate of business failures, general unsettlement, etc. (See Business Cycle.)

DERIVATIVE DEPOSITS

Deposits created out of a loan in which no cash or its equivalent, e. g., Deposit Currency (q. v.) is deposited. Among commercial banks deposits are frequently created by lending a customer a sum not in money but by credit to his account against which he may draw checks as he needs it.

DESCENT, LAWS OF

Laws, which differ in the several states, defining the

e--Partly estimated.

rules by which the property of an owner devolves to his descendants and is transferred to them upon his death. Property is transferred upon the death of an owner either by will, or where there is no will, in accordance with the intestate laws of the state in which the owner is a resident. In general, a person by means of a will can devise his real property and bequeath his personal property to whomsoever he pleases with the following exceptions: (1) The debts of the testator (one who makes a will) are a first charge upon the estate, (2) the widow has a right of dower (and the husband the right of curtesy) in the testator's real property, which in most states is equal to a life interest in one-third of the real property, from which the widow cannot be cut off unless a provision expressly in lieu of dower is made in the will, is assented to by her, and (3) trusts in perpetuity cannot be made.

When a person dies intestate, i. e., without having made a will, the laws of descent and distribution of the state in which the owner is resident govern the inheritance of all real property situated within the state and the succession of personal property wherever situated.

In New York State, the life estates of dower and curtesy were abolished after August 31, 1930 by Sections 190 and 189, Real Property Law, effective September 1, 1930. The common law estate by the curtesy of a husband in the real property of a wife dying after August 31, 1930 and all its incidents were abolished; and ex-

cept as to property theretofore affected, after August 31, 1930, no inchoate right of dower shall be possessed by a wife during coverture, and no widow shall be endowed, in any lands whereof her husband becomes seised of an estate of inheritance. Thus, the New York Statutes abolished curtesy entirely, because there was no such thing as a vested right of inchoate curtesy; but as to dower, the inchoate right of dower which attached to estates of inheritance prior to September 1, 1930 continues as vested property right, although there shall be no further dower in such estates of inheritance obtained by a husband after September 1, 1930.

In place of dower and curtesy, the New York Statute (Section 18, Decedent Estate Law) now provides where a testator dies after August 31, 1930, leaving a will thereafter executed, and leaving surviving a husband or wife, for a personal right of election to the surviving spouse to take his or her share of the estate as in intestacy, subject to specified limitations, conditions and exceptions.

DETROIT STOCK EXCHANGE

Founded in July, 1907, by seven brokers, and now located in the Penobscot Building. Now ranks as one of the larger "out-of-town" registered national securities exchanges. For the fiscal year ended June 30, 1946, total market value of transactions was $67,369,000, consisting entirely of stocks, with sales volume of 6,565,000 shares. Total issues traded on the exchange were 158 issues of 148 issuers, of which 102 issues were fully registered and 56 were admitted to unlisted trading privileges. Most of the securities traded in were not local in character, as 81% of the issues traded in were traded on one or more other exchanges. No bonds are listed.

DEVELOPMENT STAGE

A term used to denote the beginning or early period in the life of an industry, as when its plant is being erected, or prior to placing its product on the market. The securities of a company in this stage are purely speculative since they represent an enterprise which is unseasoned and not yet proved to be a success.

DEVELOPMENT WORK

The initial efforts in establishing a new enterprise. (See Development Stage.)

DEVISE

A gift of real property by will. (See Descent--Laws of.)

DEVISEE

A person to whom a gift of real property is made by will. (See Descent--Laws of.)

DEVISEN

Derived from the French word devise, the strict meaning of which is foreign bills and checks. The word is often loosely used, especially in Germany, where the form is devisen, to mean foreign bills and checks and foreign balances. International financial circles often use valuta as a synonym for devisen. Valuta is of Italian origin and in its narrowest sense means foreign currency. Thus a purist might say that the devisen (or devises, in the French plural form) were payable in valuta. But for the most part international banking circles use the words interchangeably to mean foreign short-term assets, whether in the form of bills of exchange, checks or balances.

DEVISOR

One who bequeaths real property to another or others by will. (See Descent--Laws of.)

DEVOLUTION

The passing of title of real estate by hereditary succession. The laws of descent and devolution vary among the states. (See Descent--Laws of.)

DIARY

A book or other record kept for the purpose of journalizing the maturity dates of notes, bonds, acceptances, or other time instruments; a tickler or maturity-index. (See Tickler.)

DIGESTED SECURITIES

Securities sold to persons who intend to keep them for the purpose of deriving an income; securities purchased outright and in the hands of real investors or ultimate owners. When first distributed an issue of securities is likely to be purchased in part by speculators who intend to dispose of their holdings at the first favorable market opportunity. This situation tends to bring about fluctuating prices. When securities are well "digested," price changes are apt to be less volatile, and reflect investment trends. (See Undigested Securities.)

DIME

The United States silver 10-cent piece. It weighs 38.58 grains and is 0.900 fine. (See Subsidiary Silver Coins, Token Money.)

DINAR

See Foreign Moneys - Iraq and Yugoslavia.

DIRECT EARNINGS

Direct earnings are those actually reported by a corporation without allowance for a possible equity in the surplus earnings, in excess of dividend payments, of subsidiary and/or affiliated companies. This term is in contrast with indirect or Equity Earnings (q. v.). Consolidated earnings include both direct earnings of the parent company, and equity earnings in undistributed earnings of subsidiaries, after allowance for minority interest.

DIRECT LIABILITY

A primary liability as distinguished from a contingent liability; an absolute and certain debt which must be paid on demand or at maturity by the principal debtor. A note is the direct liability of the maker.

DIRECT OBLIGATION

See Obligation.

DIRECTOR OF THE BUDGET

See Bureau of the Budget.

Director of the Mint

See Mint.

DIRECTORATE

The board of directors of a corporation. (See Directors.)

DIRECTORS

The persons in whom the management of a corporation rests. Section 27 of the General Corporation Law of New York states that the business of a corporation shall be managed by its board of directors, all of whom shall be of full age and at least one of whom shall be a citizen and a resident of the state.

Directors of a national bank are required to be citizens of the United States and at least three-fourths of them must have resided in the state or district where the bank is located or within 50 miles thereof, for at least one year prior to their election. Directors shall number not less than five nor more than twenty-five. Term of office is one year, but directors may continue in office until successors are appointed and qualify. Vacancies may be filled by remaining directors for unexpired terms. No interlocking directorates between member banks and securities concerns are allowed except by special permission of the Board of Governors of the Federal Reserve System, and no director of a member bank may at the same time be a director of any other bank except by permission of the Board of Governors.

Until enactment of the Banking Act of 1933, each director of a national bank was required to own unpledged stock in the bank of a par value of at least $1,000 in the case of banks with capital stock of $50,000 or more; and at least $500 par value in the case of banks with capital stock of only $25,000. Section 31 of the Banking Act of 1933 raised these requirements by requiring that every director be the bona fide owner in his own right of stock in the bank having par value of not less than $2,500, unless the capital of the bank should not exceed $50,000, in which case the holding was required to be not less than $1,500; or unless the capital of the bank should not exceed $25,000, in which case the director must own in his own right shares having a par value of not less than $1,000.

However, Act of June 16, 1934, as amended by the Banking Act of 1935, repealed so much of Section 31 of the Banking Act of 1933 as related to stock ownership by directors.

Directors of a bank must take an oath to administer the affairs of the bank diligently and honestly; and not knowingly violate or willingly permit to be violated any of the provisions of the statutes of the United States under which the bank is organized. The first board of directors is usually named in the certificate of organization, and the stockholders thereafter elect their successors in accordance with the by-laws at the annual meeting. Directors' meetings are held at least once a month, at which meetings the action of the loans and discounts committee in granting loans since the previous meeting must be approved or disapproved. The directors as a board appoint the president, vice-president, cashier and other officers. They define their duties, fix their salaries and amount of their fidelity bonds.

In addition to their general responsibility for diligence and prudence in the performance of their duties, directors of member banks are subject to specified liabilities for acts of the bank or its officers in violation of the statutes, such as fraud, embezzlement, false entries, false certification of checks, and loans or gratuities to examiners. Commissions and fees for procuring loans are forbidden to directors as misdemeanors, but any member bank may contract with any of its directors for purchases or sales of property or securities provided such transactions are passed on and authorized by a majority of the board not interested in them, and provided full disclosure of all profit realized is made and the terms are not less favorable to the bank than those offered to others. Loans to directors are not permitted unless authorized by a majority of the board. Loans to executive officers by member banks must be approved by a majority of the entire board, and are subject to limit of $2,500. Executive officers of a bank borrowing from other banks must make a written report of such loans to the board of directors of the bank.

Under Section 30 of the Banking Act of 1933, a director of a national bank or of a state member bank, after warning by the Comptroller of the Currency or a Federal Reserve agent to discontinue unsafe or unsound practices or violations of law, may be removed by the Board of Governors of the Federal Reserve System after due notice and hearing. (See Directors' Examinations.)

U. S. Comptroller of the Currency: Federal Laws Affecting National Banks as of January 1, 1940, 1940.
U. S. Government Printing Office: Federal Reserve Act of 1913 with Amendments and Laws Relating to Banking, 1941 (with supplements).

DIRECTORS' EXAMINATIONS

Examination of a bank conducted by its directors. Directors' examinations are not specifically required by the National Bank Act, but are required by the banking laws of many of the states for state banks and trust companies. These laws usually permit the directors to delegate this work to a firm of public accountants. The New York state banking law requiring directors' examinations reads:

"It shall be the duty of the Board of Directors of every bank during the months of March or April and during the months of September or October in each year to examine, or cause a committee of at least three of its members to examine fully, the books, papers and affairs of the bank, and the loans and discounts thereof. . . . Such directors shall have power to employ such assistance in making such examinations as they may deem necessary. When a bank is a member of the Federal Reserve System of the United States and of the New York Clearing House Association, thereby becoming subject to at least one examination each year by the Federal Reserve Board and by the New York Clearing House, respectively, then and on account of such liability to such examination, the board of directors of such bank may omit the latter of the two examinations provided for in each year by this section."

(See Bank Examination, Directors.)

DISAGIO

The opposite of Agio (q. v.). A term used chiefly in continental Europe, meaning the discount which depreciated paper currency suffers from standard or subsidiary coins of like face value; or discount upon a coin for loss of weight by abrasion or mutilation.

DISBURSEMENT

In general, a cash payment or expenditure. It refers particularly to cash outgo representing expenses rather then outgo representing the purchase of assets.

DISCLAIMER

A renunciation or repudiation. A transportation com-

pany may place in its bill of lading a disclaimer clause refusing responsibility for losses which may arise because the "shipper's load and count" do not tally with actual deliveries made to it.

DISCOUNT

This term has six meanings:

(1) Cash Discount (q. v.).

(2) Bank Discount. Interest paid in advance, or more accurately, interest paid at the beginning of a loan based upon the sum to be repaid at its maturity. The rate of discount charged by a bank is not the same as the rate of interest paid by the borrower. Interest retained by the lender at the time a note, acceptance or bill of exchange is discounted and the proceeds given to the borrower, and not at maturity. The interest so taken is called discount, or bank discount. For illustration, suppose a $10,000 note maturing in six months is discounted at 6 per cent. The discount would be .03 of $10,000, which is $300, the proceeds being the balance, or $9,700. Although this is the commercial and bank method of computing discount, it is not mathematically correct, inasmuch as the borrower is paying interest in advance of the use of the funds, and therefore, pays interest upon interest. True discount, explained below, is the accurate method of computing interest paid in advance. (See Interest, Interest Tables.)

(3) True Discount. This differs from bank discount in that interest is computed on the proceeds or amount borrowed and does not entail the payment of interest upon interest. In principle it is the same as determining the present worth of a sum of money due on a future date. In the example used in illustrating bank discount, true discount is found first by computing the proceeds. This is ascertained by dividing $10,000 by 1.03 (1 representing the principal and .03 representing the interest on $1.00 for six months at 6 per cent.) which is $9,700.87. The true discount is the difference, or $299.13. From this result it is clear that true discount is slightly more favorable to the borrower than bank discount, which, conversely, is more favorable to the lender. (See Interest.)

(4) Discount on Securities. An expression used to indicate the amount or percentage which a security sells below par value, being the opposite of premium. A bond of $1,000 par value, selling at 90, is at a 10 per cent. or $100 discount. A stock of $25 par value, selling at 24, is at 4 per cent. or $1.00 discount.

To the issuer bond discount represents deferred interest, because the issuing organization must retire the bonds at par, thereby increasing the effective interest rate. The discount upon the issue should logically be accumulated during the life of the bonds as an additional interest charge. This process is called accumulation. (See Amortization, Deferred Interest.)

When stock is sold at discount by the issuing corporation, the amount of discount becomes in reality a deficit. It is usually offset, however, by some fictitious asset, e. g., good will.

(5) Paper money is at a discount when it does not circulate at par with the standard money or other metallic currency.

When more than a dollar of paper money must be given in order to purchase a dollar of standard money, paper money is at a discount. (See Depreciated Currency.

(6) Exchange Discount. (See Domestic Exchange, Foreign Exchange, Interest.)

DISCOUNT CLERK

A bank employee responsible for handling the clerical routine in the discount department including computations in discounting notes, acceptances, etc. He also has charge of all records maintained in connection with bills discounted, e. g., register, ledger, rate book and maturity tickler.

DISCOUNT CORPORATION

The name given to a banking corporation engaged in the purchase and discount of trade and bankers' acceptances, bills of exchange and other forms of commercial paper, etc. These corporations may be organized under Federal authority (Edge Act) or under various state jurisdictions. Their function is to supplement the regular banking facilities for discounting trade and bankers' acceptances, especially those arising out of export and import transactions.

Discount corporations are more numerous in England because of the greater volume of foreign bills handled in London, the world discount and money market. (See Edge Act, Edge Corporation, Foreign Banking Corporation.)

DISCOUNT HOUSE

See Discount Corporation.

DISCOUNT LEDGER

See Bills Discounted Ledger, Liability Ledger.

DISCOUNT MARKET

The "open" market for acceptances and commercial paper, as contrasted with a bank's discounts for its own customers. As part of the money market, the discount market consists of the Federal Reserve Banks, banks, discount houses, commercial paper houses, note dealers, etc. which make up the supply and demand for such paper.

DISCOUNT RATE

The rate of interest at which a bank discounts notes, acceptances and bills of exchange and which varies according to money market conditions, according to the borrower, and maturity. The best names (prime paper) command a lower rate than other names. This term frequently is used synonymously with rediscount rate and bank rate. (See Bank Rate, Interest Rate, Rediscount Rate.)

DISCOUNT REGISTER

See Bills Discounted Register.

DISCOUNTING THE MARKET

Anticipating an event marketwise. Discounting the market or a particular security is giving effect to the expected event before it occurs by a rise or decline in prices according to whether the future event is favorable or unfavorable. For example, if it becomes commonly acknowledged by signs of improvement that business activity will have greatly increased in the next six months, although prosperity is not now actually existent, speculators will anticipate the improvement by gradually bidding higher prices. Conversely, if business conditions are expected to become depressed in the immediate future the discounting process will take place, but in the opposite direction. "Coming events cast their shadows before," and intelligent speculation is based upon predicting the future of prices. Not all events can

be discounted, because not all can be foreseen, e. g., a Supreme Court decision, a sudden declaration of war, an earthquake, labor strikes, etc.

It is possible both to under-discount and over-discount a future event. This is what happens in practically every period of boom or depression. The momentum of speculative enthusiasm carries prices beyond the values represented by equities and potential earning power and the momentum of liquidation carries prices below these values.

The stock market is said to "register" or "discount" events from three to nine months ahead, so that by the time an event has occurred, the particular security affected or the entire market has already reflected the changed condition. In this way violent and sudden price fluctuations are prevented, or, at least mitigated.

DISCRETIONARY ACCOUNTS

Accounts placed with a broker in which the selection of securities and the time and price of their purchase and sale is left with the broker. (See Controlled Account.)

DISCRETIONARY ORDERS

Authority given to a broker to execute purchases and sales of securities at the latter's selection and option as to price, with the expectation of yielding a profit, but at the risk of the customer. Most stock exchange brokers refuse to accept discretionary orders. (See Controlled Account.)

DISHONOR

Failure or refusal by the maker of a note, or acceptor of a bill of exchange, to pay the instrument at maturity; also the refusal of a drawee bank to pay its customer's check. This is called dishonor for non-payment. Failure or refusal to accept a time bill of exchange constitutes dishonor for non-acceptance.

"An instrument is dishonored by non-payment when: (1) it is duly presented for payment and payment is refused or cannot be obtained; or (2) presentment is excused and the instrument is overdue and unpaid." (Sec. 83, Uniform Negotiable Instruments Law; Sec. 143, New York Negotiable Instruments Law.)

"A bill is dishonored by non-acceptance: 1. When it is duly presented for acceptance and such an acceptance as is prescribed by this act is refused or cannot be obtained; or 2. When presentment for acceptance is excused, and the bill is not accepted." (Sec. 149, Uniform Negotiable Instruments Law; Sec. 246, New York Negotiable Instruments Law.) "Where any negotiable instrument has been dishonored it may be protested for non-acceptance or non-payment, as the case may be, but protest is not required except in the case of foreign bills of exchange." (Sec. 118, Uniform Negotiable Instruments Law; Sec. 189, New York Negotiable Instruments Law.)

Notice of dishonor, which is informal and may be oral or written, is essential except when waived or excused in order to charge the drawer and each indorser. Any drawer or indorser to whom notice is not given is discharged. Although protest, which is formal and notarized, is not legally required in the case of domestic bills, it is preferable to have a notarized protest made because of the prima facie evidentiary value of the certificate of the notary in case of action on the instrument. (See Notarial Protest Certificate.)

A bank will dishonor a check under the following conditions: (1) when the drawer has issued a stop payment order; (2) when there is some irregularity or informality, e. g., insufficient funds, post-dated, etc. (See Irregularities); (3) upon receipt of a garnishee order; (4) upon notice of the drawer's death; and (5) upon notice of bankruptcy of the drawer, in which case the funds are held for the trustee or awaiting court order. Refusal of a bank to certify a check is not an act of dishonor.

DISSOLUTION

The winding up or termination of a business through the sale of its assets and discharge of its liabilities, first to the preferential creditors (employees for wages and Government for taxes), second to the secured creditors, third to the unsecured or general creditors, and lastly to the owners. (See Defunct Company).

DISTRESS SELLING

Imperative or necessitous selling. When stocks owned on margin are sold because declining prices have impaired or exhausted equities, it is referred to as distress selling or forced liquidation.

DISTRIBUTING SYNDICATE

See Syndicate.

DISTRIBUTION (OF ESTATES)

See Descent, Laws of.

DISTRIBUTION OF RISK

A well-known investment principle popularly expressed in the maxim, "Don't put all your eggs in one basket." The principle usually applied by conservative investors and speculators, and enforced upon the banks by the banking laws, implies the spreading of investment funds over a number of media, instead of a single medium. As an illustration of diversification in investment holdings, a fund of $100,000 might be divided in the following proportions as between different classes of investments: $20,000; other bonds, $20,000 (good grade corporates, divided among public utility, railroad and industrial bonds); $10,000 in good grade preferred stocks, divided among utility, railroad and industrial preferred stocks; and $50,000 in common stocks, divided among utility, railroad and industrial issues, and ranging in selection equally from sound, seasoned common stocks, to medium grade and more attractive of the speculative common stocks. Such a selection affords diversification both as to defensive and aggressive securities, and as to industries. The theory of diversifying investment media is to reduce the risk of loss to as near the vanishing point as possible without at the same time unduly sacrificing income. One investment medium may prove unprofitable, but it is unlikely that disaster will befall all of them, but if so, then certainly not in the same degree.

Distribution of risk does not preclude specialization in one class of investment media provided diversification in a single class is obtained. One who decides to invest exclusively in bonds should not purchase railroad bonds only, and certainly not the bonds of a single railroad. If bonds are to be the investor's specialty, purchases should be distributed among Government, railroad, public utility and industrial issues. One may, however, specialize in railroad bonds and still secure a distribution of risk, although to a less degree, by purchasing bonds of different railroad companies. Neither

does the principle preclude the selection of the highest-grade investments in each class of investment media; it simply demands that the investment be spread among several particular possibilities in a given class. Diversification is less important as a safeguard against loss in the high grade investments, although this class too is subject to depreciation from rise in money rates.

A practical application of the use of this principle is exemplified in the case of bank loans and investments. National banks are not permitted to lend more than 10 per cent. of their combined capital and surplus to one borrower (with certain exceptions). Good management requires, moreover, that a bank extend loans not only to a large number of businesses and persons but also to borrowers who represent a high diversity of business types. Savings banks are permitted to invest only a part of their deposits in various classes of bonds and mortgage loans. One of the functions of bank examinations is to see that the legal restrictions giving effect to the principle of distribution of risk are not violated, to the end that the depositors' interests may be fully protected.

The diversification principle has been widely applied in the Investment Company field (q. v.).

DISTRIBUTION OF SECURITIES

See Distribution, Period of, Investment Market.

DISTRIBUTION, PERIOD OF

The last phases of a speculative cycle which may be divided into three phases which occur in rotation, viz., accumulation, advance, distribution. Distribution is the period which follows the great advance in security prices and in which experienced speculators and large interests anticipating conditions in advance and knowing that prosperity must again give way to depression, close out their holdings while prices are still high, and before the speculative crisis which marks the beginning of a period of liquidation takes place. (See Speculative Cycle.)

DISTRIBUTOR

See Broker, Investment Market, Syndicate.

DISTRICT OFFICES

Branches or branch offices of a bank. (See Branch Banking.)

DIVERSIFICATION

See Distribution of Risk.

DIVIDEND

The proportion of the net earnings of a corporation distributed to stockholders representing their profits in the enterprise. Dividend disbursements are based either upon a percentage of the par value of the stock, or in specified dollar and cents per share, and in case of stock of no par value, a certain sum per share. Dividends are usually declared at regular intervals, e. g., monthly, quarterly, semi-annually, or annually, but usually quarterly. Dividends do not become payable until declared by the board of directors. At the time of declaration this body also sets a date for the closing of the transfer books and the date of the disbursement. (See Books Close, Stockholders of Record.)

Dividend disbursements are of three kinds, as follows: (1) cash, regular and extra; (2) scrip, interest bearing and non-interest bearing, and (3) stock.

Ordinarily, dividends are paid in cash, but sometimes when earnings have been above normal, an extra cash dividend is declared over and above the regular dividend and is so designated. It is a principle of good corporate finance that regular dividends should be paid at a rate that presumably can be maintained and that when profits are above normal, extra dividends may be declared, but specified as such.

Scrip dividends are those paid in the company's promises to pay, instead of cash. They are paid when either current or past earnings are sufficient to permit cash dividends, but the company desires temporarily to conserve its holdings of cash. Scrip dividends may bear a definite maturity date or the disbursement date may be left to the discretion of the board of directors. Such dividends may be interest bearing or non-interest bearing.

A Stock Dividend (q. v.) is a dividend payable in the company's own stock. The term is also loosely applied sometimes to a dividend in stock of another company held as an asset.

Dividends may also be paid in commodities. In many instances, corporations have distributed holdings of Liberty bonds by paying them out as dividends.

Besides dividends representing disbursements of profits, there are dividends, representing the liquidation of the assets of a business upon dissolution. Such a dividend is called a liquidating dividend.

Considerable conflict of opinion has occurred among courts and accountants as to what constitutes profits for dividend purposes. It is well understood, of course, that dividends must not be paid out of capital, but only out of profits, whether earned currently or in a past accounting period, but the questions, whether money can be borrowed to pay dividends, provided the dividends have been earned, and whether dividends should be paid out of the proceeds of the sale of fixed assets when the business continues as a going concern, have given rise to conflicting opinions.

A National bank cannot disburse its entire earnings as dividends until its surplus amounts to 20 per cent. of its capital stock. Until this amount has been reached, one-tenth of its net profits at each accounting period must be carried to the surplus account. The surplus account must be maintained at 20 per cent. of the capital and is not available for dividends. The surplus account in excess of 20 per cent. of the capital, while legally available for dividends, in practice, is rarely, if ever, invaded.

For guaranteed dividends see Guaranteed Stock. (See Stock Dividend.)

DIVIDEND BONDS

See Participating Bonds.

DIVIDEND FORECAST CHART

A chart prepared by the statistical department of a brokerage house which shows the past and present earnings and dividend rates, and the probable future dividend rates based upon current business conditions for a selected group of representative stocks; a chart showing prospective dividends for leading companies.

DIVIDEND IN LIQUIDATION

See Dividend.

DIVIDEND PAYERS

A stock market expression used to indicate corporations the stocks of which pay dividends.

DIVIDEND WARRANT

An order to pay a dividend to a stockholder.

DIVISION OF ISSUE

See Division of Redemption.

DIVISION OF REDEMPTION

The Currency Redemption Division in the office of the Treasurer of the United States. The Treasurer of the United States is the official custodian of the public funds, and among his duties are maintaining the accounts for the issue and redemption of United States paper currency and for the redemption of Federal Reserve Notes, Federal Reserve Bank Notes, and National bank notes, and directing the shipment of currency and coin between the United States Mints, Federal Reserve Banks, etc. Among the publications prepared is the monthly statement of paper currency outstanding by kinds and denominations. (See Treasury Department.)

DIVISIONAL BONDS

Bonds which are the obligation of a division of a railroad as distinguished from the rest of the system. In a loose sense, divisional bonds are branch line bonds. The most usual interpretation of a divisional bond is that it is one secured by a mortgage on the property constituting a certain division of a railroad as distinguished from property of the entire system. Divisional bonds may originally have been obligations of a separate railroad, but since taken over and assumed by another. Ordinarily divisional bonds are issued by a railroad corporation secured by a mortgage on a certain division of its property as security.

DOCK RECEIPT

A receipt given by a steamship company to the shipper or shipper's agent when goods are delivered on the steamship pier for transportation abroad. It is an interim document, an ocean bill of lading issued before shipment being given in exchange therefor.

DOCUMENTARY ACCEPTANCE BILLS

See Documents against Acceptance.

DOCUMENTARY BILLS

Bills of exchange having shipping or other documents attached, e. g., bill of lading, invoice, insurance certificate, securities, insurance policies, bonds and coupons, or other documents having intrinsic value. Documentary bills give prima facie evidence of the transfer of values and therefore of their self-liquidating nature. Where shipping documents are attached there is prima facie evidence that the bill has arisen out of a commercial transaction. Documentary bills are secured, provided the indorsement on the accompanying documents passes title to the purchasing bank, and by the liability of the drawer until the bill is accepted or paid by the drawee. (See Bill of Exchange, Foreign Bills of Exchange.)

DOCUMENTARY COMMERCIAL BILLS

Bills of exchange arising out of commercial transactions and supported by bills of lading and relative papers. (See Bill of Exchange, Documentary Bills.)

DOCUMENTARY PAYMENT BILLS

See Documents against Payment.

DOCUMENTS

A general term to denote the relative papers or documents which may accompany a foreign bill of exchange arising out of commercial transactions, and include ocean or through bill of lading, marine insurance certificate, seller's invoice, etc. Sometimes the following documents also accompany bills of exchange: consular invoice, certificate of analysis, certificate of origin, certificate of inspection, and warehouse receipt. In the strict sense documents are those instruments which convey title to the goods which secure the bill of exchange.

DOCUMENTS AGAINST ACCEPTANCE

A term which refers to domestic or foreign bills of exchange drawn "D/A," which is a notification that the supporting documents are not to be released to the drawee until the bill has been accepted. Such bills are known as documentary acceptance bills.

DOCUMENTS AGAINST PAYMENT

A term which refers to domestic or foreign bills of exchange drawn "D/P," which is a notification that the supporting documents are not to be released to the drawee until the bill has been paid. Such bills are known as documentary payment bills.

DOLLAR

The monetary unit of the United States and also of some 15 other countries (see Foreign Moneys).

Although the Monetary Unit (q. v.) and Standard of Value (q. v.) in the United States the gold dollar is no longer coined.

Subsequent to abandonment of gold standard on April 19, 1933, no gold coins were struck, nor were they allowed to circulate. The Gold Reserve Act of 1934, enacted January 30, 1934, declared the coinage of gold to be at an end. For former coinage values and contents of gold coins, see Gold Coins.

The silver dollar coined only on Government account contains 412 1/2 grains of standard silver (0.900 fine), consisting of 371 1/4 grains of pure silver and 41.25 grains of copper alloy. (See Gold Coins, Money of Account, Silver Dollar, Standard Money, Trade Dollar, United States Money.)

DOLLAR ACCEPTANCES

See Dollar Exchange.

DOLLAR BILLS OF EXCHANGE

See Dollar Exchange.

DOLLAR CREDITS

Letters of credit providing for drafts to be drawn in dollars. (See Dollar Exchange, Letters of Credit, Limitations on Acceptance Credits.)

DOLLAR EXCHANGE

Bankers' acceptances and bills of exchange drawn in a foreign country and payable in the United States or another country in dollars, or drawn in the United States and payable in a foreign country in dollars. Acceptances for the creation of dollar exchange by members of the Federal Reserve System are permitted subject to regulations of the Board of Governors, and subject to a limit at any time in the aggregate of one-half of capital and surplus. No member bank shall accept such bankers' acceptances for the purpose of creating dollar exchange

in an amount exceeding in the aggregate 10% of capital and surplus, unless documented or otherwise secured. Maturity must be not more than three months' sight, exclusive of days of grace. (See Limitations on Acceptance Credits.)

DOLLAR FOREIGN BONDS

Bonds issued by foreign governments, states, cities, or corporations in foreign countries, with principal and interest payable in dollars in the United States. (See External Bonds.)

DOLLAR STABILIZATION

See Stabilized Dollar.

DOMESTIC ACCEPTANCE

An acceptance in which both drawer and drawee are located in the United States, and, therefore, payable in this country. (See Acceptance, Limitation on Acceptance Credits.)

DOMESTIC BILLS

Bills of exchange in which both drawer and drawee are located in the United States, and, therefore, payable in this country. (See Bill of Exchange, Draft.)

DOMESTIC EXCHANGE

Inland exchange; checks, drafts (bank and commercial), and acceptances drawn in one place and payable in another within the United States, as distinguished from checks, bills of exchange, bank drafts, and acceptances drawn in this country and payable abroad which are known as Foreign Exchange (q. v.).

"Bills, drafts, etc., arising in domestic clearings, payable in any place, are sometimes spoken of as the 'exchange' of that place, although in practice 'exchange' is pretty generally limited to bank drafts. A draft on a New York bank is thus 'New York exchange,' on a Chicago bank it would be 'Chicago exchange', and so on. In the main, however, the term 'exchange' is confined to drafts on the large centers." (Agger, E. E.: Organized Banking).

Formerly, before the introduction of Par Clearances (q. v.) inaugurated by the Federal Reserve banks in 1916, the value of exchange on the various central points in the United States fluctuated in accordance with supply and demand. For example, New York exchange would be quoted in Chicago or San Francisco above or below par in accordance with the relation existing between the supply of and demand for New York funds in those centers. If the supply of New York funds held as balances in New York banks by Chicago banks was excessive and tending to increase faster than the demand for such funds, then the exchange rate on New York would be quoted at a discount; if demand was relatively heavier than supply, however, New York exchange would command a premium. As in the case of foreign exchange, the limits of fluctuation in exchange rates were fixed by the cost of shipping currency.

Under the Federal Reserve inter-district check collection system, approximately 85% of the banks of the United States have acceded to the plan of accepting and remitting for checks drawn upon themselves and passed through the Federal Reserve Check Collection System (q. v.) at par. All members of the Federal Reserve System are required to accept their own checks at par, and any other bank may use the facilities of the Federal Reserve check collection system if it signifies its willingness to do the same, thereby becoming a Clearing Member (q. v.).

Member banks are no longer obliged to be put to any expense in shipping currency from one point to another in order to create a supply of exchange against which they may sell their drafts. Federal Reserve banks are always prepared to transfer funds for the account of member banks from one part of the country to another without cost. These transfers are manipulated without actual currency shipments by means of book credits, debit and credit balances among the Federal Reserve banks being settled daily through the operation of the Gold Settlement Fund (q. v.).

Furthermore, if any bank (whether a member or clearing member) wishes to remit currency to another point in payment of its own checks presented through the Federal Reserve check collection system, it may do so and the Federal Reserve bank will pay all transportation charges. Thus the ideal of the Federal Reserve check collection system now employed in the transmission of funds from one part of the country to another is to effect a materialization of par currencies, i. e., an elimination of exchange rates without loss to the maker or indorser of a check, draft, or acceptance.

The elimination of exchange rates in the sense in which it is employed above, is different, of course, from making a charge for receiving for deposit and credit a check or draft drawn upon a bank located at an out-of-town point. Bank A in New York, which receives for deposit a check drawn on Bank B in San Francisco, does not receive the proceeds of that check for three days, since it takes three days to collect it. Bank A charges its customer for this delay in availability of the funds and expenses of collection. Such a charge is not an exchange charge at all. It is rather an interest or discount charge. The check which Bank A has received is exactly similar to a note due in three days. Just as one would not expect to have a note not due for three days accepted at par, so one should not expect to have a check not due for three days accepted at par. Such a charge is therefore justifiable, and is not only permitted but is made compulsory by clearing houses through uniform schedules of rates, designed to prevent loss to clearing house banks by standardizing rates and preventing competition for deposits.

The discount charge, commonly but improperly called exchange, made by banks in receiving out-of-town items for deposit depends upon three factors:

1. The kind of item being collected, a preferred rate being accorded bankers' acceptances, but a higher than the base rate being charged for "collection" items.

2. Whether the bank on which the item is drawn is located in a Federal Reserve city (or Federal Reserve branch city). Items drawn on these points enjoy a preferential rate because of the special collecting facilities of the Federal Reserve System.

3. The mail time between the point of deposit and the point upon which the item is drawn. This interval is important because it determines the approximate time taken for collection and the amount of interest lost while the item is in transit. (The mail time is in turn determined approximately by the geographical distance.)

In recent years, exchange charges have been practical-

ly abandoned as discussed under Clearing House Exchange Rates (q. v.).

(See Par List, Par Points.)

DOMESTIC TRAVELERS' LETTER OF CREDIT

See Traveler's Letter of Credit.

DOMICILE (DOMICIL)

Literally, residence or home. It has acquired a technical meaning in commerce, especially in connection with negotiable instruments which are said to be domiciled at the place where they are payable, unless a contrary intent of the parties is shown, and will be governed by the laws of that jurisdiction.

In trust business domicile means residence. However, in law generally, domicile is more than mere residence, and is defined by the Restatement of the Conflict of Laws as "the place with which a person has a settled connection for certain legal purposes, either because his name is there, or because that place is assigned to him by the law."

DONATED STOCK

Stock which, having been originally issued and fully paid, has been given back to a corporation by its promoters or stockholders, representing a part of their holdings, especially when the stock has been issued in payment of property. The purpose of donated stock is to enable a corporation to raise cash for working capital purposes through its sale. If such stock was originally issued for full value in property, it is fully-paid, and, therefore, non-assessable.

DONOR

A giver; a person who creates a voluntary trust, also known as settler, grantor, and trustor. (See Trusts.)

DORMANT ACCOUNTS

Bank or brokerage accounts showing little or no activity, presumably with small and without increasing balances.

DOUBLE BOTTOM

See Bottom.

DOUBLE EAGLE

The United States $20 gold piece. It weighed 516 grains and was 0.900 fine. Coinage of all gold coins was declared to be at an end by the Gold Reserve Act, approved January 30, 1934. (See Gold Coins, United States Money.)

DOUBLE LIABILITY

A term used to indicate the liability to creditors of stockholders of a bank in the event of failure, in an amount up to but not in excess of the par value of the stock owned. Liability was thus "double" in the sense that the stockholder was subject to such assessment by the receiver in addition to losing his original investment. This additional liability was imposed upon shareholders in national banks by the provisions of Sec. 5151 of the Revised Statutes and Sec. 23 of the Federal Reserve Act. It thus afforded an additional source of funds for payment of deposits, and was generally regarded as protection for the depositors. In actual practice, however, collections from stockholders fared poorly, and with the inauguration of nation-wide deposit insurance, provision was made for elimination of double liability.

The Banking Act of 1933 provided that double liability shall not apply with respect to shares in any national bank issued after date of enactment of the Act (June 16, 1933). Later, the Banking Act of 1935 further provided that double liability shall cease on July 1, 1937 or thereafter with respect to all shares issued by any national bank, provided that not less than six months notice of such prospective termination of double liability shall be published in a newspaper locally published or circulated. If the national bank should fail to give such notice for the original July 1, 1937 termination date, double liability could thereafter be terminated six months after such notice was published.

In accordance with these provisions, national banks generally published the required notice and have terminated double liability, thus removing an objection to investment in bank stocks. State banking laws generally had similar provisions for double liability and were similarly amended.

The assessment liability upon shareholders to cover impairment in capital still continues on all national bank stock, both old and new. Under Sec. 5205, Revised Statutes, every national bank whose capital stock shall have become impaired by losses or otherwise, shall within three months after receiving notice from the Comptroller of the Currency, pay the deficiency in the capital stock by assessment upon the shareholders pro rata for the amount of capital stock held by each. If thereafter the national bank shall fail to pay up its capital stock and shall refuse to go into liquidation, for three months after receiving notice from the Comptroller, a receiver may be appointed to close up the business of the bank. If any stockholder neglects or refuses after three months' notice to pay the assessment, it shall be the duty of the board of directors to cause a sufficient amount of the capital stock of such stockholder to be sold at public auction, to make good the deficiency pro rata assessed, and the balance if any above the assessment shall be returned to the delinquent stockholder.

DOW JONES AVERAGES

These are the stock market averages prepared and published daily by Dow Jones & Co. in the Wall Street Journal, and upon which the Dow Theory (q. v.) has been evolved.

Industrial Average.--First industrial average was commenced on January 2, 1897, when daily average closing prices of 12 industrials were used. In 1916, the number of stocks was increased to 20, and on October 1, 1928, to 30 stocks. Initially, the average was calculated as the simple arithmetical average of the daily closing prices with, in some cases, multiples of prices of stocks split up being used for prices of the individual stocks concerned in order to keep the average free of distortion. Beginning on September 10, 1928, the constant divisor method was adopted, whereby the sum of the closing prices for the stocks is divided not by the

number of the stocks in the average, but by a figure, calculated initially on the basis of September 8, 1928 closing prices, which would give approximately the same average on the new basis as on the old basis for the day just prior to the change-over to the constant divisor method. Thereafter, the constant divisor was changed whenever necessary because of stock split-ups, stock dividends or substitutions.

At present (1948) the constant divisor is 10.98, and the stocks in the Industrial Average are as follows:

Allied Chemical
American Can
American Smelters
American Telephone & Telegraph
American Tobacco "B"
Bethlehem Steel
Chrysler
Corn Products Refining
DuPont
Eastman Kodak
General Electric
General Foods
General Motors
Goodyear
International Harvester
International Nickel
Johns Manville
Loew's
National Distillers
National Steel
Proctor & Gamble
Sears Roebuck
Standard Oil of California
Standard Oil of New Jersey
Texas Co.
Union Carbide & Carbon
United Aircraft
U. S. Steel
Westinghouse Electric
Woolworth

Railroad Average.—Originally begun on January 2, 1897, when quotations were in percentages of par value. Despite the ruling by the New York Stock Exchange on October 13, 1915 that all stocks should sell on a dollar basis, the average continued to be calculated on the percentage basis for the three issues in the average having $50 par value, Pennsylvania, Reading and Lehigh Valley, the first two until March 7, 1928, and Lehigh Valley until April 10, 1924. Beginning on March 7, 1928, the average was calculated on the simple arithmetical basis by dividing the sum of the prices by 20, the total number of issues in the average. Change-over to the constant divisor basis occurred on August 8, 1930.

At present (1948) the constant divisor is 15.32, and the stocks in the Railroad Average are as follows:

Atchison
Atlantic Coast Line
Baltimore & Ohio
Boston & Maine
Canadian Pacific
Chesapeake & Ohio
Delaware & Hudson
Delaware, Lackawanna & Western
Erie
Great Northern
Illinois Central
Louisville & Nashville
New York Central
New York, Chicago & St. Louis
Norfolk & Western
Northern Pacific
Pennsylvania
Southern Pacific
Southern Railway
Union Pacific

Utility Average.—The Dow Theory has been evolved on gyrations in the Industrial and Railroad Averages. The Utility Average was initiated in 1929, with 20 stocks, including Commonwealth & Southern and Niagara Hudson Power, which were not available for all of 1929. Accordingly, the constant divisor method was used in working back the average back for all of 1929, based on 18 stocks for the period when these two stocks were not available. On June 2, 1938, the number of stocks was reduced to 15.

At present (1948) the constant divisor is 15, and the stocks in the Utility Average are as follows:

American Gas & Electric
Cleveland Electric Illuminating
Columbia Gas
Commonwealth Edison
Consolidated Edison
Consolidated Natural Gas
Detroit Edison
Houston Lighting & Power
Pacific Gas & Electric
Niagara Hudson
Panhandle Eastern Pipe Line
Peoples Gas
Philadelphia Electric
Public Service of New Jersey
Southern California Edison

Composite Average.—This average was a simple arithmetical average of the 70 stocks then comprising the Dow Jones Industrials, Rails and Utilities when it was begun November 9, 1933. Number of issues became 65 when the Utility Average was reduced from 20 to 15 on June 2, 1938. Change-over to the constant divisor method occurred on May 10, 1945. At present (1948) the constant divisor is 50.61.

Bond Averages.—In addition to the stock averages, Dow Jones & Co. also prepare and publish the 40-Bond Average, representing the combined average of 10 high grade railroad bonds, 10 second grade railroad bonds, 10 public utility bonds, and 10 industrial bonds. The method used is the simple arithmetical average for each group, which four averages are in turn averaged to arrive at the final average for the 40-bond average. The bond averages were begun in 1915.

At present (1948), the issues in the bond averages are as follows:

10 High Grade Railroad Bonds--
- Atchison Gen. 4s, 1995
- Chesapeake & Ohio "D" 3 1/2s, 1996
- Burlington 4s, 1958
- Great Northern 3 1/8s, 2000
- Louisville & Nashville 2 7/8s, 2003
- N. Y. Central 3 1/2s, 1997
- Norfolk & Western 4s, 1996
- Northern Pacific 4s, 1997
- Pennsylvania 4 1/2s, 1960
- Virginian 3s, 1995

10 Second Grade Railroad Bonds--
- Atlantic Coast Line 4 1/2s, 1964
- Chicago Great Western 4s, 1988
- Gulf, Mobile & Ohio 3 3/4s, 1969
- Illinois Central 4s, 1955
- Mo.-Kansas-Texas 5s, 1962
- Morris & Essex 5s, 1955
- N. Y. Central 4 1/2s, 2013
- Northern Pacific 4 1/s, 2047
- So. Pacific-Oregon Lines 4 1/2s, 1977
- Southern Railway 4s, 1956

10 Public Utility Bonds--
- American Tel. & Tel. 2 3/4s, 1975
- Central N. Y. Power 3s, 1974
- Commonwealth Edison 3s, 1977
- Consumers Power 2 7/8s, 1975
- Detroit Edison 3 1/2s, 1966
- New England Tel. & Tel. 4 1/2s, 1961
- Ohio Edison 3s, 1974
- Pacific Gas & Electric 3s, 1970
- Philadelphia Electric 2 3/4s, 1974
- Virginia Electric & Power 2 3/4s, 1975

10 Industrial Bonds--
- Bethlehem Steel 2 3/4s, 1970
- Continental Baking 3s, 1965
- Deere & Co. 2 3/4s, 1965
- Goodrich 2 3/4s, 1965
- Liggett & Myers 5s, 1951

Lorillard 3s, 1963
National Dairy 2 3/4s, 1970
National Steel 3s, 1965
Shell Union Oil 2 1/2s, 1971
Wilson & Co. 3s, 1958

In addition to the above 40-Bond Average, Dow Jones & Co. on November 7, 1936 began publication of the 10-bond Defaulted Rail Average, which has been succeeded by the Income Railroad Bond Average. In 1928, the Municipal Bond Average was also inaugurated, which since October 26, 1934 has been computed weekly, based on arithmetical average of yields of 20 20-year bonds, taken at offering prices.

1932 Low (July 8)	41.22	13.23

DOW THEORY

A theory of stock price movements, based upon average prices, originated by Charles H. Dow, founder of The Wall Street Journal. The first editorials on this theory appeared in 1900-1902. The theory was later developed and extended by William Peter Hamilton, Dow's successor. According to the theory, the stock market is its own barometer; a bull market period continues as long as new high points in secondary movements exceed the preceding high point. Contrarywise, a bear market period continues so long as secondary movements get lower than the preceding one. Additionally, a bull or bear movement is further confirmed when the average of railroad stocks confirms the preceding action of industrial stocks, or vice versa.

DRACHMA

See Foreign Moneys—Greece.

DRAFT

A written order drawn by one party (the drawer) ordering a second party (the drawee) to pay a sum of money to a third party (the payee). Oftentimes the drawer and payee are the same party, the draft being made payable to "Ourselves". In reality, a draft is a bill of exchange, except that in this country the term draft is customarily used in domestic transactions, whereas, both terms, draft and bill of exchange are used in foreign transactions. A draft may be made non-negotiable, but a bill of exchange cannot. Drafts have all the chief characteristics of bills of exchange.

Drafts are of three kinds: (1) sight, demand or presentation drafts, payable immediately at sight, or on demand or presentation; (2) arrival drafts—a modification of a sight draft—payable upon the arrival of goods at the destination of the drawee and for which the draft has been drawn in payment; (3) time drafts—payable at a fixed date, or a certain number of days after date (the latter sometimes being called "days after date" drafts).

A time draft payable 30 days after sight must be presented for acceptance, and at maturity for payment. A 30-day sight draft is payable 30 days after Acceptance (q.v.) by the drawee, when it becomes an acceptance or note. Upon acceptance the drawee becomes the acceptor and principal debtor, and is bound to pay the draft at maturity. The bank at which a draft is payable should be indicated on the face of the instrument by the acceptor.

Drafts usually arise out of commercial transactions in which the buyer and seller are located at different points. A draft differs from a check in that it may be a time instrument drawn on an individual, firm, corporation or bank, and the initiative for payment of the goods is taken by the seller and not the buyer. Usually previous arrangements have been made between the buyer and the seller which permit the seller to draw drafts against the buyer in settlement of all transactions between them. Generally a shipper (seller) sends the draft drawn against the drawee (buyer) to its bank to make a presentation and collection with shipping documents attached. The shipper's bank then forwards the draft with documents to its correspondents in the city to which the goods are destined. Instructions are given to the collecting bank to surrender the bill of lading either upon acceptance or payment of the draft, the documents being referred to as "documents against acceptance," or "documents against payment," respectively.

Some drafts do not arise out of commercial transactions, but to secure payment for securities sent from one place to another, the draft being sent to a bank for collection with instructions to release the securities only upon payment. Other drafts, without documents attached, merely operate as "duns" or demands for payment of bills past due. (See Arrival Draft, Bill of Exchange, Foreign Bills of Exchange, Trade Acceptance.)

DRAWEE

The party, whether an individual, firm, corporation or bank, against which a check or draft is drawn and from which payment is expected.

DRAWER

A party, whether an individual, firm, corporation or bank, which draws, i. e., makes, a check, draft, or bill of exchange. The drawer is also known as the maker. In the case of a check the drawer is a debtor, and therefore, the payer, while in the case of a draft and bill of exchange the drawer is the creditor, and also very often the payee.

DRAWN BONDS

Bonds which have been called for redemption by lot. (See Called Bonds.)

DRIVE

An expression to indicate a sudden attack upon security or commodity values by sellers in an effort to force prices down. Section 9 of the Securities and Exchange Act of 1934 prohibits manipulative practices in such activity. (See Manipulation.)

DROP

An expression to indicate a fall in security or commodity prices. (See Decline.)

DUE DATE

The date upon which a note, draft, acceptance, bond, or other evidence of debt becomes payable; the maturity date. (See Time to Run.)

DUE FROM BANKS

An asset account appearing in the general ledger and financial statement of a bank to indicate the aggregate amount of balances outstanding with and due from other banks.

DUE FROM BANKS, COLLECTIONS

A contingent asset account appearing in the general ledger and financial statements of a bank to indicate the aggregate amount of out-of-town checks in process of collection, but not yet available as cash, through the medium of collection agents or correspondent banks. When the items are collected, the amount is added to the account entitled "Due from Banks," and subtracted from this account.

DUE FROM FEDERAL RESERVE BANK (OR FEDERAL RESERVE BANK ACCOUNT)

An asset account appearing in the general ledger and financial statement of a member or clearing member bank to indicate the balance due from a Federal Reserve bank. This amount represents approximately the cash reserve required by law to be kept with the Federal Reserve bank.

DUE FROM FEDERAL RESERVE BANK, COLLECTIONS

A contingent asset account appearing in the general ledger and financial statement of a bank to indicate the aggregate of checks in the process of collection, but not yet available as cash reserve through the agency of the Federal Reserve bank. When these items are collected, the account entitled, "Due from Federal Reserve Bank" is increased, and the amount subtracted from this account.

DUE FROM FOREIGN EXCHANGE DEPARTMENT

An asset account appearing upon the general ledger or financial statement of a bank to indicate the aggregate funds entrusted with the foreign department for use or investment in foreign exchange operations. The operations of a foreign department are usually considered as distinct from those of the rest of the bank, and its bookkeeping operations are kept separate. This sum represents the accountability of the foreign department to the bank.

DUE TO BANKS

A liability account appearing in the general ledger or financial statement of a bank to indicate the aggregate amount deposited by banks as distinguished from individuals, firms and corporations (other than banking corporations).

DULL

An expression used on a stock or commodity exchange to indicate inactive trading, and that little interest is displayed in the movement of prices.

DUMMY

A term used in connection with directors, officers, stockholders, etc., to indicate a person who acts for another, but who has no real responsibility or liability. He is merely placed in office to complete the number required by law or for publicity purposes.

DUMP

To offer suddenly for sale large blocks of securities on the market for the purpose of disposing of them regardless of the prices offered; to unload large blocks of a security or securities.

In a commercial sense this term is used in connection with international trade. When one nation floods the market of another with large quantities of a certain commodity or commodities at prices lower than they can be purchased at home, or in other foreign countries, the foreign nation is said to be dumping its goods in the other country's market.

DUN & BRADSTREET

The oldest and largest mercantile agency of the United States and of the world, supplying credit information and credit ratings on and for all types of business concerns. The present company, Dun & Bradstreet, Inc., represents an amalgamation, as of March 1, 1933, of two nation-wide credit information agencies, R. G. Dun & Co. and The Bradstreet Company.

Lewis Tappan, pioneer credit executive and originator of the idea of centralized credit reporting, was first proprietor of The Mercantile Agency, which he founded in 1841. Succession of proprietorship of The Mercantile Agency was as follows: Lewis Tappan & Co., 1841-1849; Tappan & Douglass, 1849-1854; B. Douglass & Co., 1854-1859; and R. G. Dun & Co., 1859-1933. The J. M. Bradstreet & Son's Improved Mercantile Agency was founded in 1849, and was incorporated in 1876 as The Bradstreet Company, continuing as such until the merger with R. G. Dun & Co. in 1933. John M. Bradstreet was a dry goods merchant and lawyer who had acquired a substantial file of credit information in the process of liquidating a large estate.

In addition to its credit agency functions, Dun & Bradstreet, Inc. publishes a monthly magazine, "Dun's Review", which contains articles on the effects of significant developments in business and also reports on current trends in business. It gives the points of view on controversial questions by leaders in the fields of business, labor, government and education. It also compiles and prepares for news releases and publication in its own publications the "Trade Review of the Week"; "Wholesale Commodity Price Index"; "Wholesale Food Price Index"; "Building Permits"; "Bank Clearings"; "Business Failures"; and "U. S. Regional Trade Barometers."

DUN & BRADSTREET DAILY WEIGHTED PRICE INDEX

A weighted index of the wholesale prices of 30 basic commodities, compiled from quotations furnished by the United Press Associations, and distributed daily over the wires of that organization. The index is expressed

as relatives of the base 1930-1932. Current figures are available in press releases issued each Wednesday, and also published monthly in Dun's Review and Dun's Statistical Review. Back figures are available from 1932 to date.

DUN & BRADSTREET WEEKLY FOOD INDEX

This composite index is compiled weekly, and represents the unweighted sum total of the price per pound of 31 food items in general use. It is not a cost of living index. The weekly index figures are available back to 1916. Current index figures are available in the form of press releases.

Commodities used in constructing the index are essentially the same from week to week. On very rare occasions the substitution of one commodity for another is necessitated by circumstances beyond control. Spot closing prices at New York, except where otherwise stated, are used.

DUPLICATE BILLS

Bills in a Set (q. v.). (See First of Exchange.)

DUPLICATE BILL OF EXCHANGE (CHECK)

See First of Exchange.

DUPLICATE DOCUMENTS

Documents in a set. (See Bills in a Set.)

DUTY

See Customs Duty, Tariff.

EAGLE

The United States $10 gold piece. It weighs 258 grains, and is 0.900 fine. Coinage abandoned since 1933. The Gold Reserve Act of January 30, 1934 declared the coinage of gold to be at an end. (See Gold Coins, United States Money.)

EARMARKING

Under Section 14 of the Federal Reserve Act, the Federal Reserve Bank of New York maintains accounts with foreign central banks of issue. As part of the operations of such accounts, gold may be held by the Federal Reserve Bank under earmark for the account of the foreign central banks or foreign governments. Earmarked gold is not part of the monetary gold stock, which is all held by the Treasury. Gold reserves of the Federal Reserve Banks consist of gold certificates issued by the Treasury or gold certificate credits.

The President of the United States, under authority of the Act of October 6, 1917, as amended by Act of March 9, 1933, may prohibit or regulate by means of licenses or otherwise, any transactions in foreign exchange, transfers of credit between or payments by banking institutions, and the export, hoarding, melting or earmarking of gold or silver coin or bullion or currency. (See Emergency Banking Relief Act, Gold Reserve.)

EARNING ASSETS

Loans, discounts and investments of a bank, constituting the major source of earning power for a commercial bank. Expansion in earning assets depends upon the availability of excess reserves (q.v.), and results in expansion in deposits of the banking system. Conversely, credit deflation (contraction in earning assets) reduces deposits and adds to excess reserves of the banking system. Despite quantitative and qualitative controls over credit expansion and contraction, such as reserve requirements, open market operations and fixing of bill buying and discount rates, statutory limitations on loans and investments, and examination standards, expansion and contraction in earning assets are largely a matter of individual bank credit policy. As a practical matter, however, individual banks tend to follow the group trend, voluntarily (to "keep up" with competitors) during expansion, and in self-protection (to avoid being last in liquidation of loans and investments) whenever the spiral of deflation is started. (See Credit.)

EARNING POWER

The ability of a business consistently to employ its capital profitably over a period of time. When profits show a reasonable return to invested capital and are sufficient also to provide for a high standard of maintenance of properties and necessary plant extensions, the concern is said to have a demonstrated earning power. Demonstrated earning power is the best test of the Business Risk (q. v.) in passing upon an application for a loan.

EARNINGS

Another term for profits. (See Gross Profits, Gross Revenue, Net Profits.)

EASED OFF

An expression which signifies a gradual and small decline, say fractional to one point, in security or commodity prices, without evidence of selling pressure or of enforced liquidation.

EASY MONEY

Money that can be obtained at low interest rates and without difficulty because of the existence of a plentiful supply of excess reserves (q. v.) among the banks. (See Money Market.)

ECONOMIC CYCLE

See Business Cycle.

ECONOMICS

The study of all phenomena relating to wealth and value. One of the social sciences that deals with economic goods, the creation of wealth through satisfaction of human wants, the explanations of wealth, value, and price, the distribution of income, the mechanism of exchange and markets, etc. It is variously defined in a brief way as the "science of wealth," the "science of business," "science of the development of material resources, and the production, preservation, and distribution of wealth," the "science of consumption, production, value and distribution, and exchange," etc.

Other definitions are: "The study of business in its social aspect; the word 'business' being used in its broadest sense, to cover all lawful ways of making a living" (Clay, H.: Economics for the General Reader). "Economics is the science which treats of those social phenomena that are due to the wealth-getting and wealth spending activities of man" (Ely, R. T.: Outlines of Economics). "Economics may be defined as the fundamental science of business and of social life. The term is used to describe the body of facts, principles, theories, and data of every kind that have to do with the production, distribution, and consumption of wealth" (Roberts, G. E.: Economics for Executives).

EDGE ACT

An act passed December 24, 1919, as Section 25 (a) of the Federal Reserve Act, with the title "Banking Corporations Authorized to do Foreign Banking Business." The purpose of this legislation was to permit the establishment under federal jurisdiction of foreign banking corporations to aid in the finance of and to stimulate foreign trade. Such a law had been advocated strongly by the Federal Reserve Board for some years, and represented the latest development in the historical evolution of American banking legislation to procure for American business and financial interests a larger participation in foreign trade and in the profits derived from lending our credit to foreign buyers.

The original Section 25 of the Federal Reserve Act was the first step taken in the interests of foreign trade upbuilding. By this section any National bank with a capital and surplus of one million dollars or more was permitted to establish branches in foreign countries and dependencies of the United States with the approval of the Federal Reserve Board. Prior to 1913 practically all the financing of foreign trade had been undertaken by British banks and discount houses, and only a small part of the business was participated in by a few private banks and discount houses in New York.

During World War I the need of further legislation to provide for our growing foreign trade became apparent, and Section 25 of the Federal Reserve Act was amended to permit National banks having legal capital requirements to invest in the capital stock of American banks or corporations already engaged in foreign banking. A few institutions engaging in foreign banking were organized under the banking laws of several of the states, but they were inadequate to provide for all the business. Accordingly the McLean-Platt Act, which permitted National banks without regard to the amount of their capital and surplus to purchase the capital stock of corporations of the type contemplated by the Edge Act, but not in excess of 5 per cent. of their capital and surplus, was passed.

The Edge Act provides for the federal incorporation and regulation of banks engaged in international banking, or in similar operations in a dependency or insular possession of the United States, either directly or through the agency, ownership or control of local institutions in such places. Although the line of demarcation is not

sharply drawn, two separate classes of corporations are contemplated by the Edge Act--one to deal in short-term paper, and the other to deal in long-term paper, bonds and mortgages, and with power to issue debentures.

Edge corporations are chartered by the Board of Governors of the Federal Reserve System for 20 years with a minimum capital of $2,000,000. They have power to deal in bonds; buy and sell all classes of commercial paper; to accept bills of exchange drawn upon them under the regulations and subject to the limitations imposed by the Federal Reserve Board of Governors; to issue letters of credit; to deal in foreign currencies and bullion; to receive deposits abroad subject to check; to receive deposits in the United States but not subject to check; to invest in the stock of another Edge bank; to establish branches and agencies abroad but not in the United States; to issue debentures, bonds and notes with the approval of the Board of Governors of the Federal Reserve System; and incidental powers permitted by the Board of Governors of the Federal Reserve System. (See Federal Reserve Act, Sec. 25a.)

EDGE CORPORATION

A foreign banking corporation organized under Section 25 (a) of the Federal Reserve Act. (See Edge Act.)

EDISON ELECTRIC INSTITUTE

The trade association of the principal electric light and power companies of the United States. As stated in its constitution, the objects of the institute are:

1. The advancement in the public service of the art of producing, transmitting and distributing electricity and the promotion of scientific research in such field.

2. The ascertainment and making available to the members and the public of factual information, data and statistics relating to the electric industry.

3. To aid its operating company members to generate and sell electric energy at the lowest possible price commensurate with safe and adequate service, giving due regard to the interests of consumer, investor and employee.

EGGS

For details of futures trading in eggs, see Chicago Mercantile Exchange.

EIGHTH STOCKS

In New York Stock Exchange trading, all odd lot trades are now executed 1/8th of a point away from the bid or offer of last round lot execution. (See Odd Lot, Odd Lot Brokers.)

ELASTIC CURRENCY

Money which can be expanded or contracted according to commercial needs. Elasticity is one of the essential qualities of a good medium of exchange and a sound currency system should provide this characteristic. Before the Federal Reserve Act our currency system failed to provide for an elastic currency, but Federal Reserve notes, issued under the authority of the Federal Reserve Act, now supply the elastic element which is lacking in other forms of United States currency. Since Federal Reserve notes now represent the largest portion of our circulating medium, elasticity is imparted to the entire circulation. Elasticity is secured by basing the volume of circulating medium upon the volume of credit. Federal Reserve notes expand as business expands, as indicated by increased turnover of member bank deposits and demand for currency to meet withdrawals by drawing on free balances (excess reserves) at the Federal Reserve Banks. Likewise when business contracts, the volume of currency in excess of till requirements is turned in, excess reserves increased, and the excess of Federal Reserve notes withdrawn from circulation. (See Federal Reserve Notes.)

ELECTRIC POWER OUTPUT

Electric output in kilowatt hours is released weekly by the Edison Electric Institute, and is one of the basic business barometers of general business activity. During the twenty years 1926-1946, sales of electric power by private companies increased from 53 bullion kwh to 155 billion kwh, the latest 15-year period from 1932 to 1946 showing a particularly substantial growth of 300%. Average annual growth for the 20 years was about 7 1/2% annually, a rate which has been substantially exceeded in recent years--12% per year for the period 1938 to 1943 and for 1947, about 10% to 15% above 1946 output. (See Public Utility Industry.)

ELECTRIC LIGHT AND POWER INDUSTRY

See Public Utility Industry, Public Utility Regulation, Public Utility Stocks, Superpower.

ELECTROLYTIC COPPER

See Copper.

ELEVATOR RECEIPTS

A receipt issued by an elevator company to an owner of grain held in storage at an elevator. They are similar in all respects, e. g., legal status, negotiability, and collateral uses, with warehouse receipts. (See Warehouse Receipt.)

ELIGIBLE ACCEPTANCES

See Eligible Paper, Federal Reserve Board Regulations (Regulation A).

ELIGIBLE AGRICULTURAL PAPER

See Eligible Paper, Federal Reserve Board Regulations (Regulation A).

ELIGIBLE BILLS OF EXCHANGE

See Eligible Paper, Federal Reserve Board Regulations (Regulation A).

ELIGIBLE FOR REDISCOUNT

See Eligible Paper, Rediscount.

ELIGIBLE INVESTMENT FOR INSURANCE COMPANIES

See Insurance, Insurance Companies, Insurance Company Investments.

ELIGIBLE INVESTMENTS FOR SAVINGS BANKS

See Legal Investments for Savings Banks, Savings Banks.

ELIGIBLE INVESTMENTS FOR TRUST FUNDS

See Legal Investments for Trust Funds.

ELIGIBLE NOTES

See Eligible Paper, Federal Reserve Board Regulations (Regulation A).

ELIGIBLE PAPER

Generally speaking, to be eligible for rediscount at a Federal Reserve bank, a note, bill of exchange, or trade or bank acceptance must possess the following characteristics: (a) it must arise out of a commercial, industrial, or agricultural transaction, i. e., must be issued or drawn, or the proceeds must be used, for the production, purchase, carrying or marketing of goods (wares, merchandise, or agricultural products, including live stock) in one or more steps of the process of production, manufacture, or of distribution (see Commercial Paper); (b) it must not have a maturity exceeding 90 days, except that agricultural paper may have a maturity of nine months; (c) it must bear the member bank's indorsement; and (d) every application for rediscount must contain a certificate of eligibility, executed by the member bank. Aggregate of notes, drafts, and bills bearing the signature or indorsement of any one borrower, whether person, firm, company or corporation, rediscounted for any one member bank, whether state or national, must not exceed at any time, 10 per cent, of the unimpaired capital and surplus of such bank, this restriction, however, not applying to the discount of bills of exchange drawn in good faith against actually existing values. (See Federal Reserve Board Regulations, Regulation A.)

EMBEZZLEMENT

The fraudulent appropriation by a public officer, or any other person occupying a fiduciary capacity, of the property entrusted to him by virtue of his employment. Embezzlement is not to be confused with larceny or burglary, which imply a wrongful taking away of property belonging to another by trespass or assault. Embezzlement is a misdemeanor or felony, depending upon the value of the property, and is a statutory crime punishable by imprisonment.

EMERGENCY BANKING RELIEF ACT

An act passed March 9, 1933, which confirmed all previous proclamations of President Roosevelt and the then Secretary Woodin issued during the bank crisis that confronted the inauguration of the new Democratic administration. Vested in the President and made applicable to peace time emergencies the World War I powers of regulation over transactions in credit, currency, gold and silver, including foreign exchange, fixing maximum penalties of $10,000 fine and ten years' imprisonment for violators. Empowered the Secretary of the Treasury to require delivery at the Treasury of all gold and gold certificates held by anybody in the country. Authorized the President, without invoking the war powers, to fix restrictions on the banking business of Federal Reserve members.

Allowed the Comptroller of the Currency to appoint conservators for any national bank when considered necessary to conserve its assets; enabled the conservator to set aside for withdrawal by depositors on a ratable basis such amount as the Comptroller decided might be safely used; permitted the Comptroller to allow banks under conservators to receive new deposits, which would be segregated and subject to withdrawal without restriction; and permitted the reorganization of national banks upon the approval of the Comptroller, and as the case might be, either of depositors of 75 per cent. of total deposits or holders of two-thirds of the outstanding stock, or both.

Provided for the issuance of preferred stock by national banks and for the purchase of preferred stock of national and State banks and for loans upon the security of such stock by the RFC when necessary to supply funds for organization or reorganization of such banks.

Authorized issuance of Federal Reserve Bank notes redeemable in lawful money of the United States, these notes to be issued to the value of 100 per cent. government obligations deposited as security and to the value of 90 per cent. of the notes, drafts, bills of exchange and bankers' acceptances deposited as security.

Permitted Federal Reserve Banks to make banknote advances to member banks on time limit of March 3, 1935.

Authorized Federal Reserve Banks to make ninety-day banknote advances to any individual, partnership or corporation on promissory notes secured by Federal obligations. (See New Deal.)

EMERGENCY CURRENCY

Before the Federal Reserve System was in operation, it was sometimes necessary to resort to the issue of emergency currency in case of a sudden need for money, e. g., a severe panic. Notes issued by National banks under the Aldrich-Vreeland Act of 1908 were of this type. The New York Clearing House banks, also, through the New York Clearing House Association, were compelled in six different crises, the last being in 1907, to issue clearing house loan certificates. These certificates were used only among the members of the New York Clearing House, but were effective in increasing the supply of money by enabling the banks to settle inter-bank transactions. (See Clearing House Loan Certificates.)

EMPHYTEUTIC LEASE

The name of a contract in the nature of a perpetual lease by which the owner of an uncultivated piece of land granted it to another either in perpetuity or for a long time on condition that he should improve it, by building on, planting or cultivating it and should pay for it in annual rent, with the right to the grantee to alienate it or transmit it by descent to his heirs and under a condition that the grantor should never re-enter as long as the rent shall be paid to him by the grantee or his assigns.

EMPLOYEE STOCK OWNERSHIP

As inducements to good labor relations, improved labor efficiency, and reduced labor turnover, American corporations during the late '20s broadened stock ownership to include their employees under stock purchase plans providing for favorable terms, including prices below the market and provision for installment payments. Subsequently, however, the drastic 1929-1932 deflation in stock prices caused severe decline in the market price of the stock below subscription price, leading to dissatisfaction and friction over the necessity for continuing payments under such then unfavorable terms. Accordingly, many corporations offered to repurchase the stock involved at original contract price and thus eliminate the employee stock purchase account altogether, while others made substantial adjustments in the subscription price, and still others sought by loans to employees on liberal terms to induce employees to complete their original commitments. Most corporations which encountered such difficulties were glad to terminate the employee stock purchase program at the earliest opportunity.

Although many corporations have thus abandoned the

idea of selling stock to employees, the larger corporations, especially public utilities, still consider this a suitable source of improved employee relations. A typical modern Employees' Stock Plan is that of the American Telephone & Telegraph Company. Under the Plan approved by stockholders in October, 1946, the company in September, 1947 offered stock to its own employees and employees of subsidiaries, excepting officers, at the rate of one share for each full $500 of annual basic rate of pay as of August 31, 1947. The maximum subscription for any one employee was limited to 50 shares. Elections to purchase more than 1,430,000 shares were received.

EMPLOYMENT STATISTICS

Employment, the most important single factor in the economy, is measured by two principal types of statistics, as classified by the Statistical Abstract of The United States: 1. Those compiled from the "population approach", which includes data from the Census of Population and the Monthly Report on the Labor Force of the Bureau of the Census; and 2. those obtained by the "establishment approach", including data from the monthly series of the Bureau of Agricultural Economics of the Department of Agriculture, and the Bureau of Labor Statistics.

Statistics on the labor force data of population are estimated by the Bureau of the Census monthly after obtaining sample information by interviews of households. The labor force as now defined includes persons 14 years old and over who had a job or were seeking one during the specified period. As of January, 1948, the total civilian labor force of the United States was estimated at 59,214,000 persons, of whom 57,149,000 were employed and 2,065,000 unemployed. In June, 1947, total civilian employment exceeded 60,000,000 for the first time in United States history. Average for 1947 was 58,000,000, nearly 3,000,000 above 1946 and more than 10,000,000 above 1940 and 1929. Unemployment reached a low of 1,621,000 for 1947 in November, 1947, as compared with lows on the average of 670,000 for 1944 and 1,040,000 for 1945.

The establishment type statistical series are available for both agricultural and non-agricultural industries, as are the estimates of the Bureau of the Census. Agricultural employment was estimated at 7,060,000 persons for January, 1948, as compared with 50,089,000 persons in non-agricultural industries, based on the Bureau of the Census figures. Agricultural employment figures also have been issued since 1909 by the Department of Agriculture. The monthly estimates of employment in non-agricultural establishments prepared by the Bureau of Labor Statistics are based on voluntary reports from about 150,000 establishments in 154 manufacturing industries and selected non-manufacturing industries, supplemented by data from other Government agencies.

As of January, 1948, total employment in non-agricultural establishments, as estimated by the Bureau of Labor Statistics and adjusted by the Board of Governors of the Federal Reserve System, was 42,953,000 unadjusted and 43,411,000 adjusted for seasonal variation. Since 1940, the employment level has risen about 12,000,000 or approximately one-third, all industry groups except mining participating in the gain.

Agricultural employment averaged about 8,300,000 persons for 1947, as compared with 9,500,000 in 1940 and 10,400,000 in 1929. During this period, farm production increased approximately 6% between 1929 and 1940, and 16% between 1940 and 1947, so that the productivity per worker in agriculture, as indicated by these Department of Agriculture figures, has increased substantially.

ENABLING ACT

A general term for legislation which permits communities or districts to organize into an association or district for the purpose of financing and constructing some new public improvement, which does not affect any given civil subdivision. Thus districts are organized to provide funds for building schools, sewers, drainage projects, etc., and under "Enabling Acts" it is possible for such districts to issue bonds, and to levy taxes for their repayment.

The term also applies to legislation which enables a bank, corporation, association, or community to take advantage of an alternative method of achieving a certain result. Thus, many states have enacted laws which permit state banks and trust companies to join the Federal Reserve System, and to maintain cash reserves as required by the Federal Reserve Act instead of the requirements of the state banking laws.

ENCUMBRANCE

A claim or lien, such as a mortgage upon real property, thereby diminishing the owner's equity in the property.

ENDORSED BONDS

See Indorsed Bonds.

ENDORSEMENT

See Indorsement.

ENDOWMENT INSURANCE

A form of life insurance which combines insurance with compulsory saving. It differs from ordinary life insurance in that the policy matures and becomes a claim at a fixed time, say 20 or 30 years after the initial premium is paid, and after which no further premium are payable, instead of becoming payable only upon the contingency of death.

The advantage of an endowment policy is that it may be made to mature at an age when the policy holder or beneficiary has passed the income-producing period. (See Insurance.)

ENFORCED LIQUIDATION

See Forced Liquidation.

ENGINEER'S CERTIFICATE

A statement signed by an engineer (usually an engineering firm) certifying that he has made an examination of the physical properties of a railroad, public utility or other business, and that they are in the condition which he thereupon describes. Usually the chief purpose of the engineer's examination and report is to determine whether the properties are adequate for present requirements, or to what extent they are adequate for future requirements, or if not, what expenditures are needed. Such engineering surveys are requisite for proper reorganization of distressed properties.

ENGINEER'S REPORT

A report rendered by an engineer concerning the physical condition of a property (usually a railroad or

public utility) which he has inspected with particular reference to its needs, improvements, etc., and whether it furnishes an adequate basis as security for further debt. (See Engineer's Certificate.)

ENGLISH BANKING SYSTEM

See Bank of England, Joint-Stock Banks.

ENGLISH MONEY TABLE

Copper Coins:

Symbol	Name	British Value
1/4d.	Farthing (rare)	1/4 penny
1/2d.	Halfpenny	1/2 penny
1d.	Penny	1 penny
3d.	Threepence (rare)	3 pence
Silver Coins:		
3d.	Threepence (rare in cities)	3 pence
6d.	Sixpence	6 pence
1s.	Shilling	12 pence
2s.	Florin (rare)	2 shillings
2s. 6d.	Half crown	2 1/2 shillings
5s.	Crown (rare)	5 shillings
Paper Currency:		
10s.	10 shilling note	10 shillings, or 1/2 pound
1	Pound note	20 shillings
5	5-Pound note	5 pounds

(See Foreign Moneys--England.)

EQUAL COVERAGE

A protective clause in a corporate indenture providing that in the case of subsequent issues of bonds, the subject bonds shall be entitled to the same security as that of the subsequent issues. Such a clause, in the case of debentures (unsecured obligations) will result in such debentures acquiring a secured status as the result of subsequent issuance of mortgage bonds. (See Debenture Bonds.)

EQUALIZATION FUND

See Exchange Equalization Fund.

EQUIPMENT BONDS. (NOTES)

See Equipment Trust.

EQUIPMENT TRUST

A trust created to own and lease railroad equipment. On account of the large amount of fixed assets which a railroad owns and the difficulty of raising capital to purchase equipment outright, locomotives, cars, and all forms of rolling stock are often purchased by mortgaging the equipment and selling securities based upon the mortgage. The mortgage is placed in the hands of a trustee and it, rather than the rolling stock itself, becomes the security for the equipment bonds, notes or certificates issued there-against. Equipment trust securities are considered good investments, provided the amount of the certificates is not too great a proportion of the cost of the equipment, that there is some provision in the mortgage for the upkeep of the equipment, that the earning power of the equipment will be sufficient to pay off the securities, and that the maturity of the securities is well within the service life of the equipment, their ultimate security.

Under the so-called "Philadelphia" plan, the rolling stock is leased to the railroad with the provision that stipulated rentals be paid to the trustee for the lessor. Eventually, through a series of rental payments, the principal of the obligation is paid off and the equipment becomes the property of the railroad.

The "Philadelphia" plan, under which many equipment trust obligations are currently issued was introduced originally in Pennsylvania for the circumvention of laws existing in that state declaring the illegality of conditional sale of railroad equipment, the latter being considered personal property.

Under this plan of purchasing railroad equipment, the railroad merely leases the property from an appointed trustee, which maintains absolute title throughout the term of contract and until interest and principal of last outstanding certificate have been extinguished when title passes to the railroad company. The essence of the plan is that legally construed the relationship between the trustee and the railroad company is that of lessor and lessee. Numerous legal decisions have been rendered in Pennsylvania to the effect that where possession of personal property passes under contract of lease the inclusion of a supplementary agreement that upon the payment of a certain sum title will become vested in transferee does not convert the lease into a conditional sale or invalidate the bailment contract.

Under the "conditional sale" or "New York" plan, the title to the equipment purchased with borrowed funds does not pass to the railroad until the last series of the obligation has been retired; that is to say, the equipment is sold by the investors in the equipment trusts to the railroad conditionally. The equipment is used by the railroad, but full legal title is vested in the trustee for the benefit of the trust certif icate holders, and the road must comply with the terms of the agreement governing maintenance. In addition the equipment is definitely marked as the property of the trustee, and careful record of each car and locomotive is kept. If the railroad defaults in interest or principal payments, the trustee may take possession of the equipment and sell it to other roads who are constantly in the market, as a means of raising funds with which to retire the equipment obligations.

Differences in the conditional-sale and the "Philadelphia" plan do not affect greatly the matter of quality, being little more than a legal distinction. Issues in large blocks are constantly offered under both plans, but the latter scheme, if anything, has found greater favor. So far as technical provisions of any equipment issue go, other than these legal distinctions, there is no intrinsic difference between bonds put out under the two plans. Most equipment trusts run from ten to fifteen years, mature serially in amounts calculated to reduce the amount outstanding as the properties depreciate in value, interest is payable twice annually, and sales are made over the counter on a yield basis.

Equipment trust certificates are issued by practically all American railroad companies as the least expensive method of financing equipment purchases. Annual or semi-annual instalments simplify the matter of meeting maturities. These certificates have a ready market, and are a favorite form of investments for banks be-

cause of the good security, serial maturities, and low risk.

EQUIPMENT TRUST CERTIFICATES

See Equipment Trust.

EQUITY

This term has three meanings:

(1) In Anglo-American legal parlance the administration of justice, not through the inflexible procedures of the law courts, but through the principles of equitable justice developed by Chancery. Thus there are Courts of Law and Courts of Equity and it is possible to bring an action, and obtain specific performance or other special relief through a Court of Equity when an adequate remedy is not available in a Court of Law

(2) In accounting and finance, net ownership, i. e., the extent of the owner's right in his property above all claims and liens against it expressed in money value. Thus the equity of the stockholders in a railroad corporation is represented by the value of the railroad property in excess of the claims of all creditors, including bond and note-holders, secured and unsecured, and all current indebtedness.

(3) In margin buying, the customer's equity is the present market value of his securities less the debit balance in his account, i. e., the sum borrowed from the broker to enable the customer to make the purchase.

EQUITY EARNINGS

First read Direct Earnings.

Equity earnings, also called indirect, unreported, or undisclosed earnings, are that part of the surplus earnings of a subsidiary company over and above dividend payments not reported by the parent company. Most of the large corporations hold or control through a majority, joint (half, third, quarter, etc.) or minority stock ownership in subsidiary or affiliated companies. Unless the ownership of such subsidiary is a majority interest, the parent company cannot under proper accounting principles consolidate the earnings of a subsidiary or subsidiaries in the income account of the parent company but only such part of earnings as may be actually paid to the parent organization as dividends. When earnings of subsidiaries are consolidated in the income account of the parent organization, the proportion of earnings belonging to the minority interest must be deducted.

Under the Internal Revenue Code, and subject to Regulations of the Commissioner, corporations have the privilege of making consolidated income tax returns for the taxable year in lieu of separate returns. The Code specifically defines includible corporations as those in which the common parent corporation owns directly stock possessing at least 95% of the voting power of all classes of stock and at least 95% of each class of the non-voting stock of at least one of the other includible corporations. "Stock" does not include non-voting stock which is limited and preferred as to dividends.

To illustrate the nature of equity earnings, the following example is given. A parent company owns 800,000 shares of a subsidiary having 1,000,000 shares (its sole capitalization) outstanding. The subsidiary earns $5,000,000 in a given year and pays $3 in dividends, or $3,000,000. The parent company thereby receives $2,400,000 from its subsidiary which is taken up in the parent company's income account and reported accordingly. However, such a report would fail to disclose full earnings since the surplus earnings in excess of the subsidiary's dividend payment is not taken into account. Equity earnings of the parent company for the year in question are equal to its proportionate ownership in the $2,000,000 earned but not disbursed. This proportionate interest or equity earnings is 80 per cent, of $2,000,000, or $1,600,000. Such equity earnings must be added to the actual earnings of the parent company to measure its true earning power.

ERRATIC

An expression used to describe the stock and commodity markets when prices are uncertain, first rising, then falling, or vice versa, in succession, without a definite trend.

ERROR ACCOUNT

A suspense account in brokers' offices to which errors in executions involving a loss are charged and to which any possible profits are credited.

ESCROW

A written agreement, e.g., deed, bond, or other paper, entered into among three parties, and deposited for safe-keeping with the third party as custodian to be delivered by the latter only upon the performance or fulfillment of some condition. The custodian or depository is obliged to follow strictly the terms of the agreement respecting the other parties.

ESCROW BONDS

Bonds held under an option to purchase or subject to some other condition. The bonds of an authorized issue, but not yet issued, being held by a trustee until additional funds are needed for improvements or expansion. Such bonds can be released only upon compliance with the terms of the mortgage provisions governing the issuance of additional bonds. Thus escrow bonds are that part of an authorized issue which remains unissued with the trustee until new financing is to be accomplished. (See Escrow.)

ESCUDO

See Foreign Moneys—Portugal.

ESTATE

Unqualified, this term means one's interest in land. Commonly, the term is qualified by the word "real," which is substantially identical with Real Property (q. v.) or Real Estate (q. v.) respectively.

In New York, estates in real property are classified into: estates of inheritance, estates for life, estates for years, estates at will, and at sufferance. This statutory classification is contained in Section 30, Real Property Law.

ESTATE TAXES

Estate taxes are excises upon the right of transfer of property from the decedent to his heirs, legatees and devisees. Federal estate taxes were first enacted in the act of September 8, 1916, and at present are found in Chapter 3 of the Internal Revenue Code.

Succession or legacy taxes are taxes upon the right to receive, and are governed by State laws, Nevada being the only State which does not impose death transfer taxes. Generally, State estate taxes apply to real

property and tangible personal property having a situs in the state of domicile as well as intangible personal property whether or not located in the State of domicile. Multiple State taxation, therefore, may occur where more than one State claims domicile, and also, in the absence of reciprocal exemption provisions in the State's laws, where a State claims the right to tax intangible personalty located within its borders of a decedent domiciled in another State. This has been allowed by the U. S. Supreme Court where the State can show benefits conferred, such as the protection of its laws for a trust of intangible personalty (usually stocks and bonds) set up under its laws. (See Inheritance Taxes.)

EUROPEAN RECOVERY PROGRAM

On April 2, 1948, the Foreign Assistance Act of 1948 became law, setting up the Economic Cooperation Administration with a stated term to January 30, 1952, to carry out the European Recovery Program or "Marshall Plan", named after Secretary of State Marshall. After Secretary Marshall in June, 1947 made a proposal of substantial American economic aid to Europe for recovery and reconstruction, sixteen European nations met in Paris and drew up the "Sixteen Nations Report of the Paris Conference", which outlined their needs and requirements as $20.4 billion for the four years 1948-1951. As enacted in the Foreign Assistance Act, total authorized aid was $5.3 billion for a 12-months program, consisting of authorized appropriation of $4.3 billion and a $1 billion lending authorization for aid to the sixteen European nations and Western Germany.

To administer the program, the Economic Cooperation Administration was set up under the European Cooperation Administrator, as a Governmental agency. The Administrator becomes a member of the National Advisory Council on International Monetary and Financial Problems, whose membership includes the Secretary of the Treasury, Secretary of State, Secretary of Commerce, President of the Export-Import Bank and the Chairman of the Board of Governors of the Federal Reserve System. Policy, as announced by the Administrator, is to make the widest possible use of existing Government agencies in running the Program. The power of export controls remains with the Secretary of Commerce under the Act, and the President is to settle any differences between the Administrator and the Commerce Secretary in this connection. Aid will be supplied in the form of direct grants, loans and long term credits. Letters of commitment by the Administrator may be hypothecated or assigned and become binding obligations upon the United States. The Act provides that the Administrator will seek to stabilize exchange rates and remove burdensome trade restrictions, quotas and other trade barriers. Provision is also made for a program of guarantees for American investments abroad, limited to $300 million in the first year, involving projects aiding the European Recovery Program. These guarantees may be for 14 years and assure the convertibility of local currencies into dollars.

The magnitude of the Program is indicated by a comparison of actual exports in 1946 to the nations involved of $3.5 billion, with the Sixteen Nations Report estimate of $6 billion for the first year and the total authorization of $5.3 billion for the first year by the Act. The following shipments of over $4 1/2 billion of American production are planned for the first year, of which not less than 50% shall be shipped in American bottoms:

Food and food products, 12,000,000 tons, costing $2 1/2 billion; tobacco and cotton, 1,500,000 tons, $1 billion; agricultural machinery, coal mining machinery, trucks, freight cars, etc., $300 million; iron ore and oil, 2,500,000 tons, $200 million; coal, petroleum and other raw and semi-finished materials, $1 billion.

The sixteen European nations, members of the European Economic Cooperation Committee, which will receive this aid are: Austria, Belgium, Denmark, France, Greece, Iceland, Ireland, Italy, Luxembourg, The Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey and the United Kingdom, in addition to the Western Zone of Germany.

In addition to the specific authorizations for the administration by the Economic Cooperation Administration, the Foreign Assistance Act also authorized the Reconstruction Finance Corporation to advance $1 billion for the European Recovery Program as well as direct grants by the RFC of $50 million for military aid to Greece and Turkey and $50 million to China, the latter grants being supplementary to the authorization of $275 million credits for Greece and Turkey, $463 million for China and $60 million for the care of European children contained in the Act.

In addition to the economic implications of the Program, the politicalconsiderations involved will call for close coordination of distribution of aid with American foreign policy.

(See National Advisory Council; Reconstruction Finance Corporation.)

EVEN LOTS

Board lots; full lots. Lots or number of shares of stock sold in the usual trading unit of 100 shares, or multiple thereof, e. g., 100, 200, 300, etc.

EVENING UP

A stock market expression to indicate the process which occurs when holders of long stock sell, and short sellers purchase, to cover their contracts simultaneously, so that the demand and supply of stocks is about equal and price changes are without significance. Financial reviewers often refer to the "usual week-end evening-up process," indicating that operators have disposed of their holdings or covered their contracts, not desiring to commit themselves over the week-end.

EX

Literally means out of, but in finance means without, e. g., Ex-Dividend (q. v.).

EX-ALL

Without all rights and privileges; stocks sold ex-all reserve all privileges, such as pending dividends, the right to subscribe for additional stock, or other advantages to the seller.

EXAMINATION PROCEDURE

Because of the necessity for a simultaneous bank examination, to prevent manipulations and adjustments from one account to another while the examination is in progress, it is necessary to examine all assets and liabilities in such manner that it is impossible to transfer items to conceal differences or shortages. Accordingly, a sufficient number of examiners, unannounced and unscheduled, will enter at about closing time, and engage in the following operations, as summarized from Mil-

let's Bank Audits and Examinations: 1. Assign men to count cash; 2. Seal cash which cannot be counted; 3. Seal all files and safes containing items which can be manipulated; 4. Verify exchanges; 5. Secure trial balance of general ledger; 6. Run ledgers; 7. Send out letters of verification on various items; 8. List loans; 9. Check out and prove collateral; 10. Inspect and list investments; and 11. Inspect and list mortgages.

EXAMINER

See Bank Examiners.

EXCESS LOANS

Loans made by a bank to one customer in excess of the legal maximum amount. Directors of National banks who make or assent to the making of loans in excess of the legal limit specified in Section 5200, Revised Statutes, have been held by court decisions to be personally liable for losses that may result to a bank as a consequence of making loans to one customer in excess of the legal limit. (See Limitations on Bank Loans.)

EXCESS PROFITS TAX

An excess profits tax upon corporations was in effect for the taxable years 1940-1945, inclusive, for the purpose of recapturing the large profits made under Wartime conditions. The excess profits tax was repealed by the Revenue Act of 1945. Although the nominal rates were graduated to high levels, the excess profits tax was imposed upon very reasonable terms, being calculated on a base after deduction for nominal specific exemptions, substantial excess profits credit based on optional average earnings for 1936-1939 as base period or invested capital basis, and after deduction also for unused excess profits credit for two preceding years. (See Taxes.)

EXCESS RESERVES

The portion of a bank's reserves against deposits in excess of the amount required by law, whether deposited with a Federal Reserve bank, a designated depository, or in its own vaults.

The volume and distribution of excess reserves is the primary determinant of money rates, as banks are principal factors in the money market, and their excess reserves constitute their supply of funds available for conversion into earning assets, including money market items. Mere volume of excess reserves, however, will not induce banks to keep fully invested, as confidence and stability of conditions must exist concurrent with the available reserves. Normally, however, when banks have excess reserves, they like to keep well invested. Consequently, the manipulation of the volume and distribution of excess reserves has been one of the principal activities of the Treasury and the Federal Reserve System in recent years in keeping money rates low and assuring the ability of the banks to subscribe to additional offerings of Government securities.

The power to expand loans and investments for the banking system is the reciprocal of the legal reserve requirements. Thus, with reserve requirements averaging about 15% for the Federal Reserve System, the banks as a whole have the power to expand loans and investments about 6 2/3 times for every dollar of reserves, bearing in mind that expansion in earning assets creates deposits. Such expansion is influenced not only by the availability of the excess reserves, but also by the methods of deriving those reserves.

In order to show the factors which influence increase or decrease in the supply and use of member bank reserves, the Board of Governors of the Federal Reserve System and the Federal Reserve Banks developed the table "Supply and Use of Member Bank Reserve Funds", which is published every Friday based on figures as of the preceding Wednesday. As of a recent date, the table appeared as follows:

Supply and Use of Member Bank Reserve Funds
(millions)

Item:	April 23,1947-April 21,1948 Changes that added to reserves	Changes that reduced reserves
Items, increases in which add to reserves:		
Reserve Bank credit:		
U.S.Govt. securities		−1,435
Loans, discounts and advances	+96	
Other Reserve Bank Credit	+76	
Gold stock	+2,538	
Treasury currency		- −1
Items, increases in which reduce reserves:		
Money in circulation	−387	
Treasury cash	−2	
Treasury deposits with Federal Reserve Banks		+801
Non-member deposits and other Federal Reserve accounts	−163	
Totals	3,262	2,237
Net change in member bank reserve balances		+1,025
Net change in estimated required reserves		+ 963
Net change in estimated excess reserves *		+ . 62

*Estimated excess reserves were $720 million April 21, 1948, compared with $658 million April 23, 1947.

In construction, the table represents a consolidation of figures from the combined statement of the 12 Federal Reserve Banks and from the circulation statement of the Treasury which affect member bank reserve balances. From the Federal Reserve combined statement, the table draws its figures on Federal Reserve Bank credit--bills discounted, bills bought, holdings of U. S. Government securities, industrial advances and other Federal Reserve credit. Also from the Federal Reserve combined statement come the figures on Treasury deposits with the Federal Reserve Banks, non-member deposits and other Federal Reserve accounts. The Federal Reserve Bank combined statements also furnish the figure for total member bank reserve balances.

The circulation statement of the Treasury furnishes the table with its figures on monetary gold stock, money in circulation, Treasury currency outstanding and Treasury cash.

Thus consolidated, these factors give a summary of the influences working to increase or decrease member bank reserve balances, aside from expansion or contraction in loans and investments by the member banks themselves. Expansion in loans and investments in turn is influenced by the volume of excess reserves, which is estimated weekly by the Federal Reserve Board of

Governors and published simultaneously with the Supply and Use table.

Factors which increase member bank reserve balances are: increases in Federal Reserve Bank credit, gold stock and Treasury currency; and decreases in: money in circulation, Treasury cash, Treasury deposits with Federal Reserve Banks, non-member deposits, and other Federal Reserve accounts. Factors which decrease member bank reserve balances are the opposite of the above--reduction in Federal Reserve credit, gold stock and Treasury currency, and increased circulation, Treasury cash and deposits, and non-member and other Federal Reserve accounts. At any one time, the increases or decreases are various, but each item's fluctuation has a positive or negative effect on member bank reserve balances.

The "supply" or sources of member bank reserve balances are Federal Reserve Bank credit, gold stock and Treasury currency. The "uses" are money in circulation, Treasury cash and deposits, and non-member deposits and other Federal Reserve accounts. Thus, an equation is implied, the Federal Reserve Bank credit, gold stock and Treasury currency equaling the money in circulation, Treasury cash and deposits, non-member bank and other Federal Reserve accounts, plus the total of member bank reserve balances.

The credit and money market policies of the Board of Governors of the Federal Reserve System and the Treasury, in so far as they are concerned with member bank reserve balances, are actively indicated by certain of the "Supply and Use" factors. The powers of the Board of Governors over member bank reserve balances may be summarized as follows:

1. The power, under the Banking Act of 1935, to increase or decrease legal reserve requirements against deposits within the range of reserve requirements existing on August 23, 1935 to twice those requirements. The reserve requirements on August 23, 1935 were 13%, 10% and 7% against demand deposits, according to central reserve city, reserve city, and country bank classification for member banks; and 3% against time deposits, for all banks. As of February 27, 1948, the power to increase reserve requirements has been largely exhausted, as reserve requirements are 22%, 20% and 14% against demand deposits; and 6% against time deposits.

2. The power to engage in open market operations in Government securities and bills; and to make industrial advances to member banks on various types of paper or any "sound" assets.

3. The power to raise or lower rediscount rates and adjust bill buying rates.

Under current conditions, therefore, open market operations in Government securities are the most potent power of the Federal Reserve System, as indicated by the Supply and Use table. As a practical matter, however, this power cannot be exercised freely as a weapon against credit inflation, in view of the large volume of Government security holdings by member banks, the necessity for orderly markets in Government securities, and financing needs of the Treasury.

Powers of the Treasury affecting member bank reserve balances may be summarized as follows:

1. Control of the Stabilization Fund, with original resources of $1.8 billion and deposits of $200 million in the Federal Reserve Banks, with power to buy and sell Government securities, gold and foreign exchange.

2. The power to "sterilize" gold imports, which ordinarily would add to member bank reserve balances, by borrowing amounts in the money market equal to incoming gold. Conversely, the power to monetize or "de-sterilize" gold credit or gold certificates from the inactive gold fund.

3. Power to print gold and silver certificates against the gold and silver holdings, add to Treasury deposits in the Federal Reserve Banks, and spend from such deposits, thereby adding to member bank deposits and reserve balances.

4. The Treasury's borrowing and spending operations, which affect the volume and distribution of member bank reserve balances.

The factors in the Supply and Use table reflecting Treasury policy and operations are Treasury cash and deposits with the Federal Reserve Banks as well as Treasury currency outstanding.

On the other hand, money in circulation, gold imports or exports in the absence of sterilization or control measures, and fluctuation in non-member deposits are, mechanically speaking, beyond direct influence of the policies of the Board of Governors and the Treasury.

(See Reserves.)

EXCHANGE

See Domestic Exchange, Commodity Exchanges, Foreign Exchange, Produce Exchanges, Stock Exchange.

EXCHANGE EQUALIZATION FUND

An account created for use by the British treasury, following suspension of gold payments by England on September 21, 1931. Originally this fund was 175,000,000 pounds, but subsequently two additional appropriations increased total authorized funds up to 575,000,000 pounds. In September, 1939, practically all the gold in the Issue Department of the Bank of England was transferred to the Fund. The Currency Defence Act of September 1, 1939 removed the statutory limit on the size of the Fund, authorizing it to hold foreign securities and to utilize its assets for the additional function of financing War purchases abroad. It is administered by the British Exchange Control for the purpose of preventing undue fluctuations in sterling relative to other currencies. It provides, by means of purchase or sale of other currencies or gold, a measure of support to sterling when under pressure, and a measure of resistance should the rate rise too rapidly. Operations are necessarily secret. (See Stabilization Fund.)

Bibliography

N. F. Hall: The Exchange Equalization Account, 1935.

EXCHANGE OF MONEY

See Money, Redemption of Money.

EXCHANGE RATES

See Clearing House Exchange Rates, Foreign Exchange, Foreign Moneys.

EXCHANGES

This term has two meanings:

(1) In banking practice, checks, drafts, matured acceptances, notes, etc., presented for collection through a clearing house are known as Exchanges, or Clearing House Exchanges.

(2) The English term for the market for foreign currencies and bills of exchange. What is known in the United States as foreign exchange is known in England as foreign exchanges.

EXCHANGES FOR CLEARING HOUSE

An account appearing in a bank's general ledger and financial statement representing the amount of checks drawn upon clearing house banks and collectible on the following business day through the clearing house.

EXCHEQUER

The official title of the account of the Chancellor of the Exchequer of the United Kingdom with the Bank of England. Its statutory title is His Majesty's Exchequer. It is a central account and not directly in contact with the detailed revenue and expenditure accounts. It corresponds in the United States to our Treasury Department accounts with the Federal Reserve banks. It is the account into which the gross revenues of the country are paid and from which expenditures are drawn.

EXCHEQUER BILLS

The name formerly given to the promissory notes of the British Government. They were first issued in 1696 and constituted the chief floating debt of England. They have since been superseded by Treasury Bills (q. v.).

EXCHEQUER BONDS

Bonds issued under the authority of Acts of the British Parliament by the Commissioners of His Majecty's Treasury. Exchequer bonds have a definite term not to exceed six years. A current issue are the Exchequer 1 3/4s of 1950, issued in November, 1944 and maturing February 15, 1950.

EXCISES

Indirect taxes levied upon rights or privileges, such as the right to conduct business, franchises, licenses, etc. In accordance with Article 1, Section 8, clause 1 of the U. S. Constitution, Federal excises shall be uniform throughout the United States. Because they are measured by the money value of sales or commodities involved, excises are frequently considered to be levied on the sales or commodities, but it is the intangible right or privilege which is taxed. Excises are not direct taxes, which under the U. S. Constitution must be apportioned.

EX-COUPON

Without the next maturing interest coupon attached. Bonds sold ex-coupon have the next maturing coupon already detached.

EX-DIVIDEND

Without the dividend, meaning that the right to the pending or accrued dividend is reserved to the seller. The ex-dividend date is the first day the stock sells without the dividend, and on which the quotation for the stock usually measures a decline equal to the value of the dividend. Dividends are most usually paid quarterly, although sometimes monthly, semi-annually, and annually. Suppose the board of directors declare a quarterly dividend of $1.50 (at the annual rate of 6 per cent.) on March 25 payable April 30 to stockholders of record on April 15. This dividend goes to the holder of the stock in whose name it is recorded on the books of the company on April 15, which is called the "record date." On that date, all stockholders whose names appear on the stock book of the corporation will be mailed the dividend. Corporations, especially the larger ones, generally "close the books" as of the record date for the purpose of mailing the dividend checks to the holders of record. The "books close" date, however, is not the ex-dividend date.

The ex-dividend date is determined by the delivery plan of the securities market in which the stock is sold. Effective on August 29, 1946, the majority of stock exchanges in the United States and the National Association of Securities Dealers adopted the 3-day delivery plan. Under this plan, transactions "regular way" are settled on the third full business day following the day of the transaction. Therefore, stocks sell ex-dividend on the second full business day preceding the holders of record date. If this record date is a holiday or a Saturday, the ex-dividend date is the third preceding full business day.

In the absence of any express or implied agreement to abide by the ex-dividend rules of a particular securities market, or to specify who shall be entitled to the dividend, the rule in law is that as between the seller and the buyer, the seller is entitled to the dividend. (See Deliveries.)

EXECUTION

The carrying into effect of an order. Also, the manner in which an order to buy or sell securities is handled. If, in selling securities "at the market," a broker offers them down unduly in order to find a taker, he is said to have given a bad execution. If, on the other hand, the broker is able to obtain a good price in view of market conditions, he is said to have given a good execution.

EXECUTOR

An individual or trust company appointed in a will by the Testator (q. v.) to carry out, after the death of the testator, the expressed instructions for the disposal of his property as provided in the Will (q. v.). When a person dies intestate, i. e., without leaving a will, his property is distributed in accordance with the laws of descent and distribution of the state in which the intestate is a resident. Settlement of the estate of an intestate is conducted by an Administrator (q.v.), who is appointed by the court. Duties of the executor and administrator are similar, i. e., to settle the affairs of the deceased and distribute the real and personal property to the rightful heirs.

The following is a summary, of the duties of an executor: (1) offer the will for probate in the probate (surrogate's) court, prove its execution, and defend the will if contested, (2) secure letters testamentary (the document giving the executor the right to act), (3) take possession of the property, review all the assets, examine books of account, ascertain bank balances, locate and check insurance policies, (4) notify interested parties in the estate, i. e., legatees, devisees, and heirs, (5) make a complete inventory of all assets, (6) have the property appraised and protected by insurance, (7) advertise for the presentation of claims, and after verification, pay them off in the order prescribed by law, (8) collect claims due to the deceased, (9) if there is a going business, manage it until such time as it can be sold or liquidated, (10)if the deceased was a member of a partnership, collect such interest, (11) if the deceased had a large or controlling interest in a corporation, give attention to its affairs by contact with officers and directors, until the stock can be disposed of, (12) keep accurate records of stocks, bonds, mortgages, and notes, and watch investments for bond calls, interest default,

and stock rights, (13) collect dividends, rents, interest, and insurance claims, (14) pay legacies and secure releases, (15) pay inheritance taxes due to the Federal government and the state of the decedent's residence, and taxes due any other state in which the deceased left taxable property, (16) verify trust clauses of the will, if any, and proceed accordingly, (17) after collecting all assets and paying all debts and expenses of the executorship, liquidate the residue of the estate, unless otherwise directed, and distribute to the persons entitled thereto, and (18) make final accounting to the court and obtain judicial discharge.

Executors are responsible for turning the proceeds of estates over to beneficiaries in the most advantageous condition. The law gives creditors of the estate a certain time within which to file claims. Executors perform their work under the will, letters testamentary, instructions from the court, and the statutes governing descent and distribution of property. Much of the proceedings are technical and usually require advisory services of an attorney. In a large estate, conferences will be had with beneficiaries, creditors, debtors, bankers, brokers, investment houses, tax experts, insurance agents, mortgagors, landlords, tenants, etc. (See Administrator, Descent, Laws of, Testator, Trusts, Will.)

EXECUTRIX

The feminine form of Executor (q. v.).

EXEMPT SECURITY

A security which is exempt by Section 3 of the Securities Act of 1933 from all requirements of the Act, except the fraud provisions of Section 17.

As specified in the Act, exempt securities are:

1. Any security issued or guaranteed by the United States or any Territory thereof, or by the District of Columbia, or by any State of the United States, or by any political subdivision of a State or Territory, or by any public instrumentality of one or more States or Territories exercising an essential governmental function.
2. Any security issued or guaranteed by any corporation created and controlled or supervised by and acting as an instrumentality of the Government of the United States, pursuant to authority granted by the Congress of the United States.
3. Any security issued or guaranteed by any national bank, or by any banking institution organized under the laws of any State or Territory, the business of which is substantially confined to banking and is supervised by the State or territorial banking commission or similar official.
4. Any security issued by or representing an interest in or a direct obligation of a Federal Reserve Bank.
5. Any note, draft, bill of exchange, or banker's acceptance which arises out of a current transaction or the proceeds of which have been or are to be used for current transactions, and which has a maturity at time of issuance of not exceeding 9 months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited.
6. Securities issued by non-profit organizations.
7. Securities issued by building and loan or similar organizations, provided the withdrawal fee is not in excess of 3%.
8. Securities issued by common carriers subject to Section 20a of the Interstate Commerce Act.
9. Certificates issued by a receiver or by a trustee in bankruptcy, with court approval.
10. Insurance policies and annuity contracts issued by corporations subject to supervision of State insurance or banking commissioners.
11. Securities exchanged by an issuer with existing security holders exclusively, with no commission or other remuneration involved for soliciting the exchange.
12. Securities sold solely to residents of the State in which the issuer is incorporated and doing business.

(See Securities Act of 1933.)

EXHAUST PRICE

First read Margin.

One who carries securities on margin has only an equity or partial interest in the securities he is carrying. In case of a fall in prices which threaten the wiping out of the owner's equity or margin, the exhaust price is approached. In other words, the exhaust price is the price at which these securities would have to be sold entirely to obliterate the margin, or the price at which the broker would have to sell in order to protect himself from loss. Brokers compel their customers to furnish additional margin before the exhaust price is reached, or to enter a stop loss order which may be placed several points above the exhaust price.

(See Stop Loss Order.)

EX-INTEREST

Without interest; meaning that the next maturing coupon has been detached. The term is particularly reserved to use in reference to registered bonds.

EXPANSION

A period of business growth, i. e., of increased production and consumption, necessitating an increase in the quantity and rapidity of circulation of money, in the volume of credits, and usually higher prices. If unduly prolonged, expansion may lead to Inflation (q. v.). (See Business Cycle.)

EXPENSE FUND

A fund which the law requires to be created by the organizers of a non-stock or mutual savings bank to provide for current expenses until the bank operates upon a profitable basis, and to meet current interest charges upon deposits. The expense fund represents the savings bank's working capital when it begins operations. In New York state a savings bank must start with an expense fund of at least $5,000. (See Guaranty Fund.)

EXPENSES

Items of expenditure incurred in operating a business; outgo for all items that enter into costs of manufacture or merchandising; offsets against earnings and income. In a manufacturing business, expenses are divided in three classes: (1) manufacturing, (2) selling, and (3) general and administrative. Manufacturing expenses consist of cost of raw materials, wages and salaries of workers and plant foremen and superintendents, power, heat, light, rent, depreciation of machinery and plant, etc. Selling expenses consist of salaries of salesmen, traveling expenses of salesmen, advertising, shipping costs, etc. General administrative expenses consist of salaries of officers and clerical help, office supplies, telephone, telegraph, postage, depreciation of office equipment and furniture, etc. Accounting treatment of

expenses varies according to whether the books are kept on an accrual basis or actual receipts and disbursements (cash) basis. Prepaid expenses include such items as insurance and rent, paid in advance, only a portion of which were actually used during the period, the remainder being a deferred asset or deferred charge to expense.

The chief expenses of the typical member bank in recent years have been salaries and wages, and taxes. Other expenses include interest paid on deposits, printing and stationery, interest paid on borrowed money, etc. (See Member Bank Earnings and Expenses.)

EXPIRATION (EXPIRY) DATE

The date upon which the validity or privilege which may be exercised under a contract or document terminates. This term is usually employed in connection with a letter of credit, option, etc.

EXPORT BAR

Bars or ingots of pure gold, customarily used in making gold shipments for settlement of international balances. (See Gold Bars.)

EXPORT CREDIT

See Letters of Credit.

EXPORT-IMPORT BANK

Originally created by Executive Order of February 2, 1934 as a District of Columbia banking corporation, this Governmental banking agency became a permanent independent agency of the United States by legislation approved July 31, 1945.

Authorized capital stock of the bank is $1 billion. Outstanding loans and guaranties may not exceed 3 1/2 times the authorized capital. As of September 30, 1947, total assets were $1,803 million, consisting very largely of loans receivable, $1,789 million, represented by foreign loans, the bank's specialty. Net worth, all owned by the U. S. Government, totaled $1,613 million.

The principal function is to aid in the financing and facilitating of exports and imports and the exchange of commodities between the United States or any of its territories or insular possessions and any foreign country or its agents or nationals. The bank is authorized, to do a general banking business, including the making of loans, discount and rediscount or guarantee of notes, drafts, bills of exchange and other evidences of debt, and the participating in such. Policy, as stated in the Export-Import Bank Act of 1945, is that the bank should supplement and not compete with private capital, and that loans should be generally for specific purposes and offer reasonable assurance of payment.

Management is vested in a board of directors consisting of the Secretary of State (ex-officio) and four full time members appointed by the President by and with the advice and consent of the U. S. Senate, one of whom is designated by the President as chairman. The board of directors in turn is advised by an advisory board, consisting of the chairman of the bank, the Secretary of State, Secretary of the Treasury, Secretary of Commerce, and the chairman of the Board of Governors of the Federal Reserve System.

EXPORT LETTER OF CREDIT

See Letters of Credit.

EXPORT SPECIE POINT

See Gold Points.

EXPORT TRADE ACT

See Webb Act.

EXPRESS COMPANY MONEY ORDERS

Money orders or checks issued by an express company for remitting funds to another point by mail. They are a safe, convenient and economical means of transmitting money for those who have no checking account. They are similar in form, purpose and modus operandi to postal money orders issued by the Postoffice Department, but differ in that no written application is required, are payable at any office of the company, and pass from hand to hand by continuous indorsement, without limitation as to number. American Express money orders have no time limit, being good until paid. They may be issued in any amount. Rates for American Express Money Orders (1948) are as follows:

From $0.01 to $1.00--	5¢
From $1.01 to $5.00--	10¢
From $5.01 to $20.00--	15¢
From $20.01 to $100.00--	20¢
Over $100.00--at above rates.	

EXPRESS MONEY ORDERS

See Express Company Money Orders.

EX-RIGHTS

First read Rights.

Without rights. When stock is sold ex-rights all privileges are retained by or reserved to the seller.

EX-STOCK DIVIDEND

Without the stock dividend. When stock is sold ex-stock dividend, the pending stock dividend is retained as the property of the seller. (See Stock Dividend.)

EXTENDED BONDS

Bonds the payment of the principal of which is postponed. When the repayment of bonds cannot conveniently be met at maturity in cash the bondholders may be offered new bonds to take their place or the old bonds may be extended. In the latter case when the security behind them is not changed, the bonds are said to be extended or continued. Extended bonds are not to be confused with extension bonds. (See Continued Bonds, Extension Bonds.)

EXTENSION BONDS

Bonds similar to Divisional Bonds (q. v.), but the underlying mortgage of which does not necessarily coincide with the divisions of the issuing organization. Extension bonds usually are covered by railroad property which is a continuation or extension of the existing system. They are frequently secured not only by the extension property, but by a junior lien upon other portions of the property.

As an investment, the strength of extension bonds depends upon whether the extended property is a main line and essential to the handling of through traffic.

Extension bonds should not be confused with Extended Bonds (q. v.).

EXTERNAL BONDS (OR LOANS)

When a Government borrows money by floating a bond issue in a foreign country it is said to float an external loan and its bonds are external bonds. The principal and interest of such bonds are issued and payable in the

currency of the country in which the bonds are marketed and have the advantage of eliminating the risks of exchange fluctuations for the nationals of the country whose currency is used. Such loans are to be distinguished from Internal Bonds which the Government sells to investors within the country. (See Foreign Government Bonds, Internal Bonds.)

EXTINGUISHMENT FUND

Same as Sinking Fund (q. v.).

EXTRA DIVIDEND

An additional cash dividend paid out of earnings which are above the normal rate. Whenever dividends are paid out of profits earned at an extraordinary rate, the dividends should be earmarked as extra, so that the stockholders will understand that the additional dividend disbursement is not necessarily to be maintained, and therefore not to be regularly expected. It is a good rule of corporation finance that a regular dividend should not be increased unless there is reason to believe that it can be maintained. (See Dividend.)

FACE VALUE

Par value; the principal or nominal value appearing on a bond, note, coupon, piece of money, or other instrument. The face value of a bond is the amount at which the issuing organization contracts to repay it at maturity and is the basis upon which the cash interest rate is computed. While it is ordinarily the plan of an issuing organization to float bonds at a rate of interest attractive enough to justify their sale at approximately par, or at a slight discount, when placed on the market they fluctuate in accordance with money rates and in accordance with general business conditions and earnings. Whether a bond commands a premium or sells at a discount, the nearer it approaches maturity, the nearer the market value approximates its par value, until at the date of maturity, the two values should precisely coincide. Face value is not to be confused with market value, book value, intrinsic value, investment value, or trading value. (See Par Value, Value.)

FACTOR

A commission merchant or mercantile agent who has authority in his own name to sell, or consign for the purpose of sale, to buy and to advance or borrow money on goods as security, but acting for his principal. He is a middleman whose service is to bring the buyer and seller together and usually has a specialized knowledge of a certain market. He differs from a broker in that he usually has in his possession, or at least carries samples, of the goods he offers for sale. His profit usually consists of a commission, or the difference between the price for which the goods are sold and the price exacted by the principal. If the factor guarantees (for a consideration) the payment of the debts which arise out of the agency, the factor is known as a del credere agent. (See Agent.)

FACTOR OF SAFETY

Same as Margin of Safety (q. v.).

FAILURES

Business failures are the mortality in business. Failures are regarded as an important business barometer, although fundamentally they are results and effects of underlying business trends, rather than motivating causes. As may be expected, the number of failures tends to vary directly with the business cycle.

Statistics on business failures are prepared in detail by Dun & Bradstreet, Inc., which firm reports failures by industrial groups, by size of liabilities, by divisions of industry, in large cities, by Federal Reserve districts, by geographic regions, by states (United States), by provinces (Canada), etc. The Dun's Failure Index is also compiled and published regularly.

The business failures in the Dun & Bradstreet, Inc. record represent the number of concerns involved in court proceedings or voluntary actions which are likely to end in loss to creditors. These include discontinuances following assignment, voluntary or involuntary petitions in bankruptcy, attachment, execution, foreclosure, etc.; voluntary withdrawals from business with known loss to creditors; enterprises involved in court action, such as receivership; and since June, 1934, reorganization or rearrangement, which may or may not lead to discontinuance, as well as businesses making voluntary compromises with creditors out of court.

The totals for commercial enterprises in the Dun & Bradstreet, Inc. series represent the number of names listed in the Dun & Bradstreet Reference Book each year. Totals of enterprises listed differ from the United States Census totals for businesses because the Dun & Bradstreet Reference Book does not include many service enterprises, such as barbers, beauty salons, real estate brokers and similar concerns in which merchandise is not generally purchased or sold on credit terms.

Among the causes analyzed by Dun & Bradstreet, Inc. for business failures are: lack of capital, incompetency, speculative conditions, fraud, inexperience, competition, neglect, unwise credits, failures of others, extravagance and speculation.

Table on pages 203 and 204 tabulates the Dun & Bradstreet, Inc. Reference Book and Failure Statistics, 1857 through 1947. (See Business Barometers.)

FAIR RETURN

A term used principally in connection with earnings of railroad and public utility corporations. It has developed out of the notion that public service corporations by serving the public interest and in many cases being granted monopolistic franchises should be allowed to charge only such rates for their services as will yield a reasonable return upon the actual property investment. A fair return therefore assumes knowledge of the money sacrifice required to build the properties required for the service without any allowance for any intangible value.

In the case of railroads, the Transportation Act of 1920 provided that if net railway operating income exceeded 6% of the value of the railway property held for and used by the railroad in the service of transportation, one-half of the excess was to be placed in a reserve fund by the railroad, and the remaining one-half was to be paid to the Interstate Commerce Commission for the purpose of establishing a general railroad contingent fund, to be maintained for the benefit of railroads generally. The Act specified 5.5% as fair rate of return for the years 1920 and 1921, and this rate was guaranteed for a 6-month period following the return of the railroads to private management after World War I. Fair rates of return for the future was left to the determination of the Commission. During the years 1920-1930, estimated liability of the railroads in connection with this recapture clause of the Act totaled over $359,000,000.

Rates of return upon net property investment earned by Class I railroads have fluctuated as follows:

1916	5.80%	1937	2.54%
1918	3.37	1938	1.61
1921	2.99	1939	2.55
1926	5.35	1940	2.93
1929	5.24	1941	4.28
1932	1.38	1942	6.30
1933	2.03	1943	5.71
1934	1.98	1944	4.71
1935	2.15	1945	3.77
1936	2.87	1946	2.74

In public utility regulation, rate of return allowed during the '20s was customarily about 8%, but in recent

*** Dun's Failure Index, based on the apparent annual number of failures per 10,000 enterprises. Annual rate shown represents the monthly average per annum.

years, rate proceedings have favored 6% as fair rate of return. The concept of a fair rate of return is not fixed, therefore, and is subject to long term variation, particularly in line with financing costs. During the '20s,when public utility bonds were salable on an approximately 5% basis, 8% rate of return was regarded as allowing a fair margin over financing costs. Consequently, in recent years, with low money rates permitting bond financing at about 2 3/4%, the 6% fair rate of return has allowed a better margin. (See Rate Base.)

FALSE REPORTS

Directors of banks are subject to criminal liability for embezzlement, making false entries on books, reports or statements of member banks (Sec. 5209, Revised Statutes). Under Court decisions (Thomas v. Taylor, 224 U.S. 73; Chesbrough et al. v. Woodworth, 195 Fed. Rep. 875), directors are liable in damages to persons relying thereon for making and publishing false reports of condition. The reports required of a National bank by the Comptroller of the Currency are intended not only for his information, but for that of the public. One who buys bank stock out of reliance upon a published false statement and as a consequence sustains loss, has a right of action against the directors or officers who knowingly authorized the publication of such a report (Chesbrough et al. v. Woodworth).

FALSE STATEMENT ACTS

In recent years the requirement of banks that prospective borrowers submit a recent financial statement or series of statements as a basis for a loan, has become almost universally adopted. The process of granting credit has become more scientific and this requirement has grown out of recognition that there is no better guide for scientifically measuring credit risks, provided they are accurate and free from wilfully false valuations. The statement should show the condition to be no better than the actual one. Accordingly a number of states, including New York (Sec. 1293-b, Penal Law) and Massachusetts, have enacted False Statement Acts which impose penalties upon any person who misrepresents true condition in a statement for the purpose of securing in any form whatsoever either the delivery of personal property, the payment of cash, the making of a loan or credit, the extension of credit, the discount of an account receivable, the execution, making or delivery by any person, firm or corporation of any bond or undertaking, or the making, acceptance, discount, sale or indorsement of a bill of exchange, or promissory note, for the benefit of either himself or of such person, firm, or corporation. This enables the credit men of a bank to concentrate their attention upon the scientific analysis of the risk as disclosed by the statement instead of merely "checking" its accuracy, and deters unscrupulous persons from misrepresenting the facts concerning any wilful misrepresentation of financial condition or means or ability to pay.

FARM BOARD

See Federal Farm Board.

FARM CO-OPERATIVES

There are more than 10,000 farmers' marketing and purchasing associations in the United States, reporting a total of about 5,000,000 members and an annual volume of business in excess of $6 billion. Farmers are also served by cooperatives providing irrigation, mutual insurance, credit, electric power, and other farm and home services. According to the best available estimates, at least six out of every ten farmers are members of one or more cooperatives furnishing marketing, purchasing or other business services.

Cooperatives are expanding their activities in the processing of farm products. Some 2,200 dairy associations, 175 fruit and vegetable cooperatives, 850 cooperative frozen food locker plants, and a substantial number handling poultry, livestock, sugar, rice, oilseeds and farm supplies are now reported operating in the processing or manufacturing field.

Work with cooperative marketing and purchasing associations was initiated in the Department of Agriculture in 1912. The present Cooperative Research and Service Division of the Farm Credit Administration was established by the Cooperative Marketing Act of 1926, and has been a part of the Farm Credit Administration since 1933. (See Co-operative Buying.)

FARM CREDIT ACT OF 1933

An act, passed June 16, 1933, which provided for organizations within the Farm Credit Administration to make loans for the production and marketing of agricultural products and to extend agricultural finance facilities through regional and local agencies.

Created a Production Credit Corporation and Bank for Co-operatives in each of the twelve Federal Land Bank cities, the initial capital of each Production Credit Corporation being $7,500,000, to be subscribed from a $120,000,000 revolving fund established by the Reconstruction Finance Corporation from balances available to the Secretary of Agriculture under previous enactments.

Appropriated a $40,000,000 Treasury fund and also $2,000,000 for administrative expenses.

Authorized the establishment in the District of Columbia of a Central Bank for Cooperatives, with twelve branch banks in Federal Land Bank cities, the capital stock to be subscribed by the Governor of the Farm Credit Administration out of the Agricultural Marketing Act revolving fund in accordance with current needs.

Provided that intermediate credit banks might make agricultural or livestock note purchases from any National or State bank, agricultural credit or livestock corporation, cooperative savings institutions or agricultural associations; and that loans might be made on shipping documents or warehouse receipts or mortgages covering agricultural products or livestock to 75 per cent. of market value.

FARM CREDIT ACT OF 1935

An Act, approved June 3, 1935, which amended the Emergency Farm Mortgage Act of 1933, the Federal Farm Loan Act (1916), the Agricultural Marketing Act and the Farm Credit Act of 1933.

Among other things, this Act contains the following provisions:

1. Permitted Land Bank Commissioners to make loans secured by first or second liens on real property with maturities up to forty-three years.
2. Enlarged the purposes for which Land Bank Commissioners may make loans to include all those for which the Federal Land Banks are authorized to make loans.
3. Made the definition of the term "farmer" in the Emergency Farm Mortgage Act of 1933 identical with the term "farmer" as defined in the amended Federal Farm Loan Act.
4. Extended until February 1, 1940, the time within which loans can be made by the Land Bank Commissioner; removed the former limitation ($600,000,000) on the amount of bonds of the Federal Farm Mortgage Corporation which may be used in making such loans; and permitted such loans to be made in consolidated farm-loan bonds, if acceptable to the borrower.
5. Reduced the interest rate paid by Federal land bank borrowers whose loans were obtained through national farm-loan associations or were outstanding on May 12, 1933, to a maximum of 3 1/2 per cent. per annum for all interest payable on installment dates occurring within a period of one year beginning July 1, 1935, and to a maximum of 4 per cent. per annum for all interest payable on installment dates occurring within a period of two years commencing July 1, 1936.
6. Authorized Federal intermediate credit banks to discount paper for banks for cooperatives and to make loans to such banks.
7. Permitted the issuance of consolidated debentures by Federal intermediate credit banks, following substantially the same procedure as that followed by the Federal land banks in the issue of their consolidated bonds.
8. Provided that the rate of interest on any loan made by the Governor of the Farm Credit Administration or a bank for cooperatives to any co-operative association on the security of commodities shall conform, as nearly as

practicable, to the prevailing interest rate of commodity loans charged borrowers from the Federal intermediate credit bank of the district in which the principal office of the association is located.

9. Extended for an additional period of two years the authority of the Land Bank Commissioner, under Section 30 of the Emergency Farm Mortgage Act of 1933, to make loans to joint-stock land banks in order to further their orderly liquidation.

FARM CREDIT ADMINISTRATION

Created by an Executive order of the President (No. 6084), which was submitted to Congress on March 27, 1933, and which became effective on May 27, 1933. It provided for the consolidation within one organization of the powers and functions of all Federal agencies dealing primarily with agricultural credit.

The system includes the following: (1) 12 Federal Land Banks, which make long term first mortgage loans to farmers through Nation Farm Loan Associations; (2) 12 Federal Intermediate Credit Banks, which discount or make loans on the security of agricultural paper offered them by Production Credit Associations, Banks for Cooperatives and other agricultural financing institutions; (3) 12 Production Credit Corporations, which supervise and furnish a part of the capital for local Production Credit Associations, which in turn provide short-term credit for production and general agricultural purposes; (4) 12 District Banks for Cooperatives and the Central Bank for Cooperatives, which provide credit for farmers' cooperative purchasing, marketing and farm business service organizations; (5) the Federal Farm Mortgage Corporation, which finances Land Bank Commissioner loans made prior to July 1, 1947; (6) regional agricultural credit corporations originally established by the Reconstruction Finance Corporation; (7) crop production and seed loan activities formerly conducted by the Department of Agriculture; and (8) the Agricultural Marketing Act Revolving Fund, formerly administered by the Federal Farm Board.

The Emergency Farm Mortgage Act and the Farm Credit Act of 1933 enlarged the resources of existing lending institutions and provided for the establishment of new facilities which together now constitute a permanent cooperative credit system, designed to meet the entire range of needs of farmers for mortgage accommodation and for financing their production, marketing, and purchasing operations at minimum cost.

The Governor of the Farm Credit Administration is directly responsible to the President. He is vested with all the powers, authority, and duties of the officers, executive agencies, and heads thereof whose functions were transferred into the Farm Credit Administration, or relating to the functions so transferred.

Four commissioners, appointed by the President and responsible to the Governor, supervise separate fields of activity of the organization. The Land Bank Commissioner is responsible for the supervision and regulation of the Federal land banks and national farm loan associations; had general supervisory powers over the joint stock land banks and directed the liquidation of joint stock land banks in receivership; and administers the emergency farm mortgage loans authorized under section 32 of the Emergency Farm Mortgage Act of 1933. The Intermediate Credit Commissioner is responsible for the supervision and regulation of the Federal intermediate credit banks. The Production Credit Commissioner supervises the production credit corporations and production credit associations established under the Farm Credit Act of 1933. The Cooperative Bank Commissioner is in charge of the Central Bank for Cooperatives and is responsible for the supervision of the banks for cooperatives, both the Central bank and the 12 regional banks having also been established under the Farm Credit Act of 1933. The actions of all the commissioners are under the jurisdiction and control of the Governor of the Farm Credit Administration.

The organization in each of the 12 districts of the Farm Credit Administration—coinciding geographically with the Federal land bank districts—follows a similar pattern. In each district organization there are four permanent credit institutions—a Federal land bank, a Federal intermediate credit bank, a production credit corporation, and a regional bank for cooperatives—in addition to local national farm loan associations and production credit associations. The four main credit institutions are located in the same city and have the same directors. Unified policy is assured through the single board of directors, sitting as a coordinating body known as the "Council of the Farm Credit Administration for the district." Coordination of activities and avoidance of unnecessary duplication of personnel and facilities have been secured through an executive officer called the "general agent", nominated by the Governor of the Farm Credit Administration and appointed by the district council, acting with the presidents of the four lending institutions as an advisory committee.

Through its examiners, the Farm Credit Administration makes examinations of each bank twice annually and the national farm loan associations at least once a year. The Administration approves mortgage loans as security for bond issues, appoints appraisers, and, through its reviewing appraisers, checks the appraised value of farms. It supervises the work of the 12 registrars, who are bonded employees of the Administration and who hold in trust the collateral pledged to secure the bonds and debentures issued by the banks of the system. It is authorized to grant or refuse to Federal land banks or joint stock land banks authority to make any bond issue, and to Federal intermediate credit banks authority to make any debenture issue. Dividends by Federal land banks. The Farm Credit Administration is authorized to make such rules and regulations, not inconsistent with law, and to exercise such incidental powers as it deems necessary or requisite to fulfill its duties and carry out the purposes of the Federal Farm Loan Act and the applicable provisions of the Agricultural Credits Act of 1923, the Emergency Farm Mortgage Act of 1933, the Farm Credit Act of 1933, and amendments to these acts.

The Federal Farm Mortgage Corporation Act, approved January 31, 1934, provided for the establishment of an independent corporation, the Federal Farm Mortgage Corporation, which served as a financing institution during the emergency farm mortgage refinancing period for the Federal land banks and provided the funds for Land Bank Commissioner's loans made prior to July 1, 1947. Although an independent organization, the Corporation is closely associated with the Farm Credit Administration. Its officers and two of its three directors are officers of the Farm Credit Administration.

(See Farm Credit Act of 1933, and Farm Credit Act of 1935.)

FARMERS HOME ADMINISTRATION

In addition to the Farm Credit Administration system

of farm credit (Federal Land Banks and national farm loan associations, Banks for Cooperatives, Federal Intermediate Credit Banks, and Production Credit Corporations and production credit associations), the Farmers Home Administration is another Government agency furnishing miscellaneous financial aid to farmers. Specific function is to make loans and provide guidance in farm management as needed to farmers who are unable to obtain the credit they need at prevailing rates (not more than 5%) and terms from existing other sources.

The Farmers Home Administration was established under the Farmers Home Administration Act of 1946, approved August 14, 1946, to take over the functions of the Farm Security Administration and of the Emergency Crop and Feed Loan Division of the Farm Credit Administration. The Act also amended the Bankhead-Jones Farm Tenant Act of 1937.

The Administration is an agency of the U. S. Department of Agriculture, and provides two general types of loans: (1) production and subsistence loans up to $3,500 for the purchase of live stock, seed, feed, fertilizer, farm equipment, supplies, and other farm needs; for refinancing indebtedness; and for family subsistence; (2) farm ownership loans to buy, repair, improve or enlarge family type farms.

The production and subsistence loans are made for periods up to five years at 5% interest, include supervisory services, and are similar to the rural rehabilitation loans previously made by the Farm Security Administration. Farm ownership loans are made on an amortized basis at 3 1/2% interest. The Federal Housing Administration is authorized to insure such 40-year loans by private lenders, the lender receiving 2 1/2% and the Government receiving 1% for insurance and administrative expenses. Loans can be obtained up to 90% of the reasonable value of the farm and necessary improvements. Latest policy, announced late in 1947, is to insure mortgages when private funds are available, rather than to make direct loans, and only when an applicant cannot obtain an insured mortgage loan or lacks funds for the required down payment will direct loans be made. Veterans have preference for ownership loans and insured mortgages.

The Farmers Home Administration also administers the water facilities program of the Department of Agriculture authorized by the Water Facilities Act of 1937, for the 17 Western states.

FARM INCOME

The table below summarizes U. S. Department of Agriculture estimates of gross farm income and net farm income to persons on farms from farming (including Government payments since 1933):

Year	---in millions--- Gross Farm Income	Net Income to Persons on Farms from Farming
1910	$7,352	$4,450
1911	7,081	3,915
1912	7,561	4,335
1913	7,821	4,387
1914	7,638	4,516
1915	7,968	4,395
1916	9,532	5,055
1917	13,147	8,329
1918	16,232	9,660
1919	17,710	9,877
1920	15,908	8,368
1921	10,478	3,795
1922	10,883	4,850
1923	11,967	5,608
1924	12,623	5,560
1925	13,567	6,866
1926	13,204	6,617
1927	13,251	6,314
1928	13,550	6,687
1929	13,824	6,741
1930	11,388	5,114
1931	8,378	3,482
1932	6,406	2,285
1933	7,055	2,993
1934	8,486	3,531
1935	9,595	5,052
1936	10,643	5,361
1937	11,265	6,093
1938	10,071	5,041
1939	10,547	5,262
1940	10,965	5,477
1941	13,800	7,601
1942	18,399	11,305
1943	22,785	13,930
1944	23,893	14,039
1945	24,584	14,740

Sources--U. S. Department of Agriculture, Bureau of Agricultural Economics, 1910-1939, Net Farm Income and Parity Report, 1943; thereafter, The Farm Income Situation series.

The U. S. Department of Commerce series on National Income by Distributive Shares indicates that proprietors' and rental income from farms reached a new peak of $17.0 billion in 1947, compared with $15.2 billion in 1946 and $13.5 billion in 1945. With gross farm income at new highs, costs of farming, as compared with pre-War years, have risen much less than income received, reflecting lower rise in prices paid as compared with prices received. This combination of factors has resulted in new high levels in farm income. (See Farm Mortgages.

FARM LOAN BOARD

See Federal Farm Loan Board.

FARM LOAN BONDS

See Federal Farm Loan Bonds, Federal Farm Mortgage Corporation, Federal Land Bank, Joint-Stock Land Bank Bonds.

FARM LOAN COMMISSIONER

The Farm Credit Administration is managed by a Governor, a Deputy Governor, and four Commissioners: the Land Bank Commissioner, the Intermediate Credit Commissioner, the Cooperative Bank Commissioner, and the Production Credit Commissioner. Title of the Farm Loan Commissioner was changed on June 16, 1933 to Land Bank Commissioner.

The four Commissioners are appointed by the President of the United States by and with the advice and consent of the Senate. Each Commissioner supervises his

respective field of activity in the Farm Credit Administration.

The Land Bank Commissioner is responsible for the supervision and regulation of the Federal Land Banks and national farm loan associations, and has general supervisory powers over the remaining joint stock land banks, directing the liquidation of joint stock land banks in receivership. The Commissioner also administers the emergency farm mortgage loans authorized under Section 32 of the Emergency Farm Mortgage Act of 1933.

The Intermediate Credit Commissioner supervises the 12 Federal Intermediate Credit Banks.

The Cooperative Bank Commissioner is chairman of the board of directors of the Central Bank for Cooperatives, and supervises the 12 district Banks for Cooperatives.

The Production Credit Commissioner supervises the 12 Production Credit Corporations, and the production credit associations, and administers the Revolving Fund authorized by the Agricultural Marketing Act.

(See Farm Credit Administration.)

FARM LOAN DISTRICTS

See Federal Land Bank Districts.

FARM LOAN SYSTEM

See Farm Mortgages, Federal Credit Administration, Federal Farm Loan System, Federal Farm Mortgage Corporation, Joint-Stock Land Banks.

FARM LOANS

See Farm Mortgage Companies, Farm Mortgages.

FARM MORTGAGE BANKERS ASSOCIATION OF AMERICA

An association of farm mortgage companies at one time composed of about 200 members, consisting not only of farm mortgage companies, but of banks and trust companies having mortgage departments. The purpose of this association is to elevate the standard of mortgage bank practice, to promote constructive farm-mortgage legislation and to oppose legislation regarded as hostile to its welfare.

FARM MORTGAGE COMPANIES

Companies engaged in soliciting and selling bonds or notes secured by mortgages on farm property. In some states they are required to be organized under the state banking laws, but in others they may operate as unincorporated concerns. Usually mortgages are solicited throughout the territory of a company through local agents. Prospective borrowers usually are required to apply for a mortgage loan on a form provided by the mortgage company. Information required by this form, aside from that of a purely personal nature, is along the following lines:

1. The amount of property under cultivation.
2. Date of purchase.
3. The amount of present encumbrances, if any.
4. The fair market valuation of the land.
5. The cash value of improvements.
6. The rental value.
7. The nature of the crops of the previous and current year and their cash value.
8. The assessed valuation and amount of the taxes.
9. The character of the live stock and its cash value.
10. The location of the farm with respect to railroads, towns, churches, schools, etc.
11. The condition of the title to the property.
12. The purpose for which the money is to be borrowed.

After the application is received, the property is inspected by an agent of the company who makes a report recommending its acceptance or rejection and proposing the terms. The charges on a farm mortgage loan include interest sufficient to compel the sale of the mortgage at par, plus a commission to cover inspection, clerical and other overhead costs, usually ranging from 1/2 per cent. to 1 per cent. of the loan.

Mortgage companies sometimes issue bonds and mortgages directly to investors. These bonds are secured by the mortgages which the company has purchased. These bonds are much more conveniently distributed among investors because they are sold in even and convenient denominations. (See Mortgage Bonds, Mortgage Certificates.)

FARM MORTGAGE CORPORATION

See Federal Farm Mortgage Corporation.

FARM MORTGAGE FORECLOSURE ACT

An Act approved June 12, 1934, which amended Section 32 of the Emergency Farm Mortgage Act of 1933. This amendment enlarged the lending authority of the Land Bank Commissioner under the Emergency Farm Mortgage Act of 1933 to permit him to make loans to farmers for the purpose, among others, of enabling them to redeem and repurchase farm property owned by them prior to foreclosure, irrespective of the time when such foreclosure took place.

(See Land Bank Commissioner Loans.)

FARM MORTGAGE REFINANCING ACT

An act, passed January 31, 1934 which created the Federal Farm Mortgage Corporation, with a capital of $200,000,000, to aid in the refinancing of farm debts; authorized the corporation, with the approval of the Secretary of the Treasury, to issue and have outstanding at any one time bonds in an aggregate not exceeding $2,000,000,000, guaranteed both as to interest and principal by the United States; granted the corporation permission to exchange such bonds, upon application of any Federal Land Bank, for consolidated farm loan bonds of equal face value issued under the amended Federal Farm Loan Act and to exchange such consolidated farm loan bonds held by it for bonds of the corporation of equal face value; provided that the corporation might purchase, for cash, such consolidated farm loan bonds, make loans to Federal Land Banks on the security of such consolidated bonds and invest its funds in mortgage loans under Section 32 of the Emergency Farm Mortgage Act of 1933; and granted authority to the Land Bank Commissioner, until February 1, 1936, to make loans up to $600,000,000 on behalf of the Federal Farm Mortgage Corporation, either in cash or in bonds of the corporation.

Made available a revolving fund of $40,000,000 to the governor of the Farm Credit Administration.

(See Federal Farm Mortgage Corporation.)

FARM MORTGAGES

Mortgages upon farm lands and buildings. Borrowing with a farm mortgage as security is the chief means used by farmers to raise capital for the purpose of financing the purchase of land and to expand their operating equipment—buildings and implements. The farm

mortgage is the earliest type of mortgage, and the methods of farm mortgage lending have become fairly well standardized. Much of the American practice has been adopted from European Experience.

Farm mortgages generally run from three to five years, but frequently are renewed. The borrower (mortgagor) under a farm mortgage is required to guarantee the payment of taxes and to keep the buildings repaired and insured for the benefit of the lender (mortgagee). In case of default in the payment of the interest or in carrying out any of the mortgage agreements, the entire debt becomes immediately due.

As investments, loans on farm mortgages are considered very satisfactory provided the loan does not bear too large a ratio to the value of the mortgaged property. Under the Federal Farm Loan System (q. v.) a farm loan cannot exceed 50 per cent. of the value of the improved farm land which is mortgaged, and not more than 20 per cent. of the value of the buildings. Farm mortgage loans have the advantage of a relatively high yield, safety, early maturity, freedom from fluctuation in the value of the principal of the investment, and control by the owner over his investment. The chief disadvantages are that there is usually no market, and that they have been undesirable as long-term investments.

Records of the Bureau of Agricultural Economics indicate that in 1910, the total farm debt (farm mortgage debt as of January 1st, plus annual average of short term debt held by commercial banks and Federal agencies) totaled $4,044 million, compared with $41,961 million total value of farm property, indicating total farmers equity of $37,517 million. In 1920, the total farm debt was $12,321 million, compared with total value of farm property of $80,327 million, or equity of $68,006 million. In 1933, farmers equity dipped to $26,487 million (debt of $9,791 million, property value of $36,278 million), but by the close of 1945, had more than doubted to $58,659 million (debt of $7,007 million, property value of $65,666 million). In 1946, value of farm property rose to $73,140 million.

For latest figures on farm property values and debt, see the appended table, "Balance Sheet of Agriculture" (Table I.). Table II on page 210 summarizes long term data on farms.

TABLE I.

Balance Sheet of Agriculture

(Figures in billions as of January 1st)

Assets:	1947	1946	1940	---- Change ---- 1946-47	1940-47
Physical Assets:					
Real Estate	$58.6	$52.1	$33.6	+6.5	+24.9
Non-real estate:					
Livestock	11.9	9.7	5.1	+2.2	+ 6.8

U.S.Savings Bonds	5.4	4.9	0.2	+0.4	+ 5.1
Investment in cooperatives	1.6	1.4	0.8	+0.2	+ 0.8
Total Assets	$111.1	$98.6	$53.8	+12.6	+57.4
Liabilities:					
Real Estate mortgages	$4.9	$4.7	$6.6	+0.2	-1.7
Non-real estate debt:					
To principal institutions (excluding loans held or guaranteed by Commodity Credit Corp.)	1.9	1.7	1.5	+0.3	+0.4
Loans held or guaranteed by Commodity Credit Corp.	0.1	0.3	0.4	-0.2	-0.4
To others	1.5	1.2	1.5	+0.3	+0.1
Total Liabilities	$8.4	$7.8	$10.0	+0.6	-1.6
Proprietors' Equities	$102.8	$90.8	$43.8	+12.0	+59.0
Total Liabilities and Equities	$111.2	$98.6	$53.8	+12.6	+57.4

(1) Includes all crops held on farms and crops held in bonded warehouses as security for Commodity Credit Corporation loans.

Source--Federal Reserve Bulletin for November, 1947, based on study by the U. S. Department of Agriculture, Division of Agricultural Finance, Bureau of Agricultural Economics.

FARM RELIEF ACT OF 1933

The AAA Farm Relief and Inflation Act of May 12, 1933, which provided for farm mortgage relief by authorizing the refinancing of farm mortgages at 4 1/2% through the issuance of a maximum of $2 billion in Government bonds which would be guaranteed as to interest by the Government. The Act also provided for direct agricultural relief by authorizing the Secretary of Agriculture to force increased farm prices through allocation of production or withdrawal of land from production by leasing it. To pay the cost of this program, the Secretary of Agriculture was authorized to license and tax processors of agricultural products. This first AAA Act was declared unconstitutional in 1936 (see Agricultural Adjustment Act of 1933).

FARM SECURITY ADMINISTRATION

An agency created September 1, 1937 to replace the Resettlement Administration. It made loans and offered guidance in farm and home management to low-income farmers who were unable to obtain credit to meet their needs on reasonable terms from other sources.

By the Farmers Home Administration Act of 1946, approved August 14, 1946, the Farmers Home Administration took over the functions of the Farm Security Administration, as of November 1, 1946. (See Farmers Home Administration.)

FARTHING

An English copper coin with the smallest denomination and having the value of 1/4 penny.

FASCISM

The governmental form initiated in 1922, and best

---

exemplified by Italy under the leadership of Benito Mussolini, the first premier under the Fascist regime, and chief originator of its principles. Italy was followed into fascism by Germany under Hitler, Austria, Hungary; Poland (under Gen. Pilsudski) and on a lesser scale by other central European and Balkan nations. Many of these imitations made no pretense of following fascistic political theory and were bald military dictatorships. Defeat of the Axis nations in World War II doomed the political power of fascism, so that the following is now merely of academic interest.

Fascism held that democracy and representative government, however glorious in the past, were no longer tenable under modern economic and political conditions. To prevent internal political strife and clash of varying shades of political opinion, parliamentary government was abolished and only one party recognized. In Italy, the affairs of state were administered by a dictator—the titular head of the State party—under the supervision of the Grand Fascist Council which delegated authority over various governmental functions.

Fascism contended that the trend was toward new forms in civilization, both in politics and economics. The state was resuming its right and its prestige as the sole and supreme interpreter of life in all its major aspects. In this sense, modern fascism suggested the kameralistic and mercantilistic doctrines of the 16th, 17th and 18th centuries. Fascism sought to unify or bind the citizenship, by common ties to work for the good of the state under the shibboleths: "Everything within the State—nothing without the State—Everything for the State." As a Corporative, or Authoritarian, State, citizens were welded together into a system of organization based on the individual's utility to the state. Thus, the State's organization was based largely upon occupational categories or work guilds in the leading industries, presided over by a Cabinet department called the Ministry of Corporations.

The system of occupational unions (sindacati) and producers' guilds (corporazioni) provided the means for implementing the Fascist Guild State, i. e., a State in which all national activities (political, economic, social, cultural) were brought within the framework of the State.

The 22 guilds set up in accordance with the resolutions adopted by the Central Guild Committee at its meeting of 9th May, 1934, were presided over by the Minister of Guilds; the Vice President of each guild was selected from the executive ranks of the National Fascist Party, and three members of that Party, representing the public, sat on each of the respective guild boards. Subject to these general provisions, the membership of the boards was as follows:

1. Cereal guild.
2. Fruit, vegetable and flower guild.
3. Viticulture and wine guild.
4. Beet and sugar guild.
5. Edible oil guild.
6. Animal husbandry and fisheries guild.
7. Forestry, lumber and wood guild.
8. Textile fibres and products guild.
9. Metal and engineering guild.
10. Chemical trades guild.
11. Clothing trades guild.
12. Paper and publishing guild.
13. Building trades guild.
14. Water, gas, and electricity guild.
15. Mining and quarrying guild.
16. Glass and pottery guild.
17. Credit and insurance guild.
18. Arts and professions guild.
19. Sea and air transports guild.
20. Inland communications guild.
21. Public entertainments guild.
22. Public hospitality guild.

It is apparent, therefore, that fundamental and tremendous changes in the political and economic system of Italy were wrought by the fascists in order to solidify their control.

FAVORABLE BALANCE OF TRADE

See Balance of Trade.

FAVORABLE CONDITIONS

A term used among financial writers to indicate those forces conducive to higher security or commodity values. Favorable conditions may be divided broadly into two groups, namely, political (United States and abroad), and economic (business and financial).

Under favorable political conditions may be classed election of a presidential candidate favored by business interests, passing of constructive legislation helpful directly or indirectly to business, e. g., tariff, Supreme Court decision, railroad aid, etc. It may also be international in its effect, such as the settling of an international dispute.

Under favorable financial conditions may be included low money rates, high ratio of cash reserves to deposit liabilities, as shown by bank statements, etc.

Under favorable business conditions may be included activity in production and distribution, large bank clearings, good crops, few idle cars, large earnings, few commercial failures, stable or rising prices, etc.

FEDERAL ADVISORY COUNCIL

Under the original Federal Reserve Act (Section 12), provision was made for the Federal Advisory Council, to consist of as many members as there are Federal Reserve districts. Each Federal Reserve Bank by its board of directors annually selects from its own Federal Reserve district one member of the Council. The meetings of the Council are required to be held at Washington, D. C., at least four times each year, and oftener if called by the Board of Governors of the Federal Reserve System. In addition, the Council may hold such other meetings in Washington or elsewhere as it may deem necessary.

Powers of the Council are specified in the Act as: (1) to confer directly with the Board of Governors on general business conditions; (2) to make oral or written representations concerning matters within the jurisdiction of the Board; and (3) to call for information and to make recommendations in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, the purchase and sale of gold or securities by Reserve Banks, open market operations by Reserve Banks, and the general affairs of the Federal Reserve System. Thus, the powers of the Council are purely advisory. (See Federal Reserve System.)

FEDERAL APPROPRIATIONS

See under National Budget.

FEDERAL BILL OF LADING ACT

See Bill of Lading Act.

FEDERAL CREDIT UNIONS

Cooperative associations organized under the Federal Credit Union Act, for the purpose of promoting thrift among members and creating a source of credit for provident or productive purposes.

Effective May 16, 1942, supervision of Federal Credit Unions was transferred from the Farm Credit Administration to the Federal Deposit Insurance Corporation. This transfer was made permanent on July 1, 1947, in accordance with the Reorganization Plan No. 1 of 1947 prepared by the President of the United States.

As of June 30, 1947, there were 3,812 Federal Credit Unions in operation. Credit unions are not insured by the Federal Deposit Insurance Corporation.

FEDERAL CROP INSURANCE CORPORATION

The Federal Crop Insurance Corporation, an agency of the Department of Agriculture, was created in February, 1938, and authorized to insure wheat and cotton crops. The Corporation was authorized a capital stock of $100,000,000, to serve as an insurance reserve.

After inaugurating wheat crop insurance with the 1933 crop, and cotton crop insurance with the 1942 crop, the Agricultural Appropriation Act for the fiscal year ending June 30, 1944 provided that no part of the funds appropriated to administer the crop insurance program should be used to insure wheat and cotton crops planted subsequent to July 31, 1943. Consequently, no 1944 crops were insured, and the Corporation began to wind up its affairs. Subsequently, however, the program was reinstated on a more conservative plan of insurance of wheat and cotton, and provision was made for trial insurance on other crops. (See Crop Insurance.)

FEDERAL DEPOSIT INSURANCE CORPORATION

Established by the Banking Act of 1933 (q. v.), which added the entirely new Section 12B to the Federal Reserve Act, entitled Insurance of Bank Deposits. The section was later amended by Act of June 16, 1934, which extended the Temporary Plan for insurance of deposits to June 30, 1945; by Public Resolution of June 28, 1935, which further extended the Temporary Plan to August 31, 1935; and finally, by the Banking Act of 1935 (q. v.), which completely revised the section.

Chief purpose of the corporation is to insure the deposits of all banks entitled to the benefits of deposit insurance. All banks which are members of the Federal Reserve System are insured. Any other banks in the continental United States which are not members of the Federal Reserve System may become insured upon application therefor and examination by the corporation and approval by its board of directors. Banks in Hawaii, Alaska, Puerto Rico and the Virgin Islands are also eligible for insurance. Conversely, any bank which is not a member of the Federal Reserve System may terminate its deposit insurance upon notice at any time, the insurance on the bank's deposits continuing for two years thereafter.

Insurance to the extent of $5,000 of the deposits of each depositor in an insured bank is provided. Insurance extends to deposits of every kind, including regular commercial deposits, time and savings deposits, and trust funds. No distinction is made between public and private deposits, the insurance being applicable despite the security required for public deposits. "Deposit insurance" is really a nation-wide mutual guaranty fund, annual assessments at the rate of 1/12th of 1% upon average deposits (less authorized deductions) being levied upon insured banks in order to provide insurance reserves. The assessment is payable in semi-annual installments.

As of June 30, 1947, there were 13,582 insured banks (5,012 national banks, 1,913 state member banks, 6,466 state non-member banks and 191 mutual savings banks), with total deposits of $133.7 billion, of which $62.1 billion were covered by the $5,000 insurance, for the insured commercial banks; and total deposits of $11.9 billion, of which $10.9 billion were insured, for the insured mutual savings banks. Over 96% of the more than 80 million depositors in these insured banks were fully protected by the maximum $5,000 insurance for each depositor.

Compared with this deposit insurance liability, the

corporation as of June 30, 1947 reported total assets of $1,136 million, consisting largely ($1,125 million) of U. S. Government securities held, and net worth of $1,134 million. The corporation, however, is authorized to borrow from the Secretary of the Treasury such funds as are required from time to time for insurance purposes, not to exceed in the aggregate $3 billion at any one time, at rates of interest not less than current average rate on outstanding Government obligations. The corporation has no borrowed money, sole capital consisting of 1,026,043.07 shares of no par value (issued at $100 per share), receipts for all of these shares being held by the Secretary of the Treasury. Originally, the U. S. Treasury subscribed $150 million to capital stock, and each Federal Reserve Bank subscribed an amount equal to 1/2 of the surplus of each Reserve Bank as January 1, 1933. The shares held by the Federal Reserve Banks were all retired on September 9, 1947.

Procedure of the corporation upon closing of an insured bank is to assume immediately the insured deposit liabilities of the closed bank and make available the funds needed to pay off the deposits. For this purpose, if it finds it advisable, the corporation may organize a new national bank. Claim of each insured depositor is paid upon assignment to the corporation by the depositor of all his rights to any dividends and recoveries to the extent of his insured interest (subrogation).

The corporation acts as receiver for all suspended national banks, and may act as receiver for suspended state banks when so appointed by state authority. The corporation may make loans to or purchase assets from insured banks to facilitate a merger or consolidation which would reduce probable loss to the corporation. The decision to close an insured bank does not rest with the corporation, as this power rests with the bank's directors or with the Federal or state authorities which chartered it. Also, the decision to merge with another bank is made by the bank's stockholders, not the corporation.

The corporation does have, however, the power to terminate the insurance of a bank found to be financially unsound or of a bank whose management persists in following illegal or unsound practices. Its powers also include: (1) to examine periodically insured banks which are not members of the Federal Reserve System; also national banks, with the consent of the Comptroller of the Currency, and other member banks, with the consent of the Board of Governors of the Federal Reserve System; (2) to approve or disapprove any consolidation or merger of an insured bank with a non-insured bank, or the transfer of assets to a non-insured bank in consideration of the latter's assumption of deposit liabilities; (3) to approve or disapprove any proposals to reduce the capital of insured banks not members of the Federal Reserve System; (4) to approve or disapprove proposals by insured banks not members of the Federal Reserve System to establish and operate new branches or remove established branches from one location to another; (5) to regulate the advertising which insured banks are required to use to inform the public that they are insured; (6) to prohibit the payment of interest on demand deposits of insured banks not members of the Federal Reserve System; (7) to limit rates of interest on time and savings deposits of insured banks not members of the Federal Reserve System, and to prescribe different rates for different types of time and savings deposits.

Management of the corporation is vested in a board of directors consisting of three members. The President of the United States appoints two of the members for terms of six years by and with the advice and consent of the Senate. The third member is the Comptroller of the Currency. One of the appointive members is designated chairman of the board of directors. Not more than two members of the board shall belong to the same political party.

Principal office of the corporation is in Washington, D. C.; district offices are located in Boston, New York, Columbus, Richmond, Atlanta, St. Louis, Madison, Chicago, St. Paul, Kansas City, Dallas and San Francisco.

(See Bank Deposit Insurance Act, Deposit Insurance, Insured Bank.)

FEDERAL FARM BOARD

A board created under the Agricultural Marketing Act passed June 15, 1929, but absorbed by and consolidated with the Farm Credit Administration (q. v.) in accordance with the provisions of the Farm Credit Act of June 15, 1933. The original function of this board was to extend aid in organizing farm co-operatives, and stabilizing prices of agricultural staples by purchases in the open market or enabling co-operatives to do so through advances from government funds.

In its first annual report for year ended June 30, 1930, transmitted December 4, 1930, the Federal Farm Board summarized the objectives to be achieved as follows: (1) To promote the effective merchandising of agricultural commodities in interstate and foreign commerce and (2) to protect, control, and stabilize the currents of interstate and foreign commerce in the marketing or agricultural commodities and their food products. Four methods to be employed in the execution of this policy were specifically set forth: (1) By minimizing speculation, (2) By preventing inefficient and wasteful methods of distribution, (3) By encouraging the organization of producers into effective associations or corporations under their own control for greater unity of effort in marketing and by promoting the establishment and financing of a farm marketing system of producer-owned and producer-controlled co-operative associations and other agencies, (4) By aiding in preventing and controlling surpluses in any agricultural commodity, through orderly production and distribution, so as to maintain advantageous domestic markets and prevent such surpluses from causing undue and excessive fluctuations or depressions in prices for the commodity.

FEDERAL FARM LOAN ACT

Tne Federal Farm Loan Act, which became law on July 17, 1916, was the first major effort on the part of the Federal government to provide long term credit facilities for agriculture. The purposes of the Act were "to provide capital for agricultural development, to create standard forms of investment based upon farm mortgages, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to create government depositaries and financial agents for the United States, and for other purposes." The Act provided for:

1. The Federal Farm Loan Board, consisting of seven members, including the Secretary of the Treasury as chairman ex-officio, and six members appointed by the President of the United States by and with the advice and consent of the Senate. Of these six members appointed by the President, not more than three were ap-

pointed from one political party, and all six were to devote their entire time to the business of the Federal Farm Loan Board;

2. Twelve Federal Land Banks, located in cities designated by the first Federal Farm Loan Board, which cities were required to be other than those in which the Federal Reserve Banks were located;

3. National Farm Loan Associations, organized and controlled by at least ten or more borrowing farmers; and

4. Joint Stock Land Banks, which were privately owned and operated long term or agricultural credit institutions.

The Agricultural Credits Act of 1923 amended the Federal Farm Loan Act to create twelve new type institutions called Federal Intermediate Credit Banks, located in the same cities as the Federal Land Banks, and operating under the jurisdiction of the Federal Farm Loan Board. Function of the Federal Intermediate Credit Banks was to provide intermediate credit to agriculture of not less than six months nor more than three years.

The Act was further amended by the Farm Credit Act of 1933 (q. v.) and the Farm Credit Act of 1935 (q. v.), as the result of which the old Federal Farm Loan Board has been superseded by the Farm Credit Administration (q. v.). See also Federal Farm Loan System.

FEDERAL FARM LOAN BOARD

With the passage of the Farm Credit Act of 1933, this board was superseded by the Farm Credit Administration (q. v.).

For the purpose of the historical record the following description is given:

The board upon whom the general supervision of the Federal Farm Loan System rested. It was composed of the Secretary of the Treasury (ex-officio) and four other members appointed by the President. The powers and duties of the Federal Farm Loan Board in relation to the Federal Farm Loan System were analogous to those of the Federal Reserve Board in the supervision of the Federal Reserve System. The board supervised the operations of the Federal land banks, farm loan associations, and joint-stock land banks; regulated interest rates and charges on farm mortgage loans, supervised the issue of farm loan bonds, conducted examinations of the banks under their jurisdiction, issued regulations for the guidance of the land banks and farm loan associations, and issued reports showing the condition of the banks and of agricultural credit.

(See Federal Farm Loan System.)

FEDERAL FARM LOAN BONDS

An originally authorized in the Federal Farm Loan Act of 1916, Federal Farm Loan Bonds were obligations of the Federal Land Banks and the Joint Stock Land Banks. The Emergency Farm Mortgage Act of May 12, 1933, however, restricted Joint Stock Land Banks to orderly liquidation of their existing assets. Issues by Federal Land Banks prior to 1933 were issued individually by each Federal Land Bank, but the last remaining issues of individual banks were called for payment in 1939, and now the Federal Land Banks have outstanding only Consolidated Federal Farm Loan Bonds.

As of January 31, 1948, unmatured consolidated bonds including bonds on hand, were outstanding in the amount of $686,932,000, as shown in Table I on this page.

Both principal and interest are joint and several obligations of the 12 Federal Land Banks. In addition, the bonds are secured by the collateral security, the assets of the local National Farm Loan Associations through endorsements, and the double liability of the stockholders of the Associations. Federal Farm Loan Bonds were ruled by U. S. Supreme Court interpretation as instrumentalities rather than obligations of the U. S. Government. Consolidated Federal Farm Loan bonds and the income derived therefrom are exempt from state, municipal and local taxation, but interest on these bonds issued after effective date of the public Debt Act of 1941 is not exempt from taxation by the U. S. Government, and neither gain from their sale or other disposition, nor transfer of the bonds by inheritance, gift, etc., is exempt from Federal or state taxation.

Maximum interest rate authorized to Consolidated Federal Farm Loan bonds is 5%. The law requires that collateral security for consolidated bonds shall be at least equal in amount to the bonds issued, and shall consist of:

1. Notes secured by mortgages or purchase money mortgages on farms, or contracts for the sale of farms; provided, any such mortgage, purchase money mortgage or contract constitutes a first lien on the farm or its equivalent from a security standpoint, as determined by the Farm Credit Administration, and the unpaid balance thereof at the time of pledge is not in excess of 65% of the normal value of the farm, as determined upon appraisal made pursuant to the Federal Farm Loan Act; or
2. U. S. Government obligations, direct or fully guaranteed; or
3. Cash.

The Farm Credit Administration may at any time call upon any Federal Land Bank for additional security to protect consolidated bonds. Collateral pledged with Farm Loan Registrars by the Federal Land Banks for consolidated bonds outstanding December 31, 1947 was as follows: collateral value of pledged mortgage loans, $818,213,861; U. S. Government obligations, direct and fully guaranteed (par), $4,563,000; total collateral,

TABLE I

	Amount Outstanding	Rate of Interest	Date of Maturity	Optional Date	Date of Issue
1.	$114,035,000	2 1/4%	Feb. 1, 1955	Feb. 1, 1953	Feb. 1, 1945
2.	153,700,000	1 1/2	Oct. 1, 1950	Oct. 1, 1948	Aug. 1, 1945
3.	188,790,000	1 1/2	Jan. 1, 1953	Jan. 1, 1951	Jan. 2, 1946
4.	209,407,000	1 1/4	May 1, 1952	May 1, 1950	May 1, 1946
5.	* 21,000,000	1 1/4	May 1, 1952	May 1, 1950	May 1, 1946

*Amount issued through the Farm Credit Administration and employed by the Federal Land Banks as collateral for notes payable.

$822,776,861, compared with total consolidated bonds outstanding, December 31, 1947, of $689,382,000, or excess collateral of $133,394,861.

Since June 26, 1947, when all Government subscriptions to the capital stock and paid-in surplus of the Federal Land Banks were repaid to the U. S. Treasury, this cooperative farm loan system has been owned by farmer-borrowers.

(See Federal Farm Loan System, Federal Land Bank, Joint Stock Land Bank Bonds.)

FEDERAL FARM LOAN SYSTEM

A system of farm mortgage banking organized under Government supervision, created by the Federal Farm Loan Act (q. v.) approved July 17, 1916. The system was instituted to furnish a mechanism to provide long-term credits to farmers, and to obtain an adequate supply of capital to finance these credits through the issue of bonds secured by well selected farm mortgages. Before the passage of this Act, such a system was not provided by the Federal or State governments.

The general administration of the system was originally under the control and supervision of the Federal Farm Loan Board, which was directed by the Act to divide the continental United States into 12 districts, to be known as Federal Land Bank Districts, and to establish a Federal Land Bank in each district, having a capital of not less than $750,000. The functions of the Federal Farm Loan Board were assumed by the Farm Credit Administration on May 27, 1933, and the Farm Credit Act of 1937 provided that these districts be thereafter known as Farm Credit Districts (see below).

The original Act provided for two separate schemes of rural credits, both under the jurisdiction of the Federal Farm Loan Board: (1) Federal Land Bank System, and (2) joint stock land bank system. The Federal Land Bank System operated through (1) the twelve Federal Land Banks; (2) national farm loan associations; and (3) agencies. The joint stock land bank system operated through the joint stock land banks, privately organized and owned, the number of which was not limited. The joint stock land banks were prohibited from acquiring new business and were restricted to the orderly liquidation of their existing assets by the Emergency Farm Mortgage Ace of 1933.

The Federal Land Banks are authorized to extend long term mortgage credit to farmers upon the security of first mortgages on farm lands. The mortgages are made on an amortization basis, for maturities of not less than 5 years nor more than 40 years. A bank, however, may agree to accept payment of a loan in whole or in part at any time. Most loans have been made for maturities of 33 to 36 years, although many loans are made for shorter terms, such as 20 years or less. Practically all loans in the continental United States are now made through the national farm loan associations. No loans have been made through agents for some time. Direct loans from the Federal Land Banks may be authorized in areas where association facilities are not available.

Before obtaining a loan, the farmer-applicant subscribes 5% of his loan in stock of the national farm loan association, which stock is held by the association as collateral for the loan, which the association must endorse. The application for the loan is referred to the loan committee of the association, which appraises the property offered as security, and if it approves, forwards the application together with its recommendation, to the Federal Land Bank of the district. The Federal Land Bank in turn conducts a second investigation through a land bank appraiser, who is under the supervision of the Land Bank Commissioner and is not an employee of the land bank. If and when the loan is granted, the funds are forwarded to the borrower from the Federal Land Bank through the national farm loan association. When the borrower subscribed to stock in the association, the association in turn subscribed to an equal amount of stock in the Federal Land Bank, which is held by the land bank as collateral for the loan. A Federal Land Bank is not permitted to make a loan through a national farm loan association unless the loan committee of the association is unanimous in its approval; and in no event unless the land bank appraiser's report is favorable.

No loans may be made to any one borrower in an amount exceeding $50,000, and loans to any one borrower may not exceed $25,000 unless approved by the Land Bank Commissioner. Loans may not be made in excess of 65% of the appraised normal value of the farm property offered as security. The maximum rate of interest which a Federal Land Bank is permitted to charge is 6% in any event. Rate of interest in the continental United States on Federal Land Bank loans through national farm loan associations may not exceed by more than 1% the interest rate borne by the last series of bonds issued by the bank, except with approval of the Governor of the Farm Credit Administration. The rate of interest on direct Federal Land Bank loans in the continental United States must be 1/2 of 1% in excess of the rate charged at the time on loans made through national farm loan associations. Since June 24, 1935, interest rates on new loans have been uniformly 4%, and effective for all interest maturing on and after July 1, 1944, the Federal Land Banks voluntarily reduced to 4% the rate of interest on all loans made prior to June 14, 1935.

When a borrower pays a loan in full, the land bank retires the stock which was subscribed for by the association at the time the loan was made, and pays that amount in cash to the association if the latter is up to date on obligations to the land bank. The association in turn retires the borrower's stock and credits the proceeds to the borrower. Original capital stock subscribed by the U. S. Government in the Federal Land Banks ($8,892,130 out of the original authorized capital of $9,000,000 for the twelve Federal Land Banks, or $750,000 each) was entirely retired out of the proceeds of subscriptions by borrowers. Under amendment to the Federal Farm Loan Act approved January 23, 1932, the Secretary of the Treasury on behalf of the United States subscribed for $125,000,000 of additional capital stock in the twelve Federal Land Banks, all of which has also been retired. Between June 19, 1934 and May 14, 1937, $189,000,000 was appropriated by Congress for the purpose of having the Secretary of the Treasury pay in to surplus of the Federal Land Banks sums representing entensions and deferments of maturing installments on outstanding loans. All of these contributions to surplus have also been repaid by the Federal Land Banks. Accordingly, since June 26, 1947, the United States Government has had no proprietary interest in any Federal Land Bank, and the outstanding capital stock of the Federal Land Banks is owned entirely by national farm loan associations to a smaller extent by farmers who were direct borrowers.

Farm Credit Administration.--Under the Farm

Credit Administration, which itself has been a part of the Department of Agriculture since July, 1939, each of the twelve Farm Credit Districts now is organized as follows: (1) Farm Credit Board, supervising the district; (2) a Federal Land Bank, serving the district's national farm loan associations; (3) a Bank for Cooperatives; (4) a Federal Intermediate Credit Bank; and (5) a Production Credit Corporation, serving the district's production credit associations. Thus, the present organizational set-up for each Farm Credit District provides facilities for long term and short term loans and the financing of farmers' cooperative purchasing, marketing, and business service associations.

(See Amortization Loans, Banks for Cooperatives, Farm Credit Administration, Federal Farm Mortgage Corporation, Federal Land Bank, Intermediate Credit Banks, Joint Stock Land Banks, Production Credit Associations.)

FEDERAL FARM MORTGAGE CORPORATION

Established by the Federal Farm Mortgage Corporation Act, approved January 31, 1934, to facilitate the financing of loans to farmers by the Federal land banks and by the Land Bank Commissioner. The Corporation has an authorized capital stock of $200,000,000, which was subscribed by the Governor of the Farm Credit Administration in behalf of the United States. For the purpose of such capital subscription, the funds and proceeds thereof made available to the Land Bank Commissioner under section 32 of the Emergency Farm Mortgage Act of 1933 and the mortgages taken by the Commissioner and the credit instruments secured thereby were transferred to the Corporation.

The board of directors of the Corporation is composed of the Governor of the Farm Credit Administration as chairman, the Land Bank Commissioner and the Secretary of the Treasury or an officer of the Treasury designated by him. The directors elect the officers of the Corporation and have power to adopt such by-laws, rules, regulations, and amendments as they deem necessary for the conduct of the business of the Corporation.

The Corporation, with the approval of the Secretary of the Treasury, may issue and have outstanding at any one time bonds in an aggregate amount not exceeding $2,000,000,000. These bonds, known as "Federal Farm Mortgage Corporations bonds," are fully and unconditionally guaranteed both as to principal and interest by the United States Government. The Corporation had no outstanding bonded debt as of December 31, 1947 (see Federal Farm Mortgage Corporation Bonds).

FEDERAL FARM MORTGAGE CORPORATION BONDS

The Federal Farm Mortgage Corporation had no outstanding bonded debt as of December 31, 1947.

The corporation is authorized, subject to the approval of the Secretary of the Treasury, to issue and have outstanding at any one time bonds in an aggregate amount not to exceed $2 billion. Bonds issued are secured by the assets of the corporation, and are instrumentalities of the U. S. Government. The Secretary of the Treasury in his discretion may purchase any bonds issued by the corporation. Federal Land Banks are also empowered to exchange Farm Loan bonds for bonds of the Federal Farm Mortgage Corporation of equal face value, and to purchase bonds of the corporation at or below par.

As of December 31, 1947, the corporation reported total assets of $125,849,113, of which mortgage loans and related items totaled $111,240,706, carried less reserves at net of $96,288,833. Cash in general funds totaled $4,515,818, and receivables, largely notes receivable from the Federal Land Banks, totaled $21,448,690. Net worth totaled $120,708,028, consisting of capital stock of $1,000,000 (subscribed by the Governor of the Farm Credit Administration on behalf of the United States) and earned surplus of $119,708,028.

FEDERAL HOME LOAN BANK ACT

See Home Loan Bank Act.

FEDERAL HOME LOAN BANK ADMINISTRATION

The title given to the constituent of the National Housing Agency, which senior agency was created by Executive Order of the President on February 24, 1942 to centralize non-farm housing activities. The Administration supervised the Federal Home Loan Bank System, the Federal Savings and Loan Insurance Corporation, and liquidation of the Home Owners' Loan Corporation.

Under the Reorganization Plan No. 3 of the President, the National Housing Agency was succeeded by the Housing and Home Finance Agency on July 27, 1947, and the Federal Home Loan Bank Administration was renamed the Home Loan Bank Board. (See Federal Home Loan Banks, Federal Savings and Loan Insurance Corporation, Home Owners' Loan Corporation.)

FEDERAL HOME LOAN BANKS

The Federal Home Loan Bank System was established in accordance with the Federal Home Loan Bank Act, approved July 22, 1932, and consists of eleven regional Federal Home Loan Banks and 3,705 member institutions (December 31, 1947), primarily savings and loan associations (including cooperative banks and homestead associations), and a number of saving banks and insurance companies. The System is supervised by the Home Loan Bank Board, a constituent operating agency under the Housing and Home Finance Agency, and serves as a central credit agency for private home-financing institutions.

The chief objective of the System is to make ample credit available to home owners or buyers through private lending institutions and to enable families to finance the purchase of homes at lower cost through improved types of mortgage loans which can be paid off conveniently over a period of years. Member institutions of the System may obtain reserve credit from their regional home loan banks for this purpose or in order to meet unusual withdrawal needs of their investors. An additional source of protection is provided by the Federal Savings and Loan Insurance Corporation, which insures accounts up to $5,000 in savings and loan associations. Both the Bank System and the Insurance Corporation serve home owners and savers through private financial institutions, and only indirectly through Government supervision and cooperation.

The Federal Home Loan Banks and Districts are as follows:

No. 1, Boston, Mass.; includes Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.

No. 2, New York City; includes New Jersey, New York, Puerto Rico, Virgin Islands.

No. 3, Pittsburgh, Pa.; includes Delaware, Pennsylvania, and West Virginia.

No. 4, Winston-Salem, N. C.; includes Alabama, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, and Virginia.

No. 5, Cincinnati, Ohio; includes Kentucky, Ohio, and Tennessee.

No. 6, Indianapolis, Ind.; includes Indiana and Michigan.

No. 7, Chicago, Ill.; includes Illinois and Wisconsin.

No. 8, Des Moines, Iowa; includes Iowa, Minnesota, Missouri, North Dakota and South Dakota

No. 9, Little Rock, Ark.; includes Arkansas, Louisiana, Mississippi, New Mexico and Texas.

No. 10, Topeka, Kansas; includes Colorado, Kansas, Nebraska and Oklahoma.

No. 11, San Francisco, Calif.; includes Idaho, Montana, Oregon, Utah, Washington, Wyoming, Alaska, Arizona, California, Nevada and Hawaii.

Advances from Federal Home Loan Banks to member institutions are made strictly upon the basis of the loan requests, the aggregate amount that may be advanced being dependent primarily upon the member institution's needs and ability to repay. The maximum amount a member may borrow is limited to 12 times the amount it has paid in toward the purchase of stock of the Federal Home Loan Bank. If the amount already paid in by a member is insufficient to permit the granting of an additional advance, the advance, if approved, can be consummated only if the instiution purchases the requisite amount of additional stock. All advances are made on the note of the borrowing institution, and capital stock of the Federal Home Loan Bank owned by the borrowing member must be assigned to the bank as security. Advances made under Section 10 of the Act must be also secured by the deposit and assignment of home mortgages or obligations of the United States as collateral to the note. Range of prevailing interest rates in the several Banks, as of December 31, 1947 was from 2% to 2 1/2%. Maturities are either short-term (30 days and 1 year), or long term (generally 10 years, amortized).

Funds of the System are obtained through (1) stock subscriptions; (2) borrowing. The United States has subscribed and paid for a total of $124,741,000 of stock in the Federal Home Loan Banks, of which $122,672,200 was outstanding December 31, 1947. As of that date, member institutions had subscribed for a total of $103,-083,400 of stock. Borrowed funds as of December 31, 1947 totaled $261,700,000, consisting of $140,000,000 in Consolidated Debenture 1 1/4s, "A" dated October 15, 1946 and due April 15, 1948; $85,000,000 Consolidated 1 1/4% Notes, "A", dated September 15, 1947 and due September 15, 1948; and $36,700,000 Consolidated 1 3/8% Notes, due February 17, 1948. On January 8, 1948, the System sold another $97,000,000 in Consolidated 1 3/4% Notes, "A", dated January 20, 1948 and due on January 20, 1949. Proceeds of sale were used in part to retire the February 17, 1948 maturity, and the balance used for advances to member banks. Consolidated bonds or notes are limited to not over 12 times total paid-in capital stock and reserves, and the banks are required at all times to maintain cash, Government securities, secured advances, and mortgages having guaranty, insurance or commitment therefor by the Government or any Government agency, at least equal to the amount of consolidated bonds or notes outstanding, and free of any lien or pledge. Neither obligations of the several Federal Home Loan Banks nor consolidated obligations of the Banks are obligations of the United States or guaranteed by the United States. Obligations are legal for investment by fiduciaries under authority or control of the United States, and for savings banks and fiduciaries in many states. Obligations are exempt from income and personal property taxes of any state or local taxing authority, but income is subject to all Federal taxes.

Any Federal Home Loan Bank may accept deposits from its member institutions, and when so designated by the Secretary of the Treasury, may be appointed a depository for public funds except customs receipts. Deposits with Federal Home Loan Banks are not subject to check, and the interest rate on time deposits must not exceed 1% except with prior approval of the Home Loan Bank Board.

Through inter-bank transactions, funds may be shifted from areas of abundant credit to areas of scarcity. As of December 31, 1947, a total of $435,572,186 in advances were outstanding for the System, compared with $293,454,767 December 31, 1946. Cash totaled $36,-704,450, Government securities $139,127,492, and total assets were $612,689,342, December 31, 1947, as against total obligations of $261,700,000, time and demand deposits of $98,498,264,and net worth of $249,-873,234 (capital stock of $225,749,775; undivided profits of $8,524,750; and reserves of $15,598,709).

(See Federal Home Loan Bank Administration; Home Loan Bank Act.)

FEDERAL HOUSING ACT

See National Housing Act.

FEDERAL HOUSING ADMINISTRATION

See Housing Administration.

FEDERAL INTERMEDIATE CREDIT BANKS

See Intermediate Credit Banks, Farm Credit Act of 1933.

FEDERAL LAND BANKS

The Federal Land Banks since 1933 have been under the supervision of the Farm Credit Administration, which in turn since 1939 has been part of the U. S. Department of Agriculture. Each Farm Credit District contains a Federal Land Bank, serving its national farm loan associations, as well as other agricultural credit institutions (see Farm Credit Administration).

The 12 Federal land banks were organized March and April 1917 under the Federal Farm Loan Act, with a capital of $750,000 each, or a total of $9,000,000. The greater part of this capital, or $8,892,130, was subscribed by the Federal Government. As required by law, the original capital subscribed by the Government has been entirely retired out of the proceeds of stock subscriptions by borrowers, either through national farm loan associations, or more rarely, agencies, or direct borrowers. Under an amendment to the Federal Farm Loan Act approved January 23, 1932, the Secretary of the Treasury on behalf of the United States subscribed for $125,000,000 of additional capital stock in the 12 banks. This additional capital was to be paid off at par and retired in the same manner as the original capital stock of the banks. However, the stock subscribed by the Government under this amendment could at any time, in the discretion of the directors and with the approval of the Land Bank Commissioner, be retired in whole or in part; and the Farm Credit Administration could at any time require such stock to be retired in whole or in part if in its opinion the bank had resources available for that purpose. All of this additional capital stock has also been retired, so that the Government now has no stock interest in the Federal Land Banks.

The $125,000,000 appropriated in 1932 to enable the Secretary of the Treasury to pay for stock issued to the Government, discussed above, included $25,000,000 to be used exclusively for the purpose of supplying any bank funds to use in its operations in place of any amounts of which the bank might be deprived by reason of extensions granted to borrowers under the terms of the Farm Loan Act, as amended. In addition, the Emergency Farm Mortgage Act of 1933, approved May 12, provided that in the case of any such extension made during a 5-year period beginning May 12, 1933, or in the case of any deferment of principal payments by borrowers during a 5-year period beginning July 11,1933, it should be the duty of the Secretary of the Treasury, on behalf of the United States, upon the request of the Federal land bank making the extension and with the approval of the Land Bank Commissioner, to subscribe at such periods as the Commissioner shall determine to the paid-in surplus of such bank an amount equal to the amount of all such extensions and deferments made by the bank. Such subscriptions were subject to call, in whole or in part, by the bank with the approval of the Commissioner upon 30 days' notice, and could be repaid, in whole or in part, at any time in the discretion of the bank and with the approval of the Land Bank Commissioner. The Commissioner could at any time, however, require such subscriptions to be repaid, in whole or in part, if in his opinion the bank had resources available therefor.

The authority to obtain such paid-in surplus on account of extensions granted has not been exercised since December, 1943. In the period June 19, 1934-May 14, 1937, a total of $189 million was paid in to surplus by the Secretary of the Treasury, all of which has since been repaid by the banks.

Management.—Each Federal Land Bank is managed by a board of seven directors, the Farm Credit Board in each district being ex officio the board of directors for the Federal Land Bank in the district. Three of the directors are local directors, one of whom is chosen by the national farm loan associations and borrowers through agencies, if any, of the Federal Land Banks; one is chosen by the Production Credit Associations in the district; and one is chosen by borrowers from the Bank for Cooperatives of the district. Three of the directors are district directors, of whom two are appointed by the Governor of the Farm Credit Administration. The third district director is appointed by the Governor of the Farm Credit Administration from the three persons having the greatest number of votes in nominations made by the national farm loan associations and borrowers through agencies, if any, in the district. The seventh director, termed the director at large, is appointed by the Governor of the Farm Credit Administration. The officers of each Federal Land Bank are elected by the directors, and their compensation is subject to the approval of the Land Bank Commissioner.

Loans on amortization basis.—The Federal land banks are authorized to extend long-term mortgage credit to farmers upon the security of first mortgages on farm lands. The loans are made on an amortization basis with maturities of not less than 5 nor more than 40 years. Most of the loans have maturities ranging from 33 to 36 years, but many loans are written for shorter terms, such as 20 years or less.

The mortgages provide for annual or semiannual installment payments which include interest, and in addition an amount which is applied toward the reduction of the principal, the size of these installments depending, of course, on the term, the interest rate, and the amount of the loan. After the loan has run for 5 years, the borrower may make additional payments on the principal or pay off the loan in full on any interest date. It is generally possible to make arrangements whereby the banks grant the privilege of prepayment before the expiration of the 5-year period. Under the provisions of the Emergency Farm Mortgage Act of 1933, no payment on the principal portion of any installment on any loan could be required during the 5-year period commencing July 11, 1933, if the borrower should not be in default with respect to any other condition or covenant of his mortgage.

Endorsement of notes.—With certain exceptions, discussed in the following paragraph notes executed in favor of the Federal land banks are endorsed by national farm loan associations discussed below. Under their endorsements the associations become liable for the payment of the notes in case of default by the borrowers.

The Farm Loan Act permitted the making of loans through agents consisting of banks, trust companies, mortgage companies, and savings institutions in localities where national farm loan associations have not been and are not likely to be formed. Although no loans are now being closed through such agents, approximately $2,076,700 of the loans outstanding, all in the seventh district, were made under this provision of the law.

The Emergency Farm Mortgage Act of 1933, approved May 12, provided that whenever it shall appear to the Land Bank Commissioner that national farm loan associations have not been formed in any locality in the continental United States, or that the farmers residing in the territory covered by the charter of a national farm loan association are unable to apply to the Federal land bank of the district for loans on account of the inability of the bank to accept applications from such association, the Land Bank Commissioner shall authorize said bank to make direct loans to borrowers secured by first mortgages on farm lands situated within any such locality or territory. It was provided also that the rate of interest on such direct loans made at any time by any Federal land bank shall be one-half of 1 per cent. per annum in excess of the rate of interest charged to borrowers on mortgage loans made at such time by the bank through national farm loan associations. Each borrower who obtains a direct loan must subscribe for stock of the Federal land bank equal to 5 per cent. of his loan, which stock is held by the bank as collateral security for the loan. Borrowers obtaining direct loans may covenant in their mortgages to unite, under certain circumstances, with other such borrowers to form national farm loan associations.

National farm loan associations.—Most of the loans of the banks have been made through and with the endorsement of local associations of borrowers chartered under the Federal Farm Loan Act. These organizations, numbering 1,262 as of Dec. 31, 1947, are known as "national farm loan associations." Associations are under the general supervision of the Farm Credit Administration. All stockholders in an association must be borrowers from a Federal land bank, each borrower subscribing 5 per cent. of his loan in stock of the association. The stockholders are individually responsible, equally and ratably and not one for another, for all contracts, debts, and engagements of such association entered into prior to June 17, 1933, to the extent of the amount of stock owned by them at the par value thereof,

in addition to the amount paid in and represented by their shares. The Farm Credit Act of 1933 provided that the shareholders of national farm loan associations shall not be held individually responsible for any contract, debt, or engagement of such association entered into after June 16, 1933. The income of the association consists of authorized charges collected from borrowers and applicants for loans, charges in connection with the transfer of mortgages and stock interests of borrowers, earnings received from invested reserves or other association-owned property, and dividends received by the association on its stock in the Federal land bank. The expenses consist primarily of the costs of making appraisals of farms of applicants and compensation to its secretary-treasurer, who is the active officer.

When the borrower subscribes to stock in the association the stock is held by the association as collateral security for the loan. The association in turn subscribes to an equal amount of stock in the Federal land bank which is held by the bank as collateral security for the loans closed through the association. When the borrower pays his loan in full, the bank retires its stock which was subscribed for by the association at the time the loan was made. If the association has met its obligations currently, the bank remits the proceeds of this stock to the association in cash. In such case, the borrower's stock in the association is retired and the proceeds thereof paid to him or credited on his indebtedness, if any, to the association. If, on the other hand, the association has not met its obligations currently, it may be necessary for the bank to withhold all or a portion of the proceeds of its stock and apply such proceeds as a credit on the association's indebtedness. In turn, it may be necessary for the association to defer payment to the borrower for his stock until it has met its obligations, and has funds available which may be used for retiring stock.

Appraisals.—When an application for a loan is received by a bank, it is referred, in proper cases, to a land bank appraiser, who is under the supervision of the Land Bank Commissioner, and who makes an inspection of the property and submits a written report thereon. The appraiser is a public offocial and not an employee of the bank. In the case of loans made through national farm loan associations, the application is received first by the association and its loan committee makes an investigation and reports as to the character and solvency of the applicant and the sufficiency of the security offered. The application then is forwarded to the bank with the association's recommendation.

Limits on loans.—A bank is not permitted to make a loan through a national farm loan association unless the loan committee of the association is unanimous in its approval and, in the case of either loans through associations or direct loans, unless the bank appraiser's report upon the security is favorable. Loans may not be made in excess of 65% of the appraised normal value of the farm mortgaged as security. Appraisals are made on the basis of the normal value of the property for agricultural purposes and the earning power of the land is a principal factor. To be acceptable security for a loan, a property must meet each of the following minimum standards: (1) it must be capable of producing, under typical operation, sufficient normal agricultural earnings to pay farm operating expenses, including taxes and other fixed charges, maintain the property,and meet installments on a loan that would be proper to a typical owner of the property; (2) it must be sufficiently desirable to be readily salable or rentable under normal agricultural conditions; (3) it must be sufficiently durable to maintain satisfactory production during the loan term specified; and (4) it must have sufficient stability of value to assure that, on a loan that would be proper to a typical owner of the property, the bank could recover its investment if unforeseen difficulties should result in acquirement of the property. While the normal agricultural earnings must be sufficient to meet the expenses specified in requirement 1, it is not necessary that they also be adequate in all cases to meet family living expenses. When it is necessary to rely on income other than farm earnings for family living expenses, such supplemental income must be available to the applicant and to a typical owner from dependable sources and in an amount sufficient to support customary living standards.

Loans may not be made to any one borrower in an amount exceeding $50,000, and loans to any one borrower may not exceed $25,000 unless approved by the Land Bank Commissioner. Loans may be made to any person who is engaged, or is shortly to become engaged, in farming operations or to any person the principal part of whose income is derived from farming operations.

The Federal land banks handle the Land Bank Commissioner loans as agents of the Land Bank Commissioner. Commissioner loans are often made jointly with land bank loans, and in such instances the land bank loan is made on first-mortgage security and the Commissioner's loan is secured by a second mortgage.

Purposes of loans.—The banks may make loans only for purposes specified in the law — briefly: to purchase farm land; to purchase equipment, fertilizer, and live-stock for the mortgaged farm; to provide buildings and improvements for the farm lands; to liquidate indebtedness incurred for agricultural purposes or incurred at least two years prior to the date of application for the loan; and to provide the owner of the land mortgaged with funds for general agricultural purposes.

Loans outstanding.—As of Dec. 31, 1947, there were outstanding a total of 315,573 Federal land bank loans with total unmatured principal of $869,425,448, of which $835,709,520 were classified as not delinquent.

Interest rates.— The rate of interest on loans made in the continental United States through national farm loan associations may not, except with the approval of the Governor of the Farm Credit Administration, exceed by more than 1 per cent. per annum the interest rate borne by the last series of bonds issued by the bank. In no event, however, may more than 6 per cent. interest be charged on such loans. The rate of interest on any direct loans made in the continental United States must, as stated above, be one-half of 1 per cent. per annum in excess of the rate on loans made through national farm loan associations. From July, 1933 to April 1, 1935, the rate of interest expressed in new mortgages and credit instruments evidencing Federal land bank loans made in the continental United States through national farm loan associations was 5% per annum. On April 1, 1935, interest rate was reduced to 4 1/2%; on April 10, 1935, to 4 1/4%; and on June 24, 1935, to 4%. Since June 24, 1935, the contract rates of interest on loans closed by Federal land banks through national farm loan associations have been uniformly 4% per annum. Moreover, effective for all interest installments maturing on and after July 1, 1944, the 12 Federal Land Banks, by voluntary action on the part of the board of directors of each bank, reduced to 4% the contract rate of interest on

all outstanding mortgage loans that had been made through national farm loan associations prior to June 24, 1935. At the same time, voluntary reductions in interest rates were effected for those other classes of loans which by law are required to be made at slightly higher rates than rates on loans closed through national farm loan associations.

Handling of acquired real estate.—For the most part, foreclosures are conducted and title acquired by the banks rather than by the national farm loan associations The banks, however, are entering into agreements with associations which preserve the association's liability on its endorsement. This obviates, as far as possible, the necessity of taking deficiency judgments against associations in connection with defaulted loans, and credits the association's liability with the amount received from the liquidation of the loan. This procedure protects the interests of both banks and associations and permits the orderly handling and disposition of acquired real estate. The Farm Credit Act of 1933 gave the banks power to enter into agreements with the associations, under the terms of which losses incurred and gains realized on account of the disposition of lands covered by a defaulted mortgage endorsed by such association will be shared equally by the bank and the association.

Federal farm loan bonds.—For the purpose of obtaining funds with which to make loans, a Federal land bank may issue bonds in an amount not exceeding 20 times its capital and surplus. These bonds are lawful investment for fiduciary and trust funds under the jurisdiction of the United States Government and eligible for investment by savings banks in most States. They are acceptable also to the United States Treasury as security for Government deposits, including postal savings. The bonds and the income derived therefrom are exempt from state, municipal, and local taxation. However, interest on such bonds issued after the effective date of the Public Debt Act of 1941 is not exempt from taxation by the U. S. Government; and neither gain from the sale or other disposition of such bonds nor transfer of the bonds by inheritance, gift, etc., is exempt from Federal or state taxation.

Prior to 1933, bonds were issued individually by each Federal land bank. The last remaining issues of individual land bank bonds were called for payment in 1939, and the Federal land banks now have outstanding only consolidated farm loan bonds. Section 21 of the Federal Farm Loan Act provides that when any Federal land bank shall desire to participate in a consolidated issue of farm loan bonds, it shall make application to the Farm Credit Administration for the approval on its behalf of such issue and tender to the farm loan registrar approved farm mortgages, or obligations of the United States Government, as security therefor, and no bank shall participate in such consolidated issue until such application has been approved. Consolidated bonds shall bear a rate of interest not to exceed 5% per annum As of January 31, 1948, unmatured consolidated Federal farm loan bonds, including bonds on hand, were outstanding in the amount of $686,932,000, at interest rates ranging from 1 1/4% to 2 1/4%.

The 12 Federal land banks are jointly and severally liable for the payment when due of both interest on and principal of consolidated bonds. The first consolidated bonds were issued July 15, 1933.

The Emergency Farm Mortgage Act of 1933 authorized the Federal land banks to issue, during the two-year period beginning May 12, 1933, a new type of bond, the interest on which would be fully and unconditionally guaranteed by the United States. The law provided that not more than $2,000,000,000 of such bonds could be issued and that the rate of interest on the bonds should not exceed 4 per cent. per annum. The Federal Farm Mortgage Corporation Act, approved January 31, 1934, provided, however, that no bonds containing the interest guaranty should be issued after 90 days subsequent to the enactment of the act except for the purpose of refinancing any bond which is or has been issued subject to such guaranty of interest. As of December 31, 1947, the Federal Farm Mortgage Corporation had no outstanding bonded debt. No public offering has ever been made of farm loan bonds bearing a guaranty of interest by the Government. Except for the interest guaranty on the bonds above referred to, the Government has never assumed any liability for either principal of or interest on bonds issued by the Federal land banks.

Bond collateral held in trust.—Under the provisions of the Farm Loan Act, a bank before it may issue bonds must deposit with the farm loan registrar as collateral security, approved first mortgages on farm lands or obligations of the United States Government not less in their aggregate amount than the amount of bonds to be issued. The collateral for consolidated bonds must be held by the farm loan registrars separate and apart from the collateral held by them for any bonds issued individually by the Federal land banks.

(See Federal Land Bank Bonds, Federal Land Bank Districts, Federal Land Bank System.)

FEDERAL LAND BANK BONDS

See Federal Farm Loan Bonds.

FEDERAL LAND BANK DISTRICTS

The twelve districts into which the continental United States is divided and in which the operations of each of the twelve Federal Land banks are confined. The Federal Farm Loan Board (predecessor of the Farm Credit Administration) determined the boundaries of these districts, and in so doing, considered the character and development of the states entering into each district. The following factors were considered: total land area, area of land and farms, area of improved land and farms, number of farms mortgaged at that time, amount of outstanding mortgage indebtedness, value of farm lands and buildings, gross value of farm products, total population and total rural population.

The land bank district numbers, the names of the 12 banks, their locations, and the district which each serves are as follows:

1. Federal Land Bank of Springfield, Springfield, Mass.: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, and New Jersey.
2. Federal Land Bank of Baltimore, Baltimore, Md.: Pennsylvania, Delaware, Maryland, District of Columbia, Virginia, West Virginia and Puerto Rico.
3. Federal Land Bank of Columbia, Columbia, S. C.: North Carolina, South Carolina, Georgia, and Florida.
4. Federal Land Bank of Louisville, Louisville, Ky.: Ohio, Indiana, Kentucky, and Tennessee.
5. Federal Land Bank of New Orleans, New Orleans, La.: Alabama, Mississippi, and Louisiana.

6. Federal Land Bank of St. Louis, St. Louis, Mo.: Illinois, Missouri, and Arkansas.
7. Federal Land Bank of St. Paul, St. Paul, Minn.: Michigan, Wisconsin, Minnesota, and North Dakota.
8. Federal Land Bank of Omaha, Omaha, Nebr.: Iowa, South Dakota, Nebraska, and Wyoming.
9. Federal Land Bank of Wichita, Wichita, Kans.: Kansas, Oklahoma, Colorado, and New Mexico.
10. Federal Land Bank of Houston, Houston, Tex.: Texas.
11. Federal Land Bank of Berkeley, Berkeley, Calif.: Arizona, Utah, Nevada, and California.
12. Federal Land Bank of Spokane, Spokane, Wash.: Montana, Idaho, Washington, and Oregon.

FEDERAL LAND BANK SYSTEM

See Federal Credit Administration, Federal Farm Loan System, Federal Farm Mortgage Corporation.

FEDERAL NATIONAL MORTGAGE ASSOCIATION

The Federal National Mortgage Association was originally organized on February 10, 1938 by the Reconstruction Finance Corporation with capital stock of $10,000,000, all owned by the RFC, and surplus of $1,000,000, as the National Mortgage Association of Washington. Name was changed to present title in April, 1938.

The association was organized under Title III of the National Housing Act, as amended, and its purpose was to assist in establishing and maintaining a market for mortgages on homes, including large size housing projects, insured by the Federal Housing Administrator, with the objective of encouraging loans by private lending institutions in the housing field. With the success of FHA insured mortgages, the demand upon the association to buy such mortgages in recent years has been light. As of June 30, 1947, the association reported a total of $4,961,981 FHA mortgages, as compared with cash of $8,785,534, U. S. Guaranteed obligations of $4,650, real estate acquired of $6,701, and total assets of $13,803,970. Net worth totaled $13,608,724 (capital stock, $10,000,000; surplus, $1,298,140; and reserves $2,310,584). Although authorized to borrow up to 20 times the amount of paid-in capital and surplus but in any event not over insured mortgages held, cash, and U. S. Government obligations held, the association has no outstanding debt.

(See Reconstruction Finance Corporation.)

FEDERAL OPEN MARKET COMMITTEE

See Open Market Committee.

FEDERAL POWER COMMISSION

Established in 1920 by the Federal Water Power Act, the Federal Power Commission for years supervised in a limited manner the production of hydro-electric power, its principal function being to license power developments on navigable streams and across Government lands. Production and transmission of electricity was very largely intrastate.

With the growth and development of large interstate utility systems, however, and the passage of the Public Utility Act of 1935, the Natural Gas Act of 1938, the Flood Control Act of 1938, and other legislation, the powers and duties of the Federal Power Commission have been greatly enlarged.

Under the Federal Power Act, as amended in 1935, the Commission has jurisdiction over water power projects on navigable waters of the United States, or affecting the interests of interstate or foreign commerce, or upon public lands; and also over the interstate transmission and sale of electric energy at wholesale and over the public utilities engaged in these activities. The Commission also has the power to license water power developments on streams subject to Federal jurisdiction or on public lands, to private, state or municipal agencies; and to recapture such licensed projects at the expiration of the license period upon the payment to the licensee of the net investment, not to exceed the fair value of the project.

The Commission does not have jurisdiction over rates in any but interstate business or licensed hydro-electric plants except where no State utility commission exists. With interstate business so important in recent decades, the rate regulation power of the Commission has assumed increased importance. Under the Federal Power Act, provision is made for the regulation by the Commission of rates charged by public utilities for electric power sold at wholesale in interstate commerce for resale as well as of the accounting systems of such utilities, interlocking directorates, and financial transactions, including mergers, consolidations and security issues. The Commission has exercised moderation in its policies and has declared its function to be to regulate not only in the public interest but also in the interest of the utilities affected. Rates of 6% and 6 1/2% have been granted as reasonable rates of return on investments, but rate bases of all organizations within the Commission's jurisdiction are being reviewed.

The Natural Gas Act of 1938 provided for the regulation by the Commission of the transportation of natural gas in interstate commerce, and of the sale in interstate commerce of natural gas for resale; and confers on the Commission jurisdiction over the companies engaged in such transportation and sale.

The Flood Control Act of 1938 and later similar legislation empowered the Commission to recommend to the Secretary of War the construction of facilities for development of hydro-electric power in flood control dams constructed by the War Department. Thus, through the medium of flood control, additional Government-owned hydro-electric capacity could be constructed.

(See Public Regulation, Public Utility Industry.)

FEDERAL PUBLIC HOUSING AUTHORITY

Under the Reorganization Plan No. 3 of the President of the United States, functions of the Federal Public Housing Authority were transferred July 27, 1947 to the Public Housing Administration. The Public Housing Administration in turn is a constituent operating agency of the Housing and Home Finance Agency, which also includes the Home Loan Bank Board and the Federal Housing Administration.

Principal peacetime activity of both the former Federal Public Housing Authority and of the successor Public Housing Administration is the low-rent and slum clearance program transferred from the old United States Housing Authority. The Public Housing Administration continues to administer the program of loans and annual contributions to local communities for the purpose of providing decent housing at rents which can be afforded by low-income families.

(See Public Housing Administration.)

FEDERAL REGULATION

See Public Regulation.

FEDERAL RESERVE ACT

The act which created the Federal Reserve System (q. v.), approved December 23, 1913, as amended subsequently. Most important amendments were contained in the Banking Act of 1935 (q. v.).

Present text of The Federal Reserve Act, as amended to November 1, 1946, with an Appendix containing provisions of certain other statutes affecting the Federal Reserve System, is obtainable from the Board of Governors of the Federal Reserve System.

(See Banking Act of 1933, Banking Act of 1935, Federal Reserve System, Pepper-McFadden Act, National Bank Act.)

FEDERAL RESERVE ADVISORY COUNCIL

A board, provided in the original Federal Reserve Act and continued since, which consists of twelve members elected annually by the board of directors of each of the twelve Federal Reserve banks. Its meetings are held at least four times a year at Washington, D. C., and oftener if the Board of Governors of the Federal Reserve System deems necessary, and in addition, other meetings in Washington, D. C. or elsewhere as it may deem necessary. The purpose of this body is to assist the Federal Reserve Board of Governors by making recommendations upon important matters before action is taken. Its functions are purely advisory and not mandatory. It has power to confer with the Federal Reserve Board of Governors on general business conditions, to make oral or written representation concerning matters within the jurisdiction of the Federal Reserve Board of Governors and to call for information and to make recommendations concerning discount rates, rediscount business, note issues, reserve conditions in the Federal Reserve districts, open market operations and generally, the affairs of the Federal Reserve System. The Council consists of bankers, and in addition to its advisory function, serves as a sounding board for banking opinion on policies and operations of the Federal Reserve System.

(See Federal Reserve Act, Sec. 12.)

FEDERAL RESERVE AGENT

The chairman of the board of directors of each Federal Reserve Bank, who is also designated as "Federal Reserve Agent" for the district in which the bank is located. He is one of the three Class C directors, all of whom are appointed by the Board of Governors of the Federal Reserve System, and is the official representative of the Federal Reserve Board of Governors with each Federal Reserve bank. His chief function as Federal Reserve Agent is to receive applications for the issue of Federal Reserve notes and to secure the approval of the Federal Reserve Board of Governors for their ultimate issue. The collateral for Federal Reserve notes is held under his custody and he is required to give bond to the Federal Reserve Board for the faithful performance of his duties. (See Secs. 4, 11 (i), 16 and 18 of Federal Reserve Act.)

FEDERAL RESERVE BANK

Any one of the twelve Federal Reserve Banks created under the Federal Reserve Act (q. v.) and operating in one of the twelve Federal Reserve Districts. Federal Reserve Banks are also known as "central," "reserve" and "regional" banks.

Section 4 of the Federal Reserve Act outlines the organization, corporate powers and directorate of the Federal Reserve Banks. The Banking Act of 1935 made an important organizational change. Under the original Act, the Board of Directors of the Federal Reserve Bank had the power to appoint "such officers and employees as are not otherwise provided for in this act, to define their duties, require bonds for them and fix the penalty thereof, and to dismiss at pleasure such officers or employees." The designation of "Governor", which Federal Reserve Banks adopted for their chief executive officer, was not provided for in the Act.

Under the Banking Act of 1935, and effective March 1, 1936, the Board of Directors of the Federal Reserve Bank have the power to appoint a president, vice-presidents, and such officers and employees as are not otherwise provided for in the Act, to define their duties, require bonds for them and fix the penalty thereof, and to dismiss at pleasure such officers or employees. The title "Governor" is reserved to members of the Board of Governors of the Federal Reserve System. The President of the Bank shall be the chief executive officer of the Bank and shall be appointed by the Board of Directors, with the approval of the Board of Governors of the Federal Reserve System, for a term of five years. The First Vice-President of the Bank shall be appointed in the same manner and for the same term as the President, and in the absence or disability of the President, or during a vacancy in the office of President, shall serve as chief executive officer of the Bank. No change was made in the number, classes or qualifications of the board of directors. (See Federal Reserve Cities, Federal Reserve Districts, Federal Reserve System.)

FEDERAL RESERVE BANK ACCOUNT

An account which every member bank and clearing member bank is required to maintain with the Federal Reserve bank of its district. This account represents the cash balance due from the Federal Reserve bank, and for member banks must be sufficient in amount to provide for the legal reserve against deposits.

FEDERAL RESERVE BANK COLLECTIONS ACCOUNT

An account appearing in the general ledger and financial statement of a bank which represents the amount of out-of-town checks sent for collection through the Federal Reserve Check Collection System (q. v.), in the process of collection and not yet available as reserve. It also represents the total of the balances in the Federal Reserve collection ledger in the transit department. When checks sent for collection in this manner become available, they are added to the Federal Reserve Bank Account and subtracted from the Federal Reserve Bank Collections Account.

FEDERAL RESERVE BANK EARNINGS

Federal Reserve Banks are not operated primarily for profit, the profit motive being secondary to the proper control of credit conditions and money rates. Division of earnings of Federal Reserve Banks is governed by Sec. 7 of the Federal Reserve Act. Under the original Act, Federal Reserve Banks were allowed to retain one-half of surplus earnings until surplus was built up of 50% of the paid-in capital. In 1919, this was amended to provide for retention of surplus earnings to build up surplus of 100% of the subscribed capital (which would be 200% of actually paid-in capital); once surplus reached that level, disposition of surplus earnings was to be 90% to the Government as a franchise tax and 10% to be retained in surplus.

The present provisions governing disposition of earnings were enacted by Section 4 of the Banking Act of 1933, approved June 16, 1933, which provided, effective July 1, 1932, that after all necessary expenses and 6% cumulative dividend on the paid-in capital stock, the net earnings shall all be retained in surplus of the Federal Reserve Banks. However, in connection with establishment of the Federal Deposit Insurance Corporation, each Federal Reserve Bank was required by the Banking Act of 1933 to pay one-half of its surplus on January 1, 1933, as subscription to the capital stock of the Federal Deposit Insurance Corporation. By the close of 1932, the Federal Reserve Banks had accumulated surplus of $278 million, compared with subscribed capital of $302 million. Subscriptions to the FDIC amounted to $139 million, therefore, and reduced surplus to $139 million, well below the capital subscribed. Thus, elimination of the franchise tax by the Banking Act of 1933 was designed to allow the Federal Reserve Banks to rebuild their surplus accounts, which in view of the lean earnings at the time, appeared to be a slow process. By the end of 1944, surplus accounts had been built up to less than 75% of subscribed capital.

For 1945 and 1946, open market operations of the System resulted in substantial additions to earning assets of the Federal Reserve Banks, principally in Government securities. By the close of 1946, surplus of Federal Reserve Banks totaled over $439 million, compared with subscribed capital of $373 million, and each Federal Reserve Bank reported surplus at least equal to subscribed capital. Surplus earnings for 1947 were estimated at $60 million. Accordingly, the Board of Governors of the Federal Reserve System decided to invoke the authority, under Section 16 of the Federal Reserve Act, to levy an interest charge on Federal Reserve Notes issued by the Federal Reserve Banks. This was the first time that this interest charge on Federal Reserve Notes had been invoked, which is levied on the amount of the outstanding Notes less the amount of gold certificates held by the Federal Reserve Agent as collateral security. The Board of Governors established such rates of interest as made it possible to pay to the Treasury approximately 90% of the net earnings after dividends of Federal Reserve Banks for 1947.

Invoking this authority to charge Federal Reserve Notes, the Board of Governors points out, has the same effect as the eliminated franchise tax. It is planned that the payments be made quarterly.

In addition, the Board of Governors proposed that Congress authorize the repayment of the $139 million of capital furnished by the Federal Reserve Banks to the Federal Deposit Insurance Corporation, into the Treasury rather than back to the Federal Reserve Banks, when the FDIC cancelled its capital stock. Accordingly, when Act of August 5, 1947 provided for payment and cancellation of the capital stock of the Federal Deposit Insurance Corporation, the portion of the capital stock subscribed by the Federal Reserve Banks was all paid to the Treasury, along with the Treasury's own original subscription.

Under Section 13b of the Federal Reserve Act, providing for direct loans to industry by Federal Reserve Banks, the Secretary of the Treasury was authorized on and after June 19, 1934 to contribute to Federal Reserve Banks an amount not to exceed their $139 million subscription to capital stock of the Federal Deposit Insurance Corporation. Repayment of such contributions was provided from all dividends and payments on liquidation on the FDIC capital stock, and if such proceeds did not annually amount to 2% of the contributions, the difference was to be made up by payment to the Treasury from earnings of the Federal Reserve Banks derived from the use of such contributions. Accordingly, in connection with repayment and cancellation of the entire FDIC capital stock, the Board of Governors recommended that Congress release to the Treasury general fund the approximately $139 million earmarked for payments to the Federal Reserve Banks under Section 13b of the Federal Reserve Act. Legislation was also introduced in Congress to repeal Section 13b and to substitute therefor authority for the Federal Reserve Banks, upon request of any commercial bank, to guarantee in part loans made by such commercial bank to business. For this purpose, the Federal Reserve Banks would rely on their own surplus, without resort to Government funds.

The tabulation on page 223 summarizes the earnings, expenses, net earnings, dividends and other disposition of surplus earnings of Federal Reserve Banks since 1914. (See Federal Reserve System.)

FEDERAL RESERVE BANK NOTES

Circulating notes issued by the various Federal Reserve Banks under approximately the same conditions for issuance of National Bank Notes by National Banks. Federal Reserve Bank Notes were expected to replace National Bank Notes eventually, but like National Bank Notes, are now in process of retirement. As of Feb. 29, 1948, $375 million of Federal Reserve Bank Notes were still outstanding, compared with $102 million in National Bank Notes. Federal Reserve Bank Notes continue as a liability of the issuing Federal Reserve Bank until the liability is eliminated by deposit with the Treasurer of the United States of lawful money for redemption.

Originally authorized in the Federal Reserve Act, Federal Reserve Bank Notes were issued in small amounts in 1916 and 1917, and later, in 1918-1920, about $250 million were issued in accordance with the Pittman Act (q. v.). Next large issuance occurred in the banking crisis of 1933, when it was feared that the shortage of collateral for Federal Reserve Notes might create an inadequate circulation. However, only about $200 million of Federal Reserve Bank Notes were actually issued, so that in 1942, in order to utilize the unissued stock of about $660 million of printed Federal Reserve Bank Notes, the Board of Governors authorized the Federal Reserve Banks to issue them concurrently with deposit credits to the Treasurer of the United States for equal amount, thus cancelling the liability of the Federal Reserve Banks for the issued Federal Reserve Bank Notes. (See National Bank Notes.)

FEDERAL RESERVE BANK STATEMENT

See Federal Reserve Statement.

FEDERAL RESERVE BANK STOCK

FEDERAL RESERVE BOARD

The body upon whom the general supervision and coordination of the Federal Reserve System rests, designated since the Banking Act of 1935 as the Board of Governors of the Federal Reserve System.

In accordance with Section 10 of the Federal Reserve Act, as amended by the Banking Act of 1935, the Board of Governors consists of seven members, appointed by the President of the United States, with the advice and consent of the Senate, for a term of 14 years, so rotated

---

as to provide for the expiration of the term of not more than one member in any 2-year period. The Banking Act of 1935 eliminated the Comptroller of the Currency and the Secretary of the Treasury as ex-officio members. One of the members appointed shall be designated by the President as Chairman and one as Vice-Chairman of the Board, to serve as such for a term of 4 years. Since the Banking Act of 1935, each member of the Board shall not be eligible for reappointment after he shall have served a full term of 14 years. Not more than one of the members of the Board shall be selected from any one Federal Reserve District. In selecting the members of the Board, all of whom shall devote their entire time to the business of the Board, the President shall have due regard to a fair representation of the financial, agricultural, industrial, and commercial interests, and geographical divisions of the country.

To further insure the independence of the Board, no member may be an officer or director any banking institution, or hold stock in any such institution. Before entering into his duties as a member of the Board, each appointee must certify under oath that he has complied with this requirement. Members of the Board shall be ineligible during the time they are in office and for two years thereafter to hold any office, position or employment in any member bank, except that this restriction shall not apply to a member who has served the full term for which he was appointed.

The Banking Act of 1935 and the Securities Exchange Act of 1934 added greatly to the powers of the Board of Governors by centralizing control over securities and security loans, open market operations, rediscounts, reserves, foreign relations, and supervision of member banks. The organization of the Board consists of six divisions, as follows: (1) Legal Division; (2) Division of Examinations; (3) Division of Bank Operations; (4) Division of Research and Statistics; (5) Division of Administrative Services; and (6) Division of Personnel Admin-

istration. The Board sits at Washington, D. C., in its own headquarters building. Meetings are irregular, depending upon need for action. At meetings, the Chairman shall preside, and in his absence, the Vice-Chairman shall preside; in the absence of the Chairman and Vice-Chairman, the Board shall elect a member to act as Chairman pro tempore. The Board has the power to levy semi-annually upon the Federal Reserve Banks, in proportion to their capital stock and surplus, an assessment sufficient to pay its estimated expenses and the salaries of its members and employees. In addition to the express and direct powers granted to the Board by the Federal Reserve Act and other legislation, an important additional power is the authority to make regulations and rulings interpretative or administrative of its delegated authority.

(See Banking Act of 1935, Federal Reserve Board Regulations, Federal Reserve System.)

FEDERAL RESERVE BOARD REGULATIONS

The Federal Reserve Act empowers the Board of Governors of the Federal Reserve System to issue regulations from time to time to define the terms and conditions of operation under the Act, and to interpret the meaning of the various sections of the Act. Through this power to interpret the general provisions of the Act and issue regulations and rulings, the Board of Governors is vested with quasi-judicial as well as administrative functions, in addition to the specific and direct powers outlined in the Act. Rulings and regulations of the Board are of operating importance, since they are designed to clarify practice and establish uniformity of procedure.

In addition to rulings on specific questions handed down from time to time, the Board of Governors has published, amended and revised series of regulations for the information of Federal Reserve Banks, Federal Reserve Agents, and member banks, on various subjects. To date, Regulations "A" through "W", inclusive, have been issued, amended or revised.

Regulations of the Board of Governors of the Federal Reserve System, individually with amendments, may be obtained from the Board of Governors. Digest of Rulings (to October 1, 1937) is also available in book form, containing digests of Board rulings, opinions of the Attorney General and court decisions construing the Federal Reserve Act. In addition, the Federal Reserve Bulletin issued monthly contains in its law department administrative rulings and interpretations of banking laws, new regulations issued by the Board of Governors, and similar material.

Subject matter and the various series, amendments and revisions of Regulations "A" through "W" are shown below:

Regulation A

--Acceptance of Statements in Lieu of Certificates as to Character of Commercial Paper:
Series of 1915
--Rediscounts under Section 13:
Series of 1916
Series of 1917
Series of 1920
Series of 1922
--Discounts under Sections 13 and 13a:
Series of 1923
Series of 1924
Series of 1928
Amendment of 1928
Series of 1930
--Discounts for and Advances to Member Banks by Federal Reserve Banks:
Revised, effective October 1, 1937
Amendment, March 20, 1942
Amendment, September 18, 1942
Amendment, September 11, 1944

Regulation B

--Open Market Purchases:
Series of 1916
Series of 1917
Series of 1920
Series of 1921
Series of 1922
Series of 1923
Series of 1924
Series of 1928

Regulation C

--6 Months Agricultural Paper:
Series of 1915
--Acceptance by Member Banks of Drafts Drawn to Furnish Dollar Exchange:
Series of 1916
--Acceptance by Member Banks of Drafts and Bills of Exchange:
Series of 1917
Series of 1920
Series of 1923
Series of 1924
Series of 1928
Revised, effective August 31, 1946

Regulation D

--Time Deposits and Savings Accounts:
Series of 1916
Series of 1917
Series of 1920
Series of 1923
--Reserves of Member Banks:
Series of 1924
Series of 1928
Amendment of 1930
Revised, effective January 1, 1936
Supplement of August 15, 1936
Supplement of January 30, 1937
Supplement of April 16, 1938
Supplement of November 1, 1941
Amendment of February 21, 1942
Amended and Republished, effective July 14, 1942
Amendment to Supplement, August 20,1942
Amendment to Supplement, October 3,1942
Amendment of April 13, 1943
Amendment of August 1, 1945
Amendment to Supplement, February 27, 1948

Regulation E

--Time Deposits and Savings Accounts:
Series of 1915
--Purchase of Warrants:
Series of 1916
Series of 1917
Series of 1920
Series of 1923
Series of 1924
Series of 1928

Regulation F

--Purchase of Warrants:
Series of 1915

--Trust Powers of National Banks:
Series of 1916
Series of 1917
Amendment of 1917
Series of 1920
Series of 1923
Series of 1924
Series of 1928
Series of 1930
Revised, effective June 1, 1936
Amendments of December 31, 1937
Amendment of November 20, 1939
Amendment of June 1, 1940
Amendment of September 1, 1945

Regulation G
--Loans on Farm Land and Other Real Estate:
Series of 1916
Series of 1917
Series of 1920
Series of 1923
Series of 1924
--Rediscount of Notes Secured by Adjusted Service Certificates:
Series of 1928
Series of 1931
Series of 1932
Repealed, April 6, 1939
--Collection of Non-Cash Items:
Effective February 1, 1940

Regulation H
--National Banks as Executors and Trustees:
Series of 1915
--Membership of State Banks and Trust Companies:
Series of 1916
Series of 1917
Series of 1920
Series of 1923
Series of 1924
Series of 1928
Amendment of 1930
Revised, effective November 20, 1939
--Membership of State Banking Institutions in the Federal Reserve System:
Revised, effective January 1, 1936

Regulation I
--Loans on Farm Lands:
Series of 1915
--Increase and Decrease of Capital Stock of Federal Reserve Banks:
Series of 1916
Series of 1917
--Increase or Decrease of Capital Stock of Federal Reserve Banks and Cancellation of Old and Issue of New Stock Certificates:
Series of 1920
Series of 1923
Series of 1924
Series of 1928
Amendment of 1930
Revised, effective January 1, 1936

Regulation J
--Bankers Acceptances:
Series of 1915
--Check Clearing and Collection:
Series of 1916
Series of 1917
Series of 1920
Series of 1923
Series of 1924
Series of 1928
Amendment of 1929
Series of 1930
Revised, effective September 1, 1939

Regulation K
--Acceptances by Member Banks:
Series of 1915
--Banking Corporations Authorized to do Foreign Banking Business under the Terms of Section 25 (a) of the Federal Reserve Act:
Series of 1920
Series of 1920 (second issue)
Series of 1923
Series of 1924
Series of 1927
Series of 1928
Amendment of 1930
Amendment of September 1, 1937
Amendment of November 1, 1943

--Clearings Between Federal Reserve Banks:
Series of 1915
--Interlocking Bank Directorates under the Clayton Act:
Series of 1920
Series of 1923
Series of 1924
Series of 1928
Series of 1928 (second series)
Amendment of 1930
Series of 1933
Revised, effective January 4, 1936
Amendment of November 7, 1938
Amendment of February 1, 1939
Amendment of August 1, 1939
Amendment of February 1, 1940

Regulation M
--Membership of State Banks:
Series of 1915
--Rediscount of Notes Secured by Adjusted Service Certificates:
Series of 1926
--Open Market Operations:
Series of 1933
--Foreign Branches of National Banks and of Corporations Organized under the Provisions of Section 25 (a) of the Federal Reserve Act:
Effective August 14, 1937

Regulation N
--Increase of Capital Stock of Federal Reserve Banks:
Series of 1915
--Relations with Foreign Banks and Bankers:
Series of 1933
Revised, effective January 1, 1944

Regulation O
--Issue and Redemption of Federal Reserve Notes:
Series of 1915
--Loans to Executive Officers of Member Banks:
Effective January 1, 1936
Amendment of July 1, 1939

Regulation P
--Trade Acceptances:
Series of 1915
--Holding Company Affiliates--Voting Permits:
Series of 1933
Revised, effective January 1, 1936

Regulation Q
--Commodity Paper:
Series of 1915
--Payment of Interest on Deposits:
Series of 1933
Series of 1935
Revised, effective January 1, 1936

Regulation R
--Bankers Acceptances:
Series of 1915
--Relationships with Dealers in Securities under Section 32 of the Banking Act of 1933:
Series of 1933
Revised, effective January 4, 1936

--Open Market Operations:
Effective March 19, 1936

FEDERAL RESERVE BOARD SETTLEMENT

Settlement of balances arising among Federal Reserve banks as a result of inter-district collections. (See Gold Settlement Fund.)

FEDERAL RESERVE BRANCH BANKS

Banks operating as branches of a Federal Reserve bank. The Federal Reserve Act authorizes Federal Reserve banks to establish branches without limit as to number under regulations approved by the Federal Reserve Board of Governors, but each branch must be within the boundaries of the Federal Reserve district of the Reserve bank which establishes it. At the date of this publication twenty-four branches had been established.

For the boundaries of the Federal Reserve districts and the areas served by the branch banks, see map under Federal Reserve Districts.

LOCATION OF BRANCH FEDERAL RESERVE BANKS

District	Branches
1st District, Boston	None
2nd District, New York	Buffalo
3rd District, Philadelphia	None
4th District, Cleveland	Cincinnati, Pittsburgh
5th District, Richmond	Baltimore, Charlotte
6th District, Atlanta	Birmingham, Nashville, Jacksonville, New Orleans
7th District, Chicago	Detroit
8th District, St. Louis	Louisville, Memphis, Little Rock
9th District, Minneapolis	Helena

District	Branches
10th District, Kansas City	Denver, Oklahoma City, Omaha
11th District, Dallas	Houston, El Paso, San Antonio
12th District, San Francisco	Seattle, Portland, Salt Lake City, Los Angeles

FEDERAL RESERVE BULLETIN

The only official organ or periodical issued by the Federal Reserve Board of Governors, being its medium of communication with member banks of the Federal Reserve System. It is issued monthly under the direction of the staff editorial committee, and sent to each member bank without charge. Copies are distributed to the public on a subscription basis.

FEDERAL RESERVE CHECK COLLECTION SYSTEM

The Federal Reserve Act authorizes the Federal Reserve Board of Governors to require each Federal Reserve bank to "exercise the functions of a clearing house for its member banks." Although the Federal Reserve System began operations in 1914, the check collection system was not established until July, 1916.

The purpose of the Federal Reserve check collection system was to correct the defects of the methods previously employed, and particularly the following abuses: (1) circuitous routing of checks which grew out of the efforts of banks to avoid exchange charges, and which resulted in great delay in the presentation of items; (2) inquitable distribution of exchange charges between Eastern metropolitan banks and country banks, and (3) excessive exchange charges.

At the present time the Federal Reserve check collection system is efficiently organized, and through its instrumentality out-of-town items are passed directly, economically, and at par among members and clearing members, i. e., non-member banks on the Par List (q. v.). Consequently, the only banks which do not participate in this collection system are such non-member banks as are not on the par list.

Member banks and clearing non-member banks are required to receive at par checks drawn on and presented to them by Federal Reserve banks. In order that banks using the system may know which non-member banks are members of the clearing system, the Federal Reserve Board publishes a semi-annual list with a monthly supplement containing the names of all the banks which are members and clearing members. Member banks are not required to remit for checks forwarded to them, but instead may agree to allow the sending Federal Reserve bank to charge their accounts. Non-member banks which remit must send a check which the sending Federal Reserve bank can pass at par through the clearing house of the city in which it is located.

Member banks are not required to employ the Federal Reserve check collection system. They may forward their out-of-town items directly through correspondents, irrespective of their membership in the system, but it is stipulated by the rules of the New York and other clearing houses that if the correspondents are in the system, checks drawn on them cannot be collected under any other terms than those prescribed by the rules governing Federal Reserve collections as regards exchange and time outstanding.

When a member bank deposits checks with a Federal Reserve bank to be collected from another member or clearing member, the sending bank is immediately credited in the collection or "float" account of the Federal Reserve bank. That is to say, the amount of the checks so sent does not become available as reserve until the checks have been collected. The time for collecting these items, however, may be predetermined by consulting the "schedule showing when the proceeds of items become available," in which the United States is divided in time zones, all points within such zones requiring the indicated number of days for collection.

For example, a check which is deposited by a bank in New York City with the New York Federal Reserve bank, and drawn upon a member bank in Poughkeepsie, N. Y., does not become available in the reserve account of the depositing bank until two business days have elapsed. One day is required to forward the check to the drawee bank in Poughkeepsie, and another for the Poughkeepsie bank to remit to the Federal Reserve bank of New York.

See under Federal Reserve Notes.

FEDERAL RESERVE CITIES

The cities in which the twelve Federal Reserve banks are located. Each Federal Reserve bank has a number corresponding to the district in which it operates. The twelve Federal Reserve cities, together with the districts in which they are located, are:

1. Boston
2. New York
3. Philadelphia
4. Cleveland
5. Richmond
6. Atlanta
7. Chicago
8. St. Louis
9. Minneapolis
10. Kansas City
11. Dallas
12. San Francisco

(See Federal Reserve Branch Banks, Federal Reserve Districts.)

FEDERAL RESERVE CREDIT

Total volume of Federal Reserve credit outstanding is the "supply" which the Federal Reserve Banks have contributed to member bank reserves, and consists principally of earning assets of the Federal Reserve Banks: (1) bills discounted; (2) bills bought; (3) holdings of U. S. Government securities; and (4) all other Reserve Bank credit. Included in the miscellaneous forms of Reserve Bank credit are industrial advances under Section 13b of the Federal Reserve Act; funds held on deposit with foreign banks; security holdings other than Government securities, such as Federal intermediate credit bank debentures and municipal warrants, etc.; and Federal Reserve Bank "float", or transit items credited to accounts of member banks prior to charge upon actual collection.

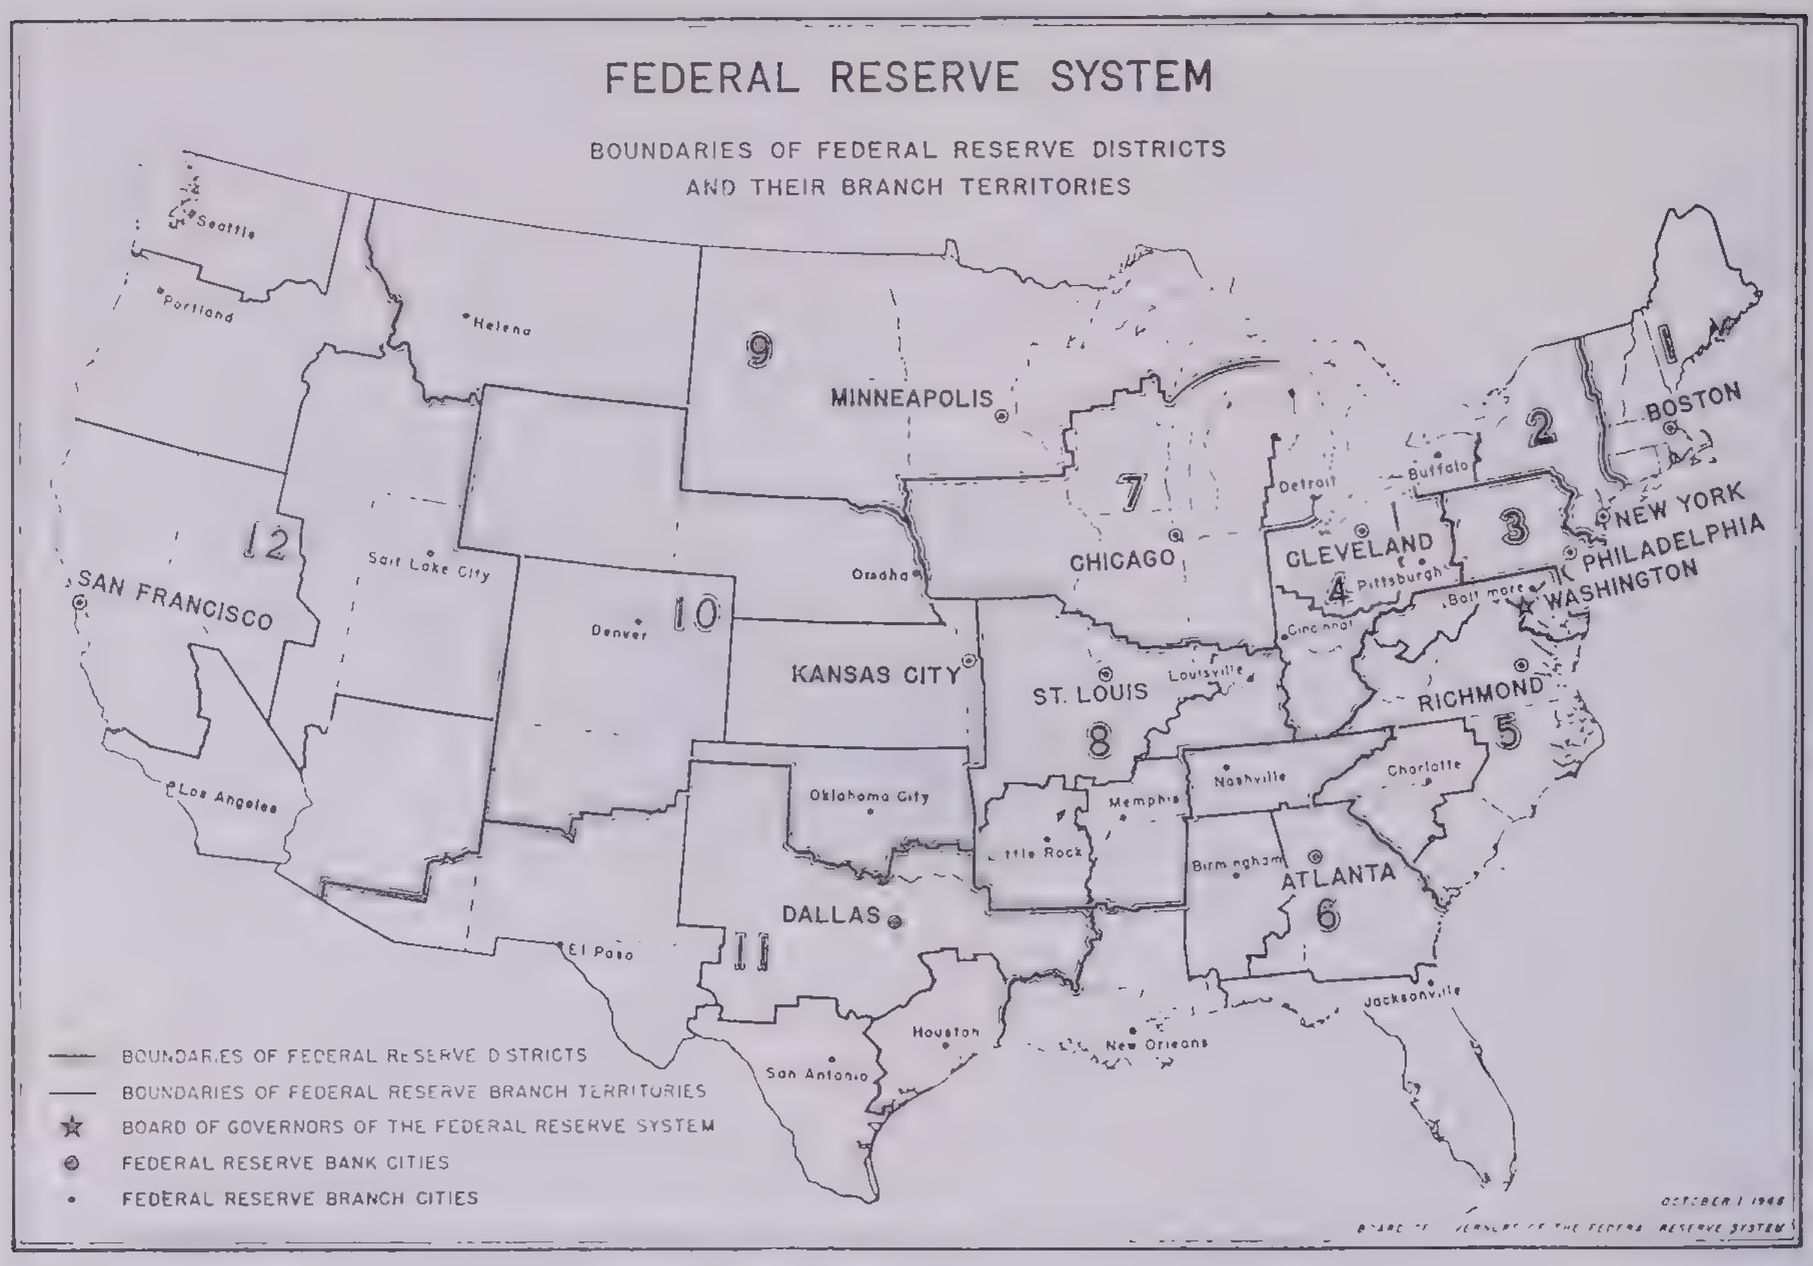
Federal Reserve credit is one of the factors which add to member bank reserves if increased and decrease member bank reserves if decreased. For fuller discussion of the factors affecting Supply and Use of Member Bank Reserve Funds, see Excess Reserves.

FEDERAL RESERVE DISTRICTS

The boundaries of the twelve Federal Reserve districts and the location of the Federal Reserve banks and branch banks are shown on the map on page 228.

FEDERAL RESERVE INTER-DISTRICT COLLECTION SYSTEM

Out-of-town items may be collected within the same



or in another Federal Reserve district. The former are known as intra-district collections; the latter, as inter-district collections. In inter-district collections, inter-Federal Reserve bank accounting is involved. For example, suppose a member bank in New York City sends checks to the Federal Reserve bank of New York drawn upon a bank in Chicago. The New York Federal Reserve bank forwards them to the Chicago Federal Reserve bank, which collects them through the Chicago clearing house. When collection is made in Chicago, the credit belonging to the depositing member bank in New York is first placed upon the books of the Federal Reserve bank in Chicago, but in favor of the New York Federal Reserve bank. That is to say, this credit is merely one of many credits belonging to the New York Federal Reserve bank. Conversely, the Chicago Federal Reserve bank, having sent checks to the New York Federal Reserve bank, is entitled to certain credits.

Settlement for collections arising among the various Federal Reserve banks is arranged by the Federal Reserve Board of Governors at Washington which acts as clearing house manager through the operation of the Interdistrict Settlement Fund (q. v.).

Federal Reserve banks eliminate the shipment of large sums of currency by clearing daily with one another by means of a private wire system connecting the Board with each of the banks. This makes is possible to give "availability" to items on the day they are paid. Clearing involves only a change of ownership of balances by book entries, i. e., debits and credits to the inter-district settlement fund. Thus, inter-district collections are effected with dispatch, and out-of-town items cleared through the Federal Reserve System become available almost as soon as presented to the paying bank. (See Federal Reserve Check Collection System, Federal Reserve System.)

FEDERAL RESERVE NOTES

Circulating notes issued by the Federal Reserve Banks. At present, they furnish about 85% of the circulating medium of the country; represent the only form of Elastic Currency (q. v.); and are authorized by Section 16 of the Federal Reserve Act.

Any Federal Reserve Bank may make application to the local Federal Reserve Agent for such amount of Federal Reserve Notes as it may require to meet the demands of member banks for currency. Application is accompanied with tender to the Federal Reserve Agent of collateral in an amount equal to the sum of the Federal Reserve Notes applied for. The collateral security thus offered shall consist of the following:

1. Notes, drafts, bills of exchange, or acceptances acquired under the provisions of Section 13 of the Act, the rediscount provisions of the Act;
2. Bills of exchange indorsed by a member bank of any Federal Reserve district and purchased by a Federal Reserve Bank under the provisions of Section 14 of the Act, the open market operations section of the Act;
3. Gold certificates;
4. In addition, beginning in 1932, direct obligations of the United States. At first, use of U. S. Government securities as collateral was for one year, but later was periodically renewed for additional periods.

The Federal Reserve Agent shall each day notify the Board of Governors of the Federal Reserve System of all issues and withdrawals of Federal Reserve Notes of the Federal Reserve Bank to which he is accredited. The Board of Governors may at any time call upon a Federal Reserve Bank for additional security to protect the Federal Reserve Notes issued to it. As of February 25, 1948, accounts of the Federal Reserve Agents indicated that total Federal Reserve Notes outstanding were $24,957,859,000, secured as follows: (1) $12,499,000,000 in gold certificates; (2) $62,355,000 in eligible paper; and (3) $13,600,000,000 in U. S. Government securities.

In addition to the collateral coverage, every Federal Reserve Bank is required to maintain reserves in gold

certificates or lawful money of not less than 35% against deposits, and reserves in gold certificates of not less than 40% against Federal Reserve Notes in actual circulation. However, when the Federal Reserve Agent holds gold certificates as collateral for Federal Reserve Notes issued to the bank, these gold certificates are counted as part of the reserve against the Federal Reserve Notes in circulation.

Moreover, the Board of Governors shall require each Federal Reserve Bank to maintain on deposit in the Treasury of the United States a sum in gold certificates sufficient in the judgment of the Secretary of the Treasury for the redemption of Federal Reserve Notes issued to each Federal Reserve Bank. In no event is this redemption fund to be less than 5% of the total amount of the Notes issued less the amount of gold certificates held by the Federal Reserve Agent as collateral security. This redemption fund shall be counted as part of the 40% gold certificate reserve.

Any Federal Reserve Bank may retire any of its Federal Reserve Notes by depositing them with the Federal Reserve Agent or with the Treasurer of the United States and thus receive back the collateral deposited. Also, any Federal Reserve Bank may at any time reduce its liability for outstanding Federal Reserve Notes by depositing with the Federal Reserve Agent its Federal Reserve Notes, gold certificates, or lawful money of the United States. In addition, any Federal Reserve Bank may at its discretion substitute other collateral of equal amount with the approval of the Federal Reserve Agent.

In addition to being secured by the direct pledge of assets, Federal Reserve Notes are a direct obligation of the issuing Federal Reserve Bank, and represent a first lien on all the assets of the bank. They are also a direct obligation of the United States Government. Federal Reserve Notes are legal tender for all public and private debts.

Denominations authorized in the Federal Reserve Act are $5, $10, $20, $50, $100, $500, $1,000, $5000, and $10,000. Notes bear upon their face a distinctive letter and serial number assigned by the Board of Governors to each Federal Reserve Bank. In June, 1946, the Board of Governors sent a letter to all Federal Reserve Banks directing that no further printing of Federal Reserve Notes in denominations of $500 and above be requested, since such higher denominations were not needed for hand to hand circulation and instead were conducive to undesirable uses, such as black market operations and other illegal purposes, including the evasion of income and other taxes.

The original Federal Reserve Act contemplated that Federal Reserve Notes be 100% secured by eligible paper, thus making them the ideal "elastic currency", expanding and contracting with the supply of eligible paper, although the Act did permit Reserve Banks to reduce their liability for Federal Reserve Notes by depositing gold or lawful money with the Federal Reserve Agents. This ideal has been gradually relaxed since; in 1916, by authorizing bills bought in the open market as collateral; 1917, by authorizing gold, gold certificates, and member bank promissory notes as collateral; and beginning in 1932, by authorizing the use of U. S. Government securities as collateral. Nevertheless, the elastic character of Federal Reserve Note circulation is still characteristic, as volume of circulation depends upon demands of member banks for currency, and those demands in turn reflect demand from the depositing public for currency.

Federal Reserve Notes should not be confused with Federal Reserve Bank Notes (q. v.).

See Money Circulation for long term fluctuation in total circulation of Federal Reserve Notes compared with other currency in circulation.

FEDERAL RESERVE RATIO

See Federal Reserve Statement, Reserve Ratio.

FEDERAL RESERVE REDISCOUNT RATE

See Rediscount, Rediscount Rate.

FEDERAL RESERVE STATEMENT

In accordance with Section 11 of the Federal Reserve Act, the Board of Governors of the Federal Reserve system shall publish once each week a statement showing the condition of each Federal Reserve Bank and a consolidated statement for all Federal Reserve Banks. These statements shall show in detail the assets and liabilities of the Federal Reserve Banks, single and combined, and shall furnish full information regarding the character of the money held as reserve and the amount, nature and maturities of the paper and other investments owned or held by Federal Reserve Banks.

Pursuant to this statutory requirement, the Board of Governors publish weekly the release, Condition of the Federal Reserve Banks, showing consolidated statement of condition of the 12 Federal Reserve Banks, and in addition statements of condition of each of the Federal Reserve Banks. These statements are also published monthly in the Federal Reserve Bulletin.

These statements show the important ratio of total reserves to deposit and Federal Reserve Note liabilities combined. The Federal Reserve Act requires that Federal Reserve Banks maintain reserves of gold certificates equal to at least 40% of their Federal Reserve Notes, and reserves of gold certificates or lawful money equal to at least 35% of deposits. The reserve position of Federal Reserve Banks has been amply in excess of legal requirements, and during only two periods--1920 and the banking crisis of 1933--did the reserve ratio come close to the legal requirements.

(See Federal Reserve System.)

FEDERAL RESERVE SYSTEM

The central banking system of the United States, created by the Federal Reserve Act (q. v.) approved December 23, 1913. It subsequently developed into one of the world's strongest banking systems, and combined eclectically the leading features of the principal European central banking systems, adapted to American requirements.

Membership. — The system consists of (1) twelve Federal Reserve banks and their branches (which may be established at home or abroad), (2) National banks, which are required to become stockholding members of the Federal Reserve bank of their district, and (3) such state banks and trust companies as may elect to join the system by meeting the qualifications of membership. As of March 31, 1948, there were 14,197 commercial banks in the United States, of which member banks totaled 6,932 banks.

Before the passage of the Federal Reserve Act, the banking system of the United States was composed of the three distinct groups of institutions above mentioned. National banks were instituted by the National Bank Act (q. v.) of 1863 and its subsequent amendments, while state banks and trust companies were organized and operated under the laws of the separate states, dating from

early American history. The Federal Reserve Act was not a negation of the National Bank Act, but rather a revision and elaboration of it.

Development. — The Federal Reserve Act grew out of the defects and insufficiencies of the former decentralized national-state system, especially in the following particulars:

1. No provision for elastic currency. Bank notes were rigid in amount, based upon the bonded debt of the United States rather than upon sound and liquid business paper. This inelastic currency system was a panic breeder. At critical times the banking system broke down because it was unable to furnish an adequate supply of money to meet the needs of legitimately expanding business.

2. No provision for rediscount facilities as a means of furnishing elastic credit, i. e., there was no certain market for the rediscount or sale of sound business paper.

3. Reserves were not centralized. Instead, the partial redeposit of reserves by country and reserve city banks at interest in central reserve city banks (particularly in New York City) made the reserve structure fictitious. They were not available when needed.

4. The system of collection of out-of-town checks was inefficient and uneconomical.

5. There was no rational control over the money market.

Steps toward removing these defects were actively begun as an aftermath of the panic of 1907, when public attention was again focussed on the problem of banking reform. Accordingly, in 1908, Congress created the National Monetary Commission (q. v.) to determine what modifications might be necessary to remove the weaknesses in existing banking legislation. After four years of investigation, this body reported its recommendations to Congress in full in a plan which later became known as the "Aldrich Plan." After undergoing numerous modifications and revisions, this report was finally submitted for the approval of Congress, and culminated in the Federal Reserve Act.

Ownership and Earnings. — The Federal Reserve banks are primarily banks for banks. Except as to open market operations, and direct loans to industry as provided in an amendment of June 19, 1934, their dealings are restricted to banks and with the Government. There are no individual stockholders. The stock is owned by member banks, which are required to subscribe to the stock of the Federal Reserve bank of their district in an amount euqal to 6 per cent. of the member bank's combined capital and surplus. Only one-half of this subscription, namely, 3 per cent., has been called up to the present time. The stock has a par value of $100, is of one class, cannot be transferred or hypothecated, and pays a fixed cumulative dividend at the rate of 6 per cent. So long as it is a member of the system, a member bank may retain the stock, and its holdings are automatically increased or diminished to correspond with any changes that may occur in its capital and surplus accounts.

After payment of all expenses, dividends constitute the claim against earnings. Federal Reserve Banks, including the capital stock and surplus therein and the income derived therefrom, are exempt from Federal, State, and local taxation except taxes on real estate. The former U. S. Government franchise tax on Federal Reserve bank earnings has been repealed (June 16. 1933).

Federal Reserve Board. — The administrative and coordinating body of the Federal Reserve System is the Federal Reserve Board (q. v.). Under the Banking Act of 1935 (q. v.) this body was reorganized as a 7-member board (originally 6 members), and styled "Board of Governors of the Federal Reserve System." Each member has the title of "governor," to serve 14-year terms at an annual salary of $15,000. Not more than four of seven shall be of the same political party. The President appoints the members with the advice and consent of the Senate, and selects out of the "governors" a chairman and vice-chairman.

This body, sitting at Washington, controls the Federal Reserve banks, and is endowed with broad powers, among the most important of which are: (1) to examine Federal Reserve banks and member banks as well as affiliates of state member banks (discretionary); (2) to make detailed reports of condition of the twelve Federal Reserve banks weekly (compulsory); (3) to add to, or to reclassify, reserve and central reserve cities; (4) to require the writing off of doubtful assets from the records of the Federal Reserve banks; (5) to suspend or remove any officer, director, or employee of the Federal Reserve banks with cause; (6) to suspend (for violation of any section of the Federal Reserve Act) any Federal Reserve bank, to operate it, and wherever necessary, to reorganize it; (7) to supervise, through the Comptroller of the Currency, the issue and retirement of Federal Reserve notes, and to prescribe regulations covering such issue and retirement; (8) to suspend reserve requirements for periods of 15 days (subject to renewal), and impose graduated taxes as penalties for deficiencies in reserve requirements; (9) to grant trust powers to National banks when not in contravention of state laws as well as authorize National banks to establish branches in foreign countries and U. S. possessions, and invest in stock of banks or corporations engaged in international or foreign banking; (10) to subject to review and determination the rates of discount set by the Federal Reserve Banks, which rates must be established by each Federal Reserve Bank every 14 days or oftener as deemed necessary by the Board of Governors; (11) to permit, or on affirmative vote of 5 members, to require Federal Reserve banks to rediscount paper for one another at rates approved by the Board; (12) to define and determine the kind of paper and securities eligible for rediscount; (13) to prescribe regulations under which member banks may borrow from Federal Reserve Banks; (14) to prescribe conditions for the admission of state banks and trust companies to membership in the Federal Reserve System and for withdrawal therefrom; (15) to maintain and operate the Interdistrict Settlement Fund.

Also, the following additional powers, some of which were added or expanded by the Banking Act of 1935:

(1) to prescribe rules and regulations for open market operations of Federal Reserve Banks. No Federal Reserve Bank shall engage or decline to engage in open market operations except in accordance with the directions and regulations of the Federal Open Market Committee, established effective March 1, 1936 and consisting of the members of the Board of Governors and five representatives of the Federal Reserve Banks.

(2) to fix at any time for each Federal Reserve district the percentage of individual bank capital and surplus which may be represented by a security loans.

(3) to direct any member bank to refrain from further increases in loans secured by stock and bond col-

lateral for any period up to one year, under penalty of suspension of all rediscount privileges.

(4) to suspend, in its discretion, after reasonable notice and opportunity for a hearing, any member bank from use of the credit facilities of the Federal Reserve System, when in the Board's judgment such member bank is making undue use of such credit.

(5) to declare immediately due and payable any advance by Federal Reserve Banks to member banks when that member bank after official warning from the Board or Federal Reserve Bank, increases its loans on stocks and bonds, or investments other than U. S. Government securities.

(6) to remove any officer or director of a member bank who continues to violate any law relating to such bank or continues unsafe and unsound practices in conducting the bank's business after warning by the Comptroller of the Currency or Federal Reserve Agent to discontinue such violations or practices.

(7) to supervise and regulate all relationships and transactions of Federal Reserve Banks with foreign bankers.

(8) to change reserves required to be maintained against demand or time deposits in order to prevent injurious credit expansion or contraction.

(9) to issue permits to holding company affiliates to vote the stock of member banks in the election of directors of the Federal Reserve Banks.

(10) to issue permits under authority of the Clayton Anti-Trust Act relating to interlocking bank directorates.

(11) to prescribe rules and regulations, under the Securities Exchange Act of 1934, with respect to the amount of credit that may be extended and maintained on any security registered on a national securities exchange.

(12) to issue regulations limiting the rate of interest which may be paid by member banks on time and savings deposits.

In sum, the Board is a dominant force in unifying the twelve regional banks into a comprehensive organization. This is secured by the specific powers granted to it, by direct contact with each bank established through a system of private wires, by its appointment of the Federal Reserve Agent at each bank, by acting as clearing-house manager for inter-district clearings, by reports from and examinations of these banks, and through its rulings on questions requiring an interpretation of the meaning of the Federal Reserve Act.

Federal Open-Market Committee. — Established effective March 1, 1936, the Federal Open-Market Committee consists of the members of the Board of Governors and five representatives of the Federal Reserve Banks elected annually by the following: one by the Federal Reserve Banks of Boston and New York; one by the Federal Reserve Banks of Philadelphia and Cleveland; one by the Federal Reserve Banks of Chicago and St. Louis; one by the Federal Reserve Banks of Richmond, Atlanta and Dallas; and one by the Federal Reserve Banks of Minneapolis, Kansas City and San Francisco. The Act specifies that no Federal Reserve Bank shall engage or decline to engage in open market operations except in accordance with the directions and regulations adopted by the Committee. The Committee in turn is governed by the principles stated in the Act that the time, character and volume of all purchases and sales of paper described in Section 14 of the Act as eligible for open market operations shall be governed with a view to accommodating commerce and business and with regard to their bearing upon the general credit situation of the country.

The Committee meets in Washington at least four times a year upon call of the Chairman of the Board of Governors or at the request of any three members of the Committee. The Board is required to keep a complete record of the actions taken by the Board and by the Committee relating to open market operations, recording the votes taken and the reasons for each action, and to publish this data in the Board's annual reports to Congress.

Federal Advisory Council. — The Federal Advisory Council (q. v.) is a body with consultative rather than mandatory powers. It is composed of twelve members, each representative of a separate Federal Reserve bank, and elected annually by its board of directors. The council meets four times a year at Washington for the purpose of assisting the Federal Reserve Board by conferring and advising, and making recommendations with regard to matters pertaining to business and financial conditions in their respective districts.

Federal Reserve Bank Organization. — Each Federal Reserve bank has its distinct organization, and serves its own district, whence it is sometimes known as a "regional" bank. The minimum capital for each bank is $4,000,000, but the majority of them have a capitalization considerably in excess of this amount.

Each Federal Reserve bank is under the direct control of a board of nine directors, divided into three classes of three directors each. These classes are known as Class A, Class B, and Class C. Class A and B directors are elected by the stockholding banks, and Class C directors are appointed by the Federal Reserve Board. Class A directors must be active and experienced bankers; Class B directors must not be bankers, but engaged in business or agriculture; and Class C directors are chosen from the public at large. One of the Class C directors, who must be of tested banking experience but not an officer, director, or employee of any bank during his term of office, is appointed to act as chairman of the board of directors.

The chairman is also given the title of Federal Reserve Agent, and is the official representative of the Federal Reserve Board at each Federal Reserve bank. The head of each Federal Reserve bank is known as President (formerly "governor").

Functions. — The functions of the Federal Reserve banks are:

1. The centralization and mobilization of bank reserves. Under the Federal Reserve System, the legal reserves of all member banks must be carried with the Federal Reserve banks of their districts. They are no longer scattered as "cash in vaults" at individual banks or in designated depositories. Being concentrated in twelve central reservoirs, these reserves furnish a base for extending a far greater volume of credit than was possible under the old system. Such reserves, moreover, are true reserves, i. e., are non-interest bearing and cannot be re-deposited, thus preventing their use as earning assets in speculative or other operations.

Reserve requirements of member banks against demand (which are subject to 100 per cent. increase) and time deposits are as follows:

	Demand	Time
In central reserve cities	13%	3%
In reserve cities	10%	3%
In other (indesignated) cities	7%	3%

These basic reserve requirements have been doubled by the Board of Governors for each category (as of mid-year 1948) thus exhausting this power to vary reserve requirements within the range of 100% of the basic requirements.

Federal Reserve banks themselves are required to keep a reserve in gold certificates or lawful money equal to 35 per cent. of their deposits. These reserves are effectively mobilized by being directed to where they are most needed by means of interdistrict discounting (see Naked Reserve), or by the sale of commercial paper eligible for open market operations in a comparatively "strong" district by a regional bank in a comparatively "weak" district.

2. To furnish an elastic currency and credit. Through rediscounting facilities, provision is made for an elastic bank-note and deposit currency. A member bank requiring additional funds may obtain them from its Federal Reserve bank by offering Eligible Paper (q.v.) for rediscount, or by borrowing on its own notes secured by eligible paper or by Government obligations. It may elect to receive the proceeds either in Federal Reserve Notes (q. v.) which it may pay out over the counter, or as a credit to its reserve account against which it may draw, or expand its loans and deposits. In other words, Federal Reserve notes and excess reserve at the Federal Reserve bank are interconvertible to a member bank. (See Elastic Currency.)

During times of business contraction customers pay off their notes, thereby permitting member banks to take up their rediscounted paper at the Federal Reserve banks, with the result that Federal Reserve notes are retired, or the borrowing bank's deposits and loans reduced.

The limit to which Federal Reserve banks can issue Federal Reserve notes is fixed by the 40 per cent. gold certificates reserve requirement. These notes must be fully secured by rediscounted commercial paper, bills bought, gold certificates, or Government securities except that in any case, the gold certificate reserve cannot be less than 40 per cent. This limit may be suspended by the Board in times of unusual stress, but with certain penalties laid down in the Act.

3. To provide an efficient system of collecting out-of-town checks. The Federal Reserve Act empowers each Federal Reserve bank to exercise the functions of a clearing house for the member banks of its district, and for such non-member banks as may qualify (by keeping a sufficient balance to cover outstanding collections), which are known as Clearing Member Banks (q. v.). The Federal Reserve Board itself serves as manager for clearing debit and credit balances arising among the various Federal Reserve banks.

From all member and clearing member banks, Federal Reserve banks will receive all items, e. g., checks, sight drafts, matured acceptances, matured notes, and coupons, at par, and forward them to the Federal Reserve bank of the district in which they are payable; or else a member bank may itself forward items payable in another district directly to the Federal Reserve bank of such district for credit of the sending bank's account with the Federal Reserve bank located in the sending bank's district. The United States is divided into time zones, and by inspection of a schedule published by each Federal Reserve bank showing when the proceeds of items sent to various points become available, it is possible to compute when any transited item becomes credited to the reserve account. All banks using the system are required to receive and remit for checks sent to and drawn upon them, at par.

Currency shipments in connection with the collection of checks for member banks by Federal Reserve banks are largely eliminated by a daily clearing of interdistrict debits and credits despatched by means of private wires to the Federal Reserve Board, which makes appropriate entries against the accounts of the twelve banks in the Interdistrict Settlement Fund (q. v.). The expense of intra- and inter-district clearings and collections is borne entirely by the Federal Reserve banks. (For further information with regard to par clearances, see Federal Reserve Check Collection System, Federal Reserve Inter-District Check Collection System.)

4. To engage in open market operations. Federal Reserve banks may buy and sell in the open market, either at home or abroad, commercial bills of exchange, bankers' acceptances and certain specified kinds of government obligations. These authorized dealings with the outside public are known as open market operations and play an important part at times in the transfer of reserve money from places of redundancy to places of scarcity and tend to maintain the national equilibrium in money rates.

The third method by which the Federal Reserve System renders more mobile our reserve money is through the creation of a broader market for commercial paper. Under the old banking system the bulk of American commercial paper was essentially local, with little or no market outside the community in which it was created.

The Federal Reserve System provides machinery by which high grade commercial paper can be discounted with entire safety throughout the United States. In this connection it has sought to encourage by preferential discount rates the use of trade acceptances and bank acceptances, forms of credit devices of the highest possible type which have been widely use in Europe, especially in London, for many years.

(See Open Market Purchases, and Regulations "B" and "M" of Federal Reserve Board Regulations.)

5. To serve as depository and fiscal agent for the Government, and to carry on sub-treasury operations. Federal Reserve banks are custodians of the major portion of the funds of the Government, and transfer them from place to place without charge. They make temporary advances to the Government. They are instrumental in the issue, flotation, conversion, and redemption of Government bonds and certificates of indebtedness, and pay the interest thereon. With the abandonment of the sub-treasuries in 1921, these banks supply member and other banks with coin and currency, and issue new currency in exchange for worn and mutilated bills and coins.

6. To conserve the American money market. This is largely achieved through the power (with the permission of the Federal Reserve Board) of raising and lowering the rediscount rate. Raising the rediscount rate is an effective tool for discouraging over-expansion in business, undue speculation, and a dangerous outflow of gold. Lowering the discount rate after a period of stress has subsided, on the other hand, is an invitation to expand business operations.

Through open market purchases and sales of commercial paper, bankers' acceptances, foreign bills of exchanges and cable transfers, also, these banks are enabled to exercise some degree of control not only over the money market, but also over gold movements,

foreign exchange rates, and dollar quotations in foreign markets.

Summarizing, the following achievements have been gained by Federal Reserve System: (1) democratization of banking by placing facilities equally at the disposal of commercial, industrial, and agricultural interests; (2) concentration of reserves in twelve central reservoirs, thereby creating a base for a greater volume of credit; (3) mitigation of panics by providing for an elastic currency and credit, capable of expansion in times of rising prices and growing prosperity, and of contraction in times of falling prices and liquidation; (4) restoration of confidence in the soundness of our money, credit, and banking system; (5) creation of an efficient, swift, and economical system of collection of out-of-town checks; (6) assistance rendered the Government as a depository and fiscal agent, and in administering sub-treasury functions; (7) creation of the bankers' acceptance, and assistance given American bankers by enabling them to participate in the profits to be derived from financing foreign trade; (8) maintenance of a continuous open market for the purchase and sale of high-grade business paper; and (9) partial control of interest rates, gold movements, and foreign exchange fluctuations.

Recent Changes. — Since 1933, many changes affecting Federal Reserve banks and their members, either by direct amendment of the Federal Reserve Act, or in related cognate banking legislation, have been made. Among the most important of these changes are the following.

1. Permanent deposit insurance has been provided, under the Banking Act of 1935, succeeding the Temporary Federal Deposit Insurance Fund established originally January 1, 1934 in accordance with the Banking Act of 1933. Under the permanent plan, member banks, which are required to be insured, and other banks, which may elect to be insured, are subject to assessments at the rate of 1/12th of 1% of average total deposits. In return, the Federal Deposit Insurance Corporation assumes 100% deposit insurance liability for all unrestricted deposits up to a maximum of $5,000 for each depositor. (See Federal Deposit Insurance Corporation.)

2. Member banks of the Federal Reserve System are prohibited from the payment of interest on demand deposits, effective June 16, 1933. The Board of Governors of the Federal Reserve System was also authorized to regulate interest rates on time deposits. Accordingly, the Board issued Regulation "Q" on August 29, 1933, which defined various types of deposits and provided maximum rates of interest payments.

3. Commercial and investment banking business have been divorced. All banks were prohibited, beginning July 16, 1934, from owning or controlling a security affiliate (theretofore engaged in underwriting and distributing securities).

4. Member banks are prohibited from lending funds to any executive officer of his member bank. A bank officer must also report to his board of directors concerning loans from another member bank.

5. Under the Banking Act of 1933, enacted June 16, 1933, new stock of national banks issued after that date was rendered free from "double liability", and later, the Banking Act of 1935, gave national banks the right, upon publication of required notice, to terminate double liability on all issues, both old and new.

6. Member banks are prohibited from acting as agent in making loans to brokers or dealers for the account of others; and from investing in affiliate obligations.

7. Private banks may not engage in both a commercial banking business and securities business. If a private bank elects to become a commercial bank, i. e., receive deposits, it is required to undergo State or Federal examination. Security corporations are prohibited from accepting commercial deposits.

8. Branch banking. State member banks are accorded the same rights respecting branches as national banks. With the approval of the Comptroller of the Currency national banks may establish and operate branches within the state, if such right is permitted by state laws to state banks. National banks are entitled to the privilege of establishing branches and must have a minimum capital of $500,000, except in states with a population of less than one million and which have no cities located therein with a population exceeding 100,000, where the minimum capital shall not be less than $250,000. In states with a population of less than one-half million and having no cities with a population exceeding 50,000, the capital shall not be less than $100,000. The aggregate capital of every national bank and its branches shall at no time be less than the aggregate minimum capital required by law for the establishment of an equal number of national banks situated in various places where such branches are located.

9. Federal Reserve banks are empowered to make direct loans to industries to provide working capital having a maturity not exceeding five years, and to purchase obligations of this character from financial institutions, under authority granted by the Board of Governors. This new power was conferred by the Act of June 19, 1934. Regulation "S" of the Federal Reserve Board prescribes the conditions and terms under which direct loans may be made.

10. A Federal Open Market Committee of twelve members, one from each Federal Reserve district has been established to supervise open market purchases. The board of directors of each Federal Reserve bank selects one member. See Federal Reserve Regulations "B" and "M."

11. The Board of Governors is charged with special supervision over all relationships and transactions entered into by any Federal Reserve bank with any foreign bank or banker. See Federal Reserve Board Regulation "N."

12. Savings banks may be admitted into the Federal Reserve System to take advantage of rediscount privileges.

13. Reconstituted the former Federal Reserve Board of 6 appointive members into the Board of Governors of the Federal Reserve System and eliminated the Comptroller of the Currency and Secretary of the Treasury as ex-officio members.

14. Changed the title of the head of Federal Reserve banks from "governor" to "president."

15. Permitted national banks to make 5-year real estate loans with limitations based on appraised value and amount of capital and surplus.

(See Central Reserve Cities, Federal Reserve Advisory Council, Federal Reserve Agent, Federal Reserve Bank Notes, Federal Reserve Board, Federal Reserve Branch Banks, Federal Reserve Bulletin, Federal Reserve Cities, Federal Reserve Statement, Pepper-McFadden Act, Naked Reserve, National Bank System, National Monetary Commission, Rediscount, Rediscount Rate, Reserve Cities.)

Bibliography

For selected modern Bibliography on the Federal Reserve System, see Bibliography under Bank.

FEDERAL SAVINGS AND LOAN ASSOCIATION

Under Section 5 (a) of the Home Owners Loan Act of 1933, Federal charters were provided for Federal Savings and Loan Associations, to be supervised by the Federal Home Loan Bank Board. The privilege of converting to Federal charters was offered to state-chartered building and loan associations, including Federal aid and automatic membership in Federal Savings and Loan Insurance of Individual accounts up to $5,000.

As of June 30, 1947, the constituent units in the Federal Home Loan Bank System included 1,476 Federal Savings and Loan Associations, for which membership is mandatory. Some 2,529 savings and loan associations, with combined assets of $7.9 billion, were covered by Federal Savings and Loan Insurance of individual accounts up to $5,000. Insurance is optional for state-chartered associations.

In operation, Federal Savings and Loan Associations are similar to state-chartered institutions, lending to home owners on mortgage security and encouraging long term savings, under the supervision of the Federal Home Loan Board.

(See Building and Loan Association, Federal Home Loan Bank Administration, Federal Savings and Loan Insurance Corporation, Home Owners Loan Act.)

FEDERAL SAVINGS AND LOAN INSURANCE CORPORATION

Established in 1934 under Act approved June 27, 1934, the Federal Savings and Loan Insurance Corporation insures accounts up to $5,000 for each investor in each Federal savings and loan association and in each state-chartered institution of the savings and loan association type which has been approved for membership. Federally chartered savings and loan associations are required to be insured, but insurance is optional with State-chartered institutions. As of December 31, 1947, a total of 1,478 Federal Savings and loan associations; and 1,058 State-chartered institutions, were insured. The insured amount of investments in all Federal savings and loan associations totaled $4,325,000,000 and in insured State-chartered institutions $2,401,000,000, or a total insured share liability of the corporation of $6,726,000,000.

Capital stock totals $100,000,000, all of which is owned by the Home Owners' Loan Corporation. As of December 31, 1947, total assets of the corporation were $189,000,000, of which $184,000,000 were invested in U. S. Government securities. Net worth, including the capital stock, totaled $185,000,000. As of December 31, 1947, the Home Owners' Loan Corporation had $5,162,550 investment in full-paid shares of Federal Savings and Loan Associations, remaining from original investments of $178,400,700 made possible by an allocation by Congress of $300,000,000 for the purchase of shares in Federal and State-chartered associations which were members of the Federal Home Loan Banks or insured by the Federal Savings and Loan Insurance Corporation, and of obligations of the Federal Home Loan Banks. The U. S. Treasury also had $555,400 investment in shares of Federal savings and loan associations as of December 31, 1947, remaining from original investments of $49,300,000, provided from an allocation to the Treasury for this purpose.

(See Federal Savings and Loan Association, Home Owners' Loan Corporation.)

FEDERAL TRADE COMMISSION

A commission created by the Federal Trade Commission Act approved by Congress September 26, 1914 and amended by the Wheeler-Lea Act on March 21, 1938. The commission consists of five members appointed by the President with the advice and consent of the Senate, not more than three of whom are to be of the same political party. The Commission was an outgrowth of crystallization of sentiment in favor of regulation of big business, and superseded the old Bureau of Corporations. The Commission's basic function is the quasi-judicial function of making findings of fact in the promotion of fair competition and freedom from monopoly in interstate commerce, and the prevention of false and misleading advertising of food, drugs, cosmetics, and devices injurious to health. The Commission also conducts investigations of interstate and foreign commerce, either upon the direction of the President or Congress, upon application of the Attorney General, or at its own initiative. Activities are limited to interstate and foreign commerce. The Commission has no absolute mandatory powers, since its decisions are subject to appeal and review by the courts. Findings of fact, however, are generally sustained by the courts if supported by substantial evidence. It issues its orders or "complaints" after an investigation on its own initiative or through the complaint of competitors.

Laws administered by the Commission are: the Federal Trade Commission Act; the Clayton Act (Sec. 2, as amended by the Robinson-Patman Act; also Secs. 3, 7 and 8); the Webb-Pomerene Export Trade Act; the Wool Products Labeling Act; and the Lanham Trade Mark Act (sections relating to cancellation of registration of offending trade marks). These laws relate to unfair methods of competition and unfair or deceptive acts or practices in commerce; price and other discriminations; organizations engaged exclusively in foreign trade; proper labeling of substitutes and mixtures in wool products; and revocation of trade marks which are deceptive, fraudulent or offensive.

The Commission's headquarters are located at Washington, D. C., and branch offices are located in New York City, Chicago, San Francisco, Seattle and New Orleans.

FEDERAL WORKS AGENCY

An important Federal agency from the standpoint of Federal spending for "pump priming" purposes, as it consists of the Public Buildings Administration, the Public Roads Administration, and the Bureau of Community Facilities. These are the surviving three constituent agencies of the five organizations brought under the Federal Works Agency at the time of its organization in 1939.

The Public Buildings Administration is responsible for the design, construction, maintenance and repair of Federal buildings, as well as the control of space and operation and protection of Federal buildings in the District of Columbia and certain Federal buildings located elsewhere. For the fiscal year 1947, this agency paid out a total of $20,285,127 for construction, $7,843,294 for repairs and alterations, $38,471,200 for maintenance and operation of buildings in the District of Columbia, and $36,045,388 for maintenance and operation of buildings located elsewhere.

The Public Roads Administration is the principal road-building agency of the United States Government and administers Federal funds made available to aid the States in improvement of highways. This agency administers the large post-war highway program authorized by the Federal-aid Highway Act of 1944, which authorizes $500,000,000 as aid to the States in highway construction in each of the first three post-War fiscal years.

Finally, the Bureau of Community Facilities was assigned the advance planning program of Title V, War Mobilization and Reconversion Act of 1944, providing for Federal loans or advances to States and other non-Federal public agencies in the planning of post-War public works. Authority to make Federal loans and advances expired on June 30, 1947, and the program is being liquidated. The agency was also assigned the veterans' educational facilities program, providing for use of surplus Government property for non-housing purposes at institutions of higher learning.

(See Pump Priming.)

FEE

This term has two meanings:

(1) A commission; charge for services. This term now is rarely used in finance, being supplanted by the term Commission (q. v.). It is primarily used in connection with court costs in referring to witness fees, jurors' fees, and lawyers' fees.

(2) Fee Simple (q. v.).

FEE SIMPLE

An estate of inheritance continues to be termed a fee simple, or fee, and when not defeasible or conditional, a fee simple absolute, or an absolute fee (New York Real Property Law, Section 31).

The fee simple absolute is the greatest estate in land, and is characterized by infinite duration, full possession and enjoyment, free alienation, and descendability and devisability to the heirs of the owner. The fee simple defeasible is a fee which will come to an end automatically at the time specified in the instrument creating it, no re-entry by the grantor or his heirs being necessary to terminate it. The fee simple subject to condition sub sequent is a fee which will terminate upon the breach of a condition subsequent attached thereto and re-entry by the grantor or his heirs.

FEEDER

A branch line or short railroad which originates freight and passenger traffic for a main line or longer railroad. A feeder gathers traffic in territory where business is light and delivers it at a through traffic terminal to a line serving a richer territory.

FEEDER LOANS

See Cattle Loans.

FEN

A Chinese weight equal to 1/100th of a tael or 1/1,600th of a chin; a candareen, Chinese money of account.

FEVERISH

An expression used to describe the stock and commodity markets when prices are hesitating, changeable, and uncertain, especially at a time when fundamental conditions are unsettled.

FIAT MONEY

Inconvertible or irredeemable money which a Government declares shall be accepted as legal tender in payment of debts, but which is not covered by an available specie reserve. It consists either of Government promises to pay the quantity of which is regulated, or of undervalued metallic coins (silver, nickel, or copper) coined only on Government account, but in no event is there expectation of redeeming either variety in the standard metal.

Fiat money was issued in large quantities during our colonial, revolutionary, and Civil War periods, each time with the same disastrous results, viz., driving full value coins out of circulation, or subjecting them to a premium, inflating prices, and in the end, becoming worthless, except in the case of the Civil War greenbacks, which became redeemable money by the Specie Resumption Act of 1875. (See Money.)

FICTITIOUS PAYEE

A non-existent payee; a fictitious person to whom a check, note, or bill of exchange is made payable. The term also applies to an existing payee whose name has fraudulently been inserted on a check, note, etc.

The Negotiable Instruments Law (Sec. 9 (3) of the Uniform Negotiable Instruments Law; Sec. 28 (3) of the New York Negotiable Instruments Law) applies to both situations, and reads: "The instrument is payable to bearer ...3. When it is payable to the order of a fictitious or non-existent person, and such fact was known to the person making it so payable..."

FIDELITY INSURANCE

Insurance provided to indemnify employers against loss by reason of the dishonesty of employees, or on account of the non-performance of contracts. In fidelity insurance contracts, the insurance company undertakes a suretyship issuing fidelity insurance bonds as a guaranty against loss arising from default or dishonesty of the insured person. The beneficiary under this form of insurance may be a private employer, a state, county or municipality, or the United States Government. Fidelity insurance companies require each applicant for a bond for which insurance is to be provided to fill out a form. In considering the application the reputation and past history of the individual is scrutinized, the opportunity or temptation for theft or dishonesty which his position offers, and the value of the property in his possession by virtue of his employment. In investigating his reputation the criminal and civil court records are consulted. Where the risk has a criminal record the application is usually rejected. Fidelity bonds are issued for three classes of risks, larceny or embezzlement, culpable negligence, and the faithful discharge of duty.

FIDUCIARY

A person or corporation (bank or trust company) in whom certain property of the principal (settlor) is entrusted for some purpose specified in the trust instrument. In such a technical trust, the fiduciary is known as the trustee. Other fiduciaries in non-technical trusts are executors, administrators, guardians, assignees, receivers, committees of estates of lunatics, etc.

FIDUCIARY CAPACITY

Generally speaking, any relationship of confidence and trust involving the highest degree of good faith and

loyalty to the interests of another person. Thus, the term is not restricted to technical trusts, but will include such relationships as attorney and client, broker and principal, corporation director and stockholders, agent and principal, etc. The term more specifically refers to formal fiduciary relationships such as trustee in technical trusts, executor, administrator, conservator, guardian, committee in lunacy, receiver, assignee, etc., for the benefit of beneficiary, distributee, ward, lunatic, debtor, principal, etc. A trustee capacity differs from an agency in that a trustee holds legal title to the property for his beneficiary, and the agency is usually a personal relationship dependent upon the will and continued existence of the parties, whereas the trust is impersonal in nature.

National banks are permitted to act in a fiduciary capacity--trustee, executor, administrator, registrar of stocks and bonds, guardian of estates, assignee, receiver, committee of estates of lunatics, etc.--when not in contravention of state or local laws, under grant of special permit from the Board of Governors of the Federal Reserve System under Sec. 11 (k) of the Federal Reserve Act. In addition to authorizing the organization of trust companies expressly organized with such powers, most of the states have also passed laws enabling state banks to act as fiduciaries. (See Trusts.)

FIDUCIARY CURRENCY

Credit money; money no part of which is supported by a metallic reserve. Paper money issued on the credit of a bank or Government is fiduciary currency. Theoretically, there is no fiduciary currency in the United States.

In England, fiduciary currency has a specific meaning. The Bank of England since its inception has always operated with a fiduciary note issue independent of the bank notes which have a 100% gold coverage. The fiduciary issue is secured by Government debt, other Government securities and silver coin, and constitutes the bulk of the Bank of England's circulation. Normally, it is designed to accommodate the absolute needs of business for currency and represents that portion which experience has shown tends to remain in circulation under any circumstances.

FILES

See Average Loan and Balance File, Credit Files.

FILLING

The part of a check which contains the amount written both in words and figures. The words and figures should agree, but the Negotiable Instruments Law (New York Negotiable Instruments Law, Sec. 26 (1), states that wherever there is a discrepancy, the sum denoted by the words is the sum payable, unless the words are ambiguous or uncertain. In that case the figures may be taken to fix the amount payable.

FINANCE

This term has three meanings:

(1) To raise money necessary to organize, reorganize, or extend an enterprise, whether by the sale of stocks, bonds, notes, or otherwise.

(2) A general term to denote the theory and practice of monetary credit, banking and promotion operations in the most comprehensive sense. It includes money, credit, banking, securities, investment, speculation, foreign exchange, promotion, reorganization, underwriting, brokerage trusts, etc.

(3) Originally the term was applied to the raising of money by taxes or bond issues and the administration of revenues and expenditures by a Government. This is now known as Public Finance (q. v.).

Also see under Corporation Finance.

FINANCE BILLS

A clean bill of exchange, usually of 60 days tenor or over, drawn by a bank or banker in one country on a bank or banker in another for the purpose of raising funds, and especially when the interest rates in the country on which the bill is drawn are lower than in the country where the bill is drawn. Finance bills are not drawn against the shipment of goods; they are bankers' bills as distinguished from Commercial Bills (q. v.). They are sometimes drawn against balances maintained with the drawee bank, but more often are not, being in the nature of an advance from a bank in one country to a bank in another. Finance bills are usually unsecured (up to a maximum limit), but sometimes bonds, stocks, or other collateral are pledged as security. The drawee bank accepts a finance bill for a fixed commission, but only of course when the drawing bank enjoys a high credit rating. Thus a finance bill is drawn for the purpose of raising funds to establish additional balances at home or abroad.

FINANCE COMMITTEE

In larger boards of directors, the board by resolution may appoint a Finance Committee, consisting of those directors who are specialists in finance, who shall have power to supervise the financial affairs of the corporation and shall report to the board of directors from time to time or whenever it shall be called upon to do so.

FINANCE COMPANY

A term used to denote several different types of institutions. It is sometimes employed in this country to denote a Holding Company (q. v.), and also a Commercial Credit Company (q. v.). In England the term usually refers to a company dealing in corporate securities.

FINANCIAL ADVERTISING AGENCIES

Advertising specialists which devote their exclusive attention to financial advertising. With the growing tendency toward greater competition among banks for business and their consequent aggressive attitude, and the overcoming of conservatism and prejudice against advertising, a large number of advertising agencies specializing in the financial field, have been established in recent years.

The services provided by these agencies are broadly of two types, individual and syndicated. Some of the more important types of services provided by these agencies are: newspaper layout and mat service, magazine layout and mat service, circular letters on various subjects, business and financial reviews, house organs, statement enclosures, window displays, pamphlet series covering special subjects, e. g., investments, savings, trusts, custodianships, letters of credit, wills, etc. (See Advertising Department, Publicity Department.)

FINANCIAL FORECASTING

See Business Barometers, Business Forecasting Services.

FINANCIAL LEGISLATION

See Bank Law, New Deal.

FINANCIAL MAGAZINES

The principal banking and finance magazines published in the United States are as follows:

American Institute of Banking Bulletin (quarterly).
Analysts Journal, New York Society of Security Analysts (quarterly).
Arkansas Banker (monthly).
Bank and Quotation Record (monthly).
Bankers Monthly.
Banking Law Journal combined with The Bankers Magazine (monthly).
Banking (monthly).
Barron's (weekly).
Bond Buyer (weekly).
Burroughs Clearing House (monthly).
Business Week.
Coast Banker (monthly).
Commercial and Financial Chronicle (twice weekly).
Credit and Financial Management (monthly).
Dun's Review (monthly).
Exchange, New York Stock Exchange (monthly).
Federal Reserve Banks: Monthly Reviews.
Federal Reserve Bulletin (monthly).
Financial Age (weekly).
Financial World (weekly).
Forbes Magazine (semi-monthly).
Fortune Magazine (monthly).
Great Lakes Banker (monthly).
Industrial Banker (monthly).
Institute of International Finance of New York: Bulletin (irregular).
Investment Banking (monthly).
Investment Dealers Digest (weekly).
Kansas Banker (monthly).
Kentucky Banker (monthly).
Magazine of Wall Street (fortnightly).
Michigan Investor (weekly).
Mid-Continent Banker (monthly).
Mid-Western Banker (monthly).
Mississippi Banker (monthly).
Money and Commerce (weekly).
Month's Work (National Association of Mutual Savings Banks).
Mortgage Banker (monthly).
Mountain States Banker (monthly).
National Auditgram (monthly).
New Jersey Banker (quarterly).
Northwestern Banker (monthly).
Ohio Banker (monthly).
Savings and Loan News, New York State League of Savings and Loan Associations (monthly).
Savings and Loan News, U. S. Savings and Loan League (monthly).
Savings Bank Journal (monthly).
Small Loan News (monthly).
Southern Banker (monthly).
Survey of Current Business (monthly).
Tarheel Banker (monthly).
Texas Bankers Record (monthly).
Trust Companies Magazine (monthly).
Trusts and Estates (monthly).
U. S. Investor (weekly).

For a current index to literature in periodicals, reference is made to the Industrial Arts Index, published by the H. W. Wilson Company, New York, N. Y.

FINANCIAL NEWS

See Financial Magazines, Financial Newspapers, Market Influences; Ticker.

FINANCIAL NEWSPAPERS

The principal daily financial newspapers exclusively devoted to financial subjects and published in the United States, are:

American Banker
Chicago Journal of Commerce
Daily News Record
Journal of Commerce of New York
Wall Street Journal

FINANCIAL RESPONSIBILITY

A term used among bank credit men to indicate the financial worth, i. e., the conservatively appraised net assets, of a credit risk. It is the ability of a borrower or prospective borrower to pay his debts based on his wealth or property. Financial responsibility is measured by the Property Risk (q. v.). (See Credit.)

FINANCIAL SOLVENCY

The normal condition of a business when current assets are in excess of current liabilities as disclosed by a true and correct financial statement. Financial solvency is to be distinguished from Business Solvency (q. v.). (See Solvency.)

FINANCIAL STATEMENT

Another term for a balance sheet, statement of condition, and statement of resources and liabilities. (See Balance Sheet, Bank Statement.)

FINANCIER

One skilled in Finance (q. v.), but the term is particularly applied to one engaged in promoting and underwriting.

FINE

The degree of purity or fineness of a metal expressed in terms of parts, percentages, or carats. Fine gold is 100 per cent. pure, or unalloyed; gold which is 24 carats. (See Carat, Fineness.)

FINE GOLD

See Fine, Fineness.

FINENESS

The amount of pure metal in a bar, ingot or coin; the degree of purity of a metal as expressed in terms of parts, percentages, or carats. The silver coins of the United States (gold coins are no longer coined) are nine-tenths fine, meaning that they contain nine parts or 90 per cent. pure silver, and one part or 10 per cent. alloy. English gold coins are eleven-twelfths fine. Standard bullion is nine-tenths fine. (See Coinage, Fine, Mint Fine Bars, Present Standard of Weight and Fineness, Standard Bullion.)

FINGER PRINT IDENTIFICATION

A method adopted by a number of savings banks as a means of certain identification, especially of foreign-born and illiterate depositors. Many savings banks located in districts serving a foreign population have experienced difficulty and suffered losses by reason of withdrawals from savings accounts by wrongful parties.

Test questions in connection with withdrawals from savings accounts by illiterate depositors have been used for many years, but they have not always proved satisfactory, especially where the depositors are unable to speak English.

Finger print identification is based upon the persistence of the skin patterns of the fingers, which do not change during the life of the individual, and which are different for each individual. Scratching and laceration do not ordinarily obliterate these patterns. The finger print is taken at the time an account is opened upon the signature card, which contains the usual additional information e. g., residence, references, occupation, etc. At each withdrawal a finger print impression is taken and compared with the original without inconvenience to the depositor.

Finger-prints were probably first used extensively for identification purposes by the British in India who applied the system as early as 1899 to the native Hindus where identification is very difficult for a foreigner. Finger-prints have been taken from the same people during childhood and again during early manhood, and in other cases during early manhood and middle age. These records have proven that finger-prints do not change materially during the whole course of life, although the patterns become larger and more pronounced as the fingers and hands grow in size. The whole system of finger-print identification depends upon the unchangeable character of these ridges. By spreading ink on the undersurface of the fingers and then impressing them upon paper or some other white surface we obtain a "finger-print" either as a record or for comparison with a previous print. By carefully comparing patterns according to well-established standards it is possible to show whether or not the impressions were made by the same person. Although at first the patterns made by finger-prints appear very complicated and difficult to recognize, closer study will show that variations in them can be detected with comparative ease. This is accomplished by classifying the various forms of finger-prints into certain types. The first requirement for a person who uses the finger-print system of identification is to familiarize himself with these various types of prints. Studies of the finger-prints of thousands of persons, by those who are constantly working with the system, have led to the establishment of four general types of patterns, although combinations or variations are sometimes found. These four types are called arches, loops, whorls, and composites.

The finger print system of identification removes the chief objection of savings banks in accepting accounts with illiterates.

FINMARK

The Markka, or Finnish mark.
See Foreign Moneys—Finland.

FIRE INSURANCE

See Insurance.

FIREWORKS

A stock market expression which denotes the soaring of prices in a single security or group of securities; a rapid advance in prices.

FIRM

This term has two meanings:

(1) A partnership; a business or professional association of two or more persons as distinguished from an incorporated company. (See Partnership.)

(2) An expression which denotes steadiness in security or commodity quotations. Prices are firm when they are stable, and resist decline, tending upward rather than downward. Though somewhat illogical in view of its derivation, a firm market usually implies one in which prices are fractionally higher; it is midway between a strong when prices are rising, and a steady market when prices are stationary.

Money is firm when interest rates hold stationary.

FIRM BID

See Offered Firm.

FIRST AND CONSOLIDATED MORTGAGE BONDS

Bonds secured by a first mortgage on a part or parts of such properties (usually of railroads) as have been consolidated, and by a second or even third mortgage upon the rest. These bonds are practically the same as General Mortgage Bonds (q. v.).

FIRST AND GENERAL MORTGAGE BONDS

Bonds secured by a first mortgage on a part of the property of the issuing corporation (usually a railroad) and by general mortgage on the rest. Such bonds are sometimes issued by a railroad in financing a new extension. A first mortgage is placed upon the new property, and if the previous mortgages upon the old property are of the open type, the remaining equity in the previously mortgaged property is used as further security. These bonds are also known as General and First Mortgage Bonds.

FIRST AND REFUNDING MORTGAGE BONDS

Bonds secured by a first mortgage on a part of the property of the issuing corporation (usually a railroad), but constituting a junior lien upon other parts, the debt upon which is being refunded. These bonds are practically synonymous with First and Consolidated Mortgage Bonds, except that the latter issue is not a refunding issue. (See Refunding Bonds.)

FIRST BANK OF THE UNITED STATES

See Bank of the United States.

FIRST BOARD

On exchanges which deal in futures, the delivery dates for the various positions are designated in advance by the exchange authorities. The first call for cotton, grain, or sugar is often known as the first board.

The term is also used to indicate the first printed sales for particular issues occurring on the New York Stock Exchange, i. e., those between 10 A. M. and noon.

FIRST-CLASS PAPER

Gilt-edged paper made or indorsed by concerns which enjoy a nation-wide reputation for their products, financial responsibility, and credit standing, as distinguished from second and third class paper indorsed by names of companies not so well known and with less financial responsibility. This term is used primarily in connection with commercial paper marketed by note brokers.

FIRST CONSOLIDATED MORTGAGE BONDS

The first (in point of time) consolidated mortgage bonds issued by a corporation (usually a railroad). Such bonds do not necessarily represent a first lien upon the

mortgaged property, since in most cases only a part of the pledged property is secured by a first mortgage. They are practically synonymous with First and Consolidated Mortgage Bonds, but should not be confused with Consolidated First Mortgage Bonds (q. v.).

FIRST GENERAL MORTGAGE BONDS

Literally, the first (in point of time) general mortgage bonds issued by a corporation (usually a railroad). They are in no sense bonds secured by a first mortgage. Since general mortgage bonds represent in part a second or even lesser claim upon the mortgaged property, it is not likely that an issue of second general mortgage bonds would ever be floated. It is, therefore, an equivocal title. (See General Mortgage Bonds.)

FIRST LEASEHOLD BONDS

Bonds secured by a mortgage on the estate in realty held under a lease, or leasehold, rather than upon the property itself. This type of bond was popular in real estate financing in the late '20s, but proved vulnerable to shrinkage in earning power subsequently, as interest on the bonds is really junior to the payment of rental on the lease. Leaseholds as security also proved to be unsatisfactory for bond financing, as payment of rentals was also impaired by shrinkage in earning power. (See Real Estate Bonds.)

FIRST LIEN

The first claim or right against property. A first mortgage bond represents the first claim to the assets and earnings of a corporation, after the preferential claims (taxes, wages, etc.) have been satisfied. (See Lien.)

FIRST LIEN AND GENERAL MORTGAGE BONDS

Bonds which constitute a first lien (or are a first mortgage) on a part (usually a small part) of the property of the issuing corporation and a general mortgage upon the rest. These bonds are the same as First and General Mortgage Bonds (q. v.).

FIRST MORTGAGE BONDS

Bonds secured by a first mortgage upon all or part of the property, as well as earnings, of the issuing corporation. While first mortgage bonds are secured by property (usually real estate but sometimes chattels and current assets), they are not necessarily always first class investments. A second or even third mortgage bond of one corporation may be entitled to a higher investment rating than a first mortgage bond of another. A first mortgage security on a given property, however, is superior to any other security, on the same property. The soundness of a first mortgage bond as an investment depends upon the value of the property serving as security in excess of the total par value of the bonds issued, the range of fluctuation of earnings, the margin of average earnings over the combined operating expenses and fixed charges, and the probability of certain retirement of the bond at maturity. While foreclosure proceedings may be instituted upon default in payment of either interest or principal of a mortgage bond, there is always danger of loss because of the possible shrinkage in value of the property upon sale, and the delay and costs incident to legal action. (See Second Mortgage Bonds.)

FIRST MORTGAGE TRUST BONDS

Bonds which are secured by a deposit of other bonds which in themselves are secured by a first mortgage. In other words these bonds are collateral trust bonds, the collateral for which consists of first mortgage bonds.

FIRST OF EXCHANGE

Foreign bills of exchange and checks are usually issued in duplicate sets and sometimes in triplicate sets. The purpose of this practice is to insure the ultimate arrival of the bill of exchange at the foreign point where it is payable. Duplicate bills with duplicate documents attached are transmitted on separate steamers to avoid inconvenience in case one ship is delayed and as a form of marine insurance—since it is not likely that both steamships will meet with a marine disaster. The first bill presented is paid, whether original, duplicate, or triplicate, i. e., any of the set is payable if the others are unpaid. When one of the set is paid, a stop is automatically placed on the others. The duplicate bills are referred to as "First of Exchange", "Second of Exchange", or as "Original" and "Duplicate". When only one bill of exchange is issued it is called sola, sole, or solus. (See Bills in a Set, Sola.)

FIRST PREFERRED STOCK

See Preferred Stock.

FIRST REFUNDING MORTGAGE BONDS

The first (in point of time) refunding bonds issued by a corporation (usually a railroad or public utility). This title is misleading and does not mean that the bonds are secured by a first mortgage, as does the title Refunding First Mortgage Bonds (q. v.).

FIRST TELLER

Another title sometimes given to the paying teller for the reason that he assumes greater responsibility and usually receives a higher salary than any of the other tellers. (See Paying Teller.)

FISCAL AGENT

Financial agent. A bank or trust company may be appointed to take general or special charge of the finances of a corporation client in accordance with any agreement which may be made between them. Acting as treasurer, a bank or trust company may perform such disbursing functions as paying bonds and coupons at maturity, bonds which have been called for redemption, dividends, interest on registered bonds, rents, etc. It may also receive sinking fund installments. The fiscal agent function is one of the corporate trust functions.

FISCAL YEAR

A term used to indicate the accounting year as distinguished from the calendar year, with which it may or may not coincide. The fiscal year is any annual period which a business or Government or sub-division thereof may select as a basis for closing its books in order to determine the results of operations and financial condition. Although most business enterprises close their books and take a physical inventory only at the close of the fiscal year, financial statements are often prepared monthly or quarterly without involving a closing of the books. The fiscal year of the United States closes June 30th. With most businesses, the fiscal year corresponds with the calendar year.

FITCH BOND BOOK

See Manuals.

FIVE PER CENT REDEMPTION FUND

The fund in gold certificates required to be maintained by each Federal Reserve Bank at the Treasury of the United States, according to the Federal Reserve Act, as in the judgment of the Secretary of the Treasury is necessary for the redemption of the Federal Reserve Notes issued to such bank, but in no event less than 5% of the total amount of the notes issued, less the amount of gold certificates held by the Federal Reserve Agent as collateral security. Such deposit of gold certificates is counted and included as part of the 40% reserve required against Federal Reserve Notes in circulation.

Federal Reserve Banks must maintain an actual reserve in gold certificates of at least 25%, including the redemption fund, which must be deposited with the Treasury of the United States against Federal Reserve Notes in actual circulation.

Federal Reserve Bank Notes and National Bank Notes, which are not in process of retirement, had a similar requirement for a redemption fund. (See Federal Reserve Bank Notes, National Bank Notes.)

FIXED ASSETS

Assets used for carrying on a business; non-trading assets, e. g., land, buildings, machinery, equipment, furniture, fixtures, etc. These assets are of a permanent nature and are to be distinguished from current assets since they will not, in the ordinary course of business, be converted into cash. They are also known as permanent, property, and capital assets.

FIXED ASSET TEST

One of the general tests applied in analyzing the investment position of securities. The depreciated value of fixed assets (land, buildings, equipment, etc.) should normally be substantially in excess of the funded debt outstanding. Even the railroads, which are allegedly over-capitalized, compare favorably on this test. Net unmatured funded debt of railroads totals about 30% of investment in road and equipment, which means there are over $3.30 invested in road and equipment for every dollar of funded debt.

This test is also computed on the basis of total capitalization (funded debt and capital stock) to the net depreciated value of fixed assets. (See Ratio of Debt to Net Worth; Ratio of Fixed Assets to Net Worth.)

FIXED CAPITAL

Capital invested in fixed, as distinguished from current assets; the excess of fixed assets over fixed liabilities. Fixed capital is that usually furnished by the stock and bondholders, while working capital required for investment in current assets in part may be furnished by banks, or through the commercial paper market, on short-term paper. Fixed capital is regarded as "tied up" or "locked up" and consequently must be furnished permanently or for a long period of time. It is for this reason that stock and bondholders contribute fixed capital to a business. (See Capital.)

FIXED CHARGES

Fixed charges have a specialized meaning in income accounting, and represent those financial expenses which must be paid as they fall due. In railroad accounting, fixed charges include rent for leased roads (usually guaranteed interest or dividends), rent for leased properties; interest on funded debt; interest on short-term or unfunded debt; and amortization of discount on funded debt. Sinking fund appropriations and insurance are sometimes regarded as fixed charges, but since sinking fund charges really are a means of extinguishing debt, it appears more logical to segregate this item as a disposition of surplus, and insurance is generally regarded as an administrative expense.

Fixed charges are sometimes confused with fixed costs, those costs made up of overhead or "burden" (indirect material, indirect labor and other indirect costs) which continue regardless of the rate of operation, as compared with variable costs, as set up in cost systems of accounting.

FIXED INCOME

Income which does not fluctuate in accordance with the general price level. Those whose income is wholly dependent upon the return from bonds, annuities, or pensions, are said to have a fixed income. While business incomes and wages tend to rise and fall with the general price level, fixed incomes do not. The fixed income class also includes Government employees, teachers, ministers, etc., whose salaries stubbornly resist adjustment to changes in the general price level. A period of low prices is beneficial, and a period of high prices disadvantageous to those having a fixed income.

FIXED LIABILITIES

Liabilities which do not mature within a short time, usually one year; long-term liabilities, e. g., bonds, bonds and mortgages, and long-term notes. Sometimes capital stock is erroneously treated as a fixed liability, but it is more properly capital liability. Strictly it is not a liability at all, but rather an accountability of a corporation to its stockholders. It has no maturity and stockholders cannot enforce payment so long as the corporation is a going concern; even in liquidation their claims are postponed till the creditors are satisfied in full.

Bonds or notes maturing within a year should be considered as current liabilities.

FIXED TRUST

See Investment Trust.

FIXTURES

Fixtures are any chattels which have been so affixed or annexed to the realty as to become a part thereof and lose their character as personalty. Annexation may be actual or constructive. Examples of fixtures are: fences, gas pipes and electric wiring in the walls of a building; mirrors set into the walls of a house so as to become a permanent feature of interior ornamentation; engines or electric motors so affixed to the land as to become a part thereof, etc. The tests usually applied to determine whether a chattel is a fixture are: (1) suitability of the annexed chattel for the purposes of the land or other real property; (2) intention on the part of the annexor to make the affixed chattel a permanent feature of the land; (3) impossibility of severance from the land or other realty without injury to the realty.

In accounting usage, the term fixtures refers to the mechanical equipment, cages, grill work, etc. found in a bank. Safe deposit vaults are often set up separately. Both items are distinguished from furniture. These items are written off usually as rapidly as the tax al-

lowed depreciation permits, and thus usually are carried well below resale values.

FLAT

A term used in bond transactions to denote that the price includes any interest accrued since the last interest date. Bonds are usually sold at a price exclusive of accrued interest, the accrued interest at the coupon rate being added. On the other hand, stocks are usually sold flat, i. e., exclusive of any accrued dividend. The following bonds sell flat: adjustment and income bonds (ordinarily); and bonds in default as to interest, principal, or both. (See Accrued Interest.)

FLAX SEED

Trading in flax seed futures is conducted on the Minneapolis Grain Exchange, a regulated exchange under the Commodity Exchange Administration. Contract unit is 1,000 bushels, with a minimum fluctuation or "point" of 1/8¢ per bushel, or $1.25 per contract. Daily trading limit is 10¢ above or below the previous close, or a maximum fluctuation of 20¢. Trading in flax seed futures is light. Commission rate charged to non-members is $5 to buy or sell one contract. (See Commodity Exchanges.)

FLEECE

A stock market expression of unfavorable connotation meaning to take advantage of the innocent amateur in speculation who "goes it blindly" and is either uninformed or misinformed. (See Lamb.)

FLETCHER-RAYBURN ACT

Another title, showing authorship, for the Securities Exchange Act of 1934 (q. v.).

FLIER

A plunge in stocks; a reckless commitment in stocks. A purchase or sale of a highly speculative security with the hope of making a large profit, but with the full understanding that a correspondingly large loss is equally possible. A stock market commitment undertaken with full realization of its speculative nature out of a spirit of gambling and with a gambler's chance of winning.

FLOAT

This term has two meanings:

(1) To market securities; to offer for sale an issue of bonds or stock to investors for the purpose of raising capital. Securities may be floated by an underwriting syndicate or securities company, or by the issuing organization direct, i. e., "over the counter." Government issues are floated through the agency of the Federal Reserve banks. (See Syndicate, Underwriting.)

(2) An account also known as floating account which holds the out-of-town checks outstanding in process of collection. Banks forward out-of-town checks for collection either through correspondent banks or Federal Reserve banks, as collecting agents. While such checks are in transit, i. e., in the process of becoming collected and converted into cash, they are known as the "float", and represent contingent rather than actual assets. They cannot be counted as reserve and must be segregated from cash balances. The "float" or aggregate of out-of-town items in process of collection is held in two general ledger accounts entitled Due from Banks, Collections; and Federal Reserve Bank, Collections.

The Federal Reserve banks also have a float account consisting of the aggregate of out-of-town items which are in the process of collection for member banks. Before the Federal Reserve Check Collection System (q.v.) was in operation, the float for the country as a whole amounted to a very large figure, due to the fact that checks were often out a month or more before presented for final payment. The Federal Reserve check collection system has greatly reduced the outstanding float and accelerated the collection of checks by insuring prompt presentation and because of the quick availability made possible by the daily inter-district settlement through the Inter-District Settlement Fund (q. v.). The Federal Reserve check collection system has also reduced the loss in the use of funds and consequently secured greater economy in the employment of bank funds for exchange purposes, which has been reflected in lower exchange rates. (See Federal Reserve Check Collection System, Due from Banks Collections Account, Federal Reserve Bank Collections Account, Transit Department.)

FLOAT LEDGER

See Collection Ledger.

FLOATING ASSETS

Same as quick or Current Assets (q. v.).

FLOATING CAPITAL

Capital invested in current as distinguished from fixed assets. Economists refer to floating and circulating capital as that which is constantly being turned over by sale, i. e., capital used for trading purposes. John Stuart Mill wrote that floating capital "does its work not by being kept, but by changing hands." Floating capital is also known as circulating capital and is vaguely equivalent to Working Capital (q. v.).

FLOATING CHARGE

A term used chiefly in England to denote an unsecured debt, e. g., debenture bonds.

FLOATING DEBT

The aggregate of current indebtedness, whether accounts or notes payable, or other current accruals of various current maturities, as distinguished from funded debt, unfunded debt or current liabilities maturing within the current year. The term is used of the short term indebtedness of a business corporation or of a Government, state or municipality.

FLOATING SUPPLY (OF SECURITIES)

That portion of the listed stocks or bonds of a corporation which is available for trading and speculation, i. e., in the hands of brokers and speculators, as distinguished from investors. A large part of the securities, and especially stocks, of large corporations is never purchased outright by investors, but is carried on margin. Whatever amount is so carried by brokers on margin for the account of customers, and in the hands of traders and speculators, constitutes the floating supply. Stocks owned outright, retained in safe deposit boxes, and not placed on the market, or not subject to speculative commitments, do not constitute floating supply.

The floating supply of some securities is small. This is true of the securities of the investment class, or those which for some other reasons are closely held. The

floating supply sometimes is so small that a premium is charged for borrowing. This occurs when short selling has been excessive and brokers find it difficult to borrow stock from ordinarily available sources with which to make delivery

FLOOR

A term to signify the floor of an exchange where brokers engage in trading Only members of the exchange are admitted to the floor with the exception of necessary clerks and other employees

FLOOR BROKER

A Two-Dollar Broker (q. v.).

FLOOR TRADER

A member of the stock exchange who trades exclusively for his own account, not accepting orders for customers, as distinguished from a commission broker who maintains a commission house and trades only for the accounts of his customers. These brokers constitute what are known as professionals. By their close contact with the market and their knowledge of its technical position, they are able to take advantage of the slightest change in prices. They are also known as room traders.

FLORIN

In Continental European coinage, the florin has a long history, having been first struck off in Florence, Italy, in 1252.

In modern European currency systems, the florin is found as follows:

(1) A silver coin of Austria, last coined in 1892.

(2) A silver coin of England. (See English Money Table.)

(3) Another name for the Netherlands guilder or gulden. (See Guilder in Foreign Moneys, Table II.)

FLUCTUATING PRINCIPLE

The factor or factors which are responsible for the range of price fluctuation, i. e., movement up and down, of a security. Different classes of both bonds and stocks are subject to a certain price range, i.e., upward and lower limit of price fluctuation. The extent of such fluctuation determines the suitability of the security for Defensive purposes (for greatest stability), as compared with suitability for Aggressive purposes (for volatility and wide range of fluctuation). The chief factor determining the fluctuating principle of high grade bonds is interest rates, and of stocks, general business conditions. There are secondary factors, however, which must be taken into consideration. While the fluctuating principle in high grade bonds is restricted almost solely to interest rates, in the case of lower grade (credit) bonds general business conditions and the earnings of the issuing corporations are also determining factors. The fluctuating principle in stocks is influenced by general business conditions, earnings of the corporation in question, dividend policy, stability of the enterprise, and technical conditions within the market. The fluctuating principle is sometimes a special factor; thus, a convertible bond is subject to fluctuation in accordance with the movement of the stock into which it is convertible.

To illustrate comparative Defensive and Aggressive qualities for different types of securities, and thus indicate the extent of the fluctuating principle, the following tabulation, prepared June, 1947 by Boston Fiduciary and Research Associates, research organization of The Keystone Company of Boston, is reproduced:

Major Investment Purpose	Classes of Securities	Average Annual Fluctuation	Approx. Current Return(4)
	Uninvested Cash	0	0
Reserves	U.S.Gov't.Bonds (1)	5%	1.5%
	High-Grade Bonds(2)	7%	2.6%
	Good-Grade Bonds	11%	3.0%
	Medium-Grade Bonds	18%	4.0%
Income	Low-Priced Bonds	22%	4.5%
	Good-Grade Preferreds	27%	5.0%
	High-Return Bonds	28%	5.0%
Income and Growth	High-Grade Commons	31%	3.3%
	Good-Grade Commons	36%	5.0%
	Leading Speculative Commons	54%	3.0%
Growth	Speculative Preferreds	55%	2.0%
	Lower-Priced Commons	67%	1.0%
	Defaulted Bonds(3)	54%	0

Notes: Average annual fluctuation figures represent average annual fluctuation on low price of each year for past nine years (prepared June, 1947). These figures are included to indicate speed of move of the various classes. The actual move in any one year may be greater or less than the average figure.

Sources: Standard & Poor's indices:
(1) U. S. Gov't. Long-Term Tax Exempts.
(2) Composite Index A1 Corporate Bonds.
(3) Index of Defaulted Bonds.
Others: Sales prices of indicated Keystone Funds.
(4) Approximate - as of June, 1947; included to indicate the typical relationship of the return from various classes.

FLUCTUATION

The variation in prices up and down. One-eighth point is the smallest variation in price recognized on the New York Stock Exchange, for both stocks and bonds.

FLUID ASSETS

See Current Assets.

FLUID CAPITAL

See Floating Capital.

FLURRY

A commotion in prices; a sudden and sharp advance or decline of prices on a stock market or commodity exchange, due to temporary alarm or enthusiasm, e. g., a sharp advance in money rates, a favorable political event, etc. A flurry is of short duration, without effect on fundamental market conditions, and produces no lasting effect.

FLUSH PRODUCTION

A term applied to an oil well or to the oil properties of a company to indicate that the period of time which it will last and the rate of output is uncertain; unsettled production.

FLY-BY-NIGHT CORPORATION

A stigmatic term used with reference to a business organized to exploit a highly speculative, unsound or temporary venture and controlled by officers who have little or no moral or financial responsibility; a corporation having a shady personnel and which is not likely to succeed and therefore likely to be of short duration. The term is especially used among bank credit men of a corporation of doubtful or worthless credit standing, without any of the elements necessary to make a good credit risk and therefore not entitled to credit.

FOR A TURN

An expression used to indicate a speculative purchase or sale for the purpose of making a small but quick gain.

FOR CASH

Securities or commodities purchased outright for transfer and delivery immediately, for which cash is paid in full. Deliveries of securities purchased for cash must be made by seller to buyer on day of the sale.

FORCED CIRCULATION

Fiat money; money which is not supported by a specific reserve, but which is decreed to be legal tender in payment of all debts and forced into circulation. This type of money has not been in circulation in this country since the Civil War.

FORCED LIQUIDATION

Urgent selling; when owners of securities or commodities are obliged to sell their holdings for cash in order (1) to obtain funds necessary for other purposes; (2) because carrying charges (usually interest rates) have advanced so that it is no longer profitable to hold them; (3) to prevent the complete exhaustion of margins in case of a falling market; or (4) to stop further loss.

FORCED SALE

A sale of property or assets compelled by certain circumstances such as (1) sale of mortgaged property in default as a result of foreclosure, for the purpose of satisfying mortgagees; (2) voluntary sale of a debtor's property to satisfy creditors; and (3) sale of merchandise to prevent moving it to another site in the case of expiration of a lease. Forced sales may be accomplished by means of an auction, closing out sales, etc., it being generally understood that the owner must make some sacrifice in order to realize quickly. (See Forced Liquidation.)

FORECASTING

See Business Barometers, Business Cycle, Business Forecasting Services.

FORECLOSURE

A legal term to denote the process of law by which the right of a mortgagee, or anyone having interest in a mortgage (such as a mortgage bondholder) when the conditions of the mortgage have been violated, to compel the mortgagor to redeem the pledge or to forfeit his right of redemption. It is a privilege given to the mortgagee upon default in the payment of interest or principal of a mortgage to enforce payment of the debt by selling the property which it secures. In most states the property covering the mortgage may be sold under a power contained in the mortgage itself, but in other states, the mortgagee must apply to equity courts for an order for foreclosure. The proceeds of sale of mortgaged property are applied first to the indebtedness secured by the mortgage and the foreclosure expenses, and the balance is paid to the mortgagor.

It is not always possible in a foreclosure sale to realize a sufficient sum to satisfy the mortgagee in full. In this event the mortgagee has a claim against the mortgagor for the deficiency. (See Deed of Trust, First Mortgage Bonds, Mortgage.)

FOREIGN AGENCIES

Agencies of domestic banks located in foreign countries. A National bank is authorized to establish agencies, as distinguished from branches, for specific purposes, but not to carry on a general banking business, in foreign countries. Federal Reserve banks may, with the approval of the Federal Reserve Board of Governors, establish foreign agencies or correspondents, and open and maintain accounts with them for the purpose of purchasing, selling and collecting bills of exchange. Federal Reserve banks may also open and maintain accounts for, and act as agents of, foreign banks established in this country. Under the Banking Act of 1933, the Board of Governors shall exercise special supervision over all relationships and transactions of any kind entered into by any Federal Reserve Bank with any foreign bank or banker, or with any group of foreign banks or bankers, and all such relationships and transactions are subject to regulations of the Board of Governors.

FOREIGN BANKING CORPORATIONS

Corporations organized under the Edge Act (q. v.) and the various state banking laws to engage in the foreign banking business. The powers of these corporations, described under Edge Act, are practically the same whether organized under federal or state jurisdictions. Their purpose is to stimulate foreign trade by providing a machinery for extending credit to importers and exporters for periods longer than is permitted by sound commercial banking practice. These corporations relieve the commercial banks from carrying the entire burden of financing foreign trade, setting them free to concentrate in the business for which they were originally designed—to finance domestic trade.

With the decline in foreign banking activities of American banks, less than half a dozen Edge Act corporations were organized, and only one has been active in recent years.

Foreign banking corporations organized under the laws of other nations with branches established in this country, must comply with the laws of the state in which such branch is located. Usually a license fee, evidence of authority from the nation of incorporation, and consent to submit reports upon request, are required.

FOREIGN BANKING SYSTEMS

See Bank of Canada, Bank of England, Bank of France, Bank of Germany, Canadian Banking System, Central Banks.

FOREIGN BILL

See Inland Bill.

FOREIGN BILLS OF EXCHANGE

First read Bill of Exchange.

Bills of exchange drawn on a foreign drawee, and pay-

able in a foreign country. They are the chief means by which settlements are made in international trade. Foreign bills of exchange are classified in many different ways, giving rise to much confusion among laymen, due to the fact that these classifications are not mutually exclusive, but on the contrary, overlap.

Five important classifications follow:

I. As to Class of Maker
  1. Government or Official Bills.
  2. Bankers' Bills (including traveler's checks).
  3. Commercial Bills.
  4. Express Company Drafts.
  5. Shipping Bills.
  6. Postal Money Orders.

II. As to Maker's Purpose and Types of Transactions out of Which Bills Arise
  1. Drawn against Funds, Balances, or Accounts.
    a. Cables.
    b. Checks.
    c. Commercial Bills.
  2. Drawn for Borrowing Purposes.
    a. Finance Bills.
    b. Reimbursement Bills.
  3. Drawn against Merchandise.
    a. Cotton Bills.
    b. Steel Bills.
    c. Grain Bills.
    d. Breadstuffs Bills.
    f. Machinery Bills, etc.
  4. Drawn against Services.
    a. Ocean Freight Bills.
    b. Marine Insurance Bills.
    c. Bankers' Commissions Bills.
    d. Merchants' Commissions Bills.
    e. Manfors' Drafts.
  5. Drawn against Securities.
    a. Purchase and sale of stocks and bonds.
    b. Dividend and interest remittances.

III. As to Security
  1. Clean Bills.
  2. Documentary Bills (shipping documents attached).
  3. Bills with securities or other valuable documents attached (including insurance policies, matured coupons, bonds, mortgages, etc.).

IV. As to Maturity. (Time of Payment.)
  1. Cables.
  2. Sight, Demand, or Presentation Bills (checks).
  3. Arrival Bills (shipping documents attached).
  4. Time Bills.
    a. Short Bills (less than 30 days after sight or date).
    b. Long Bills (30 days or more after sight or date).
    c. Days after date Bills.

V. As to Domicile. (Place of Payment.)
  1. Domestic Bills in foreign currency.
  2. Foreign Bills payable in—
    a. Dollars.
    b. Sterling.
    c. European Decimal Currencies.
    d. Other Countries.

None of the above classifications is mutually exclusive, and it is possible, for instance, to have a 60 day sight bill, drawn in sterling on a commercial house, supported by documents growing out of a shipment of cotton, and payable in London. This may be referred to as a foreign bill, sterling bill, commercial bill, documentary bill, long bill, time bill, or cotton bill. It is each and all at the same time.

The following is a general classification of foreign bills:

1. Commercial Bills.
  1. Documentary Bills.
    a. Short (demand or within 30 days sight).
      1. Documents against acceptance Bills.
        a. Discountable abroad.
        b. Held abroad until maturity without discount.
        c. Not discountable abroad because not in native currency.
      2. Documents against payment Bills—not discountable abroad.
      3. Documents on arrival—not discountable abroad on account of indefinite maturity.
    b. Long (30 days sight or more.)
      1. Documents against acceptance Bills.
        a. Discountable abroad.
        b. Held abroad until maturity without discount.
        c. Not discountable abroad because not in native currency.
      2. Documents against payment—rarely over 90 days.
      3. Days after date Bills.
        a. Discountable abroad.
        b. Held abroad until maturity without discount.
        c. Not discountable abroad because not in native currency.
  2. Clean Bills.
    a. Cables.
    b. Checks.
    c. Sight, Demand, or Presentation Bills.
    d. Time Bills.
      1. Discountable abroad.
      2. Held abroad until maturity without discount.
      3. Not discountable abroad because not in native currency.

II. Bankers' Bills.
  1. Tenor (term).
    a. Cables.
    b. Checks.
    c. Short Bills (within 30 days sight).
    d. Long bills (30 days sight or more).
  2. Purpose.
    a. Against current balances.
    b. Against open credits—Finance Bills.

(See Banker's Bill, Clean Bill of Exchange, Commercial Bills, Documentary Bills, Documentary Commercial Bills, Domicile, Grain Bills, Finance Bills, Foreign Exchange, Sterling Bills.)

FOREIGN BONDHOLDERS ACT OF 1933

Under Title II of the Securities Act of 1933, provision was made for the creation of a Corporation of Foreign Security Holders, to be effective when the President of the United States "finds that its taking effect is in the public interest, and by proclamation so declares." It was contemplated that the activities of the new corporation would be similar to those of the British Corporation of Foreign Bondholders, which has an official status in negotiating with foreign issuers.

The Act states that the corporation shall be created "for the purpose of protecting, conserving and advancing the interests of the holders of foreign securities in default."

The Secretary of State, however, advised the President that some of the foreign nations whose bonds were in default would regard the creation of such an official

corporation as an unfriendly act. In fact, Title II was not contained in the original Administration draft of the Securities Act, and was added on the floor of the Senate at the instance of the late Sen. Hiram Johnson of California, who had been responsible for the Senate Finance Committee's investigation of sale of foreign bonds in the United States.

Instead of the official corporation provided by the Act, the unofficial Foreign Bondholders' Protective Council, Inc. (q. v.) was organized in 1933.

FOREIGN BONDHOLDERS' PROTECTIVE COUNCIL, INC.

Organized in 1933 in a non-official capacity, and without benefit of diplomatic sanctions, to represent American holders of foreign bonds in default. The Council was organized instead of the corporation of foreign security holders having official status provided for by Title II of the Securities Act of 1933. The Council is the sole nationally accredited bargaining agency to represent American holders of foreign securities. (See Foreign Dollar Bonds.)

FOREIGN BONDS

See External Bonds, Foreign Corporate Bonds, Foreign Government Bonds, Foreign Municipal Bonds, Insular Bonds, Internal Bonds.

Bibliography

Dickens, P. D.: Foreign Long Term Investments in the United States, 1937-1939, 1940.

FOREIGN BRANCHES

Branches of domestic banks located in foreign countries or branches of foreign banks located in this country.

National banks possessing a capital and surplus of $1,000,000 or more may file application under Section 25 of the Federal Reserve Act with the Board of Governors of the Federal Reserve System for permission to establish branches in foreign countries or dependencies or insular possessions of the United States for the furtherance of the foreign commerce of the United States, and to act if required to do so as fiscal agents of the United States. During the period 1914-1920, the number of foreign branches of American banks increased sharply from 26 to 181, but subsequently declined steadily, and at the close of 1945, seven member banks were reported to be operating 72 branches in 20 foreign countries and dependencies or possessions of the United States. Of these, 42 branches were located in 10 Latin American countries; 12 in insular possessions and dependencies of the United States; 10 in England; 2 in continental Europe; and 6 in the Far East. This contrasts with large number of foreign branches of the Canadian banks (see Canadian Banking System).

FOREIGN COLLECTION ITEMS

See Foreign Collections.

FOREIGN COLLECTIONS

A term which includes two classes of items: (1) bills of exchange payable abroad and taken by a bank for collection only, i. e., for credit (or payment) to the account of the customer only when and if paid abroad; and (2) bills of exchange payable in the United States taken from foreign correspondents for credit (or payment) to their accounts only when and if paid. The former are sometimes called "outgoing" or "export" collections, and the latter, "incoming" or "import" collections.

Foreign collection items consist of commercial bills of exchange with and without documents attached, money orders, matured bond coupons, matured bonds and bonds called for redemption, travelers' checks, etc. Commercial bills taken for collection arise through the fact that the drawer has no established line of credit, is unable to give adequate guarantees, and therefore cannot sell his bills, or that the goods against which the bill is drawn have been sold on a C. O. D. basis, or that the maker or indorser of the bill desires to earn interest on the bill that would have been surrendered through its sale or discount. Frequently interest is added to the face of time bills taken for collection for the time elapsing between its presentation to the drawee and the approximate due date of the arrival of the return remittance to the collecting bank in this country.

FOREIGN CORPORATE BONDS

Bonds of business corporations of foreign countries. Several investment houses in New York City specialize in these issues, maintaining or quoting markets for them in American funds. Most foreign exchange rates for internal securities imposed by exchange controls vary substantially from the official foreign exchange rates. For example, the approximate rate for internal securities in Great Britain (early 1948) is $1.80 to $1.85 per Pound, compared with $4.03 per Pound official foreign exchange rate. This factor is reflected in market quotations in New York City.

FOREIGN CORRESPONDENTS

A bank in a foreign country selected to act as agent for a domestic bank, and in which balances are maintained. (See Correspondent.)

FOREIGN CROWD

That division of the New York Stock Exchange which trades in foreign dollar bonds. Most of these issues are of foreign governmental bodies (nations, states and municipalities), as American investment in foreign securities has been confined largely to public issues. (See Foreign Bonds.)

FOREIGN CURRENCIES

See Foreign Moneys.

FOREIGN CURRENCY BONDS

Bonds of foreign countries issued and payable (both interest and principal) in the currency of that country, but sometimes traded in outside the country of issue. Such bonds are normally intended for purchase by investors in the country of issue, and are to be distinguished from Foreign Dollar Bonds (q. v.). They are also sometimes known as Internal Bonds (q. v.). When bought outside the country of issue, the purchaser takes the risk of exchange fluctuations, the price of the bonds being adjusted to changes in the exchange rate of the currency in which they are issued. (See Foreign Corporate Bonds, Foreign Dollar Bonds, Foreign Government Bonds, Insular Bonds, Internal Bonds.)

FOREIGN DEPARTMENT

The department of a bank or trust company which handles that part of the business which originates in, or is destined to, a foreign country. A completely equipped

foreign department is prepared to perform practically all the banking operations that a domestic banking department performs, except in smaller volume, and its scope is therefore as broad as the banking business itself.

The chief functions of a foreign department are: (1) to discount and make advances against clean and documentary bills of exchange drawn against banks, corporations, firms, and individuals in foreign countries; (2) to issue commercial and travelers' letters of credit; (3) to accept bills of exchange drawn under letters of credit; (4) to buy and sell gold bullion; to buy and sell foreign coin and currency; (5) to sell checks, mail payments, money orders, and cables on foreign banks; and (6) to collect bills of exchange, checks, foreign bonds and coupons, money orders, etc

The chief "desks" or sections of a foreign department are: (1) Exchange Bought; (2) Exchange Sold; (3) Commercial Sight Credits; (4) Commercial Acceptance Credits; (5) Travelers' Checks and Letters of Credit; (6) Foreign Collections; and (7) Foreign Coin and Currency.

The foreign department is usually operated as if it were a bank in itself. The bank places a certain sum for investment in foreign operations, e. g., balances abroad, discounting bills of exchange, etc., for which the manager of the foreign department is accountable. A separate set of books and general ledger is maintained, which must at all times tie up with the books of the general bookkeeping department. (See Foreign Exchange.)

FOREIGN DEPARTMENT, CLEARING HOUSE

Formerly the department of a clearing house association, which collected checks for its members over a wider territory than the city in which it was located, e. g., foreign department of the Boston Clearing House, which before the inauguration of the Federal Reserve check collection system in July, 1916, collected all New England checks. Other clearing house associations also formerly maintained foreign departments, but have been superseded by the Federal Reserve Check Collection System (q. v.).

FOREIGN DEPOSITS

Deposits payable only at an office of the bank located outside the States of the United States, the District of Columbia, Hawaii, Alaska, Puerto Rico, and the Virgin Islands shall not be included as insured deposits, under the terms of the deposit insurance section of the Federal Reserve Act, Section 12B. Any insured bank, however, having its principal place of business in any of the States of the United States or in the District of Columbia which maintains a branch in Hawaii, Alaska, Puerto Rico or the Virgin Islands may elect to exclude from deposit insurance its deposits which are payable only at such branch.

In computing net demand deposits subject to reserve requirements, net demand deposits are defined by the Banking Act of 1935 as the excess of all demand deposits, including deposits due to other banks and the U. S. Government, over demand balances due from other domestic banks (except Federal Reserve Banks, foreign banks or branches thereof, foreign branches of domestic banks, and private banks) and cash items in process of collection.

The prohibition of interest on demand deposits contained in the Banking Act of 1933 does not apply to any deposit which is payable only at an office of the bank located outside of the States of the United States and the District of Columbia.

In preparing its call report, a member bank operating foreign branches reports the aggregate net amount due from its foreign branches in "other assets" and the aggregate net amount due to its foreign branches in "other liabilities." A balance due from a foreign branch of another member bank is regarded as a balance with a foreign bank, while a balance due from an American branch of a foreign bank is regarded as a balance with a domestic bank.

FOREIGN DOLLAR BONDS

Bonds issued by foreign governments, foreign municipalities, or business corporations of foreign countries, payable both as to principal and interest in American dollars. These bonds are sometimes known as External Bonds (q. v.). New foreign securities issued in the United States during the period 1923-1929 are estimated to have totaled $8,016 million, compared with $5,613 million in the period July 1, 1914-1922, and $1,520 million in the period 1930-1933. (See Foreign Corporate Bonds, Foreign Government Bonds.)

FOREIGN EXCHANGE

The mechanism by which commercial, investment, and other transactions between countries are settled. While foreign exchange is usually defined as comprehending all those transactions that are concerned with the purchase and sale of the money for foreign countries, it is more accurately described as the transferring of credits or debits through their banks by individuals or corporations in one country, by obtaining credits or debits on the books of banks in other countries, which are correspondents or branches of the banks through which transmission is arranged.

Transmission of foreign exchange may take the form of a Cable Transfer (q. v.), commercial or bankers' bills of exchange (see Foreign Bills of Exchange), international postal money orders (see Money Orders), Mail Payments (q. v.), Travelers' Cheques (q. v.), and Travelers' Letters of Credit (q. v.). While foreign exchange, and not foreign money, is normally used in the settlement of international transactions, yet each foreign exchange instrument mentioned above is convertible into the currency of the country in which it is made payable.

Thus, foreign exchange is a method of effecting payments in a foreign country without the actual shipment of gold, although the latter is practically the only universally acceptable medium for the settlement of balances arising among countries in their trading interrelations. Gold shipments, however, are reduced to the minimum, since a nation's exports are largely offset by its imports, or vice versa.

Foreign exchange is closely akin to domestic exchange, and is arranged through the maintenance of reciprocal balances by banks engaging in the business. For example, leading New York and London banks maintain accounts with each other, just as many country banks in the United States keep balances with a New York correspondent. The difference is that the New York bank keeps a balance with its London correspondent in pounds sterling, and the London bank keeps a balance with its New York correspondent in dollars. By this arrangement, it is possible for the New York bank to sell its customers—importers for example—who owe money in

London, bills of exchange dr[illegible]n favor of London exporters. When the London e[illegible]er receives the bill of exchange, he presents it for [illegible]ent or credit to his account, whereupon the London [illegible] reduces the balance maintained with it by the Ne[illegible]k correspondent. Should the sum total of bills [illegible] a New York bank sells against its balance in [illegible]n equal the sum total bought for building up its [illegible]account, then no settlement is required. But i[illegible]w York bank sells more bills on London than it [illegible] then it will deplete the balance to its credi[illegible]London bank. This can be replenished by (1) shi[illegible]l, (2) buying London exchange from anothe[illegible]bank, or (3) borrowing in London.

Foreign exchange di[illegible]omestic exchange in another important respe[illegible]npossible for an individual or corporation i[illegible] States, for instance, to settle a foreign ob[illegible]awing a check on a local bank in favor of [illegible]eller. This is true because (1) the chec[illegible]ly in the currency of the United States, a[illegible]t of the individual is not sufficiently well kn[illegible]credit, especially of the larger institution[illegible]however, is established internationally; s[illegible]xchange facilities of these banks must be [illegible]execute transfers of credits and debits abr[illegible].

Exchange is accu[illegible]anks in the United States may establish [illegible]heir credit balances with correspondent b[illegible] the following ways: (1) by purchasing bill[illegible]arising out of merchandise exports and [illegible]em abroad for collection and credit; (2[illegible]g bills of exchange arising out of the sal[illegible] securities abroad; (3) by borrowing from [illegible]s (see Finance Bills); and (4) by shipping go[illegible].

Exchange is sold, v[illegible]es maintained by banks in the United St[illegible]e reduced, in response to the followi[illegible]emand: (1) importation of merchandise; [illegible] foreign securities by American investor[illegible]f funds in the foreign markets; (4) [illegible]ous Invisible Imports (q. v.); (5) paym[illegible]s, e. g., ocean freight and marine ins[illegible]s; (6) immigrants' remittances. For the s[illegible]balances between two countries see Bala[illegible].

Foreign exchange ra[illegible]t to constant fluctuation, but unless a natio[illegible] settle its trade balances in gold, free a[illegible]ed commercial rates can fluctuate only [illegible]n defined limits above or below the Min[illegible]ange (q. v.). This differential or range o[illegible] upper limit of which is called the "go[illegible]t" and the lower limit "gold import poi[illegible]ined itself by a variable, consisting of [illegible] following costs: (1) loss of interest on [illegible]in ocean transit; (2) ocean freight charg[illegible] (and war risk) insurance charges; (4) pa[illegible]acking charges; (5) bullion broker's pr[illegible]minal haulage charges.

Market quotations wi[illegible]reciably above the mint par of exchange, s[illegible]n exchange banks, seeing an opportunity f[illegible]sell bills of exchange against shipmen[illegible]nversely, if market quotations fall too far b[illegible]par, these banks will buy bills of exchang[illegible]e importation of gold.

Within the normal lim[illegible] the Gold Points (q. v.) as explained abov[illegible]hange rates will constantly fluctuate. Such fluctuations are caused by the variations in the supply and demand of bills in the foreign exchange market. Foreign shipping is somewhat seasonal in character and whenever exports largely exceed imports, a correspondingly larger volume of bills is offered for sale than there are orders to buy. In absorbing the excess of bills to be purchased, rates tend to fall. Conversely, when imports exceed exports the demand for bills is greater than the amount offered for sale, and rates tend to rise.

This normal limitation in the fluctuation of exchange rates is predicated upon the free movement of gold among countries. If, for any reason, a nation declares an embargo upon gold exports, or if its gold reserves are so depleted that it can no longer settle its trade balances in gold, or if it sets up exchange control mechanisms designed to restrict the free fluctuation of exchange, then the normal limitations of rate variation are no longer valid, and market rates will be arbitrarily fixed by exchange controls. In recent decades of unsettled budgets, adverse balances of trade, loss of gold and exchange difficulties, many nations have imposed regulations to stop free trading in currencies, exchange or bullion, or to restrict such trading so as to prevent or modify fluctuations in exchange. The International Monetary Fund (q. v.) is designed among other purposes to bring stability to exchange rates and prevent international races in currency depreciation. (See Arbitrage, Buying Rate, Cable Rate, Check Rate, First of Exchange, Foreign Collections, Foreign Bills of Exchange, Foreign Exchange Market, Foreign Moneys, Foreign Government Bonds, Letters of Credit, Long Rate, Marine Insurance Certificate, Position Sheet, Short Rate.)

FOREIGN EXCHANGE BROKER

A bank, foreign exchange house, or dealer, that buys and sells foreign exchange.

FOREIGN EXCHANGE MARKET

There is no formal market or exchange where foreign exchange is traded in. The market consists of the large New York banks and other banks of the United States and the rest of the world which are in direct

cable communication with one another, also various investment houses, and foreign exchange brokers and dealers. In New York City, the principal foreign exchange houses are in direct contact with one another through a system of private, as well as public, wires. Since London time is five hours ahead of New York time, the cue for each day's rates is normally taken from London quotations.

FOREIGN EXCHANGE RATES

See Foreign Exchange, Foreign Moneys.

FOREIGN EXCHANGES

The English equivalent for foreign exchange. (See Exchanges.)

FOREIGN FUNDS CONTROL

Instituted by the Secretary of the Treasury under authority of Executive Order of April 10, 1940, following the invasion of Denmark and Norway by Germany. In accordance with this authority, the Treasury issued Regulations governing the declaration, freezing and licensing of transfers of assets of the nationals of the invaded countries.

Subsequently, foreign funds control was extended to assets of nationals of Germany and Japan in June and July, 1941, and when the United States entered World War II, the Treasury Regulations were integrated with the Trading with the Enemy Act, as amended by the First War Powers Act, 1941, which contemplated not only foreign funds control but complete stoppage of trade relations, direct or indirect, with enemy countries or enemy dominated countries. Since the end of the war, amendments and rescissions have eased or eliminated wartime restrictions.

FOREIGN GOVERNMENT BONDS

Bonds which are a direct obligation of a foreign government. These bonds are of two classes: (1) External Bonds (q. v.)—those marketed, intended for investment by investors in another country, and payable both as to principal and interest in the currency of that country; and (2) Internal Bonds (q. v.)—those marketed primarily in the country of issue, and payable in the currency of that country. The external bonds of foreign countries which have been marketed in the United States are also known as dollar bonds. The market for this class of bonds expanded greatly following World War I, and practically all of the European and South American nations, and some of the Asiatic countries borrowed in the American market by means of selling their external bonds. A few foreign government issues are payable in several currencies, and are known as Multiple-Currency Bonds (q. v.). In addition to foreign (national) government bonds, there were many foreign municipal issues floated in the American market.

As to security, foreign government bonds may be divided into two classes: (1) promises to pay or certificates of indebtedness without collateral; and (2) those secured by a pledge of specific assets. Most issues are of the former type. The latter type is exemplified by the old borrowings, such as the secured debt of Mexico (examples are the Cons. 5s, 1899, and Gold 4s, 1910), secured by specific revenues.

As investments, the value of these bonds depends upon the same factors as United States bonds, i. e., upon the good faith, honor, political stability, state of industrial advancement, and commercial ability of the issuing government. It is sometimes objected that government bonds, not being subject to foreclosure, are inferior to mortgage bonds, since in case of default, there is no remedy at law. For a government to default in the payment of its bonds, however, would ordinarily be credit suicide. With its credit standing undermined, it would be compelled to do without funds from outside sources, until it had paid its debts, and restored its credit. Once a government's credit has been impaired, a long time would be required to rehabilitate it. New funds, moreover, would be obtainable only at high rates of interest.

The record of foreign government bonds sold in the United States is not an enviable one. Russian and Mexican bonds have been in default for many years. In the world collapse of 1929-1933, interest was defaulted by a number of South American countries, and subsequently, World War II conditions compelled default on European issues of various nations.

The countries having dollar issues outstanding (early 1948) are as follows:

Latin America: Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Mexico, Panama, Peru, El Salvador and Uruguay.

Europe: Axis Countries (trading in enemy securities was suspended in the United States immediately upon official declarations of war, and has not been resumed as yet (early 1948) for issues of Austria, Bulgaria, Germany, Hungary and Rumania, although resumed for issues of Italy December 23, 1947), Belgium, Czechoslovakia, Denmark, Finland, France (less than $1,500,000 of the $7,400,000 in 7s of 1949 are reported held in the United States), Greece, Netherlands, Norway, Poland, Russia (trading still goes on in the Czarist Government 6 1/2s and 5 1/2s issued in 1916), and Yugoslavia.

Far East: Australia, Japan (trading in Japanese bonds was suspended December 11, 1941 and has not yet been resumed).

(See Foreign Corporate Bonds, Insular Bonds.)

FOREIGN INVESTMENTS

Although long term estimates of American foreign investments vary according to source, official or unoffical, a survey by Mr. George N. Peek, Special Adviser to the President on International credits for foreign trade, estimated total American foreign investments increased from $500 million July 1, 1896 to $1 1/2 billion July 1, 1914; $18 1/2 billion December 31, 1922; $25.7 billion December 31, 1929; and $25.2 billion at the close of 1933 (see Tables I and II appended herewith).

The U. S. Department of Commerce (International Economics Unit) also compiles estimates of United States long term investments in foreign countries, and these are combined by the Board of Governors of the Federal Reserve System with its figures on short term investments to form the series, International Capital Position of the United States.

The Board of Governors, in its series Net Capital Movement to United States Since January 2, 1935, publishes current cumulative changes in net flow of capital movements arising from various types of international transactions. Formerly, this series was reported weekly, but commencing with July, 1942, has been reported monthly. From January 2, 1935 through December 31, 1947, this series shows a net capital movement to the United States of $8,316.2 million, consisting of the following types of funds: foreign banking funds in the United States, $4,120.3 million; increase in funds of

Tables Analyzing Effect of International Investments on the Debtor-Creditor Status of the United States
(Prepared by George N. Peek, Special Adviser to the President, and Submitted in Report dated August 30, 1934)

†Decrease.

nternational institutions in the United States, $2,237.0 million; decrease in United States banking funds abroad, $174.6 million; return of United States funds in foreign securities, $1,274.9 million; inflow of foreign funds into domestic securities, $367.0 million; and inflow of foreign funds into brokerage balances, $142.4 million. Current figures on this series are reported in the Federal Reserve Bulletin.

These figures do not fully reflect Governmental activities in outflow of funds, which have been substantial, both during the War and in the post-War period. Thus, during the War, Lend-Lease furnished goods and services to foreign countries valued at over $50 billion, and credits arranged to cover goods on hand or in pipelines when Lend-Lease terminated, totaled another $1 1/2 billion. Surplus military property disposed of on credit terms in foreign countries totaled another $1 1/4 billion. UNRRA (United Nations Relief and Rehabilitation Administration) contributions by the United States totaled some $2.7 billion, or about 70% of the total. Import Export Bank authorization for loans totals $3 1/2 billion. The United Kingdom loan totaled $3 3/4 million. The United States contribution to the assets of the International Monetary Fund was $2 3/4 billion. Total loan commitments of the International Bank for Reconstruction and Development for European countries are $497 million. In addition, the European Recovery Program (q. v.) will involve further substantial siphoning of United States funds into foreign countries. For the interrelation of these items and their net effect on balance of payments, see Foreign Trade.

FOREIGN ITEMS

Checks, drafts, bills of exchange, etc., which are payable in a foreign country. This term is also quite generally employed in banking practice to apply to checks, notes, drafts, etc., which are drawn and payable within the United States, but payable at a point outside the place where they are deposited. In other words, this term is often used synonymously with transit items, and out-of-town items.

FOREIGN LIQUIDATION

The selling of American securities by foreign holders or speculators. During World War II, requisitioning of American security holdings by foreign governments held by their nationals has centralized such holdings and has made their potential liquidation a market factor.

The New York Federal Reserve Bank in its Monthly Bulletin for September, 1947 estimated the market value of foreign holdings of American securities at $3,500 million, as compared with $2,700 million value found by the U. S. Treasury's census of foreign owned assets as of June 14, 1941. The increase, estimates the Bank, was entirely caused by rise in market value, and aggregate net sales have been small, with securities worth $234 million (at market prices) having been sold in the first year after VE-Day and $223 million in the following year. Such liquidation represented largely the sale of British and Canadian holdings, with some liquidation also by Dutch and Latin American sources. The Bank noted the probability of additional liquidation, however, in view of the encouragement by foreign governments to repatriate the funds, requisitioning of holdings of French citizens by France, and a census of holdings by Sweden.

Distribution of holdings as of September, 1947 was estimated by the Federal Reserve Bank of New York as follows: Europe, $2,100 million (largely United Kingdom, $600 million, part of which was still pledged as collateral for the Reconstruction Finance Corporation loan granted in July, 1941, of which $205 million was still outstanding as of March, 1947; Netherlands, $400 million; and France, $250 million); Canada, $600 million; others, $800 million.

FOREIGN MONEYS

Post-war par values of foreign moneys have been agreed on through the International Monetary Fund (q.v.), one of whose specific functions is to promote exchange stability and avoid competitive exchange depreciation.

Each of the 45 member nations of the Fund has a quota, which determined the subscription of each member, and also sets the voting power and limitation on use of the Fund's resources by each member. Subscriptions were equal to the quotas, and were payable upon establishment of a member's par value, partly in gold and partly in the member's currency. The portion payable in gold was either 25% of the member's quota, or 10% of its net official holdings of gold and U. S. dollars, whichever was less.

Once par values have been established, members are under an obligation not to make any change in their exchange rates without consultation with the Fund. No objection by the Fund is made if the change does not exceed 10% of the original par value. If the par value of a

(1) On January 26, 1948, France established a new exchange rate system, changing the official rate from 119.107 to 214.393 francs per U. S. dollar and establishing as of February 2, 1948 a "free market" for certain purchases and sales of U. S. dollars and Portuguese escudos. On April 1, 1948, the free market was extended to include the Swiss franc. The system involves a pattern of cross rates in Paris for the U. S. dollar and other member currencies inconsistent with the established parities of those currencies. The Fund disapproved the French proposal. Accordingly, there is at present no agreed par value for the French franc.
(2) 173 shillings, 8.367 pence.
(3) 4 shillings, 11.553 pence.

TABLE II.

List of Moneys of Foreign Countries
(Principal Units)

Arranged Alphabetically
by Moneys

Name of Money	Country or Countries	Division
Afghani	Afghanistan	100 puls
Angolar	Angola	100 centavos
Anna	Bahrein Islands	1/16th Indian Rupee
	Burma and India	1/16th Rupee
Avo	Macao and Timor	1/100th Pataca
Balboa	Panama	100 centesimos
Ban (i)	Roumania	1/100th Leu
Bolivar	Venezuela	100 centimos
Boliviano	Bolivia	100 centavos
Cent	Barbados, British Guiana, British Honduras, British West Indies, Canada, Ethiopia, Hong Kong, Liberia, Newfoundland, Trinidad and United States	1/100th Dollar
	British East Africa (Kenya, Tanganyika, Uganda and Zanzibar), Eritrea	1/100th Shilling
	British North Borneo, Federated Malay States, Malaya, Sarawak	1/100th Straits Dollar
	Ceylon, Mauritius, Seychelles, Somaliland	1/100th Rupee
	China	1/100th National Dollar
	Curacao, Dutch East Indies, Netherlands, Surinam	1/100th Guilder
Centavo	Angola	1/100th Angolar
	Argentina, Chile, Columbia, Cuba, Dominican Republic, Mexico, Philippine Islands	1/100th Peso
	Bolivia	1/100th Boliviano
	Brazil	1/100th Cruzeiro
	Cape Verde Islands, Mozambique, Portugal, Portuguese Guinea, St.Thomas and Principe	1/100th Escudo
	Ecuador	1/100th Sucre
	Guatemala	1/100th Quetzel
	Honduras	1/100th Lempira
	Nicaragua	1/100th Cordoba
	Paraguay	1/100th Guarani
	Peru	1/100th Sol.
	El Salvador	1/100th Colon

Zloty	Poland	100 grosze

member's currency is reduced, it is obligated to make a corresponding payment to the Fund. Reciprocally, if the par value of a member's currency is increased, the Fund is obligated to make a corresponding repayment. The Fund may also require additional currency to be paid to it by any member nation if the foreign exchange value of its currency falls significantly.

Agreed par values were announced December 18, 1946 for 32 nations, followed later for four more nations. Par values have not yet been established for eight nations. One nation has established a new exchange rate which has been disapproved by the Fund. Par values of member currencies which have been agreed on and established are shown in appended Table I.

Table II lists principal units of foreign moneys alphabetically by name of currency, name of country, and principal division of the monetary unit.

(See Foreign Exchange, Money.)

FOREIGN MUNICIPAL BONDS

Bonds of political subdivisions and cities of foreign countries. Generally, the foreign governments added their guarantees to add to the marketability of foreign municipal dollar bonds in the United States. (See Foreign Government Bonds.)

FOREIGN POSTAL MONEY ORDERS

See Money Orders.

FOREIGN SECURITIES

See External Bonds, Foreign Corporate Bonds, Foreign Government Bonds, Internal Bonds, Multiple Currency Bonds.

Winkler, M,: Foreign Bonds, an Autopsy, 1933.

FOREIGN TRADE

Value of merchandise exports and imports of the United States, according to figures compiled by the U. S. Department of Commerce, since 1926 compares as follows:

----------000 omitted----------

Calendar Year	Exports	Imports	Excess of Exports Over Imports
1947	p14,456	p5,739	p8,717
1946	9,740	4,909	4,831
1945	9,806	4,136	5,670
1944	14,259	3,919	10,339
1943	12,965	3,381	9,584
1942	8,079	2,745	5,334
1941	5,147	3,345	1,802
1940	4,021	2,625	1,396
1939	3,177	2,318	859
1938	3,094	1,960	1,134

----------000 omitted----------

Calendar Year	Exports	Imports	Excess of Exports Over Imports
1937	3,349	3,084	265
1936	2,456	2,423	33
1935	2,283	2,047	235
1934	2,133	1,655	478
1933	1,675	1,450	225
1932	1,611	1,323	288
1931	2,424	2,091	334
1930	3,843	3,061	782
1929	5,241	4,399	842
1928	5,128	4,091	1,037
1927	4,865	4,185	681
1926	4,809	4,431	378

p--Preliminary.

Exports include Lend-Lease goods shipped to United Nations but exclude shipments to United States armed forces abroad; and also include UNRRA shipments. Imports are "general imports", which include merchandise entered immediately upon arrival into mechandising or consumption channels, plus commodities entered into bonded customs warehouses for storage.

Exports and imports are but one item in the current account of Balance of Payments (see table on page 256).

FORFEITURE

The loss or relinquishment of money deposited to secure or bind a contract, or part payment of a purchase, as a penalty for non-performance or non-fulfillment. As an illustration the case of a purchaser of stock in a National bank undergoing organization is cited. The law permits the subscriber to pay a first installment of 50 per cent., and the remainder in five 10 per cent. monthly instalments. Upon failure to make the instalment payments according to agreement, the stock is then sold to the highest bidder. If the selling price is no more than the amount of the delinquent instalment, the original purchaser forfeits his entire deposit; but if it is in excess of the delinquent instalment, the original purchaser is entitled to the excess up to the amount of the original deposit.

FORGED INSTRUMENTS

Checks, drafts, bills of exchange, notes, bonds, stock

certificates and paper money with false signatures or false denominations or false instruments with genuine signatures. The losses due to forged bonds and stock certificates have been considerable in the past, and one of the functions of the New York Stock Exchange is to prevent this abuse. The New York Stock Exchange guarantees the physical genuineness of all listed securities traded in by its members.

A bank is liable for paying a check with a forged signature. A bank is bound to know the signatures of its depositors; consequently, all checks passing through a bank are examined as to their signature by the paying teller or signature clerks before they are paid. A bank is not liable to a depositor, however, for the payment of a forged or raised check unless the depositor notifies the bank that the check was forged or raised within one year after the return of the voucher of such payment (Sec. 326, New York Negotiable Instruments Law).

Since paying a forged check is one of the chief risks with which a bank is confronted, banks should educate their depositors to protect their blank checks as a means of combating this risk. Depositors should keep blank checkbooks under control and be able to account for each of the series. Checks should not be signed in blank, nor should blank checks be given away to strangers. (See Alteration, Counterfeits, Forgery, Signature Department.)

FORGERY

In its broadest interpretation forgery is defined as

"making or altering any document with the intention of prejudicing another person."

As defined in the New York Penal Law, forgery includes false making, counterfeiting and the alteration, erasure, or obliteration of a genuine instrument, in whole or in part, the false making or counterfeiting of the signature, of a party or witness, and the placing or connecting together with intent to defraud of different parts of several genuine instruments.

Thus placing a false signature on a check, raising the amount, changing the payee's name, or the number of the check with intention to defraud constitutes forgery. The alteration of a passbook entry likewise is forgery. Forgery is a statutory crime and is punishable by imprisonment. The following precautions against check forgeries should be taken:

1. Never cash a check for a stranger untill he is identified by you through someone you know and upon whom you can rely.
2. Never accept a check just because it looks "business-like." Criminals frequently counterfeit checks of well-known concerns.
3. Always verify bank certifications through the certifying bank. Certifications are frequently counterfeited by criminals.
4. Never do what a stranger suggests in order to identify him, unless the suggestion leads to identification through someone you know and upon whom you can rely. He may have arranged with an accomplice to give you misinformation.
5. Never sign a check in blank or make it out payable to "cash" or "bearer" unless imperatively necessary.
6. Never leave your check book or canceled vouchers where anyone else can get hold of them.
7. Always write your checks carefully with good ink, typewriter or checkwriter which will indent the paper. Begin each line at the left hand side and leave no spaces between your words.
8. Be sure to have a safe place for delivery of your business mail. Do not depend on the type of box that can be easily opened by a criminal.
9. If possible never let anyone else check up your bank book with paid and cancelled checks returned from the bank. This is the one thing that every business man should do monthly and personally wherever possible.

(See Alteration, Counterfeits, Forged Instruments, Raised Bills.)

FORTNIGHTLY SETTLEMENT

See Settlement Days.

FORWARD BUYING OR SELLING

In commodity trading, the purchase or sale of a spot commodity but for deferred delivery instead of immediate delivery. (See Spot Price.)

FORWARD MOVEMENT

A market expression which refers to a general rise in the price level securities or commodities in which all listings participate. The expression may refer to a rising price tendency for the day, or for a period of time.

FORWARDING AGENT

A person or concern engaged in the business of collecting, transferring, warehousing, and delivery of goods.

FOUNDATION

An institution established on a permanent basis by private endowment, e. g., college, hospital, research bureau, church, scientific institution, etc., or the endowment fund itself. A foundation usually is instituted as a gift of the donor and maintained continuously from the income derived from investments, usually bonds, constituting the principal of the endowment. Examples of this type of institution are, in order of approximate size of assets:

General Education Board (endowed by John D. Rockefeller)
The Rockefeller Foundation
Ford Foundation
The Duke Endowment
Kresge Foundation
Commonwealth Fund (founded and supported by Mrs. Stephen V. Harkness and Edward S. Harkness)
Charles Hayden Foundation
W. K. Kellogg Foundation
Carnegie Institution of Washington
John Simon Guggenheim Foundation
Carnegie Corporation of New York
New York Community Trust
John and Mary R. Markle Foundation
Carnegie Foundation for the Advancement of Teaching
Russell Sage Foundation

FOUNDERS' SHARES (STOCK)

A special form of stock issued to the founders or promoters of a company in remuneration of the promoters' services, as distinguished from common or ordinary stock. Founders' stock is a term primarily used in English finance and corresponds approximately with Promoters' Stock (q. v.) in America. It is known as management or deferred stock. (See Deferred Stock.)

FRACTIONAL CURRENCY

Coins having a denomination of less than one dollar. These include the silver 50 cent, 25 cent and 10 cent pieces; the nickel 5 cent piece; and the bronze 1 cent piece. (See Minor Coins, Subsidiary Silver Coins, Token Money.)

FRACTIONAL LOTS

See Odd Lot.

FRANC

The monetary unit of Belgium, France, Liechtenstein, Luxembourg, Switzerland, and a number of non-metropolitan areas (see Table II under Foreign Moneys).

France on January 26, 1948 established a new exchange rate for the franc, changing the official rate from 119.107 francs to 214.393 francs per U. S. dollar. This was disapproved by the International Monetary Fund (q. v.), and at present there is no agreed par value for the French franc.

FRANCHISE

A privilege conferred by a governmentality, usually a municipality, by which a corporation is vested with powers to engage in a public utility enterprise usually under quasimonopolistic conditions. A franchise is a grant of power given to the grantee corporation to engage in a business which involves the exercise of the right of eminent domain. This includes all public service businesses (gas, water, electricity, street rail-

way, suburban, telephone companies, etc.). Public utility corporations are subject to the conditions imposed by the franchise and a violation of its provisions results in its Forfeiture (a. v.). Most states provide for the regulation of their public utilities through a public service commission.

The principal features covered by a franchise are: (1) duration, which may be fixed (limited), perpetual, or indeterminate (during "good behavior"); (2) compensation, which may be a sum of money or performance of certain services; (3) rates; (4) service; (5) improvements, which in most cases revert to the grantor upon the expiration of the franchise; (6) labor conditions and strikes; (7) capitalization; and (8) reversion to grantor.

The conditions imposed in a franchise are important in judging public utility investments, the chief points to be considered being that the bonds of these companies should mature within the life of the franchise, and should not exceed the replacement value of the company's fixed property. (See Public Service Commission, Public Utility Securities.)

FRAZIER-LEMKE-LONG ACT

See Farm Bankruptcy Act.

FREE BALANCE

The minimum free balance for checking or non-borrowing accounts corresponds to the average balance for borrowing accounts, and is the minimum amount in the account which the bank requires the depositor to maintain. In calculating service charges for checking accounts, the cost systems of most banks allow a service allowance, say of 10¢ a month for each $100 of minimum monthly balance, representing a credit for investment of demand deposits at current rates. (See Twenty Per Cent. Rule).

FREE BONDS

Unpledged or unhypothecated bonds; bonds available for immediate disposal.

FREE COINAGE

Coinage of a metal into standard coins without limitation as to quantity, with full legal tender powers for private persons. Gold was the only metal that enjoyed free coinage in the United States and in all gold standard countries. Since 1933 and the Gold Reserve Act of January 30, 1934, however, coinage of gold in the United States has been at an end, and it has been similarly ended throughout the world. Free coinage should be distinguished from Gratuitous Coinage (q. v.). (See Coinage, Free Silver.)

FREE CROWD

Also called the Active Crowd. The division of the New York Stock Exchange which handles trading in the active domestic bond issues. Trading procedure in the active crowd is similar to that in stocks, except that there are no specialists as for stock trading. Instead, memorandum of bids and offers in the particular bond is kept by quotation clerks who are employees of the Exchange, listing the names of the brokers making the bids and offers. These prices are not binding upon the brokers, but merely serve to facilitate trading by bringing together buying and selling brokers. (See Book Crowd, Cabinet Crowd.)

Bibliography

Shultz, B. E.: The Securities Market and How It Works, 1946.

FREE GOLD

An expression which means the excess of gold (now gold certificates issued by the Treasury since the Federal Reserve banks no longer hold metallic gold) held by the Federal Reserve System over the legal requirements for Federal Reserve notes (40%) and member bank deposits (35%). In computing gold reserves, the law concerns itself with the gold requirements of each Federal Reserve bank separately and not with the 12 combined Federal Reserve banks. For example, excess gold in the Federal Reserve bank of Boston does not compensate for a deficiency in Atlanta. The usefulness of this concept was diminished by the Gold Reserve Act of 1934, which vested in the Treasury of the United States title to all the monetary gold stock, including about $3 1/2 billion held by the Federal Reserve Banks. (See Gold Reserve, Gold Reserve Act of 1934).

FREE ITEMS

Checks, matured notes, and bankers' acceptances, etc., drawn on out-of-town points which are cashed or received for deposit by a bank at par without deduction for exchange or collection charges. Local clearing house associations usually determine those items which may be received by members for deposit at par and those upon which exchange must be charged. (See Domestic Exchange.)

FREE MARKET

An open market where prices are determined by free and open competition between many buyers and sellers.

FREE OF DUTY

See Foreign Trade.

FREE SILVER

A term used to denote the use of silver as a standard money, singly or with gold, as in Bimetallism (q. v.). Free silver refers to the coinage of silver at the mint without limitation as to amount, without profit to the Government, and investing it with full legal tender powers. The free silver agitation was rampant in the early 90's and was a campaign issue in 1896. (See Bland-Allison Act, Free Coinage.)

FREE WORKING CAPITAL

The margin or excess of current or quick assets over current liabilities, is variously termed net current assets, free working capital, or just working capital. The amount in the aggregate of the free working capital is not as valuable an indicator of liquidity of a business as the current ratio, or ratio of current assets to current liabilities. For example, a concern with current assets of $1,000,000 and current liabilities of $500,000 has the same aggregate free working capital as a concern with $1,500,000 in current assets and $1,000,000 in current liabilities, but the first concern is obviously the stronger in liquidity, in view of its 2:1 current ratio, as compared with 1 1/2:1 for the second concern. (See

Current Assets, Current Liabilities, Current Ratio, Working Capital.)

FROZEN CREDITS

An expression coined during the post-World War I credit deflation period to denote bank loans which could not be liquidated without financially embarrassing the borrowers and which were accordingly extended to prevent bankruptcy; loans renewed or extended as a matter of accommodation to customers on account of a precipitate fall in price of supporting collateral below the amount of the loan, with the hope of future price betterment and ultimate liquidation of the loan without loss to the lenders. (See Standstill Credits.)

FROZEN LOANS

See Frozen Credits.

FROZEN OUT

This term has three meanings:

(1) An expression used to describe a speculator whose account has been closed out by a broker due to the exhaustion of his margin. (See Exhaust Price.)

(2) The expression is also used to indicate the forcing out of small stockholders by those in control. This is accomplished by frightening them into selling their holdings by circulation of reports of distress, or by temporarily depressing the price of the security, or otherwise.

(3) An officer or director of a corporation may be "frozen out" or forced out of office by a concerted plan of the stockholders or others in control.

FUERTE

A money of Venezuela, equal to five bolivars. (See Foreign Moneys--Venezuela.)

FULL LOT

The unit of trade on an exchange, and also known as board lot. A full lot on the New York Stock Exchange is 100 shares for active stocks. Inactive stocks are traded in on the floor at Post 30 in units of 10 shares, and the usual odd lot differential applies to orders for less than 10 shares. An odd lot in bonds on the New York Stock Exchange is a unit of less than five bonds of $1,000 principal amount each, and commission charges are usually graduated higher than those for five bonds or more, according to whether the order is for four bonds; three bonds; and one or two bonds. (See Units of Trade.)

FULL (FULLY) PAID STOCK

Stock fully paid for, i. e., upon which no further subscription instalments are due up to par or face value. In most states stocks may be paid for in cash, property, or services of equivalent value. In some states, however, stock cannot be issued unless paid for in cash, or its equivalent in property (services being excluded), equal to the face value of the stock. In a few states stock may be paid in cash only.

Stock which is not fully paid carries with it the obligation on the part of the holder to pay the balance at any subsequent time.

FUNDAMENTAL CONDITIONS

A term used in market letters and financial reviews to indicate the underlying economic factors upon which the state of business, whether active or inactive, moderate or dull, prosperous or depressed, is ascertained. Fundamental conditions at any given time are determined by referring to comparative business statistics, various business, banking, investment and credit barometers, and to principles of economics. (See Business Barometers, Favorable Conditions.)

FUNDED DEBT

Bonded debt; long-term indebtedness of a business corporation, or Government or political sub-division thereof, as distinguished from the unfunded, floating, or current debt. The Interstate Commerce Commission defines this term as comprising all bonds or other certificates of indebtedness not maturing for a year or more.

FUNDED INDEBTEDNESS

See Funded Debt.

FUNDING

The process of converting the floating indebtedness of a Government or political sub-division thereof, or a business corporation, into long-term bonds. Funding may be accomplished by converting a series of short-term note issues into long-term bonds, when interest rates are low, or in corporate finance, by selling stock and paying off short term debts with the proceeds. In this way stockholders virtually buy out the interest of the creditors. Funding by means of the sale of additional stock is usually undertaken when the equity market is favorable.

FUNDS

Cash, or its equivalent, e. g., checks, drafts, money orders, etc. The term may be used to include securities which have a ready market and can be quickly liquidated. It is common to hear the expression "liquid" funds, meaning cash; and "tied up" funds, meaning money invested in income-bearing assets.

FUNGIBLE

Fungible goods are goods of a given class, any unit of which is as acceptable as another and will satisfy an obligation expressed in terms of the class. For example, bushels of wheat of a particular grade are fungible goods, as each unit of wheat of the same quality does not differ individually in value from the other units, and may be accepted or tendered without necessity of segregation or selection of particular bushels of wheat.

Much of the grain business of the country is conducted through the medium of grain elevators and warehouses, wherein grain is stored in a common receptacle and treated as common property. The depositor is entitled to grain in same kind and quantity upon demand. (See Elevator Receipts.)

FUTURES

Contracts in which the seller agrees to deliver commodities, foreign exchange, or securities at a future date, usually from one to six months, but sometimes longer, ahead. Trading in futures is chiefly confined to grain, cotton, cocoa, coffee, hides, rubber, silk,metals, and sugar, but is also common in foreign exchange. Short selling in securities is also a form of trading in futures. Ordinarily, this practice is regarded as speculative, but it is more frequently quite the opposite, as

explained by Boyle (Speculation and the Chicago Board of Trade):

"Future trading is of two kinds, speculative and hedging. A part of future trading is known as 'hedging' and is a form of insurance. A part of future trading is purely speculative. It is really dealing in grain contracts, rather than in grain. Some members of the Board of Trade devote their energies wholly to speculation, and are known as 'professionals.' Again, there is a sub-class of speculators who are called 'scalpers' or 'pit scalpers,' since they buy and sell on each slight drop of rise in the market, trying to scalp a little profit off of each fluctuation for themselves. They do not risk carrying any trades over night, but aim to be even at the close of each day. The 'professional speculator,' however, deals for the longer swings of the market, over a period of days, or even weeks."

While the primary function of the commodity exchanges is to register existing values in accordance with the operation of the law of supply and demand, its real economic value consists in furnishing manufacturers and merchants handling the commodity a mechanism for insuring themselves against losses through price fluctuations during the period the raw commodity is in process of fabrication and sold to the ultimate consumer. That is, the commodity exchange is a means by which cash holdings may be hedged against by sale of futures, or vice versa.

After long years of struggle against uninformed hostility and prejudice, futures trading in staple commodities has come into public favor. In the beginning, commodity exchanges had to fight a perpetual battle for existence against their own inexperience and the wrath of disgrunted farmers and business men only too willing to blame their ills on conspicuous marketing organizations whose operations they did not fully understand. Today the exchanges are recognized as essential cogs in international commerce, and farmers and business men have come to look on them as organizations to be used rather than abused.

This is particularly so since the Commodity Exchange Act (q. v.) placed all futures trading in designated commodity exchanges under its regulation and control. Principal protective features of regulation include the abolition of manipulative practices such as wash sales, cross trades, puts and calls, etc.; prevention of excessive speculation, both by setting daily trading limits as to price and by imposing limitations on the daily amount of speculative trading and net long or short speculative position of any one speculative account; segregation of customers funds from commission merchant's funds; registration of all commission merchants and floor brokers; prevention of any cheating or defrauding of the public, etc.

Specific provisions of futures contracts vary according to the commodity and the rules of the particular exchange, but general characteristics include the fixing of uniform unit of trading and terms of contract trading, setting of basic grades deliverable, specification of delivery during a particular calendar month, clearance of trades through a clearing house, prescribed hours of trading, etc.

Bankers have long favored futures exchanges. They look first to the character and standing of would-be borrowers before they will lend their funds; but as between firms of equal standing they have always loaned more freely to those which hedge. The larger and more successful banks even require that their customers hedge, for they have learned from experience the value of hedging as price insurance, the value of futures markets in making the assets against which they lend more liquid, and the value of having a futures contract buyer as an additional security added to that offered by the original borrower and his actual commodity.

(See Commodities, Commodity Exchange Act, Commodity Exchanges, Hedge.)

FUTURES COMMISSION MERCHANT

Under the Commodity Exchange Act, futures commission merchants include individuals, associations, partnerships, corporations and trusts engaged in soliciting or in accepting orders for the purchase or sale of any commodity for future delivery on or subject to the rules of any contract market and that, in or in connection with such solicitation or acceptance of orders, accepts any money, securities or property (or extends credit in lieu thereof) to margin, guarantee, or secure any trades or contracts that result or may result therefrom.

Futures commission merchants are required to be registered with the Secretary of Agriculture under the Commodity Exchange Act. (See Commodity Exchange Act, Futures.)

FUTURES EXCHANGE

Any contract market or futures market which has been designated to conduct trading in futures by the Secretary of Agriculture under the Commodity Exchange Act. (See Commodity Exchanges.)

In foreign exchange, futures exchange is the rate for a foreign currency at a particular future date, either fixed or optional. (See Foreign Exchange.)

GAMBLE (GAMBLING)

A term used in speculative circles meaning to "play the market" blindly. It consists of making speculative commitments without having a knowledge of business conditions, the technical position of the market, cyclical price movements, or the value of the securities traded in from the standpoint of equities and earnings, especially stocks of corporations which have not yet reached the producing stage, and the success of which is uncertain. In other words to gamble in stocks is to deal in highly speculative stocks, to deal in stocks without previous knowledge of the risks involved, to trade on thin margins, to load up heavily on one security issue, or merely to bet on the rise or fall of quotations—the practice of the Bucket Shop (q. v.). In general a gambler is one who takes heavy and unnecessary risks, e. g., one who casts too much on a single throw of the dice.

From a strict economic standpoint the well considered purchase of stocks is not gambling, since a real contribution to production is made, i. e., that of furnishing capital for speculative enterprises, whereas in gambling, no end is finally achieved. Gambling, moreover, involves the assumption of a needless or artificial risk (often created for the occasion), while speculative trading involves a necessary economic risk. Speculation is an existing and inherent risk that cannot be escaped if business is to be carried on. In gambling, a risk is created for the sole purpose of assuming it. Wagers on a horse race are deliberately created. The risk of fluctuating prices is inherent in the economic scheme. (See Hedging, Lamb, Speculation.)

GARNISHEE

See Garnishment.

GARNISHMENT

A legal process, or the notice or writ, which directs a third party who owes money or other property to the defendant in a case in which the plaintiff is suing to collect a debt, not to deliver such money or property into the defendant's hands, but to appear in court and answer the plaintiff's suit. Garnishment proceedings are instituted in order to secure to the plaintiff a claim due by a third person to such debtor, against whom suit has been brought. The person upon whom the garnishment is served is known as the garnishee.

GAS

The gas industry has two principal divisions, the artificial or manufactured gas industry, and the natural gas industry. The manufactured gas industry had its beginnings in America as early as 1816, and until the advent of the electric light, had its principal market in the illumination field. Following the perfection of the electric light, the manufactured gas industry began to develop the home market for cooking and heating, and later for gas-using refrigerators. It has also developed the industrial and commercial market to some extent.

For 1946, of total manufactured gas sales of 414 million Mcf, residential sales totaled 279 million Mcf, and industrial and commercial sales totaled 130 million Mcf. In the decade following 1929, total manufactured gas sales showed little change, but within the total there was a sharp rise in house heating sales, which increased by 313%, although still at a relatively minor aggregate, and there was a 20% gain in industrial and commercial sales. Other residential sales, which account for the bulk of sales, dropped about 25% in the decade following 1929, reflecting the trend toward less cooking in the home, but have since recovered some 15%. Nevertheless, because the principal use of gas in the home is for cooking, intensive growth in this field is necessarily limited, and extensive growth depends upon the increase in number of dwelling units.

In recent years, the increase in cost of fuel for manufacture of artificial gas (most artificial gas is manufactured from the destructive distillation of coal) has led to sharp expansion in the use of natural gas, either mixed with manufactured gas, or supplanting manufactured gas. This trend has been accelerated by the building of long distance natural gas pipe lines from natural gas fields to urban markets. Many manufactured gas companies have been converting to mixed or straight natural gas service. (See Natural Gas.)

GENERAL ACCOUNTS

Accounts which appear in a bank's general ledger; all accounts other than accounts with depositors and depositories, i. e., accounts representing balances due to and due from customers. (See General Ledger.)

GENERAL AGENT

See Agent.

GENERAL AND FIRST MORTGAGE BONDS

See First and General Mortgage Bonds.

GENERAL ASSET CURRENCY

Bank notes which are not secured by a specific pledge of collateral, e. g., specie, bonds, or commercial paper, but which are supported only by the general assets of the issuing bank. The notes of the Bank of France are examples of general asset currency. There are no examples of general asset currency in the United States, and Federal Reserve Notes (q. v.), the principal circulating medium, are specifically secured.

GENERAL AVERAGE

See Average.

GENERAL BOOKKEEPER

One who has charge of the general ledger and the General Bookkeeping Department (q. v.).

GENERAL BOOKKEEPING DEPARTMENT

The department of a bank which records all transactions affecting the general accounts, as distinguished from customers' accounts. The function of the general bookkeeping department is to summarize the transactions of each of the operating departments of the bank before they are added to or subtracted from the assets, liabilities, or undivided profits accounts. In order that the financial condition of a bank may be visualized, this department becomes the central accounting department where all the transactions of the bank are gathered, condensed and recorded. The general bookkeeping department maintains a general ledger, statement book, and expense book. (See General Ledger.)

GENERAL DEPOSITS

See Deposits.

GENERAL FIRST MORTGAGE BONDS

A misleading title, contradictory because a general mortgage cannot be a first mortgage, which in most cases denotes general mortgage bonds, although sometimes they constitute a first lien on a part of the mortgaged property. The proper title for this class of bonds is first and general mortgage bonds, or First Lien and General Mortgage Bonds (q. v.). (See General Mortgage Bonds.)

GENERAL INDORSEMENT

Indorsement in blank. (See Indorsement.)

GENERAL LEDGER

The most important accounting record of a bank which contains a summary of all transactions of the institution including general accounts and controlling accounts for the customers' ledgers. Every transaction which occurs in any of the operating departments eventually affects some account in the general ledger and in the ordinary routine, reaches the general bookkeeping department for posting to the general ledger. Each general ledger account, e. g., time loans, represents the aggregate of such loans held by the bank and the total represented by the subsidiary loan ledger. Whereas one hundred time loans may be made during the day and as many entries recorded in the subsidiary loan ledger, only one posting is made for the total (one hundred loans) to the debit of the time loans account in the general ledger.

Usually the general ledger is of the Boston or progressive type, and frequently where the number of accounts is large, two separate volumes are used, one each for assets and liabilities. Postings are made to the general ledger from various posting mediums routed to the general bookkeeping department from the various operating departments. The postings usually are made early in the day after which the ledger is proved. The balances of each customers' ledger must prove with the corresponding controlling account in the general ledger

This ledger reveals the cross section of the business each day, and the daily proofs thereof are virtually a series of instantaneous photographs or moving pictures of the bank's financial condition and financial progress.

The following accounts are typical of those appearing in the general ledger of a large National bank:

ASSETS

Loans and Discounts

Demand Loans—Brokers.
Demand Loans—Merchants.
Time Loans—Eligible for Rediscount.
Time Loans—Ineligible for Rediscount.
Bills Discounted.
Acceptances Discounted.

Unpaid Dividends.
Rediscounts with Federal Reserve Bank.
Bills Payable with Federal Reserve Bank.
Unearned Discount.
Accrued Expense.
(See Bank Bookkeeping.)

GENERAL LEGACY

See Legacy.

GENERAL LOAN AND COLLATERAL AGREEMENT

Brokers' loans, i. e., Stock Exchange loans are not usually evidenced by notes. Instead brokers borrowing on Stock Exchange collateral are required to sign a loan contract known as a General Loan and Collateral Agreement, or continuing agreement. Brokers' loans are usually demand loans and the machinery of the call loan market is such as to require a contract which can operate as a continuing obligation. This contract remains on file with the lending bank and obviates the necessity of preparing a separate note for each loan. Because of its flexibility it is more advantageous both to the borrower and to the bank. In a collateral loan, the collateral is recited, but in the General Loan and Collateral Agreement, no specific loans or collateral are mentioned. The agreement gives the bank, however, the right to sell any collateral securing a loan upon default in payment when called, or upon failure to respond to a call for additional margin. It also gives the bank the right to assign or transfer all or any part of the loan made, or to rehypothecate any Government bonds in the collateral against loans from the Federal Reserve Bank. From the viewpoint of the customer, it prevents the inconvenience of signing a note each time a loan is made. The following is a typical form of general loan and collateral agreement:

WHEREAS, the undersigned expect, from time to time, to borrow money from the Blank Bank of New York (hereinafter called the Bank) and to pledge with the Bank property of various kinds as collateral security for the payment of such loan or loans to be hereafter made by the Bank; Now, therefore,

IT IS AGREED by the undersigned with the Bank, that all property thus pledged with it may be held by it as collateral security for the payment of such loan or loans as well as for the payment of any other obligation or liability, direct or contingent, of the undersigned, or any of them, to the Bank, due or to become due, whether now existing or hereafter arising; and the undersigned agree to deliver to the Bank additional securities, or to make payments on account to its satisfaction, should the market value of said securities, as a whole, suffer any decline. The undersigned hereby give to the bank a lien for the amount of all such obligations and liabilities upon all the property or securities now or at any time hereafter given unto or left in the possession of the Bank, by the undersigned, whether for the express purpose of being used by the Bank as collateral security, or for any other or different purpose, and also upon any balance of the deposit account of the undersigned, or any of them, with the bank.

On the non-performance of this promise, or upon the nonpayment of any of the obligations or liabilities above mentioned, or upon the failure of the undersigned, forthwith, with or without notice, to furnish satisfactory additional securities, or to make payments on account, in case of decline, as aforesaid, or in case of insolvency, bankruptcy, or failure in business of the undersigned, or any of them, then and in any such case, all obligations, and liabilities, direct or contingent, of the undersigned and each of them, shall forthwith become due and payable without demand or notice; and full power and authority are hereby given to the Bank to sell, assign, and deliver the whole of the said securities, or any part thereof, or any substitutes therefore, or any additions thereto, or any other securities or property given unto or left in the possession of the Bank, by the undersigned, whether for the express purpose of being used by the Bank as collateral security, or for any other or different purpose, or in transit to or from the Bank, by mail or carrier, for any of the said purposes, at any broker's board, or at public or private sale, at the option of the Bank, without either demand, advertisement or notice of any kind, all of which are hereby expressly waived. At any such sale, the Bank may itself purchase the whole or any part of the property sold, free from any right of redemption on the part of the undersigned, which is hereby waived and released. In case of any sale or other disposition of any of the property aforesaid, after deducting all costs, or expenses of every kind for collection, sale or delivery, the Bank may apply the residue of the proceeds of the sale or sales so made, to pay one or more or all of the said obligations or liabilities to it, whether then due or not due, making proper rebate for interest on obligations or liabilities not then due, and returning the overplus, if any, to the undersigned, who agree to be and remain liable, jointly and severally, to the Bank for any deficiency arising upon such sale or sales. The undersigned do hereby authorize and empower the Bank, at its option, at any time, to appropriate and apply to the payment and extinguishment of any of the obligations or liabilities, hereinbefore referred to, whether now existing or hereafter contracted and whether then due or not due, any and all moneys now or hereafter in the hands of the Bank, on deposit, or otherwise to the credit of or belonging to the undersigned, or any of them.

The Bank may assign or transfer this instrument and may deliver the said collateral security or any part thereof to the transferee or transferees, who shall

thereupon become vested with all the powers and rights above given to the Bank, in respect thereto; and the Bank shall thereafter be forever relieved and fully discharged from any liability or responsibility in the matter. No delay on the part of the holder hereof, in exercising any rights hereunder shall operate as a waiver of such rights.

(See Call Money Market.)

GENERAL MORTGAGE BONDS

Bonds secured by a blanket mortgage upon all the property already subject in whole or in part to prior mortgages. These bonds are common among railroad and public utility corporations, being issued as a means of raising funds for improvements upon property which has enhanced in value since the issue of the underlying mortgage. Many mortgages have an "after acquired" property clause which places all the property actually owned at the time the bonds are issued, as well as all the property which may subsequently be acquired under the lien and subject to the mortgage. The "after acquired" property may be that which is obtained through the proceeds of the sale of the bonds, or it may apply to all property acquired after the date of the mortgage.

General mortgage bonds frequently are issued in sufficient amount not only to raise additional capital, but also to provide for the retirement of the original mortgage bonds when they mature. When this is the case general mortgage bonds eventually become first mortgage bonds.

GENERAL OBLIGATION

See Obligation.

G I Bill of Rights

The Servicemen's Readjustment Act (q. v.).

G I LOANS

Loans made under Title III of the Servicemen's Readjustment Act of 1944, as amended, by private or Government lending agencies, to eligible servicemen, guaranteed by the Administrator of Veterans Affairs if made for the following purposes:

(1) Buying residential property, building a home, making repairs, alterations or improvements to the home, or paying special assessments on the home; (2) buying land, buildings, livestock, equipment, machinery, supplies, or tools for use in farming, or for repairing, altering, constructing, or improving any land, equipment, or building, including the farm house, used in farming, or for working capital requirements necessary in farming operations; (3) buying a business, or buying land, buildings, supplies, equipment, machinery, tools, inventory, and stock-in-trade for use in business or the pursuit of a gainful occupation; or for the cost of construction, repair, alteration, or improvement of any property used for such purpose, or to provide funds needed for working capital.

Although conditions vary for each type of loan, general requirements are (1) the loan must be used for the purpose specified; (2) the purchase prices must not exceed a reasonable value; (3) the property must be useful and reasonably necessary; (4) the terms of payment for the purchase or improvement of a home can be met from expected income; and (5) for farms or business loans, the veteran must have enough ability and experience to provide a reasonable chance to succeed. Deadline for application for loans is July 24, 1957.

Amount of the guarantee may not exceed 50% of the loan, or a maximum of $4,000 on real estate and $2,000 on non-real estate loans, with maximum guarantee prorated if the veteran receives loans of both types. Such loans cannot bear interest of more than 4% per annum, and the Administrator will pay an amount equal to 4% of the amount originally guaranteed. Loans are to be paid back in full in not more than 10 years on non-real estate loans; 25 years on real estate loans other than for the purchase of farm real estate; and 40 years on farm realty. Loans may also be paid back at any earlier time, without penalty, if the veteran wishes.

As of September 1, 1947, more than 986,000 G. I. loans amounting to over $5,400,000,000 had been approved, of which the Administrator had approved, guaranteed and insured $2,500,000,000. The majority of veterans--over 89% or about 876,000--borrowed $5,000,000,000 to purchase homes. Some 34,000 veterans borrowed $131,000,000 for farms. Another 76,000 veterans borrowed $241,000,000 to enter businesses.

(See Servicemen's Readjustment Act.)

GIFT TAX

The Federal gift tax is an excise tax, levied upon the privilege of giving. The first Federal gift tax was effective from June 2, 1924 to December 31, 1926, when it was repealed. A new Federal gift tax law was passed June 6, 1932, and is now part of the Internal Revenue Code, Chapter 4. Thus, any gift made prior to June 6, 1932 and after December 31, 1926 was not subject to gift tax.

The Revenue Act of 1948, effective April 3, 1948, created a new deduction, the marital deduction, granted on gifts from one spouse to another and allowed in an amount equal to one-half of the gift to the spouse if the amount of the gift is included in the total taxable gifts. Other deductions include the $3,000 statutory exclusion from gifts made to an individual during any calendar year; the lifetime exemption of $30,000 for a donor; and exemptions as to gifts to charitable institutions and other types of public gifts.

The gift tax is calculated cumulatively, and is the difference between two different figures: (1) the computation of gift tax on all gifts made between June 6, 1932 to end of present calendar year; and (2) the computation of gift tax on all gifts up to the beginning of the present calendar year, excluding gifts for the present calendar year. This cumulative feature of computation is different from calculation of the income tax, for example, which is calculated for the subject year without reference to any previous years.

GILT EDGED

An expression which denotes best quality, superior merit, first class, or highest grade. It is used in connection with bonds, notes, acceptances, commercial paper, or other prime investments.

GINNERS' REPORT

Cotton ginning reports are issued by the Census Bureau regularly from August to December, with additional reports in January and in March. Other production reports issued by the Census Bureau on cotton are the monthly consumption report, the mill stock report, and the monthly spinning activity report. (See Cotton.)

GIRO SYSTEM

The German equivalent of the check system in the United States. Giro accounts were clearing accounts, and the Reichsbank,with its clearing or giro system, made available to banks, non-banking concerns and individuals the facilities of this nation-wide system through close to 500 branches and many sub-branches.

GIVE UP

In trading in securities or commodities, the term applied to an order executed by one broker for another broker's customer which the client directs be "given up" to the latter broker. (See Methods of Trading.)

GLASS-STEAGALL ACT

The title, applied to show authorship, of an act approved February 27, 1932, which temporarily liberalized the nature of collateral against rediscountable paper, and which permitted the temporary use of obligations of the United States as collateral for Federal Reserve notes, by amendment of Section 16 of the Federal Reserve Act.

This title is more widely known as that used to designate the Banking Act of 1933 (q. v.).

GOING CONCERN

A term applied to a business property in operation, as distinguished from one that temporarily has closed down, is defunct, or is being liquidated. It is frequently used in connection with valuation, the property of a going concern being more valuable than one undergoing liquidation. This is particularly true of a manufacturing industry, or public utility, the property of which consists largely of fixed assets, real estate, buildings, machinery, equipment, etc. Since most machinery is highly specialized in character and can be used for a single purpose, it naturally suffers a great shrinkage in value when sold for purposes of liquidation. The value of a public utility as a going concern and as a liquidating property would obviously be very different.

GOING SHORT

Selling short. (See Short Sale.)

GOLD

See Gold Bars, Gold Bullion Standard, Gold Certificates, Gold Clause Cases, Gold Coins, Gold Consumption, Gold Exchange Standard, Gold Imports, Gold Points, Gold Production, Gold Reserve, Gold Reserve Act of 1934, Gold Standard, Gold Standard Act of 1900.

GOLD BARS

Gold ingots. In accordance with the Gold Reserve Act of 1934, the nation's entire monetary gold stocks were vested in the Treasury of the United States, including $3.5 billion held by the Federal Reserve Banks. Gold bars, which were formerly obtainable at any United States assay office in quantities of $5,000 or over, and from the Federal Reserve Banks in any quantity at the Mint Price of Gold (q. v.), since 1934 have been obtainable from the Treasury for export under license where desired for exchange transactions at $35 per ounce plus handling charge of 1/4 of 1%. The Treasury also purchases gold freely at the statutory price of $35 per ounce less the handling charge.

Gold bars are used extensively in international settlements, and are preferable to coin from the viewpoint of the exporter since they are subject to less loss by abrasion. Most frequently used for monetary purposes is the 400-ounce gold bar. Gold bars are also obtainable for use in the arts and industry. (See Assay Office, Coinage, Mint, Mint Fine Bars, Standard Bullion.)

GOLD BASIS

See Gold Clause, Gold Reserve Act of 1934, Gold Standard Act of 1900, Monetary Unit, Standard Money, Standard of Value.

GOLD BLOC

A term applied to those European countries which, during the world-wide wave of gold suspensions in 1931-32, steadfastly clung to the gold standard. Specifically, the term applied to the seven countries, France (assuming the leadership), Switzerland, Holland, Belgium, Luxemburg, Poland, and Italy, which during the World Economic Conference at London in June and July, 1933, pleaded for a return to the gold standard by some 35 countries which had abandoned it, as a prerequisite to discussions on alleviation and removal of existing barriers to foreign trade. After devaluation of the American dollar in January, 1934, the gold bloc stood almost alone on the old parities, and lost gold heavily to the United States in the flight of capital to the dollar. During World War II, however, foreign countries ceased to lose gold to the United States as the result of Lend-Lease and other military expenditures by the United States abroad. In 1947, gold imports to the United States were resumed in substantial volume, with imports from the United Kingdom, Canada and South Africa accounting for over 70% of gold imports.

Switzerland is now the strongest gold holder in Europe, as France has lost about three-fourths of her 1940-1943 gold holdings. (See Gold Movements.)

GOLD BONDS

Bonds which by their terms were payable in gold coin "of the present standard of weight and fineness," if demanded, as distinguished from "Currency" or "Legal Money" bonds. Bonds were also payable in currency, i. e., any money which was legal tender, but bonds payable in silver were unknown in this country.

These distinctions were obviated by passage of the Joint Resolution of Congress of June 5, 1933, which declared that "every provision contained in or made with respect to any obligation which purports to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the United States measured thereby" is against public policy, and further provided that "every obligation, heretofore or hereafter incurred, whether or not any such provision is contained therein or made with respect thereto, shall be discharged upon payment, dollar for dollar, in any coin or currency which at the time of payment is legal tender for public and private debts." The Resolution went on to declare all coins and currencies of the United States (including Federal Reserve notes and circulating notes of Federal Reserve Banks and National banking associations) heretofore or hereafter coined or issued, to be legal tender for all debts, public and private, public charges, taxes, duties, and dues.

Validity of the Joint Resolution of June 5, 1933 was upheld in the Gold Clause Cases (q. v.) by the United States Supreme Court.

GOLD BRICK

A stigmatic term used of securities or of business ventures which are unsound, worthless, or actually fraudulent, but which have, nevertheless, the appearance of soundness and attractiveness.

GOLD BULLION STANDARD

A gold standard without redemption of currency in gold coin. The gold bullion standard has the advantage of economizing in the use of gold by keeping it from domestic circulation without preventing its free international movement.

Since 1934, the United States has had a restricted international gold bullion standard, with domestic currency irredeemable in gold, the only redeemable currency being silver certificates, which are redeemable in over-valued silver. Gold, either in coin or bullion, does not circulate domestically, but is available under license from the Treasury at monetary price of $35 per ounce (plus handling charge of 1/4 of 1%) for export for ordinary exchange transactions.

GOLD CERTIFICATES

Gold certificates of the type authorized for public circulation by the Acts of March 14, 1900, March 4, 1907, and March 2, 1911, are no longer permitted in circulation. Under the Emergency Banking Act of March 9, 1933, the Secretary of the Treasury was authorized, whenever in his discretion it was necessary to protect the currency system of the United States, to require the deliyery to the Treasurer of the United States any or all gold bullion, and gold coin and gold certificates, upon payments of an equivalent amount of any other form of currency coined or issued by the United States. Any person failing to comply with any requirement of the Secretary of the Treasury in this connection was subject to a penalty equal to twice the value of the gold or gold certificates involved.

Acting under this authority, the Secretary of the Treasury issued Orders dated December 28, 1933 and January 15, 1934, the latter requiring gold coin, gold bullion and gold certificates to be delivered to the Treasurer of the United States on or before January 17, 1934. As of April 30, 1948, there were outstanding $46 million in gold certificates in circulation outside the Treasury and Federal Reserve Banks, including any held outside the continental limits of the United States.

A new type of gold certificate is legally outstanding today, held only by the Federal Reserve Banks or on hand with the Treasury for the Federal Reserve Banks and Agents. Under the Gold Reserve Act of January 30, 1934, all gold held by the Federal Reserve Banks was transferred to the Treasury, the former receiving credits on the books of the Treasury at the former statutory price for gold of $20.67 per ounce. These credits in turn could be drawn on by the Federal Reserve Banks by the new type of gold certificates, which are authorized to be held by the Federal Reserve Banks only.

The following history of the former type of gold certificates authorized for public circulation is presented for historical purposes.

The gold certificate was a form of United States paper money which in effect read like a warehouse receipt certifying that full value in gold coin had been deposited in the United States Treasury for each dollar represented by the certificate. But under one of the Gold Clause Cases (q. v.), the U. S. Supreme Court ruled that gold certificates were currency, and constituting legal tender, were not to be regarded as warehouse receipts. Gold certificates circulated in lieu of an equivalent amount of actual gold, in which coin they were redeemable at the United States Treasury. They were therefore, secured by 100 per cent. gold reserve.

Historically gold certificates were first circulated in 1863. The Act of March 3, 1863, authorized the Secretary of the Treasury to receive deposits of gold coin and bullion in sums not less than $20, and to issue certificates therefor in denominations not less than $20, said certificates to be receivable for duties on imports. Under this act deposits of gold were received and certificates issued until January 1879, when the practice was discontinued by order of the Secretary of the Treasury. The purpose of the order was to prevent the holders of United States notes from presenting them for redemption in gold, and redepositing the gold in exchange for gold certificates. No certificates were issued after January 1, 1879, until the passage of the bank act of July 12, 1882, which authorized and directed the Secretary of the Treasury to receive gold coin and issue certificates, and made them receivable for customs, taxes, and all public dues.

This act, however, provided that "the Secretary of the Treasury shall suspend the issue of gold certificates whenever the amount of gold coin and gold bullion in the Treasury, reserved for the redemption of United States notes, falls below one hundred millions of dollars." The act of March 14, 1900, reenacted this provision, and further provided that the Secretary could, in his discretion, suspend such issue whenever and so long as the aggregate amount of United States notes and silver certificates in the general fund of the Treasury shall exceed $60,000,000. It provided further that of the amount of such certificates outstanding one-fourth, at least, should be in denominations of $50 or less and authorized the issue of certificates in $10,000 denomination, payable to order.

The Act of March 4, 1907, provided for the receipt of deposits of gold coin in sums of not less than $20 and the issue of gold certificates therefor in denominations of not less than $10, and the Act of March 2, 1911, authorized the issue of certificates against the deposits of gold bullion of foreign coin.

Gold certificates were issued in denominations of $10, $20, $50, $100, $500, $1,000, $5,000, and $10,000. They were not originally legal tender, but were made full legal tender by an act of Congress, December 24, 1919. These certificates had largely disappeared from public circulation in the decade preceding 1933, since they were eligible to secure Federal Reserve notes, and were largely held by the Federal Reserve banks as collateral therefor.

(See Emergency Banking Relief Act; Gold Reserve Act of 1934.)

GOLD CLAUSE CASES

The gold clause contained in all public obligations, e. g., Government bonds, and in many private long-term obligations (bonds, mortgage notes and leases) called for payment in gold coin of, or equal to, the "present standard of weight and fineness." For example, the text of a typical gold clause bond, the U. S. Treasury 4 1/4 per cent. bonds of 1947/52, read: "The principal and interest hereof are payable in United States gold coin of the present standard of value." The particular standard referred to was the gold dollar of 25.8 grains nine-tenths fine.

A gold clause was first included in the laws of the

United States in 1869. As part of the effort to restore the credit of the Government after Civil War greenbacks had depreciated in value, Congress enacted a law which pledged the payment of coin or its equivalent for greenbacks and also for interest-bearing obligations.

The act of February 4, 1910, provided that "any bonds and certificates of indebtedness of the United States hereafter issued shall be payable, principal and interest, in the United States gold coin of the present standard of value." The second Liberty bond act in authorizing the issuance of bonds provided that "the principal and interest hereof shall be payable in United States gold of the present standard of value."

By the Gold Repeal Joint Resolution (q. v.) of Congress, approved June 5, 1933, "to assure uniform value to the coins and currencies of the United States," the gold clause in all Federal and other public obligations as well as private obligations was cancelled and eliminated, applicable both to outstanding securities and those issued thereafter, and providing for payment in legal tender money. Specifically, the resolution accomplished the following purposes: (1) It declares that the clauses in public and private obligations stating that they are payable in gold or a specific coin or currency are contrary to public policy; (2) It provides that obligations, public and private, expressed to be payable in gold or in a specific coin or currency, may be discharged, dollar for dollar in legal tender. Inclusion of a clause for payment of future obligations, public or private, in gold or in a specific coin or currency is prohibited; and (3) It clarifies a provision of the Thomas inflation amendment to the Agricultural Adjustment Act which stipulated that coins and currencies issued by the United States, shall be legal tender for all debts, public and private.

The constitutionality of the Gold Repeal Joint Resolution was challenged in the United States Supreme Court in the Gold Clause Cases, decided February 18, 1935: (1) Norman v. The Baltimore & Ohio Railroad Co., a suit brought upon a coupon of the railroad's issue on February 1, 1930 of 4 1/2s due February 1, 1960; and two cases entitled United States of America, Reconstruction Finance Corporation, et al v. Bankers Trust Co. and William H. Bixby, Trustees, involving the gold clause in an issue of bonds of the St. Louis, Iron Mountain & Southern Railway Co. dated May 1, 1903 and due May 1, 1933. These cases were decided together. (2) Nortz v United States, concerning the gold clause in gold certificates, series of 1928; and (3) Perry v. United States, involving the gold clause in Liberty Bonds issued under the Act of September 24, 1917.

In all of these cases, the United States Supreme Court upheld the constitutionality of the Gold Repeal Joint Resolution as a valid exercise of the power of Congress over the monetary system expressly delegated to it by the United States Constitution.

GOLD CLEARANCE FUND

Now known as the Inter-District Settlement Fund (q. v.).

GOLD COINS

The Gold Reserve Act of January 30, 1934, declared the coinage of gold at an end. For historical purposes, the following information is given.

The table appended herewith tabulates the denominations, and weight and fineness of the United States gold coins formerly coined and in circulation.

While the gold dollar was the monetary unit and standard of value, the actual coinage of the $1 piece was discontinued under authority of the Act of September 26, 1890. Up to January 30, 1934, gold was coined in denominations of $5, $10, and $20, called respectively, half eagles, eagles, and double eagles.

Total gold coinage in circulation outside the Treasury circulation outside the Treasury and Federal Reserve Banks in February, 1933 reached $284 million, as compared with $65 million in April, 1931, and $192 million the previous month, January, 1933. Legislative and Presidential action to reclaim hoarded gold from circulation began in March, 1933, and on March 9, 1933 the Emergency Banking Act was passed, empowering the Secretary of the Treasury to require delivery of all gold and gold certificates held by anybody in the country Gold certificates had reached a total of $649 million in circulation February, 1933, compared with $591 million in January, 1933.

Under the order of the Secretary of the Treasury of December 28, 1933, as amended and supplemented on January 11, 1934 and January 15, 1934, all gold coin domestically owned (with minor exceptions) was required to be delivered for the account of the Treasurer of the United States. The Gold Reserve Act of 1934, passed January 30, 1934, required gold coin to be withdrawn from circulation and formed into bars as backing for paper currency In January, 1934, when the figure for gold coin was discontinued in the monthly circulation statement issued by the Treasury, the Board of Governors states, $287 million of gold coin was reported as still in circulation. This amount, the Board of Governors reports, is believed to have been largely lost or melted down or otherwise to have disappeared from circulation over the years. In 1914, gold coin and gold certificates totaled over 44% of total currency in circulation, but by February, 1933, despite the increase ascribed to hoarding, gold coin and gold certificates totaled only 15% of total circulation, and the bulk of circulation was Federal Reserve Notes (q. v.).

United States Gold Coins

No Longer Coined

(Old Basis of $20.67 an ounce for gold)

Denominations	Fine Gold Contained Grains	Alloy Contained Grains	Weight Grains	Fineness
One dollar ($1)	23.22	2.58	25.80	0.900
Quarter eagle ($2.50)	58.05	6.45	64.50	0.900
Half eagle ($5)	116.10	12.90	129.00	0.900
Eagle ($10)	232.20	25.80	258.00	0.900
Dougle eagle ($20)	464.40	51.60	516.00	0.900

United States gold coins were legal tender in all payments at their nominal value when not below the standard weight and limit of tolerance provided by law for a single piece, and when reduced in weight below such standard and tolerance were legal tender in valuation in proportion to their actual weight. Since gold coins were subject to abrasion, their weight was subject to reduction (See Tolerance). The public did not generally concern itself about abrasion as long as the impression upon the coin was discernible. (See United States Money.)

GOLD CONSUMPTION

Chief use of gold is for monetary purposes. Gold consumption in the arts and science in the United States since 1913 has compared as follows:

Net Industrial Consumption of Gold
(in thousands of dollars)

Year	Returned from Industrial Use	Issued for Industrial Use	Net Industrial Consumption
1946	$45,999	$199,686	$153,687
1945	30,992	139,936	108,944
1944	25,679	122,977	97,298
1943	10,521	96,864	86,943
1942	28,448	75,742	47,295
1941	30,975	67,977	37,002
1940	27,872	41,178	13,306
1939	31,328	38,789	7,461
1938	30,481	30,157	--324

1931	23,227	29,158	5,931
1930	27,512	42,689	15,178
1929	32,031	56,904	24,873
1928	30,276	56,582	26,306
1927	30,369	56,820	26,450
1926	32,063	62,991	30,927
1925	30,092	61,226	31,134
1924	32,320	64,791	32,471
1923	31,265	66,892	35,627
1922	24,683	56,614	31,930
1921	28,014	48,455	20,442
1920	29,534	79,715	50,181
1919	21,035	76,132	55,097
1918	20,327	53,014	32,687
1917	19,082	50,416	31,333
1916	20,185	50,042	29,857
1915	12,698	36,126	23,428
1914	12,935	36,137	23,202
1913	8,362	45,864	37,502

Note: Gold valued at $20.67 per ounce, 1913-1933, inclusive; at $35 per ounce thereafter.
--Excess of returns from industrial use.

GOLD DOLLAR

See Gold Coins, Monetary Unit.

GOLD EXCHANGE STANDARD

A system whereby a country keeps its money on a gold basis by keeping it at a substantial parity with the money of a country maintaining a full gold standard. Countries having a gold exchange standard rely upon some form of token money for circulation purposes. Through operations in the foreign exchange market the domestic money is maintained at a value between the normal gold points. If the country's money, which is used as the standard, goes up to the gold export point in terms of the domestic money the gold exchange standard country (through the maintenance of balances in the country whose money serves as the standard) sells bills on such country until the exchange rate is pushed below the export point. Funds obtained from the sale of exchange are then sequestered until bills on the standard country are offered for it when the exchange rate drops to what would in turn be the gold import point. In this way the domestic money is kept at a normal gold value in the international market. The great advantage of the gold exchange standard is its economy, since no large investment in gold is necessary.

--Net exports.

GOLD INFLATION

A condition said to exist in a country when it possesses abnormally large holdings of gold, which are available as a basis of credit expansion. According to the exponents of the "quantity theory" of money, gold inflation is one of the causes of high prices. It is a condition which automatically tends to correct itself since high prices tend to discourage foreign buying and to encourage importing. This is likely to lead to an excess of imports over exports. Since an excess of imports usually is paid for in gold, a reduction in gold holdings is thereby effected. (See Gold Reserve.)

GOLD MOVEMENTS

Following the devaluation of the American dollar in January, 1934, and increase in the monetary price of gold from $20.67 to $35 per ounce, a large inflow of gold began to the United States which was not interrupted until well along in World War II, when Lend-Lease and military expenditures abroad were chiefly instrumental in reversing the flow in 1944 and 1945. The inflow of gold was resumed in 1946, and increased substantially in 1947.

The table at foot of page summarizes the net inflow of gold to the United States since 1933, together with British Commonwealth sources of gold imports, the principal gold exporting countries, and comparison with total monetary gold stock of the United States.

GOLD NOTES

Notes payable in gold coin of the "present standard of weight and fineness," if demanded, in the same manner as Gold Bonds (q. v.).

In accordance with the Joint Resolution of Congress of June 5, 1933, which was upheld by the U. S. Supreme Court in the Gold Clause Cases (q. v.), such obligation is dischargeable by payment in legal tender.

GOLD POINTS

Specie points; the gold export and import points which in normal times fix respectively the upper and lower limit to the range of fluctuation of currency or foreign exchange rates quoted for a given foreign country. Whenever the rate of exchange rises to a point where it would be cheaper for importers to export gold than to buy exchange, the gold export point is reached. Under ordinary conditions the gold export point on a foreign currency represents that premium over the par of exchange at which it is cheaper to ship gold than to pay the premium for the exchange. On the other hand, when the rate of exchange declines to a point where it is

(See Foreign Exchange, Gold Imports, Gold Reserve.)

cheaper for foreign buyers to ship gold than to remit in exchange, the gold import point is reached.

In practice, of course, it is international bankers who have special facilities, rather than private individuals, who undertake gold shipments. (See Foreign Exchange.)

GOLD PRODUCTION

The principal gold producing countries of the world in order of their importance are: South Africa, Russia, Canada, United States, Australia, West Africa (Gold Coast), Rhodesia, Mexico, Colombia and the Belgian Congo. Japan also ranked as one of the leading producers prior to World War II. Among other countries, the production of India and Chile has steadily declined in recent years to minor totals, while that of Nicaragua has increased sharply percentage-wise, although still at a relatively low aggregate. Approximately 75 per cent. of recent years' world gold production has been in possessions of the British Empire. Before 1840 practically all gold came from Russia. Gold producing countries are normally gold exporting countries, and thus in recent years, the bulk of net gold imports into the United States has been from the British Empire.

History of Production.--From 1860 to 1890, annual world production of gold was relatively stable, with only moderate annual fluctuations. The United States produced only small quantities of gold until its discovery in California in 1849. From 1850 to 1886, as a result of gold mining in California, the United States produced over one-third of the world's gold, but gradually the ratio of American gold production to world production has declined, and in recent years has been only 4% to 6%. Rich gold deposits were found in Australia about 1850. Gold discoveries in California and Australia accounted for the sudden increase in world production from 1840 to 1860.

Beginning about 1891, world gold production began another expansion, due to the discovery of the Yukon and South African fields, and to improvements in methods of extraction (hydraulic and cyanide processes). Recovery of gold from known ore reserves became a technical industrial process. The Yukon mines have declined in importance, but the South African mines have proved to be the most prolific in history.

Gold production reached a peak in 1915 for the world and the United States, and then began a declining trend for seven years to 1922. Since that year, it has been increasing steadily. Under the old price of $20.67 per ounce statutory price for the United States, world production reached a peak of $525,071,000 in 1933.

A new era in gold production opened with the increase in the American statutory price for gold from $20.67 to $35 per ounce. Measured in fine ounces, world production reached a peak of 42, 270,000 ounces (Bureau of Mines estimate) in 1940, 66% above the old 1933 peak of 25,367,000 ounces. Since 1940, the world total has receded, particularly during World War II years, when shortages in equipment and manpower affected production. The rise in the cost of mining has also affected production, but nevertheless, beginning in 1946 a small recovery is beginning to appear.

Stocks.-- Estimates of world stocks of gold are impossible to compute with any degree of accuracy, because of the secrecy surrounding the true gold resources of many countries. The Board of Governors of the Federal Reserve System estimated that foreign gold reserves at the end of September, 1944 were some $14 billions. At that time, United States monetary gold stock totaled some $21 billions.

Reference is made to the appended tables for comparative world and United States production since 1910 (Table I), and production of principal producing countries in recent years (Table II);

(See Gold Reserve.)

GOLD REPEAL JOINT RESOLUTION

The following is the text of the Gold Repeal Joint Resolution, approved June 5, 1933, and otherwise known as Uniform Value of Coins and Currencies Resolution:

(Public Resolution—No. 10—73D Congress)

(H. J. Res. 192)

JOINT RESOLUTION

To assure uniform value to the coins and currencies of the United States.

Whereas the holding of or dealing in gold affect the public interest, and are therefore subject to proper regulation and restriction; and

Whereas the existing emergency has disclosed that provisions of obligations which purport to give the obligee a right to require payment in gold or a particular kind of coin or currency of the United States, or in an amount in money of the United States measured thereby, obstruct the power of the Congress to regulate the value of the money of the United States, and are inconsistent with the declared policy of the Congress to maintain at all times the equal power of every dollar, coined or issued by the United States, in the markets and in the payment of debts. Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,

That (a) every provision contained in or made with respect to any obligation which purports to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the United States measured thereby, is declared to be against public policy; and no such provision shall be contained in or made with respect to any obligation hereafter incurred. Every obligation, heretofore or hereafter incurred, whether or not any such provision is contained therein or made with respect thereto, shall be discharged upon payment, dollar for dollar, in any coin or currency which at the time of payment is legal tender for public and private debts. Any such provision contained in any law authorizing obligations to be issued by or under authority of the United States, is hereby repealed, but the repeal of any such provision shall not invalidate any other provision or authority contained in such law.

(b) As used in this resolution, the term "obligation" means an obligation (including every obligation of and to the United States, excepting currency) payable in money of the United States; and the term "coin or currency" means coin or currency of the United States, including Federal Reserve notes and circulating notes of Federal Reserve banks and national banking associations.

Sec. 2. The last sentence of paragraph (1) of subsection (b) of section 43 of the Act entitled "An Act to relieve the existing national economic emergency by increasing agricultural purchasing power, to raise revenue for extraordinary expenses incurred by reason of such emergency, to provide emergency relief with respect to agricultural indebtedness, to provide for the orderly liquidation of joint-stock land banks, and for other purposes," approved May 12, 1933, is amended to read as follows:

"All coins and currencies of the United States (including Federal Reserve notes and circulating notes of Federal Reserve banks and national banking associations) heretofore or hereafter coined or issued, shall be legal tender for all debts, public and private, public charges, taxes, duties, and dues, except that gold coins, when below the standard weight and limit of tolerance provided by law for the single piece, shall be legal tender only at valuation in proportion to their actual weight."
Approved, June 5, 1933, 4:40 P. M.

Validity of the Gold Repeal Joint Resolution was upheld by the U. S. Supreme Court in the Gold Clause Cases (q. v.).

GOLD RESERVE

The gold held in a nation's Treasury, or in the Government or central bank, which is available for (1) the redemption of circulating notes of the Government or of the central bank, and (2) export abroad to settle an unfavorable trade balance, to correct depreciated exchange rates, or as a loan to obtain higher interest rates than prevail at home. In the United States, all gold reserves were vested in the Treasury by the Gold Reserve Act of 1934 (q. v.), the Federal Reserve Banks receiving gold credits therefor redeemable in gold certificates eligible for holding by Federal Reserve Banks only. As of the close of December, 1947, gold reserves of the United States totaled $22,754 million, not including $114 million balance in the Exchange Equalization Fund.

Because of the secrecy surrounding gold reserves of central banks and governments throughout the world, estimates of world gold reserves were discontinued in January, 1934 by the Board of Governors of the Federal Reserve System, at which date the figure stood at $12,028.9 million, consisting largely of the United States total, $4,033.3 million, and the total for France, $3,020.6 million. Gold holdings of the Bank of England were reduced to a nominal amount by gold transfers to the British Exchange Equalization Account during 1939.

The United States Treasury is required by the Gold Standard Act of 1900 (q. v.), to maintain a gold reserve of at least $100 million against $347 million of United States Notes. At present there are maintained in the Treasury as a reserve for United States Notes and Treasury Notes of 1890, $156 million in gold bullion. The Treasury also maintains as security for gold certificates gold bullion of a value at the legal standard equal to the face amount of the gold certificates outstanding.

The bulk of the gold reserve of the United States was held by the Federal Reserve banks as a central reservoir of credit, and steadily increased since 1916. By the Gold Reserve Act of 1934 (q. v.), however, all the gold stocks of the nation were taken over by the U. S. Treasury, including those held by the Federal Reserve banks, which were given Treasury gold credits therefor redeemable in gold certificates. The gold reserve of the Federal Reserve System had four purposes: (1) to provide the 40 per cent. cover required for Federal Reserve notes; (2) to provide with the other forms of lawful money the 35 per cent. cover required for deposits; (3) to provide a settlement fund as a basis for the Federal Reserve Inter-District Collection System (q. v.); and, until elimination of a free gold market in 1933 and 1934, (4) to provide a free gold market where gold could be purchased or sold at home or abroad. Gold certificates now fulfill the first three functions.

The changes in amount and percentage of the gold holdings of the United States to the total gold holdings of the world are given in table below.

(See Gold Production.)

GOLD RESERVE ACT OF 1934

An act, passed January 30, 1934, which authorized the President to revalue the dollar at 50 to 60 per cent. of its existing statutory gold equivalent. On January 31, 1934, the dollar's gold weight was reduced from 25-8/10ths grains to 15-5/21s grains, nine-tenths fine, by Proclamation of the President. This made the dollar's gold value 59.05+ per cent of the par fixed by the Gold Standard Act of 1900 (q. v.), and resulted in a gold "profit" or increment of some $2,806 million. It should be noted that the emergency power of the President to alter the weight of the gold dollar had expired July 1, 1943, although his power to alter the weight of silver and other coins to the same extent of change in weight of the gold dollar still continues.

Created a $2,000,000,000 stabilization fund out of the increased value of the gold accruing as a result of devaluation of the dollar, placing it in the sole charge of the Secretary of the Treasury and vesting him with authority to expend it in virtually any transactions he might deem necessary for stabilizing the dollar abroad.

Declared the coinage of gold at an end, the metal to be held in bullion form in the Treasury as backing for paper currency.

Vested in the Treasury of the United States the title to all the nation's monetary gold stocks, including $3,500,000,000 held by the Federal Reserve banks.

Removed several then existing restrictions upon the issuance of government securities, provided that any type of government obligation might be purchased with any other type and that securities might be sold privately and authorized the issuance of $2,500,000,000 additional Treasury notes.

Authorized the President (in the Pittman silver amendment), first, to pay for newly mined silver in certificates instead of in silver dollars; second, to issue certificates against the silver bullion which the Treasury would be thus amassing; third, to issue certificates against all free silver held in the vaults of the Treasury; fourth, to reduce the weight of the silver dollar in such amounts as might be necessary to maintain a parity with the gold dollar under the new revaluation policy, and, fifth, to increase the seigniorage, or mint fee, for coinage of foreign silver or silver not produced in the United States or its dependencies.

Gold Points.

GOLD STANDARD

The employment of gold as the ultimate of redemption of internal currencies, and for settlement of trade or financial balances without restriction.

Brief History of Gold Coinage.--The ancient world recognized both gold and silver as a means of storing or conserving wealth. Throughout Asia Minor, Egypt and Greece, gold was in the ascendancy when these civilizations were reaching their crest. The Roman Empire used copper, silver and gold coins. Silver and gold were in concurrent circulation at a ratio of about 10 to 1. With removal of the capital to Byzantium and exhaustion of Spanish mines, gold tended to disappear in Western Europe after 400 A. D. From the 6th to the 13th century there was little gold to be found in Western Europe, and silver prevailed as a single standard.

One of the results of the crusades was to stimulate gold production in Asia Minor, and to bring gold back to Western Europe, so that the double standard prevailed in Europe from 13th to 19th century. In 1252, the first gold coins were minted in Europe—the gold florin of the Netherlands. But bi-metallism flourished until the early part of the 19th century.

Beginnings of Gold Standard.--The single gold standard, in terms of world history, is a comparatively modern device. The single gold standard is to be defined as making gold a single standard and relegating silver to subsidiary coinages for Government account only and for limited quantities.

England was the first nation to adopt the single gold standard about the time of the industrial revolution. The law of 1774 (providing that silver coin should not be legal tender for more than 25 pounds in one payment, except at its bullion value) practically accomplished this end, even though its meaning was only partly understood The single gold standard was reinforced by the acts of 1799 and 1816. By 1816, gold was consciously a single standard in the sense now known.

United States remained on a bi-metallic standard until the Act of 1853. The single gold standard was further reinforced by the Specie Resumption Act of 1873, and the Gold Standard Act of 1900. Portugal established the gold standard in 1854; France in 1864; Germany in 1871.

Tradition of Gold Standard.—Experience over a long period of years by leading commercial countries has shown that gold furnishes a more desirable and trustworthy standard of value than any other commodity; hence, it has been adopted by most nations, under varying regulations, as the standard of ultimate redemption for note issues and subsidiary coinages. Because of its universal acceptability, gold is the leader among monetary metals recognized as providing a basis for international settlements. Its adoption as a monetary standard is due not only to its inherent commodity value, but also because of its relative stability of value. Although no commodity is free from fluctuating value, gold con-

forms to the requisite of stability better than any other. The reason for this is that the changes in production and consumption of gold are fairly uniform. Based on estimated world stocks, annual gold production even in recent years of stimulation has increased 2% to 5% per annum, with the rate of increase in latest years about 2% per annum, and since old stocks do not deteriorate, annual production becomes an increment to the world supply. This rate of increase is moderate, considering the need for monetary purposes because of the so-called maldistribution of gold particularly for raw material producing countries

The type of gold standard in operation varies with different countries. Before the United States abandoned the gold standard in 1933, the Federal Reserve Board pointed out that the United Stated was the only country which had a full and complete gold standard. By this was meant that the United States imposed no restrictions internally or externally on gold movements. Gold might be imported or exported free of all Government restrictions. Full redemption of circulating notes and gold certificates in any amount in gold was provided, and there was an obligation to exchange gold coin for gold bullion at equivalent value without limitation as to quantity. Elsewhere, the gold standard was modified by qualifications. Other countries, by contrast, had adopted a gold bullion standard, or gold exchange standard. Under the former, there is no interference with international shipments, but obligation to redeem circulating notes in minimum amounts of bullion. Furthermore, the Government does not obligate itself to purchase gold bullion at a fixed price representing gold coin parity. Under the gold exchange standard, the central bank has the option of redeeming its notes either fully or partly in gold or in drafts upon countries which maintain a gold standard. Under this system, a large gold reserve within the country itself becomes unnecessary, but this is possible only where the country is able to maintain an excess of merchandise exports over imports. Varieties of the gold standard include: the gold-coin standard; gold bullion standard; international gold bullion standard (characteristic of the post-World War II world); gold exchange standard; gold bullion-exchange standard; gold coin-exchange standard; gold coin-bullion-exchange standard; and foreign exchange standard. Supplementing operations since 1931 have been the exchange equalization funds, with more or less secret operations, exchange control systems, and multilateral or bilateral currency and trade agreements.

Suspension and Revaluation.--During World War I, practically all European nations were unable to maintain the customary gold standard. Embargoes on gold shipments were frequent. Internally, the monetary standard became a reduced gold basis or paper currency. Following World War I, these currencies were demoralized and the efforts to attain stabilization by means of repudiation, revaluation, or restoration, resulted in the decade following the end of World War I in the following changes in rate of conversion of European currencies into the American dollar (source--Board of Governors of the Federal Reserve System):

Austria: 1923-1924, 1 gold krone, $0.2026; 1925, 1 schilling, $0.1407.

Belgium: 1913-1925, 1 franc, $0.1930; 1926, 1 belga, $0.1390.

Bulgaria: 1913-1926, 1 lev, $0.1930; 1927, 1 lev, $0.0072.

Estonia: 1921-1922, 1 Estonian mark, $0.00238; 1924-1927, 1 Estonian mark, $0.00268, 1928, 1 kroon, $0.2680.

Finland: 1913-1925, 1 markka, $0.1930; 1925, 1 markka, $0.0252.

France: 1913-1928, 1 franc, $0.1930; 1928, 1 franc, $0.0392.

Germany: 1913-1923, 1 mark, $0.2382; 1924, 1 Reichsmark, $0.2382.

Greece: 1913-1928, 1 drachma, $0.1930; 1928, 1 drachma, $0.0130.

Hungary: 1924, 1 korona, $0.2026; 1925, 1 pengo, $0.1749.

Italy: 1913-1926, 1 lira, $0.1930, 1927, 1 lira, $0.0526.

Poland: 1913-1923, 1 Polish mark, $0.2382; 1924-1926, 1 zloty, $0.1930; 1927, 1 zloty, $0.1122.

Rumania: 1913-1929, 1 leu, $0.1930; 1929, 1 leu, $0.0060.

Russia: 1913-1917, 1 ruble, $0.5146; 1922, 1 chervonetz, $5.1460.

Gold Suspensions 1931-32—After having maintained its pre-World War I gold parity throughout the stress of the decade following World War I, England took the lead in suspending gold in 1931. Following suspension of gold payments by England on September 21, 1931, a great wave of abandonments of the gold standard immediately followed throughout the world during the remainder of 1931, and first half of 1932. Altogether, more than forty nations deserted the gold standard either directly and officially, or by applying stringent regulations or controls over gold exports and foreign exchange during this period. The gold bloc nations were the only important nations to maintain the traditional gold standard, United States having officially suspended payments on April 19, 1933.

Most countries outside the gold bloc (France, Switzerland, the Netherlands and Belgium) became involved in exchange depreciation races or exchange control, and thus a flight of gold to the gold bloc countries ensued which continued until 1934, when the basically strongest currency of all, the American dollar, was finally stabilized and devalued, and the gold bloc found themselves practically alone on the old gold parities. Then ensued a flight of gold to the United States which during the period February, 1934 to December, 1940 gained a total of $15 billions in gold reserves, compared with $5 billions decline in gold reserves of foreign countries. This flight of gold was induced not only by the increasingly insecure position of the gold bloc, but also by the deepening developments of World War II. The increase in the American monetary price for gold from $20.67 to $35 per ounce helped foreign countries considerably in meeting this flight of gold to the United States. During World War II, the tremendous Lend-Lease and military expenditures of the United States in foreign countries stopped the flow of gold to the United States, and on balance foreign countries ceased to lose gold.

In the post-World War II period, the inflow of gold to the United States has been resumed, and it remains to be seen to what extent the European Recovery Program (q. v.) will help to reverse the process. Operations of the International Monetary Fund and the International Bank for Reconstruction and Development (q. v.) will also influence the stability of exchange rates and American investment abroad. Despite some agitation in that direction, however, return of the old free gold standard appears too much to expect, and variations of the gold

bullion standard may continue to be characteristic of the post-war monetary systems.

(See Gold Bullion Standard, Gold Exchange Standard, Gold Reserve Act of 1934, Gold Standard Act of 1900, Money, Standard Money, Standard of Value.)

GOLD STANDARD ACT OF 1900

Although the single gold standard was established by statute in 1873, gold did not become the actual standard until the resumption of specie payments in 1879. The Act of March 14, 1900, in providing that the gold dollar of 25.8 grains of gold nine-tenths fine be the standard of value of the United States, merely reaffirmed the Act of 1873. This Act provided that all forms of money issued or coined by the United States should be maintained at par with gold, and that it should be the duty of the Secretary of the Treasury to maintain such parity. The Act, however, did not provide adequate machinery for the maintenance of this parity and placed a burden upon the Secretary of the Treasury which, if it came to actual test, would have been difficult to fulfill. Nevertheless it did correct the chief defect of the old system by providing a means of maintaining the parity of United States notes (or greenbacks). Other forms of paper money already were fully secured; National bank notes by Government bonds; gold certificates by gold; and silver certificates by silver

This Act provided for the redemption of United States notes in gold on demand and for this purpose a reserve of $150,000,000 to be kept in the Treasury, was provided. If this fund fell below $100,000,000, the Secretary of the Treasury was required to restore it to $150,000,000 by the sale of bonds. The gold in this reserve could not be used to meet a deficit in revenue and United States notes once redeemed could not be reissued, except in exchange for gold

The Federal Reserve Act (Sec. 26) specifically reaffirmed the parity provisions of the Act of 1900 and made due provision for enforcement by providing that the Secretary of the Treasury, in order to maintain such parity and to strengthen the gold reserve, could borrow by selling bonds authorized under the Act of 1900, or by selling one year gold notes, or to obtain gold by offering these bonds as security therefor. (See Gold Clause Cases, Gold Repeal Joint Resolution, Gold Reserve Act of 1934.)

GOLD STOCKS

GOLD SUPPLY

See Gold Production, Gold Reserve.

GOLD SUSPENSION

See sub-section entitled "Gold Suspensions, 1931-32," under Gold Standard.

GOOD DELIVERY

When securities are deposited with a bank or broker as collateral, or for purposes of sale, they must constitute good delivery. A good delivery of securities implies (1) that they are physically genuine; (2) that title is vested in the owner and properly conveyed by him; (3) that they are in negotiable form, so that if it becomes necessary to sell them, either through default or failure to respond to a margin call, the bank or broker possesses good title for purposes of sale.

A "good delivery" in the technical sense for securities is determined by the rules of the securities market through which sold as well as legal requirements. Rules of the New York Stock Exchange are based upon the usages and customs practiced over a number of years among brokers and banks, and accordingly are stringent. The following are some of the New York Stock Exchange rules to be observed in determining whether or not a security constitutes good delivery:

(1) Unless otherwise agreed, coupon bonds shall be delivered in denominations of $1,000 or $500 each, except that in the case of U. S. Government bonds, $5,000 or $10,000 pieces, when exchangeable for $500 or $1,000 pieces, shall be deliverable.

(2) Coupon bonds which have been registered as to principal shall be a delivery only if registered to bearer, or while the transfer books closed, only if accompanied by a proper assignment for each bond.

(3) Coupon bonds which have been registered for voting purposes only shall be a delivery only if such registration has been cancelled.

(4) A coupon bond bearing an indorsement of a definite name of a person, firm, corporation, association, etc. in conjunction with words of condition, qualification, direction or restriction not properly pertaining thereto as a security, shall not be a delivery unless sold specifically as an "endorsed bond". This rule also applies to bonds with coupons bearing such indorsements.

(5) A coupon bond which has become mutilated shall not be a delivery unless permitted by the Exchange.

(6) A bond bearing a coupon which has been mutilated as to the bond number or signature, or which has been cancelled in error, shall not be a delivery unless the proper indorsement is made on the back of the coupon and signed by an officer or representative of the obligor.

(7) A certificate of stock, a registered bond, or other registered security shall be accompanied by a proper assignment, executed either on the certificate itself or on a separate paper, in which latter case there shall be a separate assignment for each certificate or bond.

(8) A separate assignment shall contain provision for the irrevocable appointment of an attorney, with power of substitution, and a full description of the security, and shall be in the form approved by the Exchange. The number of shares of stock or the principal amount of a bond shall be expressed in both words and numerals. (See Assignment.)

(9) When the name of an individual or firm has been inserted in an assignment, as attorney, a power of substitution shall be executed in blank by such individual or firm.

(10) When the name of an individual or firm has been inserted in a power of substitution, as substitute attorney, a new power of substitution shall be executed in blank by such substitute attorney.

(11) Any alteration or correction in an assignment, power of execution or other instrument, shall be accompanied by an explanation on the original instrument signed by the person or firm executing the same

(12) The signature to an assignment or power of sub-

stitution shall be technically correct, i.e., it shall correspond with the name as written upon the certificate in every particular, without alteration or enlargement or any change whatsoever, except that "and" or "&", "Company" or "Co." may be written either way.

(13) A certificate in the name of a corporation or an institution or in a name with official designation shall be a delivery only if the statement "Proper papers for transfer filed by assignor" is placed on the assignment and signed by the transfer agent.

(14) A certificate shall not be a delivery with an assignment or power of execution signed by a (a) person since deceased; (b) trustee or trustees, except trustees acting in the capacity of a board of directors of a corporation or association; (c) guardian; (d) infant; (e) executor; (f) administrator; (g) receiver in bankruptcy; (h) agent, or (i) attorney, except as provided in (15) below.

(15) A member or member firm may authorize one or more employees to assign registered securities in the name of such member or member firm and to guarantee assignments, with the same effect as if the name of such member or member firm had been signed under like circumstances by such member or by one of the partners of the firm, by executing and filing with the Exchange in the form prescribed by it, a separate power of attorney for each employee so authorized.

(16) A certificate with an assignment or power of substitution executed by an insolvent shall be a delivery only during the closing of the transfer books, during which time such a certificate shall be a delivery only if held by others than the insolvent, and if it is accompanied by an affidavit that the same certificate was so held on a date prior to the insolvency, and the signature to the assignment or power of substitution is guaranteed

(17) A certificate with an assignment or power of substitution executed by a firm that has ceased to exist shall be a delivery only during the closing of the transfer books, provided the execution of the assignment or power of substitution is properly acknowledged and the signature thereto is guaranteed.

(18) A certificate with an assignment or a power of substitution executed by a firm that has since been dissolved and is succeeded by a firm or firms having as general partners one or more of the general partners of the dissolved firm shall be a delivery only if the new firm or if one of the new firms shall have signed the statement "Execution guaranteed" as of the date of or a date subsequent to the formation of the new firm so signing.

(19) A certificate with an assignment or power of substitution executed by a firm the name of which has since been changed shall be a delivery only if the firm shall have signed the statement "Execution guaranteed" as of the date of or a date subsequent to the change in name.

(20) A certificate with an inscription to indicate joint tenancy or with a qualification, restriction or special designation, shall not be a delivery.

(21) A certificate with an inscription to indicate tenancy in common shall be a delivery only if signed by all co-tenants.

(22) A certificate issued in the names of two or more individuals or firms shall be a delivery only if signed by all the registered owners.

(23) A certificate in the name of a married woman shall be a delivery only during the closing of the transfer books, during which time an assignment, executed jointly by the husband and wife and acknowledged before a notary public, or other qualified officer, shall be required.

(24) A certificate in the name of an unmarried woman, with the prefix "Miss", shall be a delivery without acknowledgment if signed "Miss".

(25) A certificate in the name of an unmarried woman without the prefix "Miss" shall be a delivery only if the assignment is properly acknowledged before a notary public or other qualified officer.

(26) A certificate in the name of a widow shall be a delivery only if the assignment is properly acknowledged before a notary public or other qualified officer.

(27) Except with respect to registered securities of the U. S. Government, the signature to an assignment of a certificate not in the name of a member or member firm shall be guaranteed by a member or member firm, or by a commercial bank or trust company organized under the laws of the United States or of the State of New York and having its principal office in the vicinity of the Exchange (that part of the Borough of Manhattan located south of Fulton Street). Each signature to a power of substitution executed by other than a member or member firm shall be guaranteed in like manner.

(See Delivery, Methods of Trading, Stock Transfers.)

GOOD TILL CANCELLED ORDERS

Buying or selling orders lodged with a broker which are valid until executed or cancelled or countermanded. They are also known as open orders, and are usually indicated by the abbreviation G. T. C. (See Orders.)

GOODWILL

One of the group of intangible assets set up on a balance sheet, e. g., patents, copyrights, trade-marks, secret processes, and goodwill, representing a non-physical value over and above the physical assets. It can never exist in a new company, except by transfer or purchase, but is established as a result of prestige gained over a period of years. It sometimes appears in the balance sheet of a new company as an euphemism for deficit or stock discount. Goodwill, like other intangible assets, is subject to the suspicion of being valued at arbitrary value, and as a general rule, should be amortized. Often, for display purposes, goodwill is left with a balance sheet value of $1. Goodwill, like other intangible assets, should be deducted from net worth in computing net tangible equity. It can exist only among competitive businesses and may be defined as the money value of the reputation of a business, or the premium set upon a going concern in excess of the tangible or perhaps book value of the assets.

Goodwill was first recognized by the English courts in 1743, and is accepted in England more than in the United States, as a growth through untiring efforts of a management. Following are other definitions: "Goodwill is nothing more than the probability that the old customers will resort to the old place" (Lord Eldon). "The value of business connections, the value of the probability that present customers will continue to buy in spite of the allurements of competing dealers" (Hatfield). "The element of an established business which makes the business, as a going concern worth more than its book value, that is, its net worth as shown by the books" (Walton). "It is the influence which the proprietor or his organization has upon the purchasing public through which he is enabled to attract and retain patronage" (Wildman). A more scientific definition is that goodwill is a capitalization of excess profits over and

above the normal rate of return on the physical investment, discounted at some rate in excess of the current rate of interest.

GOURDE

See Foreign Moneys—Haiti.

GOVERNING COMMITTEE

The governing body of the New York Stock Exchange, vested with both legislative and judicial powers over members of the Exchange, is the Board of Governors. Standing committees of the Board of Governors which formerly handled administrative functions such as public relations, stock list, member firms, etc., were discontinued in the last reorganization, and these functions are now handled by administrative departments.

(See New York Stock Exchange.)

GOVERNMENT ASSAY OFFICE

See Assay Office.

GOVERNMENT BONDS

See Foreign Government Bonds, State Bonds, United States Government Securities.

GOVERNMENT DEPOSITORY

A bank designated to receive deposits of Government funds. The Federal Reserve Banks under the original Federal Reserve Act were designated as depositories and fiscal agents of the United States. Under Act of May 29, 1920, which discontinued the Subtreasury System, the Federal Reserve Banks were also designated to perform any or all of the duties and functions of Assistant Treasurers and sub-treasuries as the Secretary of the Treasury should direct.

All member banks of the Federal Reserve System may also be designated as Government depositories and as financial agents of the Government, and be required to give satisfactory security by the deposit of U. S. bonds or otherwise. National banks are also authorized to accept State public funds as depositories and give required security for the safekeeping and prompt payment of the funds deposited. Proceeds of sales of Liberty bonds of the first, second and third issues were authorized to be deposited in non-member banks, with required security, and postal savings funds are also authorized to be deposited in non-member banks.

Government deposits under the Second Liberty Loan Act are called "war loan accounts", which have been utilized in recent years of heavy Government securities financing in subscriptions by banks to new Government issues by the "book credit" method. (See Depository.)

GOVERNMENT DEPOSITS

Funds of the United States Government and postal savings deposits deposited with legal depositories. Any Government Depository (q. v.) is required by the Secretary of the Treasury to qualify for receiving Government deposits, by pledging as collateral for such deposits, such securities as are from time to time published as eligible. The amount and rates are also indicated in the published list of eligible collateral, which consists broadly of obligations of the United States Government and its territorial and insular possessions, state bonds, municipal bonds, dollar bonds of foreign governments, and certain approved bonds listed on some recognized stock exchange among the railroad, public utility, and industrial groups. Under the Banking Act of 1935, reserves are required against U. S. Government deposits, although in April, 1943, "war loan" deposit accounts were exempted from reserve requirements until six months after cessation of World War II hostilities

GOVERNMENT ESTIMATES OF CROPS

See Crop Reports.

GRACE

See Days of Grace.

GRADES (GRADING)

Standardization of the differences in quality of staple commodities so that they can be readily recognized for the purpose of facilitating trade. Leading commodities are classified in many grades representative of certain recognized and accepted standards in the trade. The Federal Grain Standard Act passed in August, 1916, vested the Secretary of Agriculture with authority to prepare standards of various grades of grain that may be traded in. Each exchange also defines its grain standards, which are maintained by Federal and state inspectors, and those engaged by the grain exchange. The Commodity Exchange Act also requires that all contracts of sale of any commodity for future delivery on "contract markets" (futures markets) shall provide for the delivery thereunder of commodities conforming to United States standards, if such standards have been officially promulgated.

In the case of wheat, basic grades deliverable on 1947 contracts on the Chicago Board of Trade are:

No. 1 Northern Spring Wheat
No. 2 Hard Winter Wheat
No. 2 Red Winter Wheat
No. 2 Yellow Hard Winter Wheat

Other grades which may be delivered at specified differentials total eight.

On the Kansas City Board of Trade, basic grades are No. 2 Winter Wheat (Red, Hard, Dark Hard and Yellow Hard), with No. 1 grades deliverable at a premium of 1¢ over No. 2 grades, and No. 3 grades deliverable at a discount of 3¢ under No. 2 grades.

In the case of other grains, basic grades are:

Corn: On the Chicago Board of Trade, No. 1 or No. 2 mixed corn; on the Kansas City Board of Trade, No. 1 or No. 2 yellow, mixed or white corn

Oats: On the Chicago Board of Trade, No. 2 white or red oats; on the Minneapolis Grain Exchange, No. 2 white oats, bright No. 2 white oats.

Barley: On the Chicago Board of Trade, No. 1 or No. 2 barley of Class I; No. 1 or No. 2 malting barley.

In the case of cotton, the basic grade and staples is middling, 15/16 inch. White and extra white cotton between middling fair and low middling, and spotted cotton that is either good middling or strict middling, are deliverable, with staples of 29/32 inch and 7/8 inch deliverable at discounts, and those of 31/32 inch and 1 inch, at premiums. Cotton is classified for both grade and staple by an examiner of the U. S. Boards of Cotton Examiners. In the case of New York Cotton Exchange contracts, staples of 7/8 inch and 29/32 inch are deliverable at average discount on the bona fide spot markets designated by the Secretary of Agriculture. Staples of 31/32 inch and 1 inch are deliverable at 75% of the average premium prevailing on the spot markets. These bona fide spot markets have been designated as Houston, Galveston, New Orleans, Memphis and Dallas

for deliveries at Gulf ports; and Memphis, Montgomery, Augusta, Savannah and Charleston, for deliveries at Mobile, Savannah, Charleston, Norfolk and New York.
(See Basis Grade.)

GRADUATE SCHOOL OF BANKING

The senior educational institution of the American Bankers Association (q.v.). Advanced work in commercial banking, savings banking, investments, trusts, banking law, and economics is available to bank officers through The Graduate School of Banking. These courses are available at resident sessions held each year during the last two weeks in June at Rutgers University, New Brunswick, New Jersey. The courses run in a three-year cycle, 200 new students being admitted each year, making a total enrollment of 600.

GRADUATE SECURITIES

A name sometimes given to securities which are listed for the first time on the New York Stock Exchange. (See New York Curb Exchange).

GRAIN

Trading in "grain" futures is normally most active in wheat, with corn, oats, rye and barley following in that order. As defined in the Commodity Exchange Act (q.v.), "grain" includes wheat, corn, oats, barley, rye, flaxseed, grain sorghums and soybeans.

GRAIN BILLS

Bills of exchange drawn against shipments of grain. (See Bill of Exchange).

GRAIN EXCHANGES

Principal commodity exchanges where grain futures are traded are: Corn, Chicago Board of Trade, Kansas City Board of Trade; barley, Chicago Board of Trade; oats, Chicago Board of Trade, Minneapolis Grain Exchange; rye, Chicago Board of Trade and Minneapolis Grain Exchange; wheat, Chicago Board of Trade, Minneapolis Grain Exchange, and the Kansas City Board of Trade. (See Commodity Exchanges.)

GRAIN FUTURES

See Chicago Board of Trade, Commodity Exchanges, Futures, Hedging.

GRAIN FUTURES ACT

An Act, originally passed in 1921, which together with the Act of June 15, 1936, which amended it, constitutes the Commodity Exchange Act, the basic legislation for regulation and supervision of the commodity futures exchanges. (See Commodity Exchange Act.)

GRAIN PIT

The structure (called a "pit") built upon the trading floor of a grain exchange, one for each of the principal grains traded, where traders and brokers gather to trade in grain futures. (See Pit.)

GRAIN SPREADER

See Spreading.

GRANGERS

The term applied to the principal grain-carrying railroads, which include the Atchison, Topeka & Santa Fe; Chicago, Burlington & Quincy; Chicago, Milwaukee, St. Paul & Pacific; Chicago & Northwestern; Chicago, Rock Island & Pacific; Great Northern; Illinois Central; Northern Pacific; and Union Pacific (See Railroads.)

GRANTOR

A donor; one who bestows a benefit. Also, one who creates a trust; the seller of real property, i. e., the grantor in a deed who gives up title. (See Trusts.)

GRATUITOUS COINAGE

Coinage of the standard metal without charge by the mints; coinage without Brassage (q. v.) or Seigniorage (q. v.). Gratuitous coinage is to be distinguished from Free Coinage (q. v.). (See Coinage).

GRATUITY

A gift; donation; benefit. No member bank, or officer, director, or employee thereof, is permitted to make any gratuity to a bank examiner; nor is a bank examiner permitted to accept such a gratuity. To do so is a misdemeanor, and an offender is subject to fine or imprisonment.

GREENBACKS

Also known as "Legal Tenders," were inconvertible notes authorized by three acts of Congress, the first of which was that of February 25, 1862, to a maximum amount of $450,000,000. They represent the Civil War inflation episode, and were the result of war-time needs rather than excursion into inflation by virtue of popular demand. Greenbacks were legal tender for all debts, public and private, except duties on imports and interest on the public debt.

Specie payments had been suspended on December 30, 1861, about a year after the outbreak of hostilities. The premium on gold was only 4% by May, 1862, although it was sufficiently noticeable early in 1862 that brokers began to deal in gold coin. A gold exchange was organized in the autumn of 1862. With 100 expressing par for gold, the highest price quoted for gold during the war was 285, or 185% premium. This was in July, 1864 (battle of Gettysburg), when greenbacks were at the corresponding lowest discount; namely, worth 38-39 cents. When the war ended in May, 1865, gold dropped to a premium of 30%, at which rate greenbacks were worth 77 cents. Thus, public credit reached its lowest ebb in July, 1864, but improved at the conclusion of the war.

The greenback inflation of the Civil War was held in check by the fact that the issues were limited, and fluctuated according to the fortunes of the combatants. If the issue had been increased as might have been necessary if hostilities had been prolonged, the inflation would have been more serious. Issuance of greenbacks inevitably increased the cost of the war by raising the price of war materials. The cost of living also advanced. Prices rose from 100 in 1862 to 216 in January, 1865, and then dropped 58 points in five months when the war ended. Real wages fell fully 20%.

The Civil War greenback inflation, however, had an agreeable ending. The Specie Resumption Act, passed December 22, 1874, provided that the Secretary of the Treasury on and after January 1, 1879, should redeem in coin the United States legal tender notes outstanding on their presentation for redemption at the office of the Assistant Treasurer of the United States.

For further particulars on this subject, see under Inflation and United States Notes.

GRESHAM'S LAW

A monetary principle named after Sir Thomas Gresham, Master of the English Mint under Queen Elizabeth, who while not the first to recognize it, was the first to clearly enunciate it and give it official standing. This principle is that an over-valued money of equal legal tender power tends to displace an under-valued money; that bad money (mutilated or debased money) drives good money out of circulation; or that cheaper money supplants dearer money

It has long been recognized that two kinds of money of equal legal tender power and nominally of equal value, but in reality of unequal value, cannot be kept in concurrent circulation. The cheaper money becomes a standard of value because people will pay their debts in the cheaper money and hoard, melt, or export the dearer money, or the dearer money commands a premium over the cheaper money. It is the operation of Gresham's Law that makes it desirable for a Government to provide for redemption of its over-valued metallic coins and paper money in standard money.

GROAT

An old English silver coin equal to four pence. (See English Money Table.)

GROSS DEBT

Total debt, without making adjustments for deductions. Deductions usually include sinking funds and reacquired debt not yet retired.

In municipal bond analysis, deductions from gross debt are sinking funds as well as that portion of the debt which is revenue producing, such as that incurred to finance city operated facilities (water supply, rapid transit, etc.). The net debt figure resulting is the base for calculating debt per capita and net debt percentage of assessed value of taxable property. (See Municipal Bonds.)

GROSS DEPOSITS

Aggregate deposits, without making any exclusions or deductions. Included in gross deposits are all types of demand and time deposits, including due to banks, and U. S. Government deposits.

Gross demand deposits, less interbank and U. S. Government deposits, and less cash items in process of collection (so-called "float") appear as "demand deposits adjusted" in memorandum form to the member bank call report. This is a statistical measure designed by the Board of Governors of the Federal Reserve System to indicate aggregate net balances in checking accounts of individuals, partnerships, corporations, States and local government bodies, after allowing for checks outstanding against these accounts.

Both gross deposits and demand deposits adjusted are to be distinguished from net demand deposits, or deposits subject to reserve requirements according to the definition of "net demand deposits" by the Board of Governors of the Federal Reserve System in accordance with banking law. In accordance with the Banking Act of 1935, net demand deposits are the excess of all demand deposits, including deposits due to other banks and the United States Government, over demand balances due from other domestic banks (except Federal Reserve Banks, foreign banks or branches thereof, foreign branches of domestic banks, and private banks), and cash items in process of collection. (See Net Deposits)

GROSS EARNINGS

Total receipts of income; Gross Revenues (q. v.).

In trading or manufacturing concerns, gross receipts are usually sales of merchandise or products, shown net after returns and allowances. Any sources of gross receipts other than sales should be shown separately; for example, rental income where products such as machines are leased rather than sold.

GROSS PROFITS

Profits on goods sold without deducting selling and general administrative expenses. Gross profits are determined by subtracting the cost of goods sold from the amount received from their sale. It is termed gross profits because selling and administrative expenses must be deducted in order to determine Net Profits (q. v.).

GROSS REVENUES

In railroad and public utility accounting, the total receipts from operations or operating revenues, corresponding to sales in an industrial or mercantile business

Railway operating revenues of railroads are classified in accordance with the Uniform System of Accounts for Steam Railway Corporations, in annual reports to the Interstate Commerce Commission, and include railline transportation revenue, water-line transportation revenue, incidental operating revenues, and joint facility operating revenue, so distributed as to group those assignable to freight or to passenger and allied services or those common to both services. Summary reports of operating revenues usually subdivide into freight, passenger, mail, express and other.

Public utility companies using a uniform system of accounts or a form for annual report prescribed by Federal or State authorities follow the segregation of revenues prescribed, generally calling for electric, gas, water, traction or other subdivisions applicable.

GROUND FLOOR

An expression used in finance to designate the specially reduced price at which the promotors, founders, or underwriting syndicate, sell the stock of a new corporation to selected persons before it is offered to the general public at a later date. The term refers especially to securities which rise rapidly in value after they have been offered to the public, but which have been offered to a favored few below the public offering price.

GROUP BANKING

The term given to a form of banking organization, which although similar to branch and chain banking, enables a holding corporation to control a group of banks within a State, without more than one unit in a given city or town. The holding corporation's function is to supervise and corrdinate the banks in the group, but each bank has its own officers and board of directors on whom the responsibility for the affairs of their bank rests.

According to the Board of Governors of the Federal Reserve System, the term "group banking" indicates the type of multiple office banking structure in which three or more independently incorporated banks are controlled directly or indirectly by a corporation, business trust, association, or similar organization. The

term "holding company" is often applied to the controlling organization.

One of the leading examples of group banking is the Marine Midland Corporation, which owns substantially all of the capital stock of 19 banks located in the New York Federal Reserve District, and was formed in 1929. These 19 banks serve 47 communities through 98 banking offices, all in New York State. Aggregate deposits of the group as of December 31, 1947 were $1,090 million, and aggregate capital funds totaled $76,541,000. The Board of Directors of the corporation has agreed with the Board of Governors of the Federal Reserve System that dividends will be paid by the corporation only from earnings accumulated subsequent to December 31, 1941, and that in computing such net earnings there will be included only such dividends as are paid by affiliated banks out of net earnings accumulated since December 31, 1934. Under this agreement, dividends received from constituent banks are available to Marine Midland Corporation for distribution to stockholders.

The Transamerica Corporation is another bank holding company, owning a majority interest in 40 domestic banks operating 117 banking offices in California, Oregon, Nevada, Washington and Arizona.

Holding company affiliates of State member banks are subject to the same conditions and limitations imposed by Sec. 5144 of the Revised Statutes for National banks, which include provision for application for holding company voting permits; examination of holding company affiliates necessary to disclose fully relations between the banks and the holding company affiliates; requirements of minimum of 12% of aggregate par value of bank stocks held by holding company to be maintained by the holding company in readily marketable assets, to be built up 2% per year until aggregate of 25% in readily marketable assets is reached; imposition of penalties for false entries by holding company officers, directors, agents or employees; requirement of no affiliation with securities underwriting firms by the bank holding company; and requirement that dividends be declared only out of actual net earnings. (See Federal Reserve Board Regulation "P".)

GUARANTEE

See Guaranty.

GUARANTEED BANK DEPOSITS

See Guaranty of Bank Deposits.

GUARANTEED BONDS

Bonds the payment of the principal or interest, or both of which, has been guaranteed by a party other than the original debtor. Railroad and industrial corporations sometimes guarantee the bonds and notes of leased or controlled companies, or subsidiaries, or companies in which they are financially interested in order to strengthen their credit, or to elevate their investment position.

While the market value of bonds guaranteed by another party is undoubtedly enhanced by such guaranty, investors should not purchase this class of bonds because of the guaranty alone. Such bonds should be intrinsically sound in themselves without the guaranty, since it may be difficult to enforce the guaranty against the guarantors in case of default of the principal debtors in an action at law. Guaranteed bonds should be supported by sufficient security to meet the principal and interest, and the guaranty should be in such form as to compel the guarantor to meet any deficiency on the part of the principal debtor.

When bonds are guaranteed after their issue, the guaranty appears in a separate instrument, and the fact of guaranty is not recited on the face of the bond at all. When bonds are guaranteed by indorsement, the fact of guaranty is stated on the face of each bond, which contains the signature of the guarantor company.

Guaranteed bonds are similar to Assumed Bonds (q. v.), and Indorsed Bonds (q. v.).

GUARANTEED LETTER OF CREDIT

See Letters of Credit.

GUARANTEED MORTGAGE CERTIFICATES

Certificates which represent a partial interest in a bond and mortgage, or which are secured by a deposit with a trustee of a bond and mortgage equal to the face value of the certificates outstanding, in addition to which the company making the mortgage loan engages to pay the certificate at maturity and all interest instalments in default of payment by the mortgagor. The guarantor company is usually a mortgage loan company, and the guaranty is valuable to the extent that the issuing company has assets with which to support the guaranty.

Guaranteed mortgage certificates normally carried an interest rate one-half of one per cent. less than bonds and mortgages not guaranteed. In the collapse of real estate values in New York in the 1929-1932 depression, mortgage companies retailing guaranteed mortgage certificates experienced a wave of defaults on obligations, and despite invoking of the 18 months grace period in guarantee provisions, the guarantee proved to be no protection because of the practice of the issuing companies in issuing guaranteed mortgages and mortgage certificates up to 20 times capital funds. (See Mortgage Certificates.)

GUARANTEED RAILROAD STOCKS

See Guaranteed Stocks.

GUARANTEED STOCKS

Shares of stock, preferred or common, the payment of dividends of which have been guaranteed by a corporation other than the issuer. Guaranteed stocks arise under much the same circumstances as Guaranteed Bonds (q. v.), but they are particularly creatures of railroad finance, although occasionally occurring in telegraph companies and other utilities. Guaranteed railroad stocks arose by reason of one railroad company leasing its property to another, in return for which the lessee railroad guarantees the payment of dividends at a stipulated rate on the stock of the lessor corporation. In default of payment of dividends, or disaffirmance of the lease, the lessor may take back its property.

Dividends on guaranteed stocks are part of fixed charges of the lessee company operating the property, and such dividends are a charge on the gross income of the operating or lessee company ranking with the interest on the operating company's own bonds. Thus, they are a charge ranking prior to the operating company's own dividends. Failure to pay the guaranteed rate abrogates the lease. In the final analysis, the importance and essentiality of the leased line to the lessee are determining factors in disaffirmance of leases.

The seasoned and better quality guaranteed railroad stocks sell on a yield basis comparable with the higher grade railroad bonds of the lessee systems, with which

they are comparable because of the fixed nature of guaranteed dividends.

Preferred stocks having no connection with guaranteed dividends are sometimes erroneously called "guaranteed" stocks, although preferred dividends even if cumulative are in no sense guaranteed to the holder.

Table on pages 282 and 283 lists some of the active Guaranteed and Leased Line railroad stocks, showing current dividend rates, term of lease, and name of lessee system.

GUARANTOR

A surety; one who guarantees payment. A person, firm, or corporation may agree to guarantee a note for another party and become liable by indorsement to pay the obligations of another in case of failure or default by the original maker (principal debtor). Thus either or both the principal and interest on bonds, and dividends on stocks, are sometimes guaranteed. (See Guaranty, Guaranteed Bonds, Guaranteed Stocks.)

GUARANTY

A contract or undertaking in which the signor, i. e., guarantor, engages that the promise of another shall be performed, usually the payment of a debt or the performance of a contract. A guaranty is a contract in which a third party, the guarantor, intervenes in an agreement between two persons by becoming responsible to one for the default of the other, the person for whom the guaranty is made being known as the guarantee. For example, if Railroad No. 1 guarantees the bonds of Railroad No. 2 the former is a guarantor, and promises their payment in case the latter, the guarantee, fails to fulfill its obligations. (See Guaranteed Bonds.)

There are two kinds of guaranties of debt, guaranty of payment, and guaranty of collection. In the first case the guarantor is in default the moment the debt is due and unpaid, while in the second the guarantor is in default only after the principal debtor has been sued, and the creditor (guarantee) has employed every expedient to enforce payment.

When a bank issues a commercial letter of credit it requires the person for whom it is issued to sign a guaranty to pay all drafts issued thereunder, and to be responsible for the validity, correctness, and genuineness of the supporting document. A typical form of Letter of Credit Guaranty is the following:

Gentlemen:

In consideration of the issuing by the Blank Bank of New York of their commercial letter of credit,

No. . . . . .
for account of . . . . . .
in favor of . . . . . .
amounting to . . . . . .
Available by . . . . . sight drafts, we hereby guarantee unconditionally the payment of all drafts issued under and in compliance with the terms of said commercial credit, at their maturity.

It is understood that neither you, nor your agents here or abroad, will be responsible for the validity, correctness and/or genuineness of the documents purporting to relate to aforesaid credit, nor for the quality, quantity, and/or arrival of the merchandise described in such documents.

You are to receive a commission of . . . . . per cent. together with all expenses incurred by you in connection with arranging the credit and the execution thereof. At least . . . . . day(s) prior to the maturity of any draft or drafts, the undersigned is to place you in New York funds sufficient to pay each acceptance with interest, if any, and all other charges relating thereto.

Two forms of guaranty agreements are used in connection with bank loans, a continuing guaranty and specific guaranty. In the former the guarantor is responsible for the default of the debtor for whom the guaranty is made up to a certain limit so long as the agreement is in force, and may therefore cover all the loans of the debtor. In the latter the guarantor holds himself responsible only for a particular described loan.

The following are typical forms of guaranty agreements:

Continuing Guaranty

. . . . . .

the undersigned, in consideration of One Dollar, receipt whereof is hereby acknowledged, and the credits, discounts, purchases or loans given or made as hereinafter mentioned, do hereby unconditionally guarantee to the Blank Bank of New York City (hereinafter called the Bank), its successors and assigns, that if before written notice from the undersigned, or any of them, not to give further accommodation hereunder, the Bank shall give any credit to . . . . . (hereinafter called the Debtor) or discount, or purchase, or make any loan on, any commercial paper made or indorsed by the Debtor, all sums payable upon all such credits, loans, discounts and commercial paper shall be paid in full when respectively due, and, in case of extension of payment of any thereof, in whole or in part, all sums payable thereon shall be paid when due according to such extension; and also so agree to indemnify and save harmless the Bank, its successors and assigns, for all costs and expenses, including counsel and attorneys' fees of enforcing the obligation of the undersigned hereunder, and/or collecting any item whose payment is hereby guaranteed.

This shall be a continuing guaranty, but the liability of the undersigned hereunder shall not exceed . . . . . Dollars ($. . . . .), exclusive of any liability on account of said costs and expenses.

Presentment or demand of payment from maker, and notice of receipt or acceptance hereof, or of intention to act, or of acting hereupon, or of non-payment, or of protest, or of sale of securities, are hereby waived by the undersigned.

Consent is hereby given by the undersigned that, from time to time, without notice to the undersigned, payment of any sum or sums payable upon any items whose payment is guaranteed hereunder, or any security for the payment thereof, may be extended in whole or in part, and any such security may be exchanged or surrendered.

Specific Guaranty

In consideration of One Dollar, receipt whereof is hereby acknowledged, and of the discount or purchase of or credit, loan or extension of time given or made on, the following described instruments:

. . . . . .
. . . . . .

By the Blank Bank of New York City (hereinafter called the Bank) . . . . . hereby unconditionally guarantee to the Bank, its successors and assigns, the genuineness of said instruments, including indorsements thereon, and payment thereof when respectively due, and, in case of extension of payment of any thereof, in whole or in part, payment

of all sums due thereunder when due according to such extension or extensions; and hereby consent that, from time to time, without notice to the undersigned, payment of any of said instruments or of any securities therefor may be extended in whole or in part, or any of the securities may be exchanged or surrendered; and hereby waive presentment, demand of payment from the maker, protest and notice of non-payment or protest, or of sale of securities, or of acceptance hereof or of intention to act or of acting hereupon; and agree to indemnify and save harmless the Bank, its successors and assigns, from all costs and expenses, including counsel and attorneys' fees, of enforcing the obligation of the undersigned hereunder and/or collecting any of said instruments.

If the undersigned be more than one person, whether individual or corporate, their obligations hereunder shall be joint and several.

GUARANTY FUND

By amendment to the New York State Banking Law in 1938, the aggregate of the guaranty fund and expense fund of a savings bank in New York State shall constitute the Surplus Fund. Such fund may be created or increased by contributions made by the incorporators or by transfers from undivided profits or by transfers from earnings. The Surplus Fund up to 10% of the amount due depositors shall not be available for the payment of dividends or to pay expenses, except that the part of the fund in excess of 5% of the amount due depositors shall be available without approval of the Superintendent of Banks for the purpose of absorbing losses.

The incorporators of a savings bank in New York shall not transact business until they shall have deposited to the credit of the savings bank in cash as an initial surplus fund at least $10,000, and if the Superintendent of Banks shall so require, shall have entered into an agreement or undertaking with the Superintendent to make such further contributions in cash to the surplus fund as in the opinion of the Superintendent may be necessary to maintain the savings bank in safe condition, and shall have filed with the Superintendent a surety bond securing such agreement or undertaking.

The surplus fund up to 10% of the amount due depositors shall be built up periodically from current earnings. If at the close of any accounting period, the surplus fund of any savings bank in New York State is less than 10% of the amount due depositors, 1/10th of the net earnings for such period shall be credited to the surplus fund, or so much less than 1/10th as will make the surplus fund equal to 10% of the amount due to depositors.

(See Savings Banks.)

GUARANTY OF BANK DEPOSITS

State guaranty of the payment of deposits to depositors in banks which became insolvent by bad management, embezzlement, or otherwise. These state guaranty systems were the predecessors of the present nationwide system of deposit insurance in the United States. While banks of issue in Europe and the United States for many years guarded their note issues so strictly as to practically preclude the possibility of loss, the policy of protecting deposits was a new departure in American banking, deriving its original impetus from the panic of 1907.

Oklahoma passed the first deposit-guaranty law in 1908, and its example subsequently was followed by Kansas in 1909, Texas in 1910, Nebraska in 1911, Mississippi in 1914, South Dakota in 1915, and North Dakota and Washington in 1917.

The Kansas law, passed in 1909, may be taken as embodying typical features of each. This law provided for an annual assessment of one twentieth of one per cent. of average deposits upon each bank voluntarily entering the system, but in computing the amount of deposits, the bank was allowed to deduct the amount of its combined capital and surplus. This last provision was held out as an inducement to accumulating a large capital and surplus. These annual assessments continued until the fund reached $500,000, after which it was discontinued until the fund fell below that amount. Should the fund become depleted the banking commissioner could levy such additional assessments as were necessary, but not to exceed five assessments of one-twentieth of one per cent. of deposits in any one year. The fund was held in the custody of the State Treasurer subject to the order of the banking commissioner. In case a bank became insolvent, the commissioner took charge of its affairs, issued to each depository an interest-bearing certificate, and then paid these off as soon as the assets of the failed bank were liquidated. If these assets should prove insufficient to cancel the certificates, the banking commissioner then certified to the State Treasurer the balance yet due, and the latter paid such balance from the guaranty fund.

The Oklahoma law (the first passed) permitted National banks to join the system if they chose to do so. The Attorney-General of the United States decided that such participation would be an exercise of powers not contemplated by any act of Congress, and, therefore, unlawful.

The history of state-guaranty or insurance of bank deposits was not satisfactory. The plans prospered in good times, but failed with unpaid deficits in bad times. In the eight states in which guaranty laws were enacted since 1908, all were discontinued by repeal or otherwise by 1931.

The accompanying table presents the salient facts on the experience of the various State deposit guaranty systems, as compiled by the Economic Policy Commission of the American Bankers Association.

With the passage of the Banking Act of 1935, providing for nation-wide system of permanent deposit insurance, a new chapter has been written on this controversial subject. (See Federal Deposit Insurance Corporation.)

Bibliography

American Bankers Association, Commission on Banking Law and Practice: The Guaranty of Bank Deposits, 1933.

GUARDIAN

A person who has the legal power to control the person and/or estate of a minor. The Board of Governors of the Federal Reserve System has the power to grant by special permit to national banks applying therefor, when not in contravention of State or local law, the right to act as guardian of estates, or in any other fiduciary capacity in which State banks, trust companies or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the national bank is located.

Guardianships are governed by statute in detail, and are of various types, as follows: (1) guardianship by nature or by birth. The natural parents as soon as the child is born are natural guardians of the person of the child. In New York, the father and mother are joint guardians of the person only of the child. (2) guardianship by socage, arising where a minor child acquires real property during minority and no general guardian has been appointed. This guardianship extends only to real property and such personal property as is incidental to real property. The natural parents are joint guardians in socage for the minor in New York, unless they are separated or divorced. (3) testamentary guardianship, arising where a deceased spouse by will appoints a guardian for the minor child. In New York, a testamentary guardian prevails over the surviving spouse if in the best interests of the child, although a child over 14 years of age may generally have the right to decide whether to stay with the natural surviving parent or the testamentary guardian. The testamentary guardian has custody over the person as well as both real and personal property of the ward, and thus is required to post bond, file annual accounts and inventory, and be removed for any misconduct in office. (4) guardianship by deed, a written instrument executed in the lifetime of the grantor, to take effect on his death, and thus of the same effect as the testamentary guardianship; (5) the general guardianship, which in New York is one created by order of the Supreme Court or Surrogate's Court after filing of petition therefor, filing of consents, and holding of hearings. The general guard-

Results of State Guaranty Plans

State	Duration	Type	Total Assessments	Final Deficit
Kansas	1909-1929	Voluntary	$2,685,000	$7,175,000
Mississippi	1915-1930	Compulsory	1.2% of capital	5,000,000
Nebraska	1911-1930	Compulsory	$17,700,000	22,000,000
North Dakota	1917-1929	Compulsory	2,000,000	14,000,000
Oklahoma	1908-1923	Compulsory	3,700,000	7,500,000
South Dakota	1916-1931	Compulsory	.....	36,769,000[3]
Texas	1910-1927	Choice ([1])	15,000,000[2]	.....
Washington	1917-1921	Optional	([4])	.....

([1]) Choice between joining fund or posting bond equal to capital.
([2]) For period 1920-1925.
([3]) As of June 30, 1930.
([4]) Because of the failure of one large bank in 1921 the plan broke down and the banks withdrew, but the law was not repealed until 1929.

ian may have custody over the person, or the property, or both of the minor, and must be a person having no adverse interest to the minor. The general guardian is held to the highest degree of fiduciary obligation, being required to invest only in legal investments, to file annual inventory and accountings, to post bond if the property is over $10,000, to obtain court orders for the payment of money, to take an oath of office, to be removed for failure to file full and satisfactory accounts or if guilty of incompetence or misconduct, etc.

Guardianships terminate when the ward becomes of age or dies, or if the guardian's authority has terminated. Guardianship over the person of a female ward terminates upon her marriage. When the ward reaches majority (21 years of age), a general accounting is required to discharge the guardian and the estate is delivered to the ward under order of the court.

Other types of guardianships are the guardian ad litem (q.v.), for actions in law, and the special guardian, for actions in equity.

GUARDIAN AD LITEM

A person appointed by a court to represent the interests of a minor in a lawsuit.

GUILD

An association of artisans, craftsmen or workers. The term was used in Europe during the Renaissance, and sometimes regarded as the forerunner of the modern trade union. The term was revived is Fascist Italy. (See Fascism.)

GUILDER

The principal currency unit of the Netherlands, also known as the gulden. (See Foreign Moneys—Netherlands.)

GUINEA

A former English coin of the value of 21 shillings, not coined since 1813. It was so called because made from gold brought from Guinea. The term is now used to denote the sum of 21 shillings. (See English Money Table.)

GULDEN

Another name for the guilder. (See Foreign Moneys—Netherlands.)

GUSHER

An oil well which produces large quantities, especially one that flows without having to be pumped.

HALF CROWN

An English silver coin of the value of 2 1/2 shillings, and hence also known as a "two and six". It was first coined in 1551. (See English Money Table.)

HALF DIME

A former United States silver coin not coined since 1873. They were the first coins minted by the United States Mint and were legal tender in amounts up to $10

HALF DOLLAR

A United States silver coin containing 173.61 grains of fine silver and 19.29 grains of copper alloy, and is 0.900 fine. Under the Joint Resolution of June 5, 1933, all coins and currencies of the United States shall be legal tender for all debts, public and private, public charges, taxes, duties and dues.

HALF EAGLE

A United States gold coin of the value of $5.00. Its composition was the same as, and its weight one-half that of, the Eagle (q. v.). No longer in circulation, in accordance with the Gold Reserve Act of 1934, which declared the coinage of gold at an end. (See Gold Coins.)

HALF PENNY

An English copper coin equal to one-half the value of the penny, and approximately equal in value to the United States one-cent piece. (See English Money Table.)

HALF SOVEREIGN

An English gold coin being half the value of a sovereign (pound sterling), and therefore equivalent to 10 shillings. It is eleven-twelfths fine and at present is equivalent to about $2 in United States money. Comparatively rare in public circulation. (See English Money Table.)

HALF STOCK

An obsolete Stock Exchange term to denote shares of stock of $50 par value, so-called because most shares were of $100 par value. Quotations for half stocks on the New York Stock Exchange were formerly on the basis of two shares. Thus the shares of the Pennsylvania and Lehigh Valley Railroad companies each having $50 par value, were quoted at a price for two shares representing $100 par value.

HAMMER THE MARKET

An expression to denote the heavy and persistent selling of stocks by professional speculators operating on the "short" side actuated by the belief that prices are inflated and that a period of liquidation is imminent. When the "bears" make a raid upon the stock market they are said to "hammer the market."

HAMMOND'S TIME

An old term used to designate the official time of the New York Stock Exchange by which its opening and closing, and close of the recognized settlement period, were regulated.

The Exchange is open for the transaction of business on every business day at 10:00 a.m., when it shall be officially announced to be open, and remains open until 3:00 p.m., when it shall be officially announced to be closed, except that on Saturdays the closing shall be at 12:00 noon, and except that the Board of Governors may change the hours of trading on any day. Dealings upon the Exchange shall be limited to the hours during which the Exchange is open for transaction of business, and no member shall make any bid, offer or transaction upon the floor before or after these hours, except that loans of money or securities may be made after the official closing of the Exchange. (See New York Stock Exchange.)

HARD CASH (MONEY)

A term to denote metallic money as distinguished from paper money. It is also more loosely used to denote cash assets (whether actual currency or bank balances), as distinguished from other quick assets, e. g., notes and accounts receivable, inventories, and readily marketable securities.

HARD COALERS

See Anthracite Roads.

HARD SPOT

A stock exchange expression to denote any single stock which stands out prominently in the day's quotations because of its firmness or strength when the rest of the list is soft, i. e., tends to decline.

HARDEN

A stock exchange expression to indicate a stiffening or strengthening of prices throughout the list due to increased buying, especially following an interval of price declines.

HARTER ACT

An Act approved by Congress February 13, 1893, which sets forth the liabilities of shipowners in the carriage of goods at sea, and indicates the contents of the limiting clauses which an ocean carrier may place in its bills of lading.

HEAVY

A stock or commodity exchange expression used to denote a drop in prices due especially to selling of long stock (or commodity contracts) by holders who are taking profits. It is a condition which exists in a market when supporting bids are not in sufficient volume and high enough to absorb offerings withour price concessions, so that the prevailing price level declines. A heavy market is to be distinguished from a weak market, which is a liquidating market, and also from a sagging market in which price declines on the average are merely fractional.

HECTARE

See Metric System.

HEDGE (HEDGING)

Reduced to its lowest terms, a form of insurance used among dealers in grain, cotton, foreign exchange, or securities, to prevent loss through price fluctuations. It is not speculation, but the avoidance of speculation. Hedging is the process of protecting one transaction by

means of another, and in the commodity markets takes the form of selling a futures contract in an amount equivalent to necessary cash purchases. The process of hedging is based on the theory that the spread between a cash commodity and its futures is constantly uniform. That is, future prices should be higher than cash prices by an amount representing the cost of storage, insurance, etc., from the time of the transaction until the arrival of the future month. Hedging in grain is commonly practiced by elevator companies, millers and exporters. Foreign exchange bankers, brokers, and dealers also practice hedging, which consists of selling by one who is "long" and buying by one who is "short," of an equal amount of the commodity dealt in. Thus a person who hedges is in a neutral position,—he is committed to both "long" and "short" contracts for an equal amount.

A typical illustration of hedging is that practiced by a flour mill, although the same principle is involved in the case of a textile mill. Suppose a miller has contracts to deliver to customers 4,000 barrels of flour a week for the next six months at a stipulated price. This output will require approximately 470,000 bushels of wheat, more than even the largest miller can carry in stock. It represents a value, moreover, which if purchased at $2.00 a bushel, means an investment of $940,000. Should the wheat decline only 1¢ a bushel, a loss of $4,700 is involved. This risk is so great that millers as a class cannot afford to take it. Millers are not speculators, but are in the business of milling, and derive their profits from milling operations; not through price fluctuations. To avoid assuming this risk, therefore, the miller sells in the future markets an equal amount of wheat, distributing his future sales contracts to mature at times he needs to buy cash wheat for filling his flour contracts. In other words, as fast as he buys cash wheat from samples that meet his milling demands, he sells an equal amount of future contracts at a stipulated price. Instead of actually making delivery, however, millers usually sell their contracts to professional speculators, or others who may want wheat at the delivery time. In case the price of wheat goes up, the miller, of course, has made a profit on his holdings of cash wheat. This profit, however, is offset by the necessity of having to pay a higher price when he covers his contract on delivery date. What he gains in the cash transaction is lost in the future transaction. On the other hand, if the price declines, the loss of his holdings of cash wheat is offset by having to pay a lesser price when he covers his contract on the delivery date. Thus, whether the price rises or falls, the hedger gains (or loses) as much on his cash contracts as he loses (or gains) on his future contracts.

The non-member commission rate on the Chicago Board of Trade for hedging 5,000 bushels of grain, buying and selling (round turn), is $15.00, which is relatively cheap insurance.

A person who owns stocks may also hedge. Suppose one owns 100 shares of U. S. Steel purchased at 100. The price has declined to say, 95 and the prospects, as indicated by the chief business barometers, are for a still greater decline. By selling 100 shares with the intention of subsequently buying them back at a lower price, hedging is accomplished. Thus if the stock declines to 80, the hedger covers at a 15 point profit, thus wiping out most of the loss on his original purchase. If the stock should rise to 105, the hedger can cover his contract by delivering his original purchase without loss on the transaction. Thus hedging, contrary to popular impression, whether in commodities, foreign exchange, or in securities, is the very opposite of speculation, undertaken in fact, for the purpose of avoiding the risk of price changes. (See Futures.)

HEIR

In a strict technical sense, a person, also known as an heir-at-law, who is entitled to the real property, or a proportionate share thereof, left by a deceased person who made no will, i. e., a person who succeeds to an intestate estate. In civil law the term has a broader meaning, and includes any person who is created successor of an estate by the operation of law or by will. In the first case (of intestacy) he is the next of kin, and is called the heir-at-law, or heir by intestacy; in the second case, the testamentary heir. No person can be an heir of a living person, but may be an heir apparent.

A direct heir is a lineal descendant, or one in the direct line of the decedent, e. g., son, daughter, father, mother, grandson, granddaughter. A collateral heir is one not in direct line of the decedent, e. g., brother, sister, uncle, aunt, nephew, niece.

In New York, all distinctions between persons who take as heirs at law or next of kin were abolished by new Article 3 of the Decedent Estate Law, effective September 1, 1930, and the descent of real property and distribution of personal property has since been governed uniformly by this statute to "distributees".

HEIR-at-LAW

See Heir.

HIDE EXCHANGE

See Commodity Exchange, Inc., Hides.

HIDES

The Standard Hide Contract on the Commodity Exchange, Inc. calls for the delivery of 40,000 lbs. (5% more or less) of Wet Salted Hides certificated by the Hide Inspection Bureau of the Exchange, with seller's option to deliver any one of the various deliverable grades at the fixed premium or discount above or below the base grade. Delivery is effected at the seller's option at any time during the month specified in the contract ex licensed warehouse in the Port of New York or in the City of Chicago or other delivery points designated by the Board.

Trading unit is 40,000 lbs. of wet salted hides. Quotations are in multiples of 1/100 of one cent per lb. Each 1/100 of 1¢ per lb. is thus equivalent to $4.00 per contract. A fluctuation of one cent per lb. is equivalent to $400 on a contract. No contracts for the delivery of hides shall be made or recorded for any month other than March, June, September and December. When trading in any such current delivery month ceases, trading in the corresponding delivery month of the next year may commence on the opening call of the next session.

The price quoted on the Exchange is in respect to the base grade, which is Standard No. 1 Light Native Cows—July/August or September take-off. The following grades are tenderable at the price of the base grade, or at fixed premiums or discounts above or below the price of the base grade as shown in Table I on page 288 for the respective standard grades. On hides which have been taken off during months other than the basis take off (July/August/September), there is an allowance to the buyer by the seller, i. e., a percentage of the net

weight after adjustment for tare is deducted therefrom on the basis set forth in Table II below.

Table I

Grade	Cents per lb.
"Frigorifico" Heavy Steers	1 1/4¢ Premium
"Frigorifico" Extreme Light Cows and Steers	1/2¢ Premium
"Frigorifico" Cows	1/2¢ Premium
"Frigorifico" Light Steers	1/2¢ Premium
Light Native Cows	Base grade
Extra Light Native Steers	At basis price
Heavy Native Steers	At basis price
Heavy Butt Branded Steers	At basis price
Heavy Texas Steers	At basis price
Heavy Colorado Steers	1/2¢ discount
Branded Cows	1/2¢ discount
Heavy Cows	1/2¢ discount
Light Texas Steers	1/2¢ discount
Extra Light Texas Steers	1/2¢ discount
Native Cows and Steers (all weights)	1/2¢ discount
Branded Cows and Steers (all weights)	1¢ discount
"Pacific Coast" Native and Branded Cows	1 1/4¢ discount
"Pacific Coast" Native and Branded Steers	1 1/4¢ discount

Table II.

Month of Take-Off	Percentage Weight Deduction Domestic Hides	South American Hides
January	7%	None
February	10	None
March	10	2%
April	7	4
May	4	5
June	2	7
July	None	7
August	None	7
September	None	5
October	1%	5
November	3	3
December	5	None

Hides which are inferior in the mechanics of take-off or of quality to the standards for the respective grades will be certificated by the Inspection Bureau with a fixed discount below Standard. Such value must be within 1 1/2¢ per lb. of the Standard for the respective grade.

Commission rates per contract bought or sold for members of the Exchange or non-members residing within the United States or Canada are as follows: (based upon a price per lb.) Below 10¢--members, $7.50; non-members, $15.00; 10¢ and above--members, $10.00; non-members, $20.00.

(See Commodity Exchange, Inc.)

HIGH FINANCE

An expression used to indicate the unwarranted or speculative use of funds belonging to others. Thus the officers of a company who use the company's money for financing an unsound venture, or for the purpose of buying speculative securities for the purpose of making speculative profits, are guilty of high finance. Any situation in which the money of other people is used by a person or concern in a speculative manner. The expression also refers to the practice of borrowing to the utmost limit on one's assets, i. e., trading on a thin equity.

HIGH GRADE INVESTMENTS

Investments of superior merit; bonds or other obligations upon which the principal and interest will be paid under any circumstances which may be reasonably conceived. Most civil bonds, and such bonds of seasoned corporations as are secured by underlying mortgages, and are protected by a long record of earnings and dividend payments, belong to this class. In general the senior bonds of seasoned railroad, public utility, and industrial corporations, and the bonds of the United States Government, and its political subdivisions enjoy the highest investment rating. In their respective groups, the strongest preferred and common stocks may be included as high grade.

To furnish a quick and convenient measure of quality, both Standard-Poor's and Moody's have developed rating systems for bonds as to quality, and Fitch's has developed quality ratings for both bonds and stocks.

(See Bond Ratings.)

Hoarding

Storing money in a secret place. Ordinarily current funds received by individuals or concerns are deposited in banks or used in trading transactions, thus being kept in circulation. Hoarded money is money which is withdrawn from circulation for which use it was intended.

Hoarding may result from three causes: (1) bank depositors during a panic may start a "run" on a bank by withdrawing their cash for fear that they will not later be able to do so; (2) illiterates and immigrants, skeptical of the safety of banks, or ignorant of their advantages, sometimes keep actual money savings in a hidden place, where obviously it earns no interest; (3) when paper money is not maintained on a parity with metallic money which is worth more, the latter may be hoarded or sold at a premium.

HOKEYS

A nickname given to Home Owners Loan Corporation Bonds (q. v.).

HOLDER

The bearer in possession of an instrument; the payee or indorsee of a bill of exchange, check, or note; the person who holds the equitable title to an instrument. (See Holder in Due Course.)

HOLDER IN DUE COURSE

According to Sec. 52 of the Uniform Negotiable Instruments Law and Sec. 91 of the New York Negotiable Instruments Law, a person who has taken a negotiable instrument (check, note, or bill of exchange) under the following conditions: (1) that it is complete and regular upon its face; (2) that he became the holder of it before it was overdue, and without notice that it had been previously dishonored, if such were the fact; (3)that he took it in good faith and for value; and (4) that at the time it was negotiated to him he had no notice of any infirmity in the instrument or defect in the title of the person negotiating it.

The value of being a holder in due course is that in

the hands of such a negotiable instrument is subject to only three defenses: (1) incapacity to contract; (2) want of consent; and (3) illegality where a statute expressly declares the instrument to be void. These defenses must be pleaded and proved.

HOLDING COMPANY

A parent corporation which owns all or the majority of the stock of its constituent subsidiaries. A holding company may be, but usually is not, an operating company, and is organized chiefly for the purpose of owning the securities of the corporations it desires to control. Ownership may be secured by the exchange of its own securities for the securities of its subsidiary corporations, or through the purchase of the securities of its constituent companies from the proceeds of sale of its own securities. It is a favorite device for concentrating control of large properties in the hands of a comparatively few persons with a minimum of capital and maximum of liability. The purpose of a holding company is usually to effect a combination of competing concerns in order to curtail competition and still meet with the requirements of the law, or to secure uniformity of and centralization in management and to effect economies in operation.

Prior to passage of the Public Utility Holding Company Act of 1935, there were two general types of public utility holding companies: (a) those companies whose subsidiaries operated in different parts of the country, furnishing either electric, electric railway, gas or water service; (b) those companies which have been called "finance companies." Such companies were organized solely to finance the organization or acquire the stock of a particular utility company. It was not unusual for this latter type (of which there were comparatively few) to be in turn subsidiaries of larger holding companies. Of the first group there were again two distinct kinds: (a) the type whose main function was to direct the financing of its subsidiaries and generally supervise important policies, but which did not maintain a central management and engineering organization in connection with the operation of its properties, allowing the initiative of operation to repose in local efficient management; (b) the type which went further than this and exercised general centralized management of its companies. The latter type was the more numerous.

Under the Public Utility Holding Company Act of 1935, interstate public utility holding companies were required to be registered with the Securities and Exchange Commission, and in accordance with the requirements of the Act for integration of properties, simplification of corporate and capital structures, and elimination of holding companies beyond the second degree, the Securities and Exchange Commission has taken extensive action. Holding companies with total system assets of $3,218 million as of June 30, 1947 were subject to liquidation and dissolution orders. (See Public Utility Act of 1935.)

HOLDING THE MARKET

Supporting the market. (See Support.)

HOLD-OVERS

In bank clearings and collections, checks and other items which, because of errors or other irregularities, e. g., missing bank stamp, post-dating, etc., cannot be collected on the day of receipt and held over as cash until the following day, or until the irregularity can be adjusted.

HOLIDAYS

See Bank Holidays.

HOME DEBIT

A Self-Check (q.v.); a term used among bank employees to designate checks deposited for credit or represented for payment at the bank on which they are drawn.

HOME LOAN BANK ACT

An Act, approved July 22, 1932, and amended by the Home Owners Loan Act of 1933, which created the Home Loan Bank System, and the Home Loan Bank Board to supervise its operations. This Home Loan Bank System is one of the permanent agencies set up during the crisis and depression of 1932-33 to restore home building and ownership, to make home mortgage finance safer and more economical for investors and borrowers, and to release funds for home repair, modernization and construction.

The Federal Home Loan Bank System as of June 30, 1947 embraces about 3,700 institutions, of which 3,665 were savings and loan associations, cooperative banks and homestead associations, 25 were mutual savings banks and 10 insurance companies. This system serves through eleven regional Federal Home Loan Banks, located throughout the United States. By membership in the system, a lending institution makes its own mortgage assets more liquid because they can be used as collateral to secure loans from the Federal Home Loan bank of its district.

The Federal Home Loan Bank System is supervised by the Home Loan Bank Board (q.v.).

HOME LOAN BANK BOARD

One of the three constituent operating agencies of the Housing and Home Finance Agency (q.v.), the Home Loan Bank Board supervises the Federal Home Loan Bank System and the Federal Savings and Loan Insurance Corporation, as well as directs the liquidation of the Home Owners' Loan Corporation. In accordance with Reorganization Plan No. 3 of 1947, the Home Loan Bank Board is a three-man bi-partisan body. The Federal Home Loan Bank System, a permanent central credit agency for private home-financing institutions, and the Federal Savings and Loan Insurance Corporation, whose purpose is to provide additional protection for funds invested in savings and loan associations, are part of the general objective of the Sytem to provide ample credit to home owners and buyers through private lending institutions and to provide financing for the purchase of homes through improved types of mortgage loans. (See Federal Home Loan Banks, Federal Savings and Loan Insurance Corporation, Home Owners' Loan Corporation.)

HOME OWNERS' LOAN ACT

An Act approved June 13, 1933, revised and amended by the Home Owners Loan Act of 1934 (approved April 27, 1934), which provides for the creation of the Home Owners Loan Corporation, with $200,000,000 of capital to be provided by the RFC and authorization to issue $2,000,000,000 in bonds to exchange for mortgages.

Stipulates that the maximum aid to be given to a home owner by the corporation, through exchange of bonds for

mortgages, would be the equivalent of 80 per cent. of the value of the mortgaged property, not exceeding $14,000; the corporation, in this refinancing, to exchange its bonds up to the permitted maximum for mortgages; the bonds to bear government-guaranteed interest of 4 per cent

Authorizes the corporation, after making such an arrangement, to collect from the home owners interest at 5 per cent. on the refinanced mortgages, the home owners to amortize these loans within fifteen years.

Provides that home owners unable to benefit by this procedure, through the reluctance of mortgage holders, might borrow up to 40 per cent. of the value of their properties for the purpose of reducing to that extent their indebtedness, these loans in no event to exceed 6 per cent. annually.

Authorizes cash loans up to 50 per cent. of the value of homes where comparatively small debts were held against such properties.

Provides for limited loans to recover homes for original owners who might have lost them by foreclosure or forced sale in two years preceding the act.

The Home Owners Loan Act of 1934 authorizes the issuance of $2,000,000,000 of bonds by the Home Owners Loan Corporation which might be sold or exchanged for mortgages.

Provides that bonds be guaranteed as to principal as well as interest by the United States.

Provides that the Secretary of the Treasury might buy and sell these bonds substantially as other government bonds.

Stipulates that the corporation should only have power to refund home mortgages in cases where the home owner was involuntarily in default at the time the Home Owners Loan Act of 1933 took effect and was now unable to refinance his home mortgage indebtedness.

Permits the corporation to advance cash in an aggregate not exceeding $200,000,000, not only to make necessary repairs, but also for rehabilitation, modernization, rebuilding and enlargement of homes.

Authorizes the corporation to grant an extension of principal or interest to a home owner where justified, but eliminated the three-year compulsory moratorium in the act of 1933.

Provides for the redemption of homes lost by the owner subsequent to Jan. 1, 1930, instead of limiting such redemption cases to homes lost within two years prior to the refunding by the corporation.

Authorizes the Home Owners Loan Corporation to buy bonds and debentures of Federal Home Loan Banks and to make advances to such banks, but provided that not exceeding $50,000,000 be invested or advanced in this manner.

Amends the Federal Farm Mortgage Corporation Act of 1934 to provide that the bonds of such corporation should not be issued in excess of its assets.

HOME OWNERS' LOAN CORPORATION

A temporary relief agency, organized in 1933, to refinance mortgages on homes in danger of foreclosure. It was empowered to aid only those home owners who were in actual danger of losing their homes through foreclosure or tax sale or inability to make payments under a purchase money contract; those unable to borrow money elsewhere to make necessary repairs on unencumbered homes; and those whose mortgages were held by institutions in liquidation. The corporation was not permitted to make loans to any other home owners for any purpose.

Mortgages on more than one million homes were refinanced through low interest, long term loans, involving a total of $3.5 billion in loans to home owners, advances to borrowers and other disbursements. A total of 198,000 houses were acquired by the corporation on its loans and advances.

Since 1936, the corporation has been in liquidation, and as of June 30, 1947, inventory of houses acquired in foreclosure on its own loans totaled only 25, and collections were still being made on some 351,000 remaining accounts. Over 84% of the original investment in loans and advances had been collected or liquidated. (See Home Loan Bank Board, Home Owners Loan Act.)

HOME OWNERS' LOAN CORPORATION BONDS

The Home Owners Loan Act of 1934 (q. v.) authorized the issuance of $2 billion of bonds by the Home Owners Loan Corporation which could be sold or exchanged for mortgages. These bonds were dated August 1, 1934, bearing interest at the rate of 2 3/4% per annum, and matured on August 1, 1949, callable at the option of the Home Owners Loan Corporation on and after August 1, 1939 at par and accrued interest on two months notice. Principal and interest on these bonds were guaranteed by the U. S. Government. The bonds have been all called. (See Home Owners Loan Corporation.)

HONOR

To pay a check or demand draft when it is presented to the drawee for payment, to accept a time draft or other time instrument when presented at maturity. A bank honors a check when it pays it. (See Acceptance for Honor, Dishonor, Payment for Honor.)

HOUSE BILLS

Bills of exchange drawn by a bank or other institution on its branch, agency, or subsidiary abroad. They are usually single-name bills.

HOUSING ACT

See National Housing Act.

HOUSING ADMINISTRATION

The Federal Housing Administration, established in June, 1934 by the National Housing Act (q.v.), is now a constituent operating agency of the Housing and Home Finance Agency (q.v.).

HOUSING AND HOME FINANCE AGENCY

Established on July 27, 1947 under Reorganization Plan No. 3 of the President, the Housing and Home Finance Agency now centralizes three constituent operating agencies: (1) the Home Loan Bank Board; (2) the Federal Housing Administration; and (3) the Public Housing Administration. The reorganization of housing agencies in the Government grouped together under the Housing and Home Finance Agency some 13 agencies in seven different departments or independent agencies of the Government.

In addition to general supervision and coordination of the three operating agencies, the Housing and Home Finance Agency Administrator is responsible for direction and supervision of management and disposition of Government owned war housing, as well as completing the temporary housing program for veterans. The Administrator is also a member of the National Housing Council in the Housing and Home Finance Agency, which serves as a coordinating medium for obtaining most ef-

fective use of Government housing activities. Other members besides the Administrator, who is Chairman, are the Chairman of the Home Loan Bank Board; the Federal Housing Commissioner; the Public Housing Commissioner; the Administrator of Veterans' Affairs; the Chairman of the Board of the Reconstruction Finance Corporation, and the Secretary of Agriculture.

(See Federal Housing Administration, Home Loan Bank Board, Public Housing Administration.)

HUNG UP

An expression used to describe the condition of an investor or speculator who has purchased securities the prevailing prices of which are below the original purchase prices, and which, therefore, cannot be disposed of without loss; to be loaded up with undesirable securities thereby tying up the owner's capital, and preventing him from making other commitments at favorable opportunities.

HYDRO-ELECTRIC COMPANY BONDS

Bonds of companies producing and selling electrical energy for power, light, and heat by means of hydro-electric plants. Because of the unpredictability of rainfall and water level, stand-by steam plants are essential for hydro-electric companies, thus diluting the advantage of low cost of normal hydro-electric plant operation. (See Public Utility Bonds.)

HYPOTHECARY VALUE

Loan value; collateral value; the value of securities or other collateral, e. g., notes, acceptances, etc., when placed on deposit with the lender, as a pledge for the payment of a loan. Good bonds usually have a hypothecary value equal to from 75 to 90 per cent. of their market value. (See Collateral, Hypothecation.)

HYPOTHECATION

The deposit of securities, or other collateral, e. g., notes, acceptances, bills of lading, warehouse receipts, etc., as a pledge for the payment of a loan. Securities must be in negotiable form before they are acceptable as Collateral (q. v.).

HYPOTHECATION CERTIFICATE

A certificate attached to a bill of exchange drawn against a shipment of goods, which describes the nature of the shipment, and authorizes the banker buying the bill to dispose of the goods in case payment or acceptance of the bill is refused. The hypothecation certificate, also known as a letter of hypothecation, is given by the seller of the bill together with the bill of lading, insurance certificate and other documents, as further security to the buying bank.

A general hypothecation power is sometimes executed by habitual drawers of bills of exchange which is applicable to all the bills which they may sell to their bankers. This is held by the purchasing bank.

IDENTIFICATION

A bank is liable to a customer for paying a check to an unauthorized payee, and a bank, therefore, must use great care in paying out its funds. When an account is opened the identity of the principals should be established immediately and their signatures placed on file.

Checks or other instruments should not be cashed for persons who are unknown. If a check is presented by a stranger, it should not be cashed until the indorsement or guarantee of one of the bank's customers can be secured. This is the best identification. In the case of small items or checks drawn under letters of credit, personal letters, passports, or an identification book may be accepted as identification media.

Very often a concern's payroll clerk, or persons other than the principal of the account present payroll checks, and authority may be given by the principals for this purpose. The identity of the person receiving the funds should always be established, however, by requiring him to indorse the check. Paying tellers are not usually permitted to cash checks drawn on other banks without approval from an officer. (See Finger Print Identification, Signature Department, Signatures.)

IDLE MONEY

Loose funds not being employed; money awaiting investment; free capital.

This term is also often applied to "excess reserves" (q.v.) of the banking system.

IF ISSUED

See When Issued.

ILLIQUID

Not readily convertible into cash; the opposite of liquid. Illiquid assets are those which can be realized upon only with difficulty, or at a sacrifice in value. Fixed assets are illiquid assets.

IMMEDIATE CREDIT ACCOUNT

In the late '20s, when banks competed actively for deposits and interest was payable on demand deposits, banks sometimes agreed to credit for interest purposes all local items deposited by a customer immediately upon receipt, and out-of-town items immediately upon collection. These accounts were called immediate credit accounts. Payment of the extra interest amounted to a premium for the accounts.

The motive for this competitive practice, the payment of the extra interest, was eliminated by the Banking Act of 1933, which prohibits payment of interest on demand deposits.

IMPAIRED CAPITAL

Under the Revised Statutes (Sec. 5205), every national bank which fails to pay up its capital stock, and every national bank whose capital stock becomes impaired by losses or otherwise, is required to pay the deficiency in the capital stock within three months after receiving notice from the Comptroller of the Currency, by assessment upon the stockholders pro rata for the amount of capital stock held by each.

If any such national bank fails to pay up its capital stock, and refuses to go into liquidation for three months after receiving the notice from the Comptroller, a receiver may be appointed to close up the business of the national bank.

State member banks are subject to compliance with the same requirements imposed on national banks.

IMPAIRED CREDIT

Weakened or diminished credit, especially as expressed in the reduction or total withdrawal of credit usually extended to a concern by its banking connections. Impaired credit may be the result of a breakdown in any one of the essential elements of a credit risk—moral risk, business risk, or property risk. (See Credit, Line of Credit.)

IMPERIAL BANK OF INDIA

The outstanding commercial bank of India, founded in 1921 under the Imperial Bank Act of 1920 as the amalgamation of the three Presidency banks--the Bank of Bengal, founded in 1806; the Bank of Bombay, founded in 1840; and the Bank of Madras, founded in 1843. In addition to its commercial banking activities, the Imperial Bank was invested with a quasi-public character, performing many fiscal functions for the Government, acting as a bankers' bank, operating a large system of branches throughout the country, and stimulating banking development in India. It was originally intended in 1920 that the Imperial Bank should eventually become the central bank for India, but in 1926, the Hilton Young Currency Commission recommended the creation of a separate bank, to be called the Reserve Bank of India, to perform central banking functions, thus leaving the Imperial Bank free to continue its commercial banking activities.

The central bank in India, therefore, having the sole right to issue notes, is the Reserve Bank of India, which was incorporated under the Reserve Bank of India Act in 1934 and commenced operations on April 1, 1935. (See Central Banks.)

IMPORT CREDIT

See Letters of Credit.

IMPORT DUTY

See Customs Duty, Tariff.

IMPORT QUOTA

A practice which grew up as a result of the slump in foreign trade during 1930-33 among various nations whereby the quantity of a given import was limited to a specified amount. The purpose is to achieve a better balance of exports and imports.

IMPORT LETTER OF CREDIT

See Letters of Credit.

IMPORT SPECIE POINT

See Gold Points.

IMPROVEMENT BONDS

A sub-classification of municipal bonds.

Bonds issued by a municipality or district for the erection of public works, or other improvements usually with more specific titles, e. g., public improvements, or street improvement bonds. They are sometimes Special Assessment Bonds (q. v.). Improvement bonds are municipal debentures and are not to be confused with Improvement Mortgage Bonds (q. v.).

IMPROVEMENT MORTGAGE BONDS

Bonds secured by a junior mortgage (usually on a railroad or public utility property) to provide for improvements or additions. These bonds are practically equivalent to general mortgage and refunding bonds, and like general mortgage bonds are customarily authorized and issued in sufficient quantity not only to provide for future betterments, but to retire the underlying mortgage bonds as they mature. When first issued they represent a second or perhaps third lien, but upon the retirement of the prior or underlying issues they may eventually become a first lien.

They are to be distinguished from extension bonds which are secured by additional real property or right-of-way, and from improvement bonds which are municipal or quasi-municipal issues. (See Extension Bonds, Improvement Bonds.)

IN AND OUT

An expression used among speculators to denote a transaction quickly turned over. One who buys or sells (or vice versa) a security on the same day, or within a brief period, is in and out of the market.

INACTIVE ACCOUNT

An account with a bank which shows a stationary or declining balance and against which both deposits and withdrawals are infrequent; or an account with a broker which shows few transactions, either purchases or sales. Inactive bank accounts are also called dormant accounts, and are usually transferred to an inactive accounts ledger. State statutes usually provide for escheat or forfeiture to the state of inactive or dormant accounts after specified number of years of inactivity. (See Active Account.)

INACTIVE MARKET

A market in which the volume of sales for the day or other period is small in comparison with average transactions. In an inactive stock market the number of securities dealt in and number of shares per transaction are small due to lack of public participation. An inactive market is usually one in which trading is largely confined to professionals. See under New York Stock Exchange for volume of transactions. (See Active Market.)

INACTIVE POST

The post on the floor of the New York Stock Exchange, Post 30, at which transactions in inactive stocks take place. The unit of trade for "inactive" is 10 shares instead of 100 shares. Inactive stocks are those in which trading interest is scant, and frequently embraces those, including preferred stocks, whose capitalizations are small. An inactive stock may be transferred to an "active" if conditions justify, or vice versa.

INACTIVE SECURITIES

Stocks or bonds, whether listed on the New York or other stock exchange, not frequently traded in. There are degrees of activity and inactivity. Many securities are not traded daily, some not being quoted more than once a month. From the standpoint of collateral (loan) value, any security which is traded every day is regarded as active. From a broker's standpoint, however, a security may not be regarded as active unless, say, 50,000 shares per day are sold, whereas an inactive security might be one in which, say, 500 shares or less, are sold. (See Active Securities, Inactive Post.)

INCOME

A term used in income tax accounting to indicate money received by a taxpayer from all sources. Section 22 (a) of the Internal Revenue Code defines gross income as including gains, profits, and income derived from salaries, wages, or compensation for personal service, of whatever kind and in whatever form paid, or from professions, vocations, trades, businesses, commerce, or sales, or dealings in property, whether real or personal, growing out of the ownership or use of or interest in such property; and also from interest, rent, dividends, securities, or the transaction of any business carried on for gain or profit, or gains or profits and income derived from any source whatever. However, Section 22 (b) of the Code lists 14 specific exclusions from gross income for income tax purposes. These exclusions are not as of right, but are acts of grace on the part of the sovereign, and are subject to change or amendment by Congress.

In a narrow investment sense, the term means the periodic (usually annual) accrual or return upon one's investments or income bearing property, e. g., stocks, bonds, mortgages, notes, real estate, etc., as distinguished from return for services, e. g., salaries, commissions, etc.

The derivation of income may best be shown by the following outline.

(See National Income.)

KINDS OF INCOME

		Property	Income
Property Income	(1)	Land	Rents
	(2)	Capital Investments . .	Interest, Profits
	(3)	Speculative Investments	Profits, Dividends
	(4)	Appreciation and Depreciation on Capital Goods	Profits
Service Income	(1)	Wages	
	(2)	Salaries	
	(3)	Fees, Commissions, Royalties, Tips, etc.	

INCOME BASIS

See Basis, Income Return, Yield.

INCOME BONDS

Bonds the payment of interest upon which is contingent upon earnings. Income bonds usually grow out of railroad reorganizations in which holders of defaulted mortgage bonds are required to accept income bonds. The principal of income bonds may be secured by a mortgage but one which constitutes only a junior lien,

or they may be collateral trust bonds or plain debentures. Interest upon income bonds does not constitute a fixed charge, and is payable out of earnings only after all fixed charges have been met. Failure to pay interest on income bonds, except when earned, does not entitle the bondholders to the right to sue. Interest is not paid if earnings are insufficient, but if the entire interest requirements for the issue are not earned, usually such portion as is earned may be declared payable. Income bonds are cumulative or non-cumulative, interest being dependent on declaration by the Board of Directors, as in the case of stocks.

Generally, income bonds are not high grade investments and are the least desirable of all the bonds of a given corporation. They usually rank just above the preferred stock. (See Adjustment Bonds.)

INCOME ENGINEERING

A newly coined phrase synonymous with budgeting. (See Budget.)

INCOME RETURN

The money accruing or earned upon an investment per year. The income return upon stock is found by dividing the amount of annual dividends by the purchase price; thus, if U. S. Steel common is purchased at 80 and pays $5.00 in annual dividends, the income return is 6.25 per cent. The income return on bonds may mean two things, the annual return upon purchase price, or yield if held to maturity. The former is ascertained in the same way as the income return from stock, i. e., by dividing the annual amount of interest by the purchase price. For the return if held to maturity, see Yield.

INCOME STATEMENTS

Statements of profit and loss for a particular period. Sources of items for the income statement is the temporary summary account, profit and loss account, which is set up in connection with the closing entries for the period in order to close out the nominal accounts of income and expense.

Form and content of income statements vary according to the nature of the business, public regulation, and managerial requirements for accounting detail. Regulation S-X of the Securities and Exchange Commission, relating generally to the form and content of financial statements of registrants under the Securities Act of 1933, Securities Exchange Act of 1934, and the Investment Company Act of 1940, has been a standardizing factor in accounting practices and detail of profit and loss or income statements.

INCOME TAXES

Federal income taxes have been continuously levied in the United States since March 1, 1913. In October, 1913, the first Federal income tax law was passed, following ratification of the 16th Amendment to the Constitution of the United States the previous February. That amendment added nothing to the taxing powers of the Federal Government, but merely provided that Congress shall have power to lay and collect taxes on incomes without apportionment, and without regard to any census or enumeration. Thus, Congress did have the power to lay taxes on income before March 1, 1913, but under the decision of the U. S. Supreme Court that such taxes were direct taxes, income taxes before March 1, 1913 would have had to be apportioned, in accordance with such Constitutional requirement for direct taxes.

The United States had an income tax during the Civil War, but this was given up shortly after the war. In 1894, Congress enacted an income tax, but this was declared unconstitutional by the Supreme Court, which ruled such a tax a direct tax and hence unconstitutional because it was not apportioned. Congress in 1909 proposed the 16th Amendment to the States, and such amendment was declared ratified by proclamation on February 25, 1913.

Although one or two states had enacted personal income taxes in the latter part of the 19th century, the first state to enact modern income taxes was Wisconsin, in 1911. As of July 1, 1947, 31 states and the District of Columbia levied income taxes of varying degrees of severity.

Before the 1932 depression and revisions of the income tax laws, both Federal and State, personal exemptions were quite high, with the result that the incidence of taxation among the low income groups was light. It is estimated that prior to the depression, only one out of every nine families paid Federal income taxes. Since 1932, however, exemptions have been lowered, rates increased, and the incidence of the income tax broadened considerably.

The income tax is the largest source of Federal revenues. For the 1947 fiscal year, the Treasury reports that individuals paid $19.6 billion in income taxes, or 44% of total receipts, and corporations paid another $9.7 billion, or 22% of total receipts, in income and excess profits taxes, making a total of $29.3 billion in revenue from these sources, or 66% of total receipts. Thus, income taxes are a highly productive source for the Federal Government, in addition to being highly flexible to revenue needs with their ease of amendment in rates and exemptions. In the case of the states, general and special property taxes, as well as gasoline and license levies, are the principal sources of revenue, although income taxes for various states have assumed increasing importance.

1947 Report.--The Treasury reports that individual income tax receipts increased in the fiscal year 1947 as compared with the fiscal year 1946 as a result of the increased levels of taxable income, more than offsetting the full year effect of the reduction in rates instituted by the Revenue Act of 1945. Individual income tax receipts during the fiscal years 1941 through 1947 accounted for $88.0 billion in receipts. In 1947, receipts from income and excess profits taxes amounted to $29.3 billion, a decline of $1.6 billion, or 5.1%, from 1946. A decrease of $2.9 billion in receipts from corporation income and excess profits taxes was partially offset by an increase of $1.3 billion in receipts from the individual income tax. Income and excess profits taxes accounted for 65.6% of total receipts for the 1947 fiscal year, compared with 42.0% in 1941. As between the two sources of revenue, the individual income tax has for the past four years provided the larger amount of revenue, and in 1947 amounted to more than double the corporation receipts.

Income and excess profits taxes upon individuals and corporations during the past seven years have yielded the highest revenues in United States history, as shown on table on page 295.

INCOMING EXCHANGES

Checks presented at a clearing house by other member banks upon the bank against which they are drawn in the clearing process. In the exchange of checks at the clearing house, each bank is presented by other member banks with the checks drawn against it which other banks previously have taken for credit. Incoming exchanges are the checks which each bank receives at the clearing house from other members, as distinguished from the checks which each bank presents against the other member banks. Incoming exchanges represent debits to the receiving bank's depositors' accounts. (See Clearing House, Clearing House Exchanges.)

INCONVERTIBLE PAPER MONEY

See Fiat Money, Irredeemable Paper Money.

INCORPORATED TRUSTEE

A trust company; a bank authorized by law to act in a fiduciary capacity, as distinguished from an individual trustee. (See Trustee.)

INDENTURE

A deed or agreement under seal between two or more parties, so called because originally a deed was indented or zigzagged along one of the margins. Since issued in duplicate, proof of genuineness or falsity of the documents was secured by comparing the indentations on the original with the duplicate, which if genuine, coincided with the original. In modern usage this term is equivalent to mortgage indenture or Deed of Trust (q.v.).

INDEPENDENT BANKING SYSTEM

A banking system in which banking is conducted by separate, local institutions, owned in the community in which they are established,locally managed, and having a single office, or if branch offices, the latter are confined to the same city. Independent banking is one of the features of the American banking structure, as distinguished from branch banking which characterizes the banking of Canada and many of the European countries, where banks are permitted to establish branches without limitation as to number or location.

The advantages claimed for independent banking are that it prevents the development of centralized control, and the concentration of banking power in the hands of a few individuals. It also permits sounder banking operations, especially in providing credit, since each banking unit is in closer contact with the local situation which is more likely to be understood by resident managers than by officials operating from a central office.

(See Branch Banking.)

INDEPENDENT TREASURY SYSTEM

A system established in 1846 under which Government funds were taken out of the banks and placed in the Treasury and sub-Treasuries. Between 1833, the date of the expiration of the charter of the Second Bank of the United States, and 1846, Government funds were maintained in state chartered banks exclusively. It was largely due to the charge of favoritism in the selection of state banks as depositories that the Independent Treasury System was adopted. Prior to 1833, Government funds were kept in the First and Second banks of the United States. (See Bank of the United States.)

In the period from 1846 to 1863 Government funds were exclusively in the Treasury and sub-treasuries, no banks being used as depositories of Government funds until after the National Banking System was established in 1863. After the establishment of this system, National banks to some extent served as Government depositories, thereby supplementing the treasuries as custodians of Government funds. With the establishment of the Federal Reserve System, the Federal Reserve banks were intended to serve as the chief depositories for Government funds, although member banks are still eligible for this purpose and large amounts are still kept on deposit with them.

The disadvantage of the independent Treasury system was that it was likely to disturb the money market by irregular deposits and withdrawals of money. While some of the governmental receipts from taxation were regular, a large portion, including income taxes, were quarterly. Withdrawals, moreover were apt to be exceedingly irregular. If irregular deposits and withdrawals happened to occur when money was tight—especially at the crop moving period, the result was likely

to be harmful. On the other hand, the Independent Treasury System was of aid in time of a crisis or panic by the deposit of surplus Government funds in the banks, thus providing a larger central reservoir. Sub-treasuries were abandoned in 1921, their functions being taken over by the Federal Reserve banks. (See Depository, Sub-Treasury, Treasury Department, Treasury Statement.)

INDETERMINATE BONDS

Bonds which have no fixed maturity date but which are callable at the option of the issuer usually after a specified date. (See Perpetual Bonds.)

INDEX-NUMBERS

Numbers which are representative or typical of the movement of prices of a single commodity or group of commodities (or wages, securities, exports, or other variable) or of the average prices prevailing during a given period, taken as a base with which to compare the price of these commodities (or other variables) at later dates.

The following is a definition of an index-number of wholesale commodity prices: "An index-number of any given article at any given date is the percentage which the price of that article at that date is of the price of the same article at a date or period which has been selected as base or standard. The method of computing index-numbers may be illustrated as follows. The average price of each commodity for the year 1913 is considered as 100. Then every month the prices of the various commodities are turned into relatives on that scale. Thus if wheat sold in 1913 at $1.00 a bushel and in May, 1918, at $2.26 a bushel, the relative price of wheat is then 226. If, on the other hand, the price of any commodity should drop from 50 cents to 40 cents, the relative price would be 80. To ascertain the change that has occurred from month to month in the general level of prices it is only necessary to strike an average of those prices" (Moulton, H. G.: Financial Organization of Society).

An index-number may be (1) an average of relative prices or average percentages of change in prices; (2) a sum in dollars and cents showing changes in the aggregate cost of certain definite quantities of certain commodities, e. g., Bradstreet's index-number of wholesale prices; and (3) relative figures made from a series of the second type.

Most index-numbers are general series, and while the majority of them are prepared to show changes in wholesale prices, they may also be constructed to show (1) the change in the value of money; (2) rise or fall in the cost of living; (3) alterations of periods of prosperity and depression; (4) the change in the purchasing power of the dollar; (5) the change in wage level, in export and import trade, bank clearings, bank deposits, etc.

The purpose of index-numbers of wholesale prices is to show the variation or trend in the price level. There are three general types of such index-numbers, the continuous index-number, e. g., "Dun & Bradstreet's," the chain index (not frequently used), and the base index. Preference seems to be for the first which shows the average rise or fall of prices compared with the next or any preceding date, e. g., week, month, or year. In the base index comparison is made with the average of prices for a fixed base period, e. g., 1926, that used in the Bureau of Labor Statistics index-number. Base index-numbers become less significant the longer they are maintained.

"Making an index number involves several distinct operations: (1) defining the purpose for which the final results are to be used: (2) deciding the number and kinds of commodities to be included; (3) determining whether these commodities shall be weighted according to their relative importance; (4) collecting the actual prices of the commodities chosen, and, in case a weighted series is to be made, collecting also data regarding their relative importance; (5) deciding whether to measure the average variations of prices or the variations of a sum of actual prices; (6) in case average variations are to be measured, choosing the base upon which relative prices shall be computed; and (7) settling upon the form of average to be struck.

"At each one of these successive steps choice must be made among alternatives that range in number from two to thousands. The possible combinations among the alternatives chosen are indefinitely numerous. Hence there is no assignable limit to the possible varieties of index-numbers, and in practice no two of the known series are exactly alike in construction" (Mitchell, W. C.: The Making and Using of Index Numbers).

The Bureau of Labor Statistics index-number of wholesale prices, computed both on a monthly and weekly basis, is undoubtedly the most comprehensive of those compiled in the United States. For this reason, its movements are more restricted than the indexes composed of a smaller number of items, such as the so-called "sensitive indexes" which select commodities especially sensitive to price changes. This index number, computed from 784 commodities is available as representative of all commodities, non-agricultural commodities, and 18 separate sub-groups, as follows; farm products; foods; hides and leather products; textile products; fuel and lighting materials; metals and metal products; building materials; chemicals and drugs; housefurnishing goods; miscellaneous; automobile tires and tubes; cattle feed; paper and pulp; rubber, crude; other miscellaneous; raw materials; semimanufactured articles; finished products.

A great number and variety of index numbers are published regularly by official and unofficial sources in the United States, as compared with a paucity of such data in the United States before World War I. The appended table tabulates some details of index numbers pertaining to commodity prices and the price level. Principal official sources of index numbers are the Departments of Agriculture, Commerce and Labor, and the Board of Governors of the Federal Reserve System. The Department of Commerce in its Survey of Current Business and the Board of Governors in the Federal Reserve Bulletin regularly publish complete business indexes which afford an index view of the trend of prices, business activity and production.

(See Cost of Living Index, Production Index.)

(a) Retail prices of representative non-style articles, based on reports from 53 leading stores.
(b) Weights applied to 12 kinds of prices, for combined index of general price level.

INDIA COUNCIL BILLS (DRAFTS)

Bills sold by the India Council in London. The Secretary of State used to sell Council bills and telegraphic transfers in London, payable in rupees in India, as a means of converting sterling into rupees. However, since 1923, the Government of India has been operating directly in the exchange market by purchasing sterling in India by public tender or privately from the exchange banks through the Imperial Bank (q. v.).

INDICATED YIELD

A term sometimes used for yields on bonds (either current return or yields to maturity) and stocks; especially when determined by reference to yield tables. Crop reports also list indicated yields of crops. (See Crop Reports; Yield.)

INDIRECT EARNINGS

Same as Equity Earnings (q. v.).

INDIRECT EXCHANGE

See Arbitrage, Arbitration of Exchange.

INDIVIDUAL BANK DEBITS

See Bank Debits.

INDIVIDUAL BANK RETURN

See Bank Return.

INDIVIDUAL BANKER

A private bank; an individual partnership or unincorporated association engaged in the banking business and subject to the jurisdiction of the State Banking Department, as distinguished from an incorporated bank. In most states, the banking function of receiving deposits from the public is restricted to banks incorporated under Federal or State law.

INDIVIDUAL DEPOSITS

Funds deposited with a bank by individuals, partnerships, firms, and business corporations (other than banking corporations), as distinguished from deposits of banks, trust companies, and other moneyed corporations. The Board of Governors of the Federal Reserve System prepares estimates of individual, partnership and corporation deposits for its studies on ownership of deposits.

Demand deposits, excluding interbank and Government deposits, are used in connection with bank debits and calculation of deposit turnover by the Board of Governors.

INDIVIDUAL TRUSTS

See Trusts.

INDORSE

To place one's signature on the back of a document as evidence of its legal transfer and passing of title, such as on a check, note, stock certificate, bill of exchange, bill of lading, etc. (See Indorsement.)

INDORSED BONDS

This term has two meanings:

(1) Bonds indorsed by a person or corporation other than the maker whose direct obligation they are. Indorsed bonds usually arise out of a consolidation in which the parent corporation purchases the bonds of its subsidiary. In order to strengthen their value marketwise, or as collateral for loans, the parent company may indorse them. A guaranty is implied in an indorsed bond, the indorser becoming liable in case of non-payment, just as in the case of an indorser of a note. The terms of the guaranty are written upon the bonds themselves, or upon a separate document. The underlying security is not changed by the indorsement.

(2) Bonds with writing or signatures extraneous to the text written thereon. By a rule of the New York Stock Exchange, a coupon bond bearing an indorsement of a definite name of a person, firm, corporation, association, etc., in conjunction with words of condition, qualification, direction or restriction, not properly pertaining thereto as a security, shall not be a delivery unless sold specifically as an "endorsed bond". This rule also applies to bonds with coupons bearing such endorsements.

INDORSEE

One to whom a negotiable instrument payable or indorsed to order is negotiated by indorsement and delivery. If the instrument is payable to bearer on its face, or if it is payable to order on its face and the last indorsement is in blank, the instrument may be negotiated by delivery alone. In the indorsement "Pay to the order of A. B. See, (signed), D. E. Eff," the indorsee is A. B. See. An indorsee is a "holder" of the instrument and has important rights as such (Right of the Holder, Article IV of the Uniform Negotiable Instruments Law, Article V of the New York Negotiable Instruments Law). (See Indorse, Indorsement.)

INDORSEMENT

The writing on the back of a negotiable or other instrument. The indorsement of a check, bill of exchange, or note consists of words, qualifying or not, followed by the signature of the indorser, who may be the payee, drawee, accommodation indorser, or holder, or simply the signature alone thereof. Indorsement is the means, plus delivery, by which order instruments are negotiated to another person. Negotiation consists of the transfer of title to and rights in an instrument from one person to another so that the transferee becomes the legal holder. If the instrument is payable to bearer, it is negotiable by delivery alone; if payable to order, it is negotiable by the indorsement of the holder completed by delivery.

An indorsement must be written on the instrument itself or upon a paper attached thereto, called an Allonge (q.v.). An indorsement must be an indorsement for the full amount of the instrument, but where the instrument has been paid in part, it may be indorsed as to the remainder. There is no limit to the number of indorsements that may be made on a negotiable instrument, except where negotiability has been destroyed.

There are five kinds of indorsements recognized in the Negotiable Instruments Law:

(1) Indorsement in blank, also known as general indorsement. If the instrument is payable to A. B. See, the indorsement in blank is his simple signature without additional words, i.e., "A. B. See." It specifies no particular indorsee, and thereafter is payable to bearer, and may be negotiated by delivery alone. It is a common form of indorsement, but has the objection that if the instrument is lost or stolen, it may come into the possession of a holder in due course, and being payable to bearer, may be paid to him. The holder may convert an indorsement in blank into a special indorsement.

An indorsement in blank is an unqualified indorsement, and thus the indorser thereof makes all the warranties to all subsequent holders in due course specified in Sec. 66 of the Uniform Negotiable Instruments Law (Sec. 116, New York Negotiable Instruments Law).

(2) Special indorsement, also known as direct indorsement, and indorsement in full. This indorsement specifies the person to whom or to whose order the instrument is payable, and the indorsement of such increase is necessary to the further negotiation of the instrument. If an instrument is payable to A. B. See, the special indorsement is "Pay to Adam Smith, A. B. See" or "Pay to the order of Adam Smith, A. B. See." This is the most proper form of unqualified indorsement and offers the owner the greatest protection both from a legal and practical standpoint. Without Adam Smith's indorsement, the instrument cannot be negotiated except by forgery.

A special indorsement is an unqualified indorsement, and the indorser thereof makes all the warranties to all subsequent holders in due course detailed in Sec. 66 of the Uniform Negotiable Instruments Law (Sec. 116, New York Negotiable Instuments Law).

(3) Conditional indorsement. This is an infrequent form of indorsement in which the indorser imposes some condition upon the transferee, e. g., "Pay Adam Smith upon the satisfactory performance of his contract, (signed) A. B. See", or "Pay Adam Smith or order if I am elected to the City Council, (signed) A. B. See." Where an indorsement is conditional, a party required to pay the instrument may disregard the condition and make payment to the indorsee or his transferee, whether the condition has been fulfilled or not; but any person to whom an instrument so indorsed is negotiated will hold the same, or the proceeds thereof, subject to the rights of the person indorsing conditionally (Sec. 39, Uniform Negotiable Instruments Law; Sec. 69, New York Negotiable Instruments Law).

The conditional indorsement is an unqualified indorsement dependent upon the condition's fulfillment, and the indorser thereof thus makes all the warranties, if the condition is fulfilled, specified in Sec. 66, Uniform Negotiable Instruments Law (Sec. 116, New York Negotiable Instruments Law).

Qualified indorsements are of two types and constitute the indorser a mere assignor of title to the instrument:

(4) "Without recourse", or words of similar import. The qualified indorsement, "Without recourse, (signed) A. B. See" does not destroy the negotiability of the instrument. Effect of this indorsement is to limit the warranties and engagement to pay; instead, the "without recourse" indorser makes the limited warranties found in Sec. 65, Uniform Negotiable Instruments Law (Sec. 115, New York Negotiable Instruments Law).

(5) Restrictive indorsement. A restrictive indorsement is a blank or special indorsement accompanied by words which either (1) prohibits the further negotiation of the instrument; or (2) constitutes the indorsee the agent of the indorser; or (3) vests the title in the indorsee in trust for or to the use of some other person. Thus, the indorsement "For deposit only, (signed) A. B. See" prohibits further negotiation of the instrument; and the indorsement "Pay Adam Smith for collection, (signed) A. B. See" constitutes the indorsee the agent of the indorser. The third type, "Pay Adam Smith in trust for John Jones, (signed) A. B. See", is rare.

Under Sec. 37, Uniform Negotiable Instruments Law (Sec. 67, New York Negotiable Instruments Law), a restrictive indorsement confers upon the indorsee the rights to (1) receive payment of the instrument; (2) bring any action thereon that the indorser could bring; (3) transfer his rights as such indorsee, where the form of the indorsement authorizes him to do so. All subsequent indorsees acquire only the title of the first indorsee under the restrictive indorsement.

The restrictive indorser is a qualified indorser, and makes the limited warranties found in Sec. 65, Uniform Negotiable Instruments Law (Sec. 115, New York Negotiable Instruments Law).

For further details and incidents of indorsements, see Article III, Uniform Negotiable Instruments Law (Article IV, New York Negotiable Instruments Law).

INDORSEMENT IN BLANK

The signature of the indorser, without additional words, is a sufficient indorsement (Sec. 31, Uniform Negotiable Instruments Law, Sec. 61, New York Negotiable Instruments Law). For example of indorsement in blank, and legal effect thereof, see Indorsement.

INDORSEMENT IN FULL

Known as the special indorsement in the Negotiable Instruments Law. It specifies the person to whom or to whose order the instrument is payable, followed by the signature of the indorser. For example of indorsement in full (special indorsement), and legal effect thereof, see Indorsement.

INDORSER

One who transfers his title to an instrument to another party by indorsement. (See Indorse, Indorsement).

INDUSTRIAL BONDS

Bonds issued by industrial corporations (excluding mining and real estate bonds), as distinguished from Government, municipal, public utility, railroad bonds, etc. Industrial bonds are essentially a modern type and were practically unknown prior to 1900, when the great industrial corporations, requiring large sums of capital, began to develop. Most industrial corporations still have no bonded debt, but are capitalized with preferred and common stock issues, doing their financing through commercial paper and seasonal bank loans. A large volume of industrial bonds was issued during World War I and following readjustment period, however, due to unprecedented growth of American industry and the necessity of raising additional capital funds. Industrial bonds are usually secured by a first mortgage upon a part or all of the plant of the issuing corporation although there are a few instances of collateral trust and unsecured issues.

Industrial bonds as a class are not considered as high grade investments as the other classes, although there are many individual issues that command a standing superior to issues in the other classes enumerated. Industrial bonds are considered more speculative than the other classes, because (1) they are unseasoned, i. e., have not been on the market as long as the others, and the record of insolvencies and defaults is unfavorable in comparison with the other classes; (2) lack of standardization due to the great diversity of industrial undertakings and the lack of uniformity in methods of operation, accounting, statistics, etc., each concern being a case by itself; (3) the dependence for success upon the high quality of management and personnel; and (4) instability of sales and earnings, which are subject to wide fluctuations, and in times of depression may not be sufficient to cover interest charges.

Leading industrial corporations have had no difficulty in bond financing or refunding at low interest rates of recent "easy money" years. Examples of high grade industrial issues (quality rating A1+) issued in recent years include: Deere & Co., Deb. 2 3/4s, 1965; Phillips Petroleum Deb. 2 3/4s, 1964; Standard Oil of California 2 3/4s, 1966; Standard Oil of New Jersey 2 3/8s, 1971; Texas Corp., 3s, 1965; and Westinghouse Electric Deb. 2 5/8s, 1971. Industrial bonds rated A1 include: Allis-Chalmers Mfg. 2s, 1956; Caterpillar Tractor Deb. 2s, 1956; National Dairy Products 2 3/4s, 1970; Shell Union Oil 2 1/2s, 1971; Swift & Co., 2 5/8s, 1972; and Union Oil of California 2 3/4s, 1970. Industrial bonds rated A include: American Tobacco Deb. 3s, 1969; Bethlehem Steel 2 3/4s, 1970; P. Lorillard 3s, 1963; Skelly Oil 2 3/4s, 1965; and Tennessee Gas & Transmission 2 3/4s, 1966.

Bibliography

Prime, J. H.: Analysis of Industrial Securities, 1935.

INDUSTRIAL COLLATERAL

One of the two classes of stock exchange collateral. Brokers who borrow in the call money market may present to the lending bank either industrial or regular (also called mixed) collateral. Industrial collateral consists entirely of stocks of industrial corporations actively traded on the New York Stock Exchange. (See Call Money Market, Collateral.)

INDUSTRIAL RECOVERY ACT

See National Industrial Recovery Act.

INDUSTRIAL STOCKS

Stocks of corporations in the extractive, manufacturing and distributive lines of business, as distinguished from railroad, public utility, bank, insurance company, and investment company stocks.

The magnitude of the industrial field lends itself to a wide range in detail of classification. A current classification, based on nature of the industry, is Barron's group classification for its group stock averages, as follows:

(1) Automobiles, (2) Automobile Equipment, (3) Aircraft Manufacturing, (4) Air Transport, (5) Building Materials and Equipment, (6) Chemical, (7) Copper, Lead and Zinc, (8) Drugs, (9) Dry Goods Chains, (10) Electrical Equipment, (11) Farm Equipment, (12) Foods and Beverages, (13) Gold Mining, (14) Grocery Chains, (15) Liquor, (16) Machinery (Heavy), (17) Motion Pictures, (18) Office Equipment, (19) Oil, (20) Packing, (21) Paper, (22) Railroad Equipment, (23) Retail Merchandise, (24) Rubber, (25) Steel and Iron, (26) Textiles, (27) Tobacco. The Chief characteristics of industrial stocks are the great variety in the lines of business they represent, lack of uniformity in methods of operation, accounting, and managerial skill, lack of stability in sales and production, and wide variations in earnings as result of alternate periods of prosperity and depression.

Industrial stocks are considered to be the most speculative of all types of securities. The enumeration above of their chief characteristics reveals some of the speculative elements necessarily inherent in their very nature. There is, however, a wide divergence in the stability of the various groups of industrial stocks and among individual issues in the same group. Companies engaged in the manufacture and sale of basic commodities, e. g., steel, equipment, food, clothing, etc., are obviously more stable than those engaged in the production of specialties, the market for which is less broad. Preferred stocks, moreover, often enjoy a fairly high investment rating, especially among companies which are conservatively financed. Common stocks which represent the last claim upon the assets and earnings of a corporation, are subject to considerable fluctuation in market price even among the best established and managed corporations.

In the original financing of many industrial corporations, the property was often purchased from proceeds of sale of preferred stock, or more rarely, bonded debt, common stock representing capitalization of future earning power. Many of these companies have since built up substantial property values against their common as well as preferred stock by reinvestment of a portion of annual earnings in fixed property. Most of the development of industrial corporations in fact, has been accomplished in this way. Many leading industrial corporations have characteristically paid in dividends highly conservative ratios of current earnings, thus "ploughing back" the bulk of earnings and self-financing expansion needs to a large extent in this manner.

In determining the value of industrial stocks as speculative investments the following points should be considered: nature and degree of stability, skill and responsibility of the management, amount of funded and floating debt, amount of prior charges, actual (not book) value of net assets per share, net current assets per share, current earnings per share, prospective earnings, average earnings over past five years per share, and current dividend rate. Generalized, tests in selecting industrial stocks are: Safety of principal, future prospects, management, personnel, certainty of income, marketability, potential appreciation, yield, security behind issue, stability of business, and trend of earnings and expenses. (See Speculation.)

INDUSTRIALS

See Industrial Bonds, Industrial Stocks.

INFLATION

A condition of buoyancy or expansiveness; the process of being puffed up. In the financial sense, the term has varied connotations, but basically, whatever the cause, is characterized by rising commodity and stock prices, increased business activity and profits, and a corresponding fall in the purchasing power of money. In this general sense, inflation is the exact opposite of deflation, a process or succession of events whereby commodity and stock prices, business activity and profits are declining, but with a concomitant rise in the purchasing power of money.

Herewith follow a number of definitions of inflation:

"I define inflation as a condition brought about when the means of payment in the hands of those who will spend them increase faster than goods can be produced. In other words, the volume and velocity of money must be related to the volume of actual and potential production of real wealth. I asked the question: 'How is it possible to have inflation when men are idle and plants are idle?' There can be speculative excesses when surplus funds bid up stocks or real estate, but inflation in the generally accepted sense can only come about by increasing the means of payment in the hands of people who are willing to spend faster than we can increase production."—Marriner C. Eccles, Chairman of the Board of Governors of the Federal Reserve System, November 22, 1935.

"Inflation exists in a country whenever the supply of money and of bank deposits circulating through checks, so-called deposit currency, increases relatively to the demand for media of exchange in such a way as to bring about a rise in the general price level." —Dr. Edwin W. Kemmerer.

"An increase in the general level of prices growing out of an increase in expenditures while goods available for purchase are not correspondingly increased in amount."—Dr. James Harvey Rogers.

Under normal conditions inflation is merely another name for credit expansion and a general rise in trade activity on a "sound" basis that historically has occurred during a period of revival or recovery following a trade depression, although the term is frequently reserved for that final phase of prosperity which in the past has led to speculative "excesses" in commodity and/or stock price movements, immediately preceding a crisis or collapse. The period from 1915 to 1919, the World War I boom, was one of great activity and credit expansion, brought about chiefly by large emissions of Government bonds, financed through the Federal Reserve System, as well as by popular subscription. During this period, as well as the period of rising prosperity between 1922 and 1929, the characteristics of inflation prevailed, but of orthodox credit inflation rather than through any change in the value of the monetary unit, or in its quality. A considerable range in latitude for inflationary symptoms thus exists within the normal mechanism of credit and debt-creation, i. e., by an expansion in the use of bank credit, heavy security flotations, and a rapid turnover of bank deposits, without involving any change in the monetary mechanism. Indeed, in the United States, where approximately 85 per cent. to 90 per cent. of all transactions are consummated by means of check payments (bank deposit currency), such inflations as arose in the period from 1879 to 1929, were uniformly credit inflations. By the same token, deflationary periods during this half century were credit deflations. (See Business Cycle.)

In the popular mind, however, and particularly since the money controversy of the years 1932-34, the term inflation (and its counterpart deflation) is less associated with the normal ups and downs inherent in the business cycle, than with monetary manipulation undertaken as a deliberate act of a Government, through its monetary authorities, to achieve a definite end, e. g., (1) to raise commodity prices, (2) to ease the burden of public and private debt, (3) to decrease the claims of creditors in terms of commodity prices considered abnormally low in comparison with prices at the time the credits were extended, (4) to prevent further bankruptcies and permit the liquidation of frozen bank assets, (5) to protect gold (or other metallic) reserves, and (6) to stimulate demand for a nation's products (by resultant lower exchange rate of its currency) in world markets, etc. While, as heretofore stated, the common denominator of any inflation is a rise in prices in most, if not all, parts of the economic structure, the characteristic of monetary inflation is that the general price level is forced up by altering the money side of the equation of exchange, either by increasing the quantity of money, impairing its quality, e. g., denying its redeemability, or lowering the metallic content of the unit, or both, or increasing the velocity of circulation.

In the era before the credit system developed, the common form of currency manipulation was debasement of the coinage. A sovereign, hard pressed for funds, and not wishing to risk heavier tax levies, had only the choice of substituting baser coins for those outstanding, or reducing their metallic content. The inflation of the French Revolution, usually regarded along with the German inflation culminating in 1924 as the most disastrous in history, was one of paper money secured by confiscated church lands.

Types of Inflation.—Monetary changes that are commonly regarded as constituting inflation or as tending to produce inflationary consequences, may be cited as follows:

(1) Suspension of gold payments. This may mean repeal of the right of the public to redeem currency, or the refusal to permit gold exports, or both. Usually, suspension of gold payments involves loss of both rights. It does not, however, necessarily prevent the maintenance of a free gold market in the country that has suspended gold payments. It does mean that gold will command a higher price in terms of the currency no longer respecting a fixed rate of convertibility, such higher price depending upon the market's judgment of the worth of that currency relative to other currencies.

(2) Devaluation, i. e., lowering the gold (or other metallic) content of the monetary unit and seizure by the Government of the resulting "write-up" or profit.

(3) Introduction of silver into the monetary system, either as token money, at a coinage value above its commercial (bullion) value, as Bimetalism (q. v.), or without a definite ratio of coinage with gold, or as Symmetalism (q. v.).

(4) Issuance of fiat or irredeemable paper money, either under statutes strictly limiting the size of the issue, or without limitation.

Suspension of gold payments is a procedure for protecting gold reserves or stimulating export trade, and may be initiated without inflationary intent or consequences. England's suspension of gold payments on September 21, 1931, was designed in furtherance of these ends, and not to raise the internal price level. Another major purpose of England's suspension of gold payments was to experiment with "managed currency," a policy of not attempting to anchor the currency to a fixed gold price, but to allow the currency to seek its natural level in the foreign exchange markets, protected against sharp and sudden fluctuation only by the operations of the Equalization Fund (q. v.).

Strictly speaking, therefore, the mere suspension of gold payments without other changes from customary monetary practice, is not, ipso facto, an inflationary step. It may or may not lead to inflation; it may or may not lead, after a period of trial and de facto stabilization, to a revaluation of the monetary unit at a new, but lower, gold conversion rate.

Since the great wave of national gold suspensions of 1931-32, due to the break-down of the workings of the traditional gold standard, much has been written about "managed currency," controlled inflation, counter-inflation, and deflation. The purpose of Governments was not to destroy the value of currencies to the detriment of the creditor class, but rather to shut off the forces of previous defalcation, and launch a new up-swing out of knowledge that pressures working for deflation, and chiefly the demand for liquidity and gold hoarding, were removed. Experience with managed currencies is still young, and its final history is not written. Proponents of "managed currency," however, claim success for its operation, e. g., in England and Sweden.

Like suspension of gold payments, devaluation does not insure a price rise. Devaluation is the statutory adoption of a new monetary unit of less metallic weight (and value) than that which preceded it. France, Belgium, and Italy are examples of countries which devalued their units in the years 1924-28 by from 75 per cent. to 80 per cent., after being off gold a number of years. The inflation in these countries occurred previous to devaluation. Actual devaluation was intended to stabilize prices at the higher levels attained. Devaluation provides new pars in foreign exchange; affords the Government an opportunity to capture the gold profit; and provides a basis for future credit expansion. But it stops the antecedent monetary inflation.

The promptest and surest method of achieving inflation, whether by voluntary intent, or involuntarily through inability to meet obligations, is by the issue of fiat, or inconvertible, paper money. Issuance of inconvertible paper is equivalent to a note forged by a government against its people. It is an injection of additional claims for goods or services of society without increasing the supplies of goods and services commensurately. Since there are no reserves to liquidate the added purchasing power prices rise, and the real income of the people declines. The creditor classes, owning claims to fixed sums of money, constantly declining in purchasing power, are impoverished or ruined. If the emissions are limitless or uncontrolled, it is possible to render the currency worthless, or practically so. The continental currency of our pre-constitutional Government, the inflation in France in the years 1790-96, and the German inflation of 1920-24 are the frequently cited examples of paper money inflation that went to the extreme end of catastrophe. Out Civil War greenback history furnishes an example of a paper money inflation that was limited and controlled.

For Civil War inflation, see under Greenbacks.

Also see Gold Standard, and Managed Currency.

Continental Currency Inflation.—The Revolutionary War had been financed largely by the printing of "Continental dollars," on the authorization of the Continental

Congress with the "faith of the Continent" as the only backing. The Congress then had no power to tax. The final result of this inflation is best summed up in the old saying—"not worth a Continental"—which has come down to even recent years as an expression of worthlessness.

One of the early histories tells the story in these graphic words:

"During the summer of 1780 this wretched Continental currency fell into contempt. As Washington said, it took a wagon load of money to buy a wagon load of provisions. At the end of the year 1778, the paper dollar was worth 16 cents in the northern states and 12 cents in the south. Early in 1780 its value had fallen to two cents and before the end of the year it took ten paper dollars to make a cent.

"In October, Indian corn sold wholesale in Boston for $150 a bushel, butter was $12 a pound, tea $90, sugar $10, beef $8, coffee $12, and a barrel of flour cost $1,575. Samuel Adams paid $2,000 for a hat and a suit of clothes. The money soon ceased to circulate, debts could not be collected, and there was a general prostration of credit."

French Assignat Inflation.—The French assignats which were issued between 1790 and 1796 form an outstanding example of deliberate inflation. The French Revolutionary government was confronted with the problem of both raising revenue and overcoming a condition of business depression. In response to the demands of the inflationists, the Constituent Assembly in April, 1790, authorized the issuance of assignats to the amount of four hundred million livres, to be legal tender and to bear interest at three per cent. The currency was to be secured by church lands recently seized.

At the beginning the effect was to relieve the Treasury of some of its burdens and to stimulate trade. As soon as the assignats began to circulate, however, they depreciated to the extent of about five per cent. The four hundred millions of paper were soon exhausted, and there was an immediate agitation for the issuance of additional currency. It was even claimed that the first issue had been a success. Mirabeau, a leading inflationist of the day, advocated that currency be issued equal to the amount of the whole national debt and insisted that such action would bring prosperity to the nation. The Assembly in September, 1790, by a vote of 508 to 423 approved the issuance of assignats up to a total of one billion two hundred million livres. This issue bore no interest and was payable to bearer but provided that as fast as the assignats were paid in for land they should be burned.

In the latter stages of the issuance of assignats the printing presses were run at the will of the executive authority, blanket authorization being given for the issuance of such amounts as might be needed. Within a year the discount on assignats was from 18 to 20 per cent., and within two years it amounted to 44 per cent. About that time there was a temporary rise in their value but in 1795 a rapid depreciation commenced. By February, 1796, it required 288 paper francs to equal one gold franc. Prices of various necessities soared, that of sugar rising 69 times and soap 44 times. Finally the populace joined in a public burning of the machinery with which the assignats had been made.

In October, 1795, a new government was established, the Directory. It tried to restore order in February, 1796, by issuing a new kind of paper money, called mandats, and secured only by choice public lands. One mandat was made worth thirty assignats. The mandats immediately depreciated to 30 per cent. of face value, then fell to 15 per cent., finally to 5 per cent. On July 16, 1796, the inevitable blow fell; the Directory decreed that all paper could be accepted at its real value, which meant at nothing. The people ceased even to compute the depreciation after that. When Bonaparte took the consulship the largest loan available in the land would not meet the government's expenses for a single day.

Unable to do profitable business in such a rapidly changing money, the market women of Paris marched on the Assembly and made an appeal famous among economists, that "laws should be passed making paper as good as gold." The Assembly tried to in every way possible. In April, 1793, a forced loan of a billion livres was levied upon the rich. In July that year the estates of the nobles were confiscated, and these lands, estimated at three billion livres, were placed also behind the paper money to make it more valuable.

In 1793 six years in prison was made the penalty for selling gold at more than its nominal value in paper. Six months later selling assignats at less than face value was made worth twenty years in prison. Two years later the guillotine was provided for any Frenchman who made investments in a foreign country.

Napoleon Bonaparte saw enough of inflation in the terrible years 1790-96 to convince him of its fallacious and dangerous nature. When he took the consulship conditions were appalling. The government was bankrupt, the troops were unpaid and further collection of taxes appeared impossible. Nevertheless, when asked at his first Cabinet meeting what he intended to do, Napoleon replied: "I will pay cash or nothing!" And he carried out that promise to the letter. "While I live," he declared, when he was hard pressed on another occasion, "I will never resort to irredeemable paper."

German Post-War Inflation.—Like France, Germany was involved in budget difficulties after World War I. Its national expenditures had increased five-fold during the War period and its national debt six-fold. The paper money in circulation had increased from less than three billion marks at the beginning of the War to 29 billion at the end of November, 1918. Wholesale prices in Germany slightly more than doubled during the War period. In view of the large expansion of currency, the advance in prices up to the time of the Armistice was moderate.

The German government borrowed from the Reichsbank during the War by the process of discounting Treasury bills. This was done to an increased extent as it became necessary to meet deficits in the post-war period. By the time the orgy of inflation reached its height toward the end of 1923, the government Treasury bills which were held by the Reichsbank totaled nearly 200 quintillion marks.

What happened during 1922 and 1923 was unlike anything that had ever occurred in the world's history. Paper marks depreciated more rapidly than the Continental currency of the United States in Revolutionary War days or the assignats of France, also in the latter part of the eighteenth century. The expenditures of the German government increased from 145 billion marks for the year ending March 31, 1921, to more than eight trillion marks two years later and to 49 quadrillion marks the next year. It was impossible to keep up with expenditures by levying more taxes. Currency in circulation, which amounted to 252 billion marks in August, 1922, increased to two trillion marks in January, 1923, and to 28 quadrillion marks in September, 1923, and

finally reached a total of 497 quintillion marks at the end of 1923.

By November 20, 1923, one gold mark was regarded as equal to one billion paper marks. New rentenbank notes which were issued at about that time as an intermediate step toward stabilization were exchanged at the rate of one for one billion paper marks. Subsequently, when the Reichsbank was reorganized in October, 1924, it issued new gold reichsmarks, one of which was equivalent to one trillion old paper marks.

During the inflationary period the gold value of the mark as quoted in foreign exchange dropped from an original par of 23.82 cents to about one-half cent in December, 1921, one one-hundredth of a cent in December, 1922, and twenty-three trillionths of a cent in December, 1923.

The business of gathering together and distributing capital in Germany was completely demoralized by the inflation. No one wanted to keep money in the banks. In 1922 all savings in Germany amounted to only 3,000,000,000 gold marks, against 20,000,000,000 reported by the savings banks alone two years earlier. Speculation was rampant, and it resulted in overdevelopment in some fields, underdevelopment in others. How much of this capital was remunerative may be gathered from the fact that dividend payments in 1922, measured in their gold value, were only one-fiftieth of what they were before the war.

Russian Post-War Inflation.—Russia was plunged into inflation by efforts to finance governmental deficits through the issuance of fiat money. Early in World War I, the Russian Treasury was allowed to discount its short-term obligations at the State bank to any extent desired, previous restrictions being removed. The currency was on an inconvertible paper basis. As early as 1916 there was only paper money in circulation. The government obtained enormous amounts from the bank. Between January 1, 1917, and January 1, 1923, the quantity of money in circulation increased two hundred thousand times while prices increased ten million times. The depreciation was more rapid than the rate of issuance of currency. A new Soviet State bank issued notes to meet deficits of the Treasury during 1922 and 1923. Finally in 1924 a new ruble was issued in exchange for fifty billion of the old depreciated rubles.

INGOT

A bar of metal cast from a mold, such as gold, copper, tin, lead, zinc, etc.

INHERITANCE

In popular usage, inheritance refers to any property obtained through devise or bequest (by will), or through descent and distribution (by laws of intestacy). In the technical sense, inheritance at common law referred to the estate in real property descending to heirs. In New York, all distinctions in intestacy between persons taking as heirs or heirs at law and next of kin were abolished August 31, 1930, and the descent or distribution of real property or personal property now applies to a uniform class of takers called distributees, including a surviving spouse. (See Descent, Laws of; Testator; Will.)

INHERITANCE TAXES

Taxes imposed by practically every state in the United States upon the right to receive property by inheritance or succession. They are collected but once—at the time of the transfer of the inheritance to the beneficiaries—being unlike other taxes, which are collected periodically.

Inheritance taxes are to be distinguished from the Federal estate taxes (q. v.), which are imposed upon the privilege of transferring property at death. Inheritance taxes are of two kinds, direct and collateral. The first applies to property directly descending to the next of kin, e. g., son, daughter, father, mother. The administration and rate of the tax differs among the different jurisdictions. Most ineritance taxes are progressive, the percentage increasing with the size of the estate or individual shares, and with the remoteness of kinship. In England inheritance taxes are called "death duties."

INLAND BILL

As defined by the Negotiable Instruments Law, a bill of exchange which is, or on its face purports to be, both drawn and payable within the state (Sec. 129, Uniform Negotiable Instruments Law; Sec. 213 New York Negotiable Instruments Law). Any other bill is a foreign bill. The term is frequently used, however, as synonymous with domestic bill. A foreign bill must be protested in case of dishonor, but an inland bill need not (Sec. 152, Uniform Negotiable Instruments Law; Sec. 260, New York Negotiable Instruments Law).

INSCRIBED STOCK

Stocks or bonds which in English practice exclusively, are registered in the name of the holder in the books of the issuing organization and for which no actual certificates (in the American sense) are issued. The owner of inscribed stocks, besides being registered on the company's books as owning a certain number of shares, is given a memorandum of ownership. This memorandum does not prove title nor constitute ownership, and is non-negotiable. It cannot be sold or assigned as a stock certificate in America. In order to transfer inscribed stock, the holder must personally attend to the transfer by presenting his memorandum of ownership and signing the inscribed stock register. The original certificate of ownership is then destroyed and a new one issued in its place in the name of the transferee or buyer.

Inscribed stock differs from registered stock in that in the former, no actual certificates of ownership are issued, the memorandum of ownership not constituting proof of title.

As a rule, only British Government or municipal loans are issued as inscribed stock, British Consols (q. v.) being an example. Most of the securities upon the London Stock Exchange are in "registered" rather than "inscribed" form. Dividends or interest upon inscribed stock are remitted by check.

INSIDER

An expression to denote a person who, because of his employment or business connections, has intimate knowledge of the financial affairs of a concern before such information is published and is available to the

public. He is therefore in a peculiarly advantageous position for capitalizing this information by speculating, i. e., making commitments in the securities of the concern in accordance with this knowledge, in advance of the public.

Under Sec. 16 of the Securities Exchange Act of 1934, every person who is directly or indirectly the beneficial owner of more than 10% of any class of any equity security (except exempted securities) registered on a national securities exchange, or who is a director or officer, is required to file at the time of registration of the security or within ten days after becoming such owner, director or officer, a statement with the exchange and with the Securities and Exchange Commission of the amount of all equity securities of the issuing company of which he is the owner. Thereafter, within ten days after the close of each calendar month, he is required to file with the exchange and the Commission a statement, if there has been any change in ownership during the month, indicating his ownership at the close of the calendar month and such changes in his ownership as have occurred during the month.

The Act goes on to provide that for the purpose of preventing the unfair use of information which may have been obtained by such beneficial owner, director or officer, by reason of his relationship to the issuer, any profit realized by him from any purchase and sale, or any sale and purchase, of any equity security of the issuing company (other than an exempted security) within any period of less than 6 months shall insure to and be recoverable by the issuing company, unless such security was acquired in good faith in connection with a debt previously contracted. This recovery shall be irrespective of any intention on the part of such beneficial owner, director, or officer in entering into the transaction of holding the security purchased or of not repurchasing the security sold for a period exceeding 6 months.

Suit to recover such profit may be instituted at law or in equity in any court of competent jurisdiction by the issuing company, or by the owner of any security of the issuer in the name and in behalf of the issuing company if the latter fails or refuses to bring suit within 60 days after request or fails diligently to prosecute the suit thereafter. However, no such suit shall be brought more than 2 years after the date such profit was realized.

In addition, Sec. 16 of the Securities Exchange Act of 1934, provides that it shall be unlawful for any such beneficial owner, director or officer either directly or indirectly to sell any equity security of the issuing company (other than an exempted security), if the person selling the security or his principal (1) does not own the security sold, or (2) if owning the security, does not deliver it against such sale within 20 days thereafter, or does not within 5 days after such sale, deposit it in the mails or other usual channels of transportation. This provision does not apply in the case of inability to make delivery or deposit within the deadline despite exercise of good faith, or undue inconvenience or expense involved. (See Securities Exchange Act of 1934.)

INSOLVENCY

The condition of a debtor unable to pay debts. Insolvency in the bankruptcy sense means the excess of liabilities over assets. As defined by the National Bankruptcy Act (Sec. 1), "a person shall be deemed insolvent within the provisions of this Act whenever the aggregate of his property, exclusive of any property which he may have conveyed, transferred, concealed, removed, or permitted to be concealed or removed, with intent to defraud, hinder or delay his creditors, shall not, at a fair valuation, be sufficient in amount to pay his debts."

Insolvency in the sense which has been defined by equity courts means the inability of a person to meet debts as they mature. Thus, a person whose assets might not cover all liabilities may nevertheless be solvent in the equity sense because of ability to marshal assets to meet debts as they mature. Both types of insolvency are entitled to relief afforded debtors by the National Bankruptcy Act (q. v.).

Insolvency is to be distinguished from bankruptcy in that the former is an accounting term independent of statute, whereas the latter is the legal term, indicating that the debtor is subject, voluntarily or involuntarily, to the provisions of the National Bankruptcy Act. (See Bankruptcy, Failures.)

INSOLVENT

An individual or concern that is unable to meet debts as they mature, or whose liabilities exceed assets; the adjective applied to such a financial condition. (See Insolvency.)

INSTALMENT

A part payment on the purchase price of an article, which is sold with the understanding that the remaining payments shall be due on specified future dates. The word is especially used in connection with the purchase of consumer goods where a certain percentage is paid down, the balance being payable in a number of payments following at stipulated intervals, until the full amount is paid. Such payments are called instalments.

The term is also applied to a part payment on a debt, e. g., a note, or income tax assessment.

Instalment credit controls exercised by the Board of Governors of the Federal Reserve System under Regulation W (q. v.), pursuant to Executive Order, ceased to be operative after November 1, 1947, in accordance with resolution of Congress approved August 8, 1947. Instalment terms prescribed by Regulation W generally called for maturities of not more than 15 months and down payments of at least one-third.

INSTALMENT BONDS

See Serial Bonds.

INSTALMENT SALES

Sales of goods to consumers on a definite plan of payments, involving a certain cash payment with balance payable in instalments periodically until the debt is extinguished. Prior to 1922, instalment sales were confined to comparatively few retail businesses, and usually those distributing cheaper grades of merchandise to wage-earning classes. The plan gained impetus after 1922, when it recorded its initial success in the automobile trade. In recent years, automobile instalment credit has continued to be the largest line, followed by instalment credit extended by furniture stores,department stores and mail order houses, jewelry stores, and household appliance stores.

Usually the instalment seller is protected by some form of lien (modified chattel mortgage) upon the merchandise by which title remains vested in the seller until the buyer completes the final payment. Evidence of title and terms of the contract are signed by both par-

ties. Default entitles the seller to repossession. Instalment selling is a way of stimulating business, and involves the extension of consumers' credit which in recent years has become increasingly popular with commercial banks. At the close of 1929, consumer instalment loans at commercial banks, totaled only $43 million, and by 1933 had dropped to $29 million. By the close of 1937, however, the total had expanded to $258 million, and the real growth has occurred in the post-War period, with total loans of $1.8 billion in 1946 and $2.5 billion in 1947, and total outstanding December 31, 1947 of $1.4 billion. This expansion by commercial banks has exceeded that of other lenders; small loan companies, for example, extended $1.3 billion of loans in 1946 and $1.5 billion in 1947 and had outstanding loans of $712 million at the close of 1947.

At the close of 1947, total instalment credit reached $6,156 million, compared with $3,976 million at the close of 1946, and $1,595 million at the close of 1933, and almost double the total of $3,167 million reported at the close of 1929. Most of the expansion at commercial banks, whose expansion in this type of loans has been considerably greater than at other lenders, has resulted from additional loans for repair and modernization of housing, and for purchases of automobiles and other durable consumers' goods.

Prior to November 1, 1947, Regulation W of the Board of Governors of the Federal Reserve System regulated the expansion of instalment loans on automobiles and other consumers' goods, and prescribed minimum down-payment and repayment period terms. As of November 1, 1947, in accordance with Congressional Resolution, Regulation W ceased to be effective.

INSTITUTIONAL SECURITIES CORPORATION

A New York mortgage loan company, organized in July, 1933 by the mutual savings banks of New York State in order to create a market for mortgages, mortgage loans and obligations secured by mortgages held by the mutual savings banks. The company also does mortgage servicing, and in 1942, also entered the field of financing, building and management of defense housing and the investing of funds in Federal Housing Administration insured mortgages. In 1946, the corporation also was authorized to invest in guaranteed veterans' loans.

Sources of Funds.--Capital of $10,000,000 ($100 par value) was originally subscribed by the mutual savings banks of New York State in proportion to their deposits, payable in cash or mortgages, half of which was called for payment. In 1947, the par value was reduced to $50 to reflect the paid-in capital. In addition to its capital stock, the corporation's principal source of funds is the issuance of unsecured debentures, authorized to an aggregate principal amount of 10 times paid-in capital. As of December 31, 1947, a total of $20,000,000 in debentures was outstanding, or 4 times capital, consisting of four issues of $5,000,000 each, with 10-year maturities and carrying 3% interest rate. These debentures were all sold to the mutual savings banks of New York State.

Financial Condition.--A fully invested position is maintained, inventory of bonds and mortgages as of December 31, 1947 totaling $22 million, or 66% of total assets, and first mortgage bonds of Knickerbocker Village, Inc., a housing development, totaling another $3.6 million. Cash (including balances in agency accounts) totaled $462,000, and Government bonds, $6.1 million. In addition to the $20 million in debentures, the corporation also had outstanding a total of $6,050,000 in loans payable, or total borrowed funds of 4.4 times the capital funds of $6,098,000 (capital of $5 million and surplus and undivided profits of $1,098,000). Mortgage commitments at the close of 1947 totaled $17,711,000, compared with $3,100,000 at the close of 1946.

The Instituional Securities Corporation was one of the two institutions organized by New York State savings banks in 1933 to impart liquidity as needed to mortgage holdings, the other institution being the Savings Banks Trust Company (q.v.). (See Savings Banks.)

INSTRUMENT

A general term to denote any kind of document in writing by which some right is conferred or contract is expressed. Practically all documents used in finance, e. g., check, draft, note, bond, coupon, stock certificate, bill of lading, trust deed, trust receipt, etc., are instruments. (See Credit Instruments, Negotiable Instruments.

INSTRUMENTALITY

Literally, an agency. Corporations organized under act of Congress, if such corporations are instrumentalities of the United States, and if under such act, Congress has specifically provided for such exemption, are exempt from Federal income taxes. Although obligations of Government credit agencies, such as the Intermediate Credit Banks, are ruled to be instrumentalities of the United States, that does not make them liabilities of U. S. Government unless so provided by legislation. In holding company finance, courts have applied the "instrumentality rule" to hold parent companies liable for debts of subsidiaries which are merely instrumentalities of the parent companies.

INSUFFICIENT FUNDS

A term used in banking practice in returning checks not payable because the drawer has insufficient funds. When a check is presented for collection through the clearing house or otherwise for which the drawer has insufficient funds to meet it, the drawee bank returns it to the presenting bank for credit (by messenger or otherwise), with a memorandum slip attached on which the words "Insufficient Funds," are printed.

Where doubt exists, the paying teller examines the account of the drawer to see that sufficient funds are on hand, when a check is presented for payment.

INSULAR BONDS

Bonds issued by Hawaii, Puerto Rico and the Philippine Islands, known also as territorial bonds. Other insular possessions and dependencies of the United States have no bonded debt outstanding.

Philippine Islands: Pursuant to the Tydings-McDuffie Act of 1934, as amended in 1939; a supplementary sinking fund was created for retirement of Philippine bonds issued prior to adoption of the Act, consisting of proceeds from the Philippine tax on exports to the United States. These proceeds were turned over to the U. S. Treasury in trust, to pay future interest and principal requirements on bonds of the Philippines, its provinces, municipalities and instrumentalities issued prior to May 1, 1934 which will remain outstanding after July 4, 1946.

Total net bonded debt June 30, 1941 was $36,011,069, of which $24,623,199 was National Government debt, consisting of 11 issues. The Tydings-McDuffie Act specifically provides that there shall be no obligation on the part of the United States to meet the interest or principal of bonds or other obligations of the Philippine Commonwealth, provincial or municipal governments issued thereafter during the continuance of the U. S. Government in the Philippines. Philippine bonds are exempt from all U. S. taxes, except estate, inheritance and gift taxes, regardless of whether issued prior to or after enactment of the Tydings-McDuffie Act, but whether such status will continue now that the U. S. has completely withdrawn from the Philippines has not been officially determined.

Hawaii: The Organic Act for the Territory of Hawaii limits the total bonded indebtedness to 10% of the assessed value of property in the Territory and the amount of indebtedness to be incurred in any one year to 1% of such assessed values. As of June 30, 1945, net bonded debt, after deduction of sinking funds, totaled $12,287,083, consisting of some 27 issues, mostly for small outstanding amounts. Net assessed valuation of property in Hawaii January 1, 1945 was $345,312,499, 10% limitation on debt therefore amounting to $34,531,250, or well above the net bonded debt outstanding. The bonds are exempt from all U. S. taxes except estate, inheritance and gift taxes.

None of the insular bonds are direct obligations of the United States, but in as much as the bonds were issued by authority of the American Congress, and under the supervision of the U. S. Treasury, and since in the opinion of the Attorney General of the U. S., the United States could compel payment in the event of default, these insular bonds are generally considered to be indirect obligations of the United States. In approving in 1921 the issue of the Philippine Islands 5 1/2s, due 1941, the Attorney General of the United States wrote in part as follows:

"This issue and sale of bonds is authorized explicitly by the National Power, and while in the strict and legal sense the faith of the United States of America is not pledged as a guaranty for the payment of the loan or for the due use of the proceeds or the observance of the sinking fund requirements, the entire transaction is to be negotiated under the auspices of the United States of America and by its recognition and aid. There can be no doubt, therefore, that the National Power will take the necessary steps in all contingencies to protect the purchasers in good faith of these securities." (This opinion applies to Philippine bonds issued prior to enactment of the Tydings-McDuffie Act on March 24, 1934.)

Puerto Rico: The Organic Act for Puerto Rico provides that no public indebtedness of Puerto Rico and the municipalities of San Juan, Ponce and Mayaguez shall be allowed in excess of 10% of the aggregate tax valuation of its property, and no public indebtedness of any other subdivision or municipality of Puerto Rico shall thereafter be allowed in excess of 5% of the aggregate tax valuation of the property in any such subdivision or municipality. By amendment approved in 1935, bonds or other obligations payable solely from revenues derived from public improvements shall not be considered public indebtedness within the meaning of this debt limitation. Total assessed value of real and personal property June 30, 1945 was $368,369,000, of which $281,207,000 was real property. As of July 1, 1945, Puerto Rican bonds (Insular issues, Irrigation South Coast and Utilization of Water Resources, and Land Authority issues) totalled $13,064,000, of which $940,000 was to be called July 1, 1946. Outstanding were some 24 issues, mostly for small amounts. The electric revenue bonds of the Puerto Rican Water Resources Authority, which is a government instrumentality of the People of Puerto Rico but not an obligation of Puerto Rico, being payable solely from electric revenues of the Authority, were outstanding June 30, 1946 in the amount of $25,000,000, consisting of 2 1/2s, due serially to 1969, and 1.90s, due serially to 1973.

The Puerto Rican legislature has passed a "tax holiday" which offers to new industries blanket, exceptions from income, property and municipal taxes, as well as from excise levies on machinery and raw materials. The holiday is to last until June 30, 1959, and during the subsequent three years, graduated low rates go into effect.

Puerto Rican bonds are exempt from U. S. income taxes, but subject to estate, inheritance and gift taxes. In December, 1942, Puerto Rican bonds became subject to Island income tax, but this was ruled not to apply to bonds held by holders residing outside Puerto Rico.

Obligation of the United States in regard to Puerto Rican bonds is considered to be covered by the 1921 opinion of the Attorney General cited above.

INSURANCE

Elimination of or protection against risks regular enough to become amenable to actuarial calculation; voidance or reduction of losses occurring through various misfortunes, e. g., death, fire, accident, tornado, shipwreck, etc., through the co-operative sharing of such losses, i. e., through contributions made to a single fund by a large number of persons for the purpose of indemnifying losses systained by such of the group as may be affected.

Whether insurance is provided by established "old line" companies which compute risks scientifically through the aid of experience tables, or by mutual associations, or by groups of individuals, its function is always to ease the bearing of calculable risks. The essential principle of insurance is co-operation or pooling of losses that may occur to a large group of persons, but which actually through the law of averages, will happen only to a small number in such group. For instance, it may be known that three out of every 1,000 houses in a given locality, will burn down each year; but it is not known which of those three houses will be destroyed. The loss to the owners of the three houses would be

crushing, but if distributed among a thousand owners, it becomes entirely bearable.

Insurance does not prevent losses; rather it substitutes a small certain loss for a possible or contingent large loss. The insured is indemnified for the amount of the loss, or for the insured amount, or for the face of his policy, in return for payment of periodic premiums. It is thus the reverse of gambling, which involves the assumption of heavy and unnecessary risks. Insurance seeks to eliminate chance while gambling seeks to create chance. Thus, paying four dollars a year as protection against the contingent loss by fire of a house worth $3,000 is insurance; not doing so, by assuming the risk of loss of $3,000, is gambling.

The principal kinds of insurance are the following: Life--Ordinary life, participating and non-participating; group life; industrial; annuities. Fire and marine--Fire; entended coverage; ocean marine, war risk and excluding war risk; motor vehicle; earthquake; inland navigation, etc.; tornado and windstorm; sprinkler leakage; riot and civil commotion; explosion; rain; hail; flood; aircraft. Casualty and surety--accident; health; automobile liability; other liability; workmen's compensation; fidelity; surety; plate glass; burglary and theft; boiler and machinery; automobile property damage; other property damage and collision; automobile collision. Insurance on property greatly exceeds life insurance. Based on aggregate insurance in force, fire and marine heads the list, followed in order by life and casualty insurance.

Fire insurance is written by stock companies,mutual companies, or by associations of individual insurers, e. g., Lloyd's in London. A particular feature of the American system of chartering insurance companies is the segregation of companies into life, fire and casualty companies, and the absence of multiple line companies authorized to write all kinds of insurance, as in the case of European companies. Instead, American operation under the group or "fleet" system has been characteristic, with nearly 95% of total fire and marine business, and 70% of casualty business, among stock companies, being handled by groups or fleets. The U. S. Supreme Court decision, however, that insurance is commerce may lead to fundamental changes or outright abandonment of group operation, the latter decision having been taken in 1948 by the Home Group of fire and casualty companies.

Life Insurance.—These companies are also of stock and mutual form, and are usually classified according to the plan of premium payments into (1) "old line" level premium, and (2) assessment (mutual and fraternal companies). The "old line" companies are the most satisfactory since premiums, reserves, and surplus are computed scientifically in accordance with the American mortality experience table, an assumed rate of earnings on investments, and a fixed rate of expenses. They are regulated, moreover, especially in the matter of investment media, by the various state insurance departments.

Classified by method of premium payment, level premium, or "old line" life insurance is best known by its four most popular forms: (1) ordinary life plan, in which premium payments at a fixed sum continue throughout life (the policy automatically becoming an endowment at age 96); (2) limited payment plan, in which the number of premiums is limited to ten, fifteen, twenty or more years when the policy becomes paid up; and (3) term plan, in which insurance is provided for a term of years renewable for another term at an advanced rate depending upon the age of the insured, with no values available to the insured himself but carrying the lowest premium charge.

Endowment is a combination of insurance and compulsory savings in which the policy matures in a certain number of years after it is issued, so that if the policy-holder survives, he receives the face of the policy at that time. An endowment policy is a form of savings which compares favorably with a savings bank account with the compulsory feature added.

All mutual, legal reserve insurance companies provide for a participation in savings by all policy-holders. In this way the cost of insurance to the insured is progressively lower as the policy increases in age. Legal reserve companies organized as stock companies write life insurance on the participating and non-participating basis, mainly the latter, but their initial premiums to the insured are lower than those of the mutual companies. If the premium payments of a company plus its income on investments exceed death claims and expenses, a surplus arises. This may be due to the circumstance that the average insured live longer than was assumed, because the investment return is temporarily or permanently higher than postulated, or because expenses are kept down below the precalculated rate. Out of such surplus, dividends are paid to policy-holders based upon the amount of the annual premium and the kind of insurance. Such dividends may usually be taken in a number of alternative ways: (1) cash payment, (2) applied in reduction of premium, (3) to purchase paid up insurance additions payable at the maturity of the policy, (4) to accelerate the payment of the total premiums due, i. e., to hasten the time when the policy will be considered as paid up, or (5) credit to a premium deposit fund.

When a policy matures there are usually several optional methods of settlement: (1) payment in cash in one sum, (2) payment of interest on the amount of the policy, at the end of each year during the lifetime of the payee, and the payment of the principal sum with any accrued and unpaid interest thereon, on the death of the payee, to his or her executors, administrators or assigns, (3) payment of a specified number of equal annual instalments, whether the payee lives or dies (the first instalment payable immediately), the amount of each instalment to be in conformity with the company's prepared tables, (4) payment of equal annual instalments (the first instalment payable immediately), for ten or twenty years certain, and as many years thereafter as the payee shall live, such selected ten or twenty instalments certain being paid whether the payee lives or dies, the amount of each instalment to be in conformity with the company's prepared tables, and (5) payment of an annuity during the lifetime of the annuitant (first payment payable immediately), the amount of each payment to be in conformity with the company's prepared tables.

The motives for carrying life insurance may be as follows: (1) to provide funds to pay debts and cover funeral expenses, (2) to provide an estate for the benefit of wife and children, the income of which will be sufficient to provide for their material wants (the ideal situation); (3) to provide a monthly income for the wife and children; (4) insurance for old age (endowment insurance); (5) to provide for education of children; (6) protection for business associates (business insurance); (7) to provide bequests; (8) to pay inheritance taxes on personal and real estate; (9) to pay mortgage on home of insured; (10) to provide an income during periods of sickness or disability (disability insurance); and (11) to

provide for credit expansion.

Fire Insurance.--Straight fire insurance is the largest line written by fire companies. Premium volume from fire insurance is more than double the volume of motor vehicle and extended coverage combined, the next two largest lines. Most fire insurance policies are written for terms of three to five years, a practice which tends to result in lack of adequate insurance coverage for the insured in periods of rising property values, and the reverse when values decline. Another characteristic of this practice is its influence on underwriting profits of fire companies. In accordance with the law, all premiums paid in advance must be set aside on the books as a liability, the unearned premiums account, and may be credited to underwriting account only as fully earned. The expenses, however, of writing the business must be met immediately, and losses on the increased volume of outstanding insured risks rise normally. Both the larger expenses and losses are charged to current underwriting account, whose credit, earned premiums, still does not reflect the larger premium volume which will be fully earned in the future. Thus, the paradox arises that normally underwriting losses are reported in periods of rising premiums written. To adjust for this distortion, the statistical practice has developed of adjusting the reported or "statutory" underwriting results by adding to or subtracting therefrom the equity in unearned premiums reserve fluctuation, which equity is usually figured conservatively as a flat 40%. (See Insurance Company Statements.)

Casualty and Surety Insurance.--The casualty and surety companies as a group are the youngest branch of the industry. During the late '20s, some of these companies added to their writings the guarantee of real estate mortgages and bonds, a type of business which caused severe underwriting losses in the ensuing 1929-1932 depression and necessitated financial aid from the Reconstruction Finance Corporation for various companies. The depression also witnessed heavy underwriting losses in workmen's compensation, surety and automobile liability lines. As recovery developed, however, the casualty companies emerged with a sounder rate structure, eliminated unprofitable lines, and strengthened financial condition. A characteristic of casualty companies, as compared with fire companies, is their conservatism in investing assets, most casualty companies maintaining a large proportion of their assets in cash and Government securities, with average of 60% of their assets invested in bonds and only 20% in stocks. This liquidity is also induced by the short term nature of insured risks, the largest casualty line being automobile liability, followed by accident and health.

A current characteristic of both fire and casualty companies in recent years has been the great expansion in premium volume, which for many companies has doubled from pre-War levels. Because of this greater exposure to insured risks, and the necessity for setting aside unearned premium reserves on new business written, most companies need additional capital funds in order to bring down to safer levels the ratio of premium volume to capital funds.

Investment Characteristics of Insurance Stocks.--Insurance stocks are popular investment media with conservative long term investors interested in steady current dividends and high growth factor. Most companies keep dividend payments to stockholders within the income from their investments alone, which assures stability of dividends, and in addition results in "ploughing back" to capital funds all other gains--underwriting profits, capital gains on turnover of securities, book appreciation on retained securities, etc. Normally, over a period of years, this ploughing back process results in good growth in surplus, with eventual capitalization of surplus through stock dividends, and in growth of equity values (so-called "liquidating" values) for the stocks.

INSURANCE COMPANY INVESTMENTS

See Life Insurance Company Investments.

INSURANCE COMPANY STATEMENTS

Financial statements of insurance companies reflect the dual nature of their operations as underwriting and investing institutions.

In general, the largest underwriting and investing insurance companies as a group are the life insurance companies, reflecting both the large volume of new business and the long term nature of policy contracts, which involve the long term accumulation and investment of reserves. Underwriting operations of all types of companies are regulated in detail by the States, by the home state where the company is domiciled as well as by States in which the company is admitted to do business, since relations with policyholders are vested with a high degree of public interest. Investing activities of life insurance companies are also inhibited in various States, particularly in New York State, where as the result of the Armstrong investigation of life insurance companies in 1906, the Insurance Law prohibits domestic companies from investing in or lending upon any stocks or shares of any corporation or institution other than preferred or guaranteed stocks, or life insurance company stock acquired for the purpose of mutualization; and also empowers the Superintendent of Insurance to refuse a new or renewal license to any non-domiciled company if he finds that its investments do not comply in substance with the investment requirements and limi-

tations imposed upon domestic companies. Fire and casualty companies, however, have no statutory inhibition against investments in common stocks, and have built up a variety of degrees of diversification in bonds and stocks, with casualty companies in particular maintaining a higher than average position in cash, Government and other high grade bonds.

The majority of the large life insurance companies are mutualized, having no capital stock and being owned by policyholders. The stock form of organization is most general in the fire and casualty field, although the mutual companies have grown substantially.

Income accounts for life insurance companies (Income and Disbursements, Gain and Loss Exhibit) are more reports of income, disposition of income, and reconciliation of suplus, rather than statements of true earnings for any particular period, for calculation of true earnings for a specified period would involve determination of a variety of hidden earnings inherent in outstanding policy contracts and not reflected in these statements. Among fire and casualty companies, income accounts (Underwriting Exhibit, Investment Exhibit) come closer to reflecting current earnings, except that the reported underwriting results (so-called "statutory" underwriting profit or loss, because the figures are reported in the legal form prescribed) are distorted by fluctuations in the unearned premiums reserve and its influence on the earned premiums credit to underwriting account. In accordance with the law, all premiums paid in advance must be credited to the unearned premiums reserve, but the expenses of writing the business are charged immediately to underwriting account, and the underwriting account does not reflect the premiums until they are fully earned by the passage of time. Thus, in a period of rising premium volume, the underwriting account will often show a statutory loss. To adjust for this, the statistical device of applying a specified percentage of unearned premiums reserve fluctuation to the statutory underwriting results has been evolved, such percentage representing the equity in unearned premiums.

Another characteristic of insurance company statements is the use of so-called "Convention" values in carrying investments. The National Convention of Insurance Commissioners, which is now known as the National Association of Insurance Commissioners, first authorized the use of "Convention" values for the December 31, 1931 statements, permitting valuation of securities at June 30, 1931 prices as a means of bolstering the surplus reported by weaker companies. The practice of authorizing "Convention" values has continued for every year since, although the original motive and necessity have been changed. Statements for 1941 and years since have been authorized the use of market values for stocks and non-amortizable bonds as of December 1st each year, and amortized values for all other bonds. Most companies show surplus on both the Convention basis and actual market value basis.

In statistical analysis of fire and casualty insurance company stocks, the phrase "liquidating value" is customarily used to indicate equity value of the stock. This figure, however, is hardly indicative of true liquidating value, as it is merely based on reported policyholders' surplus at market value (capital stock and surplus), voluntary reserves, plus a percentage of equity in the unearned premiums reserve. Equity in unearned premiums is customarily calculated as a flat 40% for fire insurance stocks, which is conservatively low for most companies, and varying percentages, depending on the type of insurance, for casualty company stocks. Insurance analytical and reporting firms, such as the Alfred M. Best Company, have influenced standardization of statistical practices and methods in this field.

(See Insurance, Life Insurance Company Investments.)

INSURANCE DEPARTMENT

The department of a state which supervises the organization, management, and examination of insurance companies, title and mortgage companies, and so on, doing business or having a corporate existence in that state. In three states, e. g., New Jersey, the regulation of banking, insurance, mortgage and title companies, is combined in one department known as the Department of Banking and Insurance, headed by the Commissioner of Banking and Insurance. In other states, the head of the department is variously known as the Superintendent of Insurance, Commissioner of Insurance, Insurance Commissioner, Director of Insurance, etc.

INSURANCE TRUST

A trust which may be created by a life insurance policyholder which directs that the funds represented by such policies when they become a claim against the insurance company or companies shall be paid to the trustee of the insurance trust agreement and administered according to its terms rather than by direct payment to the estate or to the beneficiaries. Insurance trusts can be established through trust companies or the trust departments of such banks as are eligible to engage in trust business. Insurance trusts are classified as "unfunded" if the settlor transfers no fund to the trustee out of the income from which the expense of premiums on the policy may be met; or "funded" if he so does. Insurance trusts wherein the beneficiaries are relatives of the insured-settlor, are called "personal" insurance trusts; if the beneficiaries are connected with partnerships or corporations, "business" insurance trusts.

The principal purpose of an insurance trust is to prevent the impairment or loss of principal of insurance funds paid to beneficiaries through bad management, inexperience in making investments, deliberate swindling by stock promoters, and in other ways. Large sums of money are lost, particularly to women beneficiaries, through lack of experience in handling large sums, and the insurance trust is a device that may be used for the protection of dependents against their own misjudgment or mismanagement.

The insurance company often by means of settlement options gives the insured the choice for final settlement of the policy other than by lump sum payment, such settlement options being of three types: (1) holding the proceeds, and paying the interest to the beneficiary for life or for a stated number of years, with principal sum payable at the end of the period; (2) paying the proceeds, including interest earnings, in equal instalments for a stated number of years, at the end of which period the original principal will have been entirely distributed; and (3) paying the proceeds as a life income to the beneficiary, and in the event the beneficiary dies before the entire proceeds shall have been paid, paying the balance to some other named beneficiary until the entire amount has been distributed. These settlement options do not give rise to legal trusts, although the language "holding the proceeds in trust" is often loosely used in this connection, since the insurance company's liability is really contractual.

Particular advantages of the insurance trust are: (1) Protection of the widow, children and other dependents against the unwise use of large proceeds; (2) it is not necessary to probate the insurance trust; and (3) insurance payable to beneficiaries other than the executor or administrator of the estate of the insured is not subject to the debts of the insured (N. Y. Insurance Law, Sec. 55a). Until Sec. 811 (g) of the Internal Revenue Code was completely revised in 1942, there was also the advantage of some freedom from estate taxes on the estate of the insured (to the extent of the first $40,000 of the amount receivable by beneficiaries other than the executor or administrator). (See Trusts.)

INSURED BANK

A bank entitled to the benefits of Federal deposit insurance under the provisions of Section 12B of the Federal Act, as amended.

Banks eligible for deposit insurance under the present permanent deposit insurance law, which replaced the former temporary deposit insurance plan on August 31, 1935, are as follows:

1. All member banks of the Federal Reserve System, including national banks and state member banks.

2. Every state bank which is converted into a national bank or becomes a member of the Federal Reserve System.

3. Every actively operating bank which was not a member of the Federal Reserve System on June 30, 1935, but which was or thereafter became a member of the Temporary Federal Deposit Insurance Fund or of the Fund For Mutuals theretofore created, continued to be an insured bank without application or approval, except that any such non-member bank which did not file on or before August 23, 1935 (date of exactment of the Banking Act of 1935) a certified statement as of October 31, 1934 and make the required deposit insurance payments, ceased to be insured banks on August 31, 1935.

4. Any state non-member bank, upon application to and examination by the Corporation and approval by the Corporation's board of directors.

Before approving the application of any such state non-member bank, the Corporation's board of directors shall give consideration to the following factors: The financial history and condition of the bank, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the convenience and needs of the community served by the bank, and whether or not its corporate powers are consistent with the purposes of the deposit insurance law. In addition to considering these factors, the Corporation's board of directors shall determine upon the basis of a thorough examination of the applying bank that its assets in excess of its capital requirements are adequate to enable it to meet all its liabilities to depositors and other creditors as shown by the bank's books.

5. Banks in Hawaii, Alaska, Puerto Rico and the Virgin Islands are eligible to apply for insurance.

As of June 30, 1947, the number of insured and non-insured banks and their deposits compared as follows:

Insured Banks:	Number	*Total Deposits
National banks	5,012	$77,146
State member banks	1,913	38,289
Non-member commercial banks	6,466	18,240
Mutual savings banks**	191	11,901
Totals	13,582	$145,576
Non-insured Banks:		
Non-member commercial banks	843	2,248
Mutual savings banks	342	5,541
Totals	1,185	$7,789
Grand Totals	14,767	$153,349

*In millions. Of total deposits of $145 billion reported by insured banks, $73 billion were estimated to be insured ($62 billion for commercial banks, $11 billion for mutual savings banks). Depositors numbered more than 80 million, over 96% of whom were fully protected by the maximum of $5,000 of insured deposits for each depositor.

**Including 3 State members of the Federal Reserve System.

Assets and liabilities of insured commercial banks in the United States and possessions as of June 30, 1947, excluding the three mutual savings banks which are State members of the Federal Reserve System, are shown on table on pages 311 and 312.

INTANGIBLES

In accounting terminology, intangibles include goodwill, franchises, patents, copyrights, trademarks, formulae, processes, etc. This classification is not a legal differentiation between tangible and intangible assets, as receivables, for example, are classified as current assets in accounting. Prevalent accounting practice is to write off intangible assets, either regularly by providing for depreciation and amortization, or in lump adjustments.

(See Goodwill.)

INTEGRATION

Under the Public Utility Holding Company Act of 1935, the Securities and Exchange Commission is directed to take action to limit system operation to companies which are integrated, both geographically and as to nature of operations.

Among industrial concerns, integration indicates the ownership of subsidiary companies or sources of supply and processing which enable a company to control a product from the raw material stage up to the finished product, thus obviating dependence upon outside sources.

INTERCHANGEABLE BONDS

First read Coupon Bonds (q.v.) and Registered Bonds (q.v.).

Bonds which may be converted from coupon or registered form (or vice versa) and back again to coupon (or registered) form. Most bonds which have once been converted from coupon to registered form cannot be changed back to coupon form. Registered bonds do not enjoy as ready a market or command as high a price as coupon bonds, and for this reason, the option of conversion is valuable.

INTERDISTRICT SETTLEMENT FUND

A gold certificates fund held by the United States Treasurer, for the account of and subject to the order of the Board of Governors of the Federal Reserve System, but belonging to the twelve Federal Reserve Banks, the purpose of which is to effect with as little delay and cost as possible the settlement of inter-Federal Reserve Bank transactions. The fund is a part of the machinery of the Federal Reserve Inter-District Collection System

All Insured Commercial Banks

(q.v.) provided for in Sec. 16 of the Federal Reserve Act. By means of this system Domestic Exchange (q.v.) is greatly facilitated, and the necessity for frequent currency shipments from one part of the country to another has been practically eliminated.

In this function, the Board of Governors of the Federal Reserve System acts as a clearing house for the Federal Reserve Banks, which in turn act as a nation-wide clearing house for their member banks and for such non-member banks as maintain clearing accounts with the Federal Reserve Banks. Originally, the Board of Governors directed each Federal Reserve Bank to forward to the Treasury or to the nearest sub-Treasury $1,000,000 in gold, and in addition an amount at least equal to its net indebtedness to all other Federal Reserve Banks, so that the first weekly settlement might take place May 27, 1915. Since July 1, 1918, settlements have been made daily. Each Federal Reserve Bank wires the Board of Governors daily through the system of private or leased wires connecting practically all Federal Reserve Banks and branches and the Board, of the net credits due to other Federal Reserve Banks and their branches. Adjustments are made by book entries to the respective portions of the Fund of each Federal Reserve Bank affected. In this way, the clearances are made and the ownership of each Federal Reserve Bank in the Fund is constantly fluctuating, although the total of the Fund continues intact.

Items cleared through the Fund include check collections, transfers of funds for member banks and the Treasury, Federal Reserve Bank investment items, and other interdistrict business. Direct forwarding of checks and settlement of interdistrict checks through the Interdistrict Settlement Fund have reduced materially the average time formerly required to collect out-of-town checks. Wire transfers of funds by member banks through their local Federal Reserve Banks may be made at no charge if the transfers are for multiples of $1,000, and at a charge for the cost of the telegrams when such transfers are made for designated customers. These transfers are made by wire from the sending to the receiving Federal Reserve Bank, and settlements therefor are accomplished through the Fund.

(See Federal Reserve Inter-District Collection System, Par Clearances, Par List.)

INTEREST

The "price of money"; rental payment upon money; a charge made to the borrower by the lender for the use of money. "The excess payment made when the borrowed dollar is returned is called interest" (Mackenzie, M. A., Interest and Bond Values). It is expressed in terms of a percentage upon the principal. Thus, if $6.00 is paid for the annual use of $100, the rate is 6 per cent. Interest is often payable at shorter intervals, but rarely at longer. Interest on call loans, for instance, is usually payable monthly; on commercial loans quarterly; on mortgages semi-annually, and upon bonds semi-annually.

Simple interest is that computed upon the principal without reference to the interest period on the assumption (for exact simple interest) that 1/365 of a year's interest accrues each day. It is equivalent to compounding at the day of calculation and if the interest period is less than one year, the nominal simple interest rate is greater than the true interest rate compounded annually. Practically, however, this difference is disregarded. Ordinary simple interest is based on the assumption that each day is 1/360 of a year. Ordinary interest for one day is slightly more than exact interest for one day. Compound interest is computed upon the principal plus the interest which has accrued and payable upon the agreed interest date. Interest is usually compounded monthly, quarterly, semi-annually or annually.

When interest is compounded more frequently than once a year, it produces an "effective" rate in excess of the nominal or quoted rate. For example, if the nominal interest rate on a $1,000 bond is 4 per cent., and payable annually, the effective interest rate is the same; if payable semi-annually it is 4.04 per cent.; if payable quarterly it is 4.0604 per cent.; if payable monthly it is 4.0742 per cent.: if payable daily it is 4.0811 per cent. The interest on a $1,000 4 per cent. bond compounded annually is therefore $40; $40.40 if compounded semi-annually; $40.604 if compounded quarterly; $40.742 if compounded monthly, and $40.811 if compounded daily. The maximum advantage achieved by daily compounding is $0.811 a year on a $1,000 4 per cent. bond. Effective savings, therefore, are obtainable by compounding annually. (See Deposit Interest Rate, Discount, Interest Balance, Interest Rates, Interest Tables, Legal Rate of Interest, Usury.)

INTEREST ACCRUED

See Accrued Interest.

INTEREST ADDED

See Accrued Interest.

INTEREST BALANCE

Formerly, prior to passage of the Banking Act of 1933, which prohibited interest on demand deposits, the interest balance of an account was the amount upon which interest for the day was computed. This amount did not necessarily agree with the total credit balance in the account, because of deposit of checks and other items not available until cleared or collected.

In modern account analysis, average collected balances, after deducting reserve requirements, are the basis for allowance of the earnings credit to the account, usually based on current rate of return on earning assets. Against this, cost of handling items deposited or drawn is charged. (See Bank Cost Accounting.)

INTEREST-BEARING SECURITIES

Bonds, notes, mortgages, debentures, certificates of indebtedness, equipment trust certificates, etc., which yield interest, as contrasted with equity securities, such as preferred stocks and common stocks, which evidence ownership in business and thus are not entitled to interest or the recourse of creditors in the event of default on interest or amortization charges.

INTEREST RATES

See Deposit Interest Rate, Discount, Legal Rate of Interest, Money Market, Rediscount Rate.

INTEREST TABLES

Tables constructed to show the amount of interest which will accrue on a given convenient (round-number) sum, e. g., $1, $100, or $1,000, at different rates of interest for various intervals of time, whereby separate and independent computations for each interest transaction are rendered unnecessary.

Interest tables are prepared in many different forms, with varying degrees of detail and refinement in carrying out decimal places and time intervals, and to meet a wide divergence of uses. The following list, illustrated subsequently, comprises the more important types of interest tables:

I. Simple interest. Simple interest computed on a given principal, e. g., $1,000, at different rates for various time intervals. See Table I.

II. Discount or present value. Present value (or worth) of a given sum, e. g., $1, maturing at different time intervals at various rates of interest. See Table II.

III. Compound interest. The amount to which a given sum, e. g., $1, will accumulate at interest compounded at various rates for different time intervals. See Table III.

IV. Periodic savings at compound interest. The amount to which a given sum, e. g., $1 saved regularly at the beginning of each year, will accumulate at compound interest at various rates for different time intervals. See Table IV.

V. Doubling of principal. The number of years in which a given sum will double at different rates of interest. (See Table V.

VI. Present value of an annuity. Present value (or cost to buy) of an annuity of a given sum, e. g., $1,000, at different rates of compound interest, for a varying number of annual incomes. See Table VI.

VII. Amortization of principal plus interest. The aggregate amount required to cancel a debt (bond or note) of a given sum e. g., $1,000, on the amortization plan, and simple interest plan, for different maturities at various rates of interest. See Table VII.

VIII. Sinking fund accumulations. The amount or instalment to be set aside periodically (annually, semi-annually, or quarterly) which at various rates of compound interest will accumulate to a sinking fund sufficient at varying maturities to retire the principal of a given amount of bonds. See Table VIII.

IX. Monthly Savings to Attain a Specified Estate. The amount required to be saved per month with interest compounded at 4 per cent. semi-annually to accumulate a specified sum at age 65. See Table IX.

X. Bond Interest Table. The amount of accrued interest on a $1,000 bond from 1 day to 6 months at coupon rates for every one-quarter of one per cent. from 3 1/2 per cent. to 5 per cent., and 6 per cent. The interest on a $1,000 bond at 4 1/2 per cent. for 4 months and 23 days would be $15.00 for 4 months and $2.875 for 23 days, total, $17,875. See Table X.

XI. Income From Dividend Stocks. The approximate current return, or yield, from dividend paying stocks at prices from 20 to 200, having a cash rate from $2 to $10 annually. See Table XI.

Simple interest tables for computing interest on short-term loans are based on a 360-day and 365-day year. Commercial banks customarily use the 360-day tables but the Federal Reserve banks compute their transactions on the 365-day table. There are a number of tables showing the amount of interest on a given sum at various interest rates from 1 to 365 days.

(See Amortization Loans, Annuity, Bond Values Table, Discount, Interest.)

INTEREST WARRANT

An order by a corporation for the payment of interest due on its bonds, notes, etc.—especially an order drawn on a paying agent calling for payment of interest on registered bonds. (See Warrant.)

INTERIM CERTIFICATES

Temporary printed certificates; provisional bonds or stocks issued to purchasers of a new issue until the final or permanently engraved securities can be issued to take their place. Final stock certificates or bonds are known as definitive or permanent securities. Since the preparation of the definitive bond and stock certificates involves time and purchasers require some sort of documentary proof of ownership, interim certificates are provided to fill the gap. Interim certificates may be issued by the debtor corporation or by the syndicate managers of the syndicate floating the issue. They are also known as receipts, or syndicate managers' receipts.

INTERIM DIVIDEND

A dividend paid in anticipation of the usual periodic dividend. Some corporations make a practice of paying an interim dividend at a small nominal rate usually each quarter, in anticipation of the disbursement of the year-end or full dividend declared at the close of the fiscal year.

INTERIM RECEIPTS

See Interim Certificates.

INTERIOR BANKS

An ill-advised term to denote banks located outside of New York city, other than Federal Reserve banks, Federal land banks, etc. Practically all banks not located in New York find it convenient to maintain banking connections and to carry balances with some New York bank. The purpose of these balances is to enable banks outside of New York city to sell drafts on New York, to deal in foreign exchange, issue letters of credit, etc., the New York correspondent being the instrumentality by which these transactions are consummated. For this reason, New York is treated throughout the country both as a reserve and financial center. Even the banks located in Chicago, although technically central reserve city banks, are regarded as interior banks, a term roughly equivalent to Country Banks (q.v.).

INTERLOCKING DIRECTORS

Directors of one corporation who are at the same time directors of another in the same or similar line of business. By this means a community of interest between the two corporations is secured to the end that competition is lessened or entirely eliminated.

Under the Clayton Act, as amended by the Banking Acts of 1933 and 1935, no private banker or director, officer or employee of any member bank of the Federal Reserve System or any branch thereof shall be at the same time a director, officer, or employee of any other bank, banking association, savings bank, or trust company, organized either under the National Bank Act or State laws, or any branch thereof. However, the Board of Governors may by regulation permit such service as to not more than one other such institution or branch thereof. This general prohibition does not apply to specified exceptions: banks in which the United States controls stock; banks in formal liquidation; foreign banking corporations; banks controlled by stockholders of member banks; banks in other cities; banks not engaged in the same class of business; and mutual savings banks. (See Clayton Act; Federal Reserve Regulations, Regulation L; Kern Amendment.)

Act of 1923, the 12 Federal Intermediate Credit Banks were designed to provide for intermediate maturities in agricultural credit-maturities ranging between the short term loans available at commercial banking institutions and the long term loans available through the Federal Land Bank System and other mortgage lenders.

Modern history of the Intermediate Credit Bank System dates from passage of the Farm Credit Act of 1933, when the farm credit system was reorganized under the Farm Credit Administration. The Intermediate Credit Banks continued their original functions in the new system, there being one Intermediate Credit Bank in each of the 12 Farm Credit Districts.

Loans.--The Intermediate Credit Banks deal with institutions and not directly with the borrowing public (farmers, cattlemen, etc.). Business of the banks consists of the rediscounting of agricultural paper and lending on the security of agricultural paper tendered by established agricultural credit agencies, such as production credit associations, State and National banks, agricultural credit corporations, livestock loan companies, and banks for cooperatives. Direct loans to cooperative associations are also authorized, but are rarer. Maturities of loans and rediscounts are ordinarily less than 12 months, although the banks are authorized a limit of 3 years in maturities. Loan and discount rates at the close of 1947 at 8 of the Intermediate Credit Banks were 1 1/2%, and 1 3/4% for the other 4 banks. Rates may not exceed by more than 1% the rate on last preceding issue of debentures issued by the bank concerned, except with approval of the Farm Credit Administration. Interest rate charged original public borrowers in the paper discounted by Intermediate Credit Banks may not exceed the banks' discount rates by more than 4% without approval of the FCA.

The real need which the Intermediate Credit Banks fulfill in the agricultural credit system is indicated by the substantial volume of loans and discounts handled. Total loans and discounts volume for 1947 was $1,253 million, of which $380.9 million was reported outstanding at the close of 1947, reflecting the turnover of largely short term maturities. Since organization, the Intermediate Credit Banks have handled loans and discounts aggregating $11,395 million.

Sources of Funds.--The Intermediate Credit Banks originally in 1923 received as contribution from the Secretary of the Treasury on behalf of the United States to capital stock, an aggregate of $60,000,000 ($5,000,000 authorized capital stock for each bank) being all subscribed and paid for prior to June 30, 1933. By legislation passed on January 31, 1934, another $40,000,000 was contributed by the Government to capital funds. During the 1941 fiscal year, however, the Intermediate Credit Banks repaid $40,000,000 to the Government, leaving the net Government investment in the System as of December 31, 1947 at $60,000,000. These repaid funds are kept in a revolving fund by the Treasury, to be available to the System in the future should the need arise.

In addition to the Government as a source of capital funds, the Intermediate Credit Banks are authorized sale of collateral trust debentures as a source of working funds, and also have recourse to rediscounts and loans from the Federal Reserve Banks and private banking institutions, loans from the Reconstruction Finance Corporation, etc. should the need arise. Sale of debentures has been the chief source of working funds, outstanding debentures being authorized up to 10 times capital and surplus of the banks. As of December 31, 1947, capital funds of the Intermediate Credit Banks totaled $84.7 million, compared with total debentures outstanding February 2, 1948 of $365,920,000. At the present time, there are only consolidated debentures outstanding, on which all 12 Intermediate Credit Banks are jointly and severally liable for payment of principal and interest. Although authorized for a maximum ma-

TABLE I.—SINGLE INTEREST TABLE—30 DAYS TO THE MONTH

Courtesy of Financial Publishing Co.

turity of 5 years, debentures in practice have been issued for short term maturities of 3 to 12 months. Face rates of interest on debentures currently outstanding, payable at maturity, range from 1.10% to 1.55% for maturities of 3 and 9 months. Security consists of like amount of agricultural paper, U. S. Government securities, or cash. The debentures are instrumentalities of the U. S. Government, but the Government assumes no liability, direct or indirect, for the debentures. Debentures are usually sold between the 15th and 25th day of each month for delivery on the first business day of the following month. Debentures are exempt from State, municipal and local taxes.

Financial Condition of System.--As of December 31, 1947, the Intermediate Credit Banks maintained a well invested position, with loans and discounts totaling $380.9 million, or 84% of total assets, compared with cash items and U. S. Government securities of $69.3 million, or 15% of total assets. Borrowed money at the close of 1947 totaled $357.7 million ($354.0 million in debentures, $3.7 million in notes payable), compared with capital funds of $94.1 million (capital stock of $60 million, earned surplus and undivided profits of $24.7 million, and contingent reserves of $9.4 million), a ratio of net worth to borrowed funds of only 1:3.8. In recent years of low lending rates, the banks have been

earning net profits after reserves of about 1 1/2% on capital funds, and bringing down to net profits about 20% of gross interest earnings.

Administration.--Directors of each Intermediate Credit Bank are the members of the Farm Credit Board of the particular district, as is the case for the other three major credit institutions in each Farm Credit District, the Federal Land Banks, production credit corporations and banks for cooperatives. This assures unified policy. The Intermediate Credit Commissioner, a member of the Farm Credit Administration, is responsible for supervision of the 12 Intermediate Credit Banks. Originally, officers of the Federal Land Banks were also officers for the Intermediate Credit Banks, but since the 1933 reorganization, the Intermediate Credit Banks have had separate officers.

(See Farm Credit Administration.)

INTERNAL BONDS (OR LOANS)

Bonds issued by a Government in its own currency for purchase by investors at home. Such bonds are to be distinguished from external bonds which the Government sells in a foreign market and in the currency of that market. (See External Bonds.)

INTERNAL DEBTS

The domestic indebtedness of a nation, public and private. Current statistics on net public and private debts are compiled by the Office on Business Economics of the U. S. Department of Commerce. In the latest review (September, 1947 issue of Survey of Current Busi-

ness, the term net public and private debt outstanding is defined as a comprehensive aggregate of the indebtedness of borrowers after elimination of duplicating Governmental and corporate debt. The net debt concepts for each of the four classifications reported are summarized as follows:

1. Federal Government net debt is that owed to all other sectors of the economy, excepting the Federal Government proper, its corporations and agencies.
2. State and local government net debt is that owed to all other economic entities except to State and local governments;
3. Corporate net debt is that owed to all other entities (including corporations) except to corporate members of an affiliated system.
4. Private non-corporate debt, net or gross, is the summation of all forms of legal indebtedness except that among individuals and unincorporated non-financial business firms.

The table on page 322 herewith, prepared by the Department of Commerce, outlines the fluctuation in public and private debt in the United States since 1916.

Feature of the 1946 experience was the expansion in total private debt to $150 billion, the highest total since 1930, although combined public and private debt declined $14.7 billion owing to the $23 billion deflation in Federal debt caused by the Treasury's policy of debt retirement during 1946.

(See Farm Mortgages, Municipal Debts, National Budget, Public Debt.)

Bibliography

Clark, E.: Internal Debt of the United States, 1933.

INTERNAL REVENUE

Revenue collected by the Federal Government from domestic, i. e., home sources, such as corporate and personal income taxes, various excise taxes, etc. Customs duties and Panama Canal tolls are the chief sources of Federal revenue which are not internal.

Revenue which the Government collects from internal or domestic activities, as distinguished from customs duties which are levied on imports. The largest source of internal revenue is income taxes on corporations and individuals, which in 1944 fiscal year reached a total of 76% of total receipts, and in the 1947 fiscal year accounted for 66% of total receipts.

Other sources of internal revenue, in approximate order of productivity, are liquor taxes, employment taxes, tobacco taxes (highest return from cigarette taxes), manufacturers' excise taxes, estate tax, retailers' excise taxes, and miscellaneous taxes (largely admission taxes.) Internal revenues collected for the fiscal years 1947 and 1946, and principal sources thereof, compared as follows:

	Fiscal Year 1947	1946
Total Internal Revenue Receipts	$39,108,385,741	$40,672,096,997
Sources:		
Income, excess profits, and unjust enrichment taxes	29,020,054,044	31,258,138,151
Capital stock tax	1,597,470	352,120,833
Estate tax	708,793,811	629,600,697
Gift tax	70,497,262	47,231,604

Wyoming	32,589,057	30,833,938
Totals	$39,108,385,741	$40,672,096,997

Totals for States and Territories comprising part of or more than one collection district compared as follows:

Alaska	$15,831,344	$15,187,544
California	3,144,385,640	3,369,379,258
District of Columbia	485,875,854	509,938,000
Illinois	3,447,148,357	3,545,708,557
Maryland	678,159,708	722,420,422
Missouri	1,061,844,944	1,090,438,984
New Jersey	1,267,410,582	1,274,010,456
New York	7,723,862,348	8,114,589,270
Ohio	2,443,637,089	2,588,807,837
Pennsylvania	2,986,060,371	3,206,562,271
Texas	1,085,680,197	1,074,306,152
Washington	484,388,554	543,604,281
Puerto Rico	2,744,782	2,492,511

Internal revenue collection districts follow State boundaries, except that the Maryland district includes the District of Columbia, and Puerto Rico (For sugar collections), and the Washington district includes the Territory of Alaska. The Bureau of Internal Revenue points out that these amounts collected by States are not entirely indicative of the Federal tax burden of the respective States, since the taxes may be eventually borne by persons in other States.

(See Income Taxes.)

INTERNATIONAL BALANCE OF PAYMENTS

The international balance of payments concept is a broader one than merely the Balance of Trade (q.v.) concept, and includes all the items involving receipts or payments from or to foreign sources. Although merchandise transactions (exports and imports) are normally the largest items, capital movement can exercise at

---

times a major influence on the international balance of payments.

Balance wheel of the international balance of payments is the net movement of gold, since adverse balances are usually settled by means of gold movements. The table on page 323 was prepared by the Board of Governors of the Federal Reserve System, tabulates the gold inflow to the United States and contributing factors for the years 1914-1940, before World War II.

During World War II, the international balance of payments was distorted by military transactions. For the post-World War II years 1946 and 1947, the international balance of payments of the United States compared with the pre-World War II year 1938 is shown on the table on page 324.

INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

This post-World War II institution, also known as the World Bank, was originally proposed for adoption by national governments along with the International Monetary Fund (q.v.) in the Articles of Agreement ratified by the Bretton Woods Conference in July, 1944 attended by 44 nations. A large majority of the original conferee nations adopted the proposal by appropriate national legislation by late 1945, including the United States, which passed its Bretton Woods Agreement Act on July 31, 1945, and these nations formally signed the Articles of Agreement in Washington, D. C. on December 27, 1945.

The Bank began operations on June 25, 1946 with an authorized capital of $10 billion. Of this authorized capital, $7,670 million had been subscribed by 38 of the original conference nations, and 8 other nations have since become members, bringing total capital up to $8,263,100,000, 20% of which has been paid in. Member nations are as follows:

Purposes.--Basic purposes of the Bank are to encourage and hasten a sound world economy, and to promote international flow of capital for productive purposes to assist in reconstruction and development of member nations' economic facilities. As stated in the Articles of Agreement, purposes of the Bank are:

1. To assist in the reconstruction and development of territories of members by facilitating the investment of capital for productive purposes, including the restoration of economies destroyed or disrupted by war, the reconversion of productive facilities to peacetime needs, and the encouragement of the development of productive facilities and resources in less developed countries.

2. To promote private foreign investment by means of guarantees or participations in loans and other investments made by private investors; and when private capital is not available on reasonable terms, to supplement private investment by providing, on suitable conditions, finance for productive purposes out of its own capital, funds raised by it and its other resources.

3. To promote the long range balanced growth of international trade and the maintenance of equilibrium in balances of payments by encouraging international investment for the development of the productive resources of members, thereby assisting in raising productivity, the standard of living and conditions of labor in their territories.

4. To arrange the loans made or guaranteed by it in relation to international loans through other channels so that the more useful and urgent projects, large and small alike, will be dealt with first.

5. To conduct its operations with due regard to the effect of international investment on business conditions in the territories of members and in the immediate post-war years, to assist in bringing about a smooth transition from a wartime to a peacetime economy.

Sources of Funds.--In addition to its subscribed capital, 20% of which has been paid in, 2% in gold dollars and 18% in member currencies, the Bank is authorized to borrow in the capital markets of the world. However, under the Articles of Agreement, the Bank is required to obtain approval of the particular government if it wishes to use a nation's capital markets for borrowings. Since under current conditions, the American capital market is the most readily available, the Bank obtained permission to borrow in the United States, and on June 30, 1947 filed a registration statement with the Securities and Exchange Commission for public offering, made on July 15, 1947, of $100 million in 10-Year 2 1/4% bonds, due July 15, 1957, and $150 million in 25-Year 3% bonds, due July 15, 1972. This first offering was oversubscribed, as these rates and maturities were attractive at the time of offering, but a subsequent adjustment in short term money rates has since caused the bonds to sell off to small discounts.

Loans.--As of March 31, 1948, loan commitments of the Bank totaled $497 million, of which $94.2 million were unused, and on which accrued interest and commissions totaled $5.5 million. Thus, this net loans position of $408.3 million compared with total assets of $1,907.8 million, a minor portion as yet. Most of assets March 31, 1948 consisted of non-interest bearing notes, payable on demand delivered to the Bank in substitution for currencies of members, in accordance with the Articles of Agreement, totaling $915.2 million; and U. S. Government obligations totaling $409.5 million.

Outstanding loans March 31, 1948 of $497 million were to four borrowers: the Credit National of France, for $250 million; Kingdom of Netherlands, $195 million ($56.5 million unused); Kingdom of Denmark, $40 million ($32.7 million unused); and Grand Duchy of Luxembourg, $12 million ($5 million unused). Other loan applications were pending.

Thus far, these loans have borne an interest rate of 3 1/4%, plus a commission of 1% per annum, which in accordance with the Articles of Agreement, will be set aside in a special reserve fund, for maturities of 30 years for the French loan and 25 years for the other loans.

The total amount outstanding of guarantees, participations in loans and direct loans made by the Bank may not be increased at any time to an amount in excess of the total unimparied subscribed capital, reserves and surplus of the Bank. As of March 31, 1948, subscribed capital totaled $8,263.1 million, of which the called amount totaled $1,652.6 million; and excess of income over expenses thus far totals $1.2 million.

Management.--Under the Articles of Agreement, all powers of management are vested in the Board of Governors, which consists of one Governor and one alternate appointed by each member, to serve for 5 years each. One of the Governors is chosen by the Board as Chairman. The Board delegates powers to the Executive Directors, consisting of 12 directors, 5 of whom are appointed by each of the five largest member nations and 7 of whom are elected by the Governors other than those appointed by the five largest member nations. These Executive Directors are responsible for actual operations of the Bank, and serve for two years, with power to appoint alternates. In turn, the Executive Directors, who serve continuously at the principal office of the Bank, choose the President, who cannot be a Governor or an Executive Director or an alternate, and who serves as Chairman of the Executive Directors. Since the principal office of the bank is required to be located in the territory of the member nation holding the largest number of shares, principal office of the Bank is at Washington, D. C., with a branch office in New York and a temporary office at Basle, Switzerland.

(See International Monetary Fund.)

INTERNATIONAL BANKING

See Foreign Banking Corporations, Foreign Exchange.

INTERNATIONAL CHECKS

Same as Traveler's Cheques (q.v.).

INTERNATIONAL CLEARING HOUSE

There is no physical clearing house where foreign bills of exchange and other instruments are used in the settlement of foreign transactions. In effect, however, the market for foreign exchange constitutes an international clearing house.

INTERNATIONAL CODE

See Cipher Code.

INTERNATIONAL EXCHANGE

Same as Foreign Exchange (q.v.).

INTERNATIONAL GOLD MOVEMENTS

See Foreign Exchange, Gold Movements, Gold Reserve.

INTERNATIONAL LABOR ORGANIZATION

Originally a constituent agency of the League of Nations, the International Labor Organization now functions under the Economic and Social Council of the United Nations.

General function of the ILO is the improvement of working conditions in all countries by encouraging the adoption of national laws regulating hours of work, providing a minimum living wage, social insurance, safety codes, protection of women and young workers, vocational education, recognition of the rights of labor as well as of management, and recognition of the right to equal pay for equal work. General objectives are the prevention of unemployment, regulation of labor supply, and raising of living standards.

In addition to its investigations of labor problems and publication of technical reports, the ILO functions through its sponsorship of international conferences bringing labor, management and government together. Conventions and recommendations are adopted, which the conferees and members are requested to enforce through adoption of national laws incorporating these standards. Thus far, 86 conventions and 82 recommendations embodying ILO sponsored standards have been formally adopted, and 56 conventions are now in force, covering the following range of subjects:

Wages, hours of work, minimum age of employment, conditions of seamen, conditions of agricultural workers, working conditions of women and young workers, workmen's compensation, social insurance, minimum wage fixing machinery, social standards in non-metropolitan

territories, holidays with pay, industrial safety, statistics, employment services, labor inspection, and subjects relating to migration.

INTERNATIONAL MONETARY FUND

Established concurrently with its companion institution, the International Bank for Reconstruction and Development (q.v.) the International Monetary Fund is closely identified with the Bank in the Articles of Agreement, as membership in the Fund is a prerequisite to membership in the Bank.

The Fund's principal objectives are the promotion of international monetary cooperation, the stabilization of currencies, and the facilitation of international trade in so far as this can be achieved in the financial field. As specified in the Articles of Agreement, purposes of the Fund are:

1. To promote international monetary cooperation through a permanent institution which provides machinery for consultation and cooperation on international monetary problems.

2. To promote exchange stability and avoid competitive exchange depreciation.

3. To assist in the establishment of a multilateral system of payments in respect of current transactions, which will involve the eventual elimination of restrictions on the making of payments and transfers for current international transactions, and the avoidance of discriminatory currency arrangements or multiple currency practices.

4. To permit members, under appropriate conditions, to draw upon the resources of the Fund with a view to shortening the duration and lessening the degree of any disequilibrium which may from time to time arise in their balances of payments.

Sources of Funds.--Funds are obtained from subscriptions of member nations equal to their assigned quotas, which also determine the limit on drawing rights of members upon the Fund. Original quotas agreed to at the Bretton Woods Conference for the original members totaled $7,397,500,000, which figure has since been increased to $7,961,000,000 as of February 29, 1948 by the addition of new members and revisions in original quotas. Payments of quotas were in gold (either 25% of quota or 10% of net official holding of gold and U. S. dollars, whichever was smaller) and the remainder in the member's own currency. As of February 29, 1948, assets included gold of $1,356.9 million; non-negotiable, non-interest bearing securities of members, payable in their currencies on demand, $4,544.9 million; and balances with depositories, $883.0 million, or a total of $5,427.9 million. Other assets were largely the unpaid balances of members' subscriptions--$12.9 million of members whose par values have been established; and $1,162.9 million of members whose par values have not been agreed upon. Thus, actually paid up subscriptions as of February 29, 1948 totaled $6,785.2 million.

Operations.--Resources of the Fund are available to eligible members. A member may buy the currency of another member from the Fund in exchange for its own currency. For this, the Fund charges a service charge of 3/4% in addition to parity price, which may be increased to not more than 1% or may be reduced to not less than 1/2%. A member may buy from or sell gold to the Fund, for which there is a handling charge. The Fund prescribes a margin above and below par for gold transactions by members. To avoid excess use of its resources by a member, the Fund charges members for average daily balances of currencies held in excess of the members' quotas, on a rising scale, as follows: If not more than 25% in excess of quota, no charge for first three months, 1/2% per annum for the next nine months, thereafter 1/2% increase in the charge for each subsequent year. If 25% to 50% in excess of quota, a charge of 1/2% for the first year, and an additional 1/2% for each subsequent year. On each additional bracket of 25% in excess of quota, an additional 1/2% for the first year, and an additional 1/2% for each subsequent year. Whenever holdings of a member's currency rise to a point where the penalty charge is up to 4% per annum, the member shall consult with the Fund as to means of reducing the Fund's holdings; and if the charge reaches 5% and no agreement is reached, the Fund can then charge whatever it considers appropriate as a penalty.

Once a member's par value for its currency has been established, no member may make any change in exchange rates without consultation with the Fund, except that no objection by the Fund shall be offered if the change does not exceed 10% of original par value.

First exchange transaction occurred on May 8, 1947, when France purchased $25,000,000 from the Fund in exchange for francs. As of April 30, 1948, the Fund had bought some $606 million in various currencies, chiefly sterling and French francs, and sold $600 million in U. S. dollars as well as 1.5 million pounds sterling. At the close of February, 1948, holdings of member currencies totaled $1,559 million in U. S. dollars and $3,869 million in other member currencies.

Management.--As in the case of the Bank, powers of management of the Fund are centered in the Board of Governors, which consists of one Governor and one alternate appointed by each member to serve for five years. One of these Governors is chosen Chairman. The Board of Governors delegate powers to the Executive Directors, of whom the minimum is 12 and the present number is 13. Five of these represent the members with the largest quotas, the United States, United Kingdom, China, France and India; five are appointed by members, excluding the American Republics, not entitled to appoint Directors; and two are elected by the American Republics not entitled to appoint Directors. Voting power of the Executive Directors is approximately proportional to the quotas of their respective member nations. The Executive Directors select the Managing Director, who is the chief executive officer, and cannot be a Governor or an Executive Director, although he acts as chairman of the Executive Directors.

Under the Articles of Agreement, principal office of the Fund is to be located in the territory of the member nation having the largest quota. Thus, since the United States has the largest quota, principal office of the Fund is at Washington, D. C.

INTERNATIONAL MONEY ORDER

See Money Orders.

INTERNATIONAL POSTAL MONEY ORDER

See Money Orders.

INTERNATIONAL SECURITIES

Bonds or stocks which enjoy a ready market on the principal exchanges of several leading nations, thus being subject to arbitrage transactions under normal conditions. This term also refers to bonds and stocks whose interest or dividends is payable in the financial centers of two or more countries.

Stocks of leading American railroads and industrials are traded in London. Canadian securities enjoy markets both in New York and London. Canadian Pacific Railway, for example is listed on the Montreal Stock Exchange, Toronto Stock Exchange, New York Stock Exchange, Boston Stock Exchange, Detroit Stock Exchange, Los Angeles Stock Exchange, Philadelphia Stock Exchange, and San Francisco Stock Exchange, as well as being traded on the London Stock Exchange.

INTERNATIONAL TRADE ORGANIZATION

Charter for this international organization affiliated with the United Nations was drawn up at the United Nations conference on trade and employment in Havana, Cuba held November 21, 1947-March 24, 1948. The charter's objectives are to assist countries in economic development, to reduce tariffs and other barriers to trade, to increase opportunities for economic progress, and to encourage international efforts in solving problems of production, consumption and exchange of goods. The charter provides for general rules of fair trade, and parties to the charter undertake in the fields of trade and employment to cooperate with one another and with the United Nations. Pending ratification of the charter by conferee nations and formal establishment of the ITO, an interim commission was appointed at the Havana conference for the ITO.

INTERPOLATION

The method of obtaining a desired intermediate yield or price from a given series of yields or values, usually in bond yield tables. The ordinary method of interpolation, called the straight line method, calculates by simple proportion the desired intermediate figure by its relation to the next nearest upper and lower given figures, known as the bracketing figures. (See Bond Values Table; Yield, for examples of interpolation.)

INTERSTATE COMMERCE ACT

An act approved by Congress on February 4, 1887, and amended in 1888, 1903 (Elkins amendment), 1906 (Hepburn amendment), and 1910 (Mann-Elkins amendment), for the purpose of bringing all railroads doing an interstate business under the regulation of a common body, namely, the Interstate Commerce Commission. The original act sought chiefly to correct certain abuses, leading to four main provisions viz.: (1) prohibition of pooling; (2) forbidding discrimination between persons in the form of special rates and rebates; between localities; and between connecting lines and commodities; (3) requiring all charges to be reasonable, and that rates and fares be printed and posted for public examination; and (4) making it unlawful to charge more for a shorter than for a longer distance over the same line in the same direction, when the shorter distance is included within the longer, except by special permission.

Most important of the early amendments to the Interstate Commerce Act was the Hepburn Act of 1906, which granted the Commission the power to fix maximum rates after complaint and hearings, extended control over accounts to include powers of inspection and audit, extended jurisdiction of the Commission to include express and sleeping car companies, pipe lines, and industrial railways, and gave the Commission's orders binding effect by directing the courts to enforce orders provided they were found regularly made and duly served.

Modern regulation began with the Transportation Act of 1920, which in addition to providing for administrative control of rates, finance, consolidation, and service, provided for the first time the concept of a general rate level which would enable railroads to earn a fair return upon a fair value of their transportation properties, with provision for recapture of earnings above the determined fair return. The controversial questions of fair rate of return and recapture of excess earnings led to much litigation, and finally in 1933, these questions were rendered obsolete by repeal of the recapture clause and by new rating making provisions, contained in the Emergency Railroad Transportation Act of 1933. This latest legislation merely directs the Interstate Commerce Commission to fix rates that are just and reasonable, with due consideration to the effect of rates on the movement of traffic, adequacy and efficiency of railway transportation service, and the need of sufficient revenues by railroads so as to provide such service under "honest, economical and efficient" management.

(See Interstate Commerce Commission, Railroad Industry, Railroad Transportation (Emergency) Act of 1933, Transportation Act of 1920.)

INTERSTATE COMMERCE COMMISSION

The senior administrative agency of the Federal Government, originally created under the Interstate Commerce Act in 1887, which functions under this Act and other Federal statutes in regulating railroads, motor bus and motor truck lines, inland waterway carriers, pipe lines other than water or gas, freight forwarders, and other types of transportation agencies, operating in interstate commerce.

Originally, the main purposes of the Act were to prevent unreasonableness in railroad rates and unjust discrimination between shippers and communities. For about two decades, however, or until the Hepburn Act of 1906, the Commission was without real power because of the hostile attitude of the railroads and the courts. The original Act and subsequent amendments and statutes have conferred upon the Commission many powers over carriers, including regulation as to freight rates, passenger fares, charges for switching and other incidental services, publication of tariffs, issuance of stocks, bonds and other securities, extension of lines, abandonments, consolidations, sale, lease and purchase of other properties, accounting rules and practices, pooling of services, interlocking directorates, safety rules and regulations, standards for equipment and appliances, hours of service for labor, etc. The variety of duties is indicated by the Commission's 17 bureaus, as follows: Administration, Accounts, Finance, Formal Cases, Informal Cases, Inquiry, Law, Locomotive Inspection, Motor Carriers, Personnel Supervision and Management, Safety, Service, Transportation Economics

and Statistics, Traffic, Valuation, Water Carriers, and Freight Forwarders.

The Commission is composed of 11 members, one of whom serves as Chairman. Address is the Interstate Commerce Commission Building, Washington, D. C.

In addition to Federal regulation over interstate activities, carriers are subject to State regulation, as 47 of the States maintain regulatory commissions functioning within their respective jurisdictions.

(See Interstate Commerce Act.)

INTERURBAN BONDS

See Street Railway Bonds.

INTESTACY (INTESTATE)

When a person dies without leaving a will he is known as an intestate decedent and his estate is an intestacy. An intestacy is terminated by an administrator appointed by a probate (or surrogate) court. (See Administrator, Descent, Laws of, Letters of Administration.)

INTRINSIC VALUE

Literally, the actual value which a thing possesses in itself. This concept is somewhat nebulous and philosophical, but among economists implies value-in-use or utility, as distinguished from market value.

In referring to metallic money, intrinsic value denotes the bullion value of the metal composing the coin. Paper money is sometimes said to have no intrinsic value, meaning that the paper upon which it is printed is worthless. There is a certain amount of quibbling in stressing this point of view, since everyone recognizes that the value of paper money or any credit instrument, depends upon the collateral behind it or the credit standing and financial responsibility of the maker.

In referring to securities, intrinsic value denotes the value of a stock or bond as an investment, i. e., its worth as shown by its underlying equities, security, and past and potential earning power of the issuing organization, as distinguished from the ruling market value which because of depression or speculative enthusiasm, may be either below or above intrinsic value.

INVENTORY

A schedule or listing of property owned by an individual or concern and generally applied to the itemization of a single kind of property, the quantity, unit price, and total value being indicated for each item. Thus a merchandise inventory in a department store would consist of an itemized schedule of each kind of merchandise, shoes, carpets, men's suits, hosiery, etc., showing the quantity on hand in one column, the unit price in a second column, and the total price, (i. e., extension) in a third.

Physical inventories of merchandise, raw materials, goods in process and finished stocks should be taken at least annually, preparatory to making th financial statements and determining the profits for the year. Some businesses maintain a perpetual inventory.

INVENTORY VALUE

The valuation placed upon the stock in trade of a business--raw materials, work in process, finished goods, merchandise, securities, or whatever may be the nature of stock in trade. Principal accounting methods of inventory valuation are: (1) cost; (2) cost, less reserves; (3) cost or market, whichever is lower; (4) average cost; (5) first in, first out; and (6) last in, first out. The last in, first out method, authorized by Congress for income tax purposes in 1938, has become increasingly popular in recent years of rising prices as a means of charging current cost to sales, and thus tempering the effect on profits of inventory appreciation, while at the same time providing a cushion in lower priced units. Under this method, the last units purchased are assumed to be the first charged against goods sold, the opposite of the first in, first out method.

Since valuation of inventories exercises a very important effect on income subject to taxes, the Internal Revenue Code provides that whenever in the opinion of the Commissioner of Internal Revenue the use of inventories is necessary in order clearly to determine the income of any taxpaper, inventories shall be taken by such taxpaper upon such basis as the Commissioner, with the approval of the Secretary of the Treasury, may prescribe as conforming as nearly as may be to the best accounting practice in the trade or business and as most clearly reflecting the income. Once a taxpaper has selected an authorized method of valuation of inventories, such method shall be used in all subsequent taxable years unless with the approval of the Commissioner a change to a different method is authorized. (See Inventory.)

INVESTMENT

In a loose sense, the employment of capital for gain, whether in a business, farm, urban real estate, Government bonds, industrial bonds, oil stocks, merchandise, or an education. More strictly, it is the purchase of property for the sake of its income, but always with a view to eliminating the risk of impairment of the principal, as distinguished from Speculation (q.v.). "The investor buys to procure the income from the principal, while the speculator buys to secure the profits that may accrue in a realized appreciation of the principal (Lagerquist: Investment Analysis). Pratt (Work of Wall Street) says that "in making such a purchase safety is the primary consideration, the amount of the income is important but secondary." An investor, as dintinguished from a speculator "contemplates little or no risk, fixed interest return, and little or no thought of profit. . . . . The intent in an investment is to regain the principal (with or without a profit, which, however, will be only incidental) on the termination of the venture, pending which termination, a fixed and sure income will be received (Martin, H. S.: New York Stock Exchange).

A few authors limit the meaning of investment to purchases of property, e. g., bonds, acceptances, notes, mortgage loans, etc., in which the relation between the original outlay and the final return is as nearly certain as can be contrived in a human world. According to this view the investor must possess an enforceable contract, preferably supported by security and signed by a debtor having adequate financial responsibility, which calls for the payment of a fixed sum at a stipulated rate of interest, at a stated maturity.

Reduced to its lowest terms, investment is, therefore, the purchase of a series of future incomes, definite and known in advance, which provides also for the repayment of the principal sum without loss on a certain date; or which provides as in the case of an annuity for the return of the principal as a part of the interest, on the regular interest dates.

While, in principle, investment is limited to such placements of capital as involve a contractual obliga-

tion to pay a specified rate of interest and to return the original sum on a fixed date, thereby debarring stocks (both preferred and common), real estate, commodities, and other commitments, in practice investment, even as differentiated from speculation, cannot be conducted without some element of risk. Investment management, when applied to particular situations, especially when there is an effort to secure a rate of return in excess of "pure interest," requires knowledge and skill in selection of media, timing of purchases and sales, reinvestment of interest and matured holdings, diversity, tax features, and ability to gauge nuances of value.

Investments which fulfill closest approach to requisites of absolute safety and freedom from anxiety, necessarily those with a low rate of return, are relatively circumscribed. Where such is a prime consideration, as in case of a widow with limited funds, trust estates, foundations, or other extremely conservative investors, investments should be restricted to United States Government bonds, state and municipal bonds, first mortgages, or savings deposits. Persons in a position to assume modest risks, or capable of watching trends, such as business men, need not be penalized with the lower rate of return derived from "care-free" investments. There are many corporate issues which satisfactorily meet the requirements of a business man's risk. To aid the investor in appraising the varying risk incident to any one of the thousands of bond issues available for investment, bond rating services may be consulted. (See Bond Ratings.)

Some Investment Principles.--Excessive rigidity in investment is undesirable, but the following general rules are considered of wide applicability:

1. Have an investing plan, adapted to your circumstances and requirements. Do not invest blindly. Have some objective or general investing preference in mind or outlined in writing.

The ideal investing plan is one closely correlated to available excess income over living expenses, tax bracket, and family objectives. In general, three investing preferences are prevalent: (1) Emphasis on conservation of principal, with least risk; (2) emphasis on income, consistent with reasonable conservation of principal; and (3) emphasis on capital appreciation, with income secondary and conservation of principal least important.

Diversification should be a guiding principle in all well constructed investing plans, although intensive investment, as compared with diversified investment, is often characteristic of plans emphasizing capital appreciation. Diversification may be as to (1) total commitment in "defensive" securities (those characterized by stability), as compared with "aggressive" securities (those characterized by volatility); (2) total commitment in any one industry; (3) total commitment in any one security. (See Distribution of Risk.)

2. Review and revise your holdings periodically. No investment, even the highest grade, is absolutely safe. There is no bond or share of stock in existence which should be "locked up and forgotten."

3. Devote time to your investments. If you do not have either the time or the qualifications to do so, place your investing affairs in the hands of a competent investment adviser. If your portfolio is not large enough to justify this expense, instead of selecting individual securities yourself, invest in investment company shares, which solve for the small investor the problems of selection of individual securities; supervision by experienced research staff; handling of details of custody of securities, collection of interest and dividends, etc.; at a fair "loading" charge (see Investment Companies).

INVESTMENT ADVISERS ACT

An Act passed in 1940 (Title II of Public No. 768, 76th Congress) which brings by means of registration persons and firms engaged in investment advisory work within the regulation of the Securities and Exchange

Commission. Basis for the Act was the investigation and report by the SEC called for by Section 30 of the Public Utility Holding Company Act of 1935. Under the Act, investment advisory contracts are not permitted which provide for compensation of the investment adviser on the basis of a share of capital gains or capital appreciation of the funds of the client, or which fail to provide for consent of the client to any assignment of the contract or notification of the client of any change in a partnership advisory firm. Prohibited transactions include any devices to defraud clients, or operating as a fraud or deceit upon clients, or wherein the adviser acts as principal for his own account without disclosure to and consent of the client. Advisers subject to registration are those engaged in interstate advisory work in registered securities, whose clients number over 15, who hold themselves out generally to the public as investment advisers, and whose clients are not only investment companies and insurance companies. Advisers are subject to cancellation of their registration if they or controlling persons within 10 years of issuance of order by the SEC have been convicted of any felony or misdemeanor involving the purchase or sale of any security or practice in the securities field as investment adviser, underwriter, broker or dealer.

As of the close of 1947, registered investment advisers numbered 952.

(See Securities and Exchange Commission.)

INVESTMENT BANKS

A term of classification of banking institutions sometimes used to indicate those institutions which supply long term and intermediate credit to borrowers. The term "bank", however, is loosely used in such a sense. The Board of Governors of the Federal Reserve System defines a bank as a financial institution which accepts money from the general public for deposit in a common fund, subject to withdrawal or to transfer by check on demand or on short notice, and makes loans to the general public. This definition therefore includes national banks, state-chartered institutions (commercial banks, trust companies, mutual and stock savings banks, industrial banks, and cash depositories), and unincorporated banks (private banks and bankers). It therefore excludes building and savings and loan associations, personal loan and other small-loan companies, credit unions, mortgage companies, sales finance companies, insurance companies, and the various credit agencies owned in whole or in part by the Federal Government.

Prior to the Banking Act of 1933, which "divorced" security selling affiliates of member banks, many banks operated departments for the purchase and sale of securities through their security affiliates, thus coming close to the European concept of investment banks, which not only accept deposits from the public of the savings and commercial type, but also underwrite, purchase and sell securities in addition to transacting savings and commercial banking. (See Investment Banker.)

INVESTMENT BANKER

A banker engaged in investment banking, i. e., financing the capital requirements of business, as distinguished from the seasonal or current requirements. The investment banker is the middleman between businesses which require capital for purchase of fixed assets, e. g., the expansion of plant and facilities, and the ultimate investor, who has money to lend. New and expanding enterprises come to the investment banker for aid in the financing of their capital requirements. The investment banker then analyzes the affairs of the applicant for capital credit in order to determine whether he is justified in undertaking to finance the enterprise. This analysis is usually exhaustive, involving a study of the assets, earnings, sales, market for the product, personnel, and likelihood of success, or continued success. If the financing is undertaken, the kind of securities are then selected, and the amount, rate, and price, are agreed upon. Usually an investment banker shifts the risk of marketing these securities by forming a syndicate in which he becomes the manager, but in which others are invited to participate. (See Syndicate, Underwriting.)

An investment banker is a buyer and seller of securities. He buys them from the issuing organization, or from a syndicate, and sells to security dealers, or to the investor. Thus, investment banking combines a number of related functions, i. e., originating new issues, underwriting additional issues of an existing organization or a new issue of a new company, dealing in existing issues, and distributing securities purchased from a syndicate or otherwise. The investment banker is required to have considerable capital, since he must be in a position to "clear" large blocks of securities. His securities, however, are available as collateral for loans. An investment banker is in no way pledged to indemnify the investor against any loss he may sustain by reason of the securities sold.

INVESTMENT BANKERS ASSOCIATION

An association of investment bankers in the United States, organized in 1912. In its latest constitution, as amended December 6, 1946, the preamble states the constitution is adopted "in order that investment bankers may the better serve both those who purchase and those who sell securities, through which the necessary funds are raised for the operation and expansion of business activities and for the carrying on of public functions, and may thus contribute to the increase in national wealth and in its wide diffusion; and in order that they may aid in these directions through mutual cooperation, through the maintenance of high standards of service, through self-regulation, and through the support of appropriate legislation."

Any individual, corporation, partnership or other legal entity of good reputation, engaged in the investment banking business, is eligible for membership in the association and may upon application be admitted to membership by and in the sole discretion of the Board of Governors of the association.

For the purpose of determining the amount of annual dues to be paid by each member of the association, the membership is divided into classes, as follows:

(a) Class I members comprise those members which act as principal underwriters in very large amounts.

As of August 31, 1946, Class I members numbered 40.

(b) Class II members comprise those members (other than members in Class I) which act as principal

underwriters of securities in large amounts.

As of August 31, 1946, Class II members numbered 54.

(c) Class A members comprise those members (other than members in Classes I and II) which act as principal underwriters of securities in substantial amounts.

Class A members totaled 94 as of August 31, 1946.

(d) Class B members comprise those members (other than members in Classes I, II and A) which act as principal underwriters of securities.

Class B members totaled 266 as of August 31, 1946.

(e) Class C members comprise all other members.

As of August 31, 1946, Class C members totaled 247.

Total membership of all classes was 701 as of August 31, 1946, approximately 13% below the all time high of 812 as of June 8, 1937. Registered branch offices of members totaled 771 as of August 31, 1946.

The term "principal underwriter" is defined to be a member organization whose name appears on a prospectus or circular as the underwriter or as one of the underwriters of an issue of securities. The Board of Governors may in its sole discretion change the classification of any member. The classification of members shall not be disclosed or published.

The administration of all affairs of the association is vested in the Board of Governors, which consists of 47 members (the president, the 5 vice-presidents elected by the association's convention, the ex-president whose term has last expired, and the 40 governors in office elected for rotating 3-year terms). The 40 governorships are allocated to the 18 regional groups of the association as follows: New York group, 8; Central States group, 6; California group, 4; New England group, 3; Eastern Pennsylvania, Mississippi Valley, Pacific Northwest, Southeastern, and Southern groups, 2 each; Canadian, Michigan, Minnesota, Northern Ohio, Ohio Valley, Rocky Mountain, Southwestern, Texas and Western Pennsylvania groups, 1 each.

Standing committees of the association are: Education, Federal Legislation, Federal Taxation, Finance, Foreign Investment, Governmental Securities, Group Chairmen's, Industrial Securities, Membership, Municipal Securities, Public Service Securities, Railroad Securities, State Legislation, and Stock Exchange Relations.

The association's officers and committees have worked very closely with parallel officers and committees of the National Association of Securities Dealers, and also maintain close working relationship with the New York Stock Exchange and the Association of Stock Exchange Firms.

Main office of the association is located at 33 South Clark Street, Chicago 3, Illinois. Office in Washington, D. C. is also maintained.

(See National Association of Securities Dealers.)

INVESTMENT BAROMETERS

Barometers which foretell the trend in bond prices, among which are, trend of interest rates, trend of commodity prices, excess reserves of the Federal Reserve System, extent of use of capital for commercial purposes, degree of activity of business, gold movements and Government and corporate financing. (See Business Barometers.)

INVESTMENT COMPANY

As defined in the Investment Company Act of 1940, an investment company means any issuer which--

(1) Is or holds itself out as being engaged primarily, or proposes to engage primarily, in the business of investing, reinvesting, or trading in securities;

(2) Is engaged or proposes to engage in the business of issuing face amount certificates of the instalment type, or has been engaged in such business and has any such certificates outstanding; or

(3) Is engaged or proposes to engage in the business of investing, reinvesting, owning, holding or trading in securities, and owns or proposes to acquire investment securities having a value exceeding 40% of the value of such issuer's to total assets (exclusive of Government securities and cash items) on an unconsolidated basis.

Face amount certificates of the instalment type are defined as obligations to pay stated or determinable sums at fixed or determinable dates, more than 24 months after date of issuance, in consideration of periodic payments similarly ascertained. "Securities", as used in the definition, do not include Government issues or those of employees' securities companies, or majority owned subsidiaries not investment companies.

With total assets of over $2.2 billion and approximately one million stockholders, investment companies rank today as among the largest investing institutions, and constitute a potent market factor and money pool. The following paragraphs trace the history and development of investment companies, from their early humble beginnings influenced by British investment companies, to their mushroom growth in the late '20s, shakeout created by the great depression, Federal regulation beginning in 1940 which marked a new departure in their history, and to their present important position.

British Investment Trusts.—Although the first investment "trust" (the modern American designation for these investing institutions is "investment company") is said to have been authorized by King William of the Netherlands in Brussels in 1822, and an investment trust was started in Switzerland in 1849, the idea which still serves as a model for modern investment trusts first assumed importance in England and Scotland. The first was called the Foreign and Colonial Government Trust and was organized in 1865. There were also the London Financial Association and the International Financial Society. Many of these investment trust companies invested heavily in American securities and those of the colonies of Great Britain. The purpose of the early British investment trusts was to procure the highest yield compatible with safety through the principle of diversification and the substitution of expert investment knowledge for guesswork. The prospectus of the Foreign and Colonial Government Trust stated: "The object of this trust is to give the investor of moderate means the same advantage as the large capitalist in diminishing the risk of investing in foreign and colonial government stocks and reserving a portion of the extra interest as a sinking fund to pay off the original capital. A capitalist who at any time within the last 20 or 30 years had invested, say £ 1,000,000, in ten or twelve such stocks selected with ordinary prudence, would on the above plan not only have received a high rate of interest, but by this time have received back his original capital by the action of the drawings and sinking fund, and held the greater part of his stocks for nothing."

The British investment trust is managed by a board of

directors, or trustee-managers. Certain limitations have always been devised, but the trustees nevertheless are vested with wide discretionary powers. Under certain restrictions imposed by the articles (or memorandum) of association, the directors may, among other things: (1) issue and allot shares of stocks and debentures, (2) purchase and sell securities and other investments, (3) act as transfer agents for the registration of the company's securities, (4) appoint and fix salaries of officers and clerks, (5) institute, defend, compromise or settle any legal action on behalf of the company, (6) set aside a portion of the company's earnings as a reserve, and manage and appropriate the funds in such reserve, (7) determine the profits of the company, and (8) negotiate and effect a combination of the interests of the company with those of any other company. There is usually some provision for limiting the expenses of administering the trust.

The articles of association usually prescribe rules relating to selection of investment media, and the substitution of one investment for another. The River Plate & General Investment Trust defined the maximum risk by providing that its capital be distributed "over a number of different securities on the principle of averages, no investment being made exceeding £10,000 in any one undertaking without the unanimous resolution of a meeting of the trustees."

Provisions regarding investment media of the Scottish Central Investment Trust are: the purchase of securities of all descriptions whether of home or foreign companies; to acquire securities by original subscription or underwriting; to advance money against securities; to deal in property of all descriptions, including real estate; and to purchase and deal in life assurance policies and annuities. The following are common restrictions to secure desired diversification: not more than one-twentieth in companies whose shares are not fully paid; not more than one fifth in any one country except England; not more than one-fortieth in any one class of security. There are many trusts which place a specific amount as a limit, usually £10,000. In practically all cases, trustees are permitted to sell securities and replace them by others either to take profits or to prevent loss.

Over a period of about a century, British investment trust practice has become fairly well standardized, and has assumed the following characteristics: (1) limitation of the amount of capital which may be invested in a single undertaking which is usually from 5 per cent to 10 per cent; (2) limitation of the amount of debentures and preferred stock to that of the total common stock outstanding; (3) payment of dividends from earnings without reference to possible impairment of the original capital (unlike business corporations, banks, and testamentary or voluntary trusts); (4) absence of desire to control or operate any enterprise; (5) vesting of control in common or deferred shares, or in founders' shares.

The financial structure of British investment trusts is also fairly well defined. There are three general classes of securities which are issued: (1) ordinary or common shares, (2) preference or preferred shares, and (3) debentures. A common provision of the declaration of trust is one limiting the issue of debentures outstanding at any one time to the aggregate amount of ordinary and preference shares.

American Investment Trusts.—American investment trusts are of comparatively recent origin, and did not become generally well known before 1923. One of the oldest American investment companies is the Railway & Light Securities Co., which dates through its antecedent, Railway & Light Securities Co., a Maine corporation, from 1904. In the '20s, the American concept of investment trust was broadened to include not only companies or funds operating like the British (the British investment trusts being corporations and having no technical "trust" forms), but also certain other types of investment participation. In this country the era of the '20s developed four or five types of investment companies, namely, general management, specialized management (both of which are characteristic British forms), fixed or limited management, holding and financial companies, and trading corporations. What were known as fixed and limited management investment trusts in this country consisted generally of issues of certificates carrying pro rata participation in a group of American common stocks. The composition of each group, "block", or "unit" was generally defined in an indenture, under whose terms a trust company, acting as trustee, held the underlying securities and issued the participating certificates. Sometimes the indenture provided that no changes were to be made in the deposited securities. Other indentures under which participations were sold to the public provided for the element of management, by defining, with more or less latitude, the conditions under which changes could be made in the securities held in the trust company by the "depositor" corporation (i. e., the group creating the investment trust fund by agreement with the trust company functioning as trustee under the indenture).

With the coming of the great depression of 1929-1932, weaknesses in investment companies organized during the late '20s became glaringly pronounced and were fatal to many companies, especially those which had sold large amounts of senior capital (debentures and preferred stocks) at high interest and dividend rates and had invested the proceeds in securities at boomtime prices. Under pressure of the depression, abuses in management crept in. The financial and holding company type, which with the trading type, had been popular in the late '20s, practically disappeared, and many general management types also passed out of existence, were absorbed, and were reorganized. Popularity of the fixed trust sharply waned as the list of stocks rigidly prescribed in the indenture incurred severe depreciation, suspended dividends and lost their former investment standing. Incidentally, many of these indentures are still in existence, as they originally prescribed 15 and 20 years or longer in term of the trust, so that although these fixed type trust shares are no longer actively offered, termination and liquidation of the underlying units remain to be accomplished in the future to remaining holders. Beginning about 1932, the "open end" (or Boston type) of investment company began to increase as a solution of the disadvantages of the fixed trust. Although the mortality in investment companies was high, various companies of the general management type and conservative management weathered the depression safely.

Federal Regulation.--In 1935, pursuant to a section of the Public Utility Holding Company Act, the Securities and Exchange Commission embarked upon an exhaustive study of investment companies in America which is the definitive work on American investment company experience prior to Federal regulation. This study led to passage of the Investment Company Act of 1940, representing the first Federal regulation of investment com-

panies and marking a new departure in their history and development. Besides being remedial in nature by aiming at abuses uncovered in the SEC study, the Act is positive in character by prescribing new standards and procedures.

The Act first divided investment companies into three general classes:

1. Face-amount certificate companies, those engaged in issuing such securities or having any outstanding;

2. Unit investment trusts, organized under a trust indenture or similar instrument, not having boards of directors, and issuing only redeemable securities,which represent undivided interests in units of specified securities (the so-called fixed trust type);

3. Management companies, which are further sub-divided into: a. open end companies; b. closed end companies. These companies are additionally sub-divided into: a. diversified; and b. non-diversified companies.

An open end company is one which offers for sale or has any redeemable security outstanding of which it is the issuer. A diversified company is one which has at least 75% of the value of its total assets represented by cash and receivables, Government securities, those of other investment companies, and other securities, limited for this purpose in respect of any one issuer to an amount not greater in value than 5% of the management company's total assets, and to not more than 10% of the outstanding voting securities of the issuer.

Salient regulatory features of the Act include:

1. Registration. Every investment company with more than 100 security holders must register with the SEC.

2. Adequacy of capital. Section 14 of the Act sets forth three conditions, compliance with one of which is a necessary prerequisite to a public offering:

a. Net worth in the issuing company of at least $100,000;

b. That the issuer has previously made a public offering and at the time thereof had a similar net worth;

c. The provision is made, as a condition of registration under the Securities Act of 1933, which in the Commission's opinion adequately insures: (1) that after the effective date of the registration, the company will not issue any security, or receive the proceeds of any subscription, until agreements have been made by not more than 25 responsible persons to purchase securities to be issued by the company for an amount which in addition to the net worth of the company will equal at least $100,000; (b) that the agreed payments will be made before any subscriptions are accepted from any persons in excess of 25; and (c) that arrangements will be made for refund without deduction upon demand of any proceeds paid in, should the company not realize a net worth of $100,000 within 90 days after the registration becomes effective.

3. Conservatism of Capital Structures. To limit "trading on the equity", closed end companies are required to have assets of at least three times funded debt or bank loans, and preferred stock must be covered at least 2 times by assets. Open end companies are limited to solely one class of security outstanding, although bank loans are permitted to a limited extent. These requirements in capitalization applied to capital structures after 1940, and did not disturb capitalizations built up prior thereto.

4. Investment policies. Each company is required to register a statement of basic investment policy, which once stated, may not be changed except with approval of stockholders.

5. Management practices and procedures. The Act prohibits self-dealing, conflicts of interest or breaches of trust; bars persons guilty of securities frauds from serving as officers or directors, requires that a majority of the board of directors must be composed of persons not affiliated with investment bankers or with brokers; requires stockholders' approval of fundamental changes in the board of directors; calls for at least 40% of the directors to be persons who are not officers or investment advisers of the company; and requires that a majority of directors of open end companies be indepent of the "sponsor" or sales distribution organization. Trafficking in management contracts and contracts to supervise the company's funds in prohibited. In addition, investment companies may not purchase over a nominal percentage of voting securities of other investment companies.

Federal regulation has served well in re-establishing investor confidence and clearing the industry of undesirable elements and practices, with the result that since 1940, investment companies have grown very substantially, particularly the open end type, whose assets by the close of 1946 and expanded 190% to $1.3 billion. Another important aid to this growth was the elimination of triple taxation (double corporate taxation plus taxation of the investment company income itself) through the provisions of Supplement "Q" to the Internal Revenue Code, which enables investment companies electing to become Regulated Investment Companies under its provisions to pay no tax on the distribution of net investment income and net capital gains made to stockholders. Thus in effect the investment company becomes a tax-free conduit of income for the security holders.

Regulation of sales practices, referred to in the Investment Company Act of 1940, has been accomplished by investment companies mainly on a voluntary basis through adherence to the rules of fair practice established by the National Association of Securities Dealers (q.v.). The various "blue sky" laws of the states also largely regulate sales practices of investment companies, although a few states have prescribed detailed regulation of investment companies similar to Federal regulation. Included in sales practices is the amount of the "load" or selling charge added to the offering price of open end companies' shares, which averages about 7 1/2%, sold through authorized security dealers. A few open end companies sell direct to investors.

Open end companies, which have featured growth since 1940, have developed into various types of funds or "series" as sponsors have tailored offerings to the investing preferences of dealers and investors. Among types of open end funds developed have been: (1) the common stock funds, those whose investing policy emphasizes investment largely in common stocks; (2) balanced funds, whose investing policy calls for predetermined ratios of bonds, preferred stocks, common stocks and cash; and (3) the bond and specialty funds, which specialize in holdings of bonds or stocks of particular industries or types, and do not diversify generally. Another important appeal of open end company shares is the ability of small investors to purchase any odd amount of shares without extra charge, such as is involved in odd lots for listed securities, and on the other hand, the privilege of investors to turn in their open end shares to the company at asset value, most companies

charging either a nominal charge or none at all for such redemption.

As of June 30, 1947, there were 352 companies registered with the Securities and Exchange Commission as investment companies under the Investment Company Act of 1940, with total assets of approximately $3.6 billion. These registered companies were classified under the Act as follows: Management open end companies, 125; management closed end, 115; unit, 96, and face amount certificate companies, 16.

INVESTMENT CREDIT

Credit furnished to finance the purchase of long-term, durable goods. A purchaser of corporation bonds or real estate mortgages is a lender of investment credit. (See Credit.)

INVESTMENT INCOME

Income derived from invested capital, as distinguished from income derived from services. In insurance company accounting, investment income is current income (interest, dividends, etc.) from securities held in portfolios, as contrasted with capital gains or losses derived from actual sale of securities, and book appreciation or depreciation on retained securities. Insurance companies generally keep their own dividends to stockholders within investment income alone, thus assuring stability of dividends to stockholders and "ploughing back" all other gains (underwriting, turnover of securities, and book appreciation) into surplus. This normally results in large ploughed back gains, with consequent compounding of growth in equity values over a period of years. (See Insurance Company Statements, See Income.)

INVESTMENT MARKET

The channels or outlets for distributing bonds and other investments. The chief market for bonds exists among the following classes of purchasers: investing public (private investors), banks -- commercial, savings, and trust companies; speculative public; insurance companies; business concerns; investment companies; trust estates and trustees; eleemosynary institutions; foundations; labor unions; fraternal orders and clubs; endowments.

INVESTMENT MEDIA

The various types of property in which capital may be invested, customarily for gain, whether enhancement of principal or current return, or both, rather than just conservation of principal. Besides investment in a going business, the most usual types of investment media available may be summarized as follows:

1. Savings accounts.
2. Time deposits and certificates of deposit.
3. U. S. Savings bonds and stamps.
4. U. S. Postal Savings bonds and stamps.
5. U. S. Government bonds, Treasury certificates of indebtedness, bills.
6. U. S. Government guaranteed obligations.
7. Federal Savings and Loan investment accounts.
8. State, political subdivision and municipal obligations.
9. Insurance--ordinary, endowment, 20-payment and 30-payment life, etc.
10. Annuities--life, terminable, perpetual.
11. Notes, acceptances and bills of exchange.
12. Commodities.
13. Previous metals.
14. Bonds--railroad, public utility, industrial.
15. Stocks--railroad, public utility, industrial, bank and trust company, insurance, investment company, finance company, etc.
16. Real estate bonds and mortgages, insured by the Federal Housing Administration and uninsured--urban property (commercial, industrial and residential); farm property.
17. Chattel mortgages on various types of personal property.
18. Real estate--urban property (commercial, industrial and residential); farm property.
19. Foreign bonds and stocks.
20. Foreign exchange.

(See Investment.)

INVESTMENT RATING

See Bond Rating.

INVESTMENT SECURITIES

The term investment securities has come to be indiscriminately applied to all classes of bonds and stocks, regardless of quality. In its strict sense, however, investment securities are those obligations and equities whose characteristics are distinctly or predominantly conservative.

General tests of investment securities are:

1. Security of principal, which depends upon the character of the issuer, nature of the business, type of security, class of lien, nature of the collateral pledged, protective provisions in the mortgage or indenture, and provisions for recourse in the event of default.
2. Regularity of income, which depends upon the nature and stability of the business, and type of security.
3. Fairness of yield, a relative factor.
4. Efficiency and conservatism of management, an intangible factor of basic importance.
5. Marketability, which depends on such factors as legality for investment by fiduciaries, degree of seasoning, and maintenance of active listed or unlisted markets for the issue.
6. Investor convenience, including collateral value or acceptability as security for loans, acceptability of denomination and maturity, registration privilege, place of payment of interest and principal, exemption from taxation, and interchangeability of denominations.
7. Financial factors of safety, depending basically upon equities, earning power, and position in capitalization.

(See Investment.)

INVESTMENT SECURITIES REGULATIONS

Under paragraph Seventh of Section 5136, Revised Statutes, as amended by the Banking Act of 1935, the business of dealing in securities and stock by national banks (the Federal Reserve Act provides that other member banks shall be subject to the same restrictions as national banks) shall be limited to purchasing and selling such securities and stock without recourse, solely upon the order, and for the account of customers, and in no case for their own account, and national banks shall not underwrite any issue of securities or stock, subject to the following exceptions:

1. The national banks may purchase for their own account investment securities under such limitation and restrictions as the Comptroller of the Currency may by regulation prescribe. In no event shall the total amount of the investment securities of any one obligor or maker, held by the national bank for its own account, exceed at any time 10% of its capital stock actually paid in and unimpaired, and 10% of its unimpaired surplus fund (except that this limitation did not require any national bank to dispose of any securities lawfully held by it on the date of enactment of the Banking Act of 1935, August 23, 1935).

2. As used in this section, the term "investment securities" means marketable obligations evidencing indebtedness of any person, copartnership, association, or corporation in the form of bonds, notes and/or debentures commonly known as investment securities, under such further definition of the term "investment securities" as may by regulation be prescribed by the Comptroller of the Currency.

3. Except for the exceptions provided below, or otherwise permitted by law, nothing contained in this section shall authorize the purchase by national banks for their own account of any shares of stock of any corporation.

4. The limitations and restrictions contained in this section as to dealing in, underwriting and purchasing for their own account by national banks, of investment securities shall not apply to:

a. obligations of the United States.

b. general obligations of any State or of any political subdivision thereof;

c. obligations issued under authority of the Federal Farm Loan Act, as amended, or issued by the Federal Home Loan Banks or the Home Owners' Loan Corporation;

d. obligations which are insured by the Federal Housing Administrator pursuant to section 207 of the National Housing Act, if the debentures to be issued in payment of such insured obligations are guaranteed as to principal and interest by the United States.

5. In carrying on the business commonly known as the safe-deposit business, national banks shall not invest in the capital stock of a corporation organized under the laws of any State to conduct a safe-deposit business, in an amount in excess of 15% of the capital stock of the national bank actually paid in and unimpaired and 15% of its unimpaired surplus.

Pursuant to this section, the Comptroller of the Currency on February 15, 1936 issued his first regulation, further defining the term "investment securities". This was followed on June 27, 1938 by a broad revision of the Comptroller's investment securities regulation and the issuance of regulation relating to the classification of loans in bank examinations as agreed to by the Secretary of the Treasury, the Board of Governors of the Federal Reserve System, the directors of the Federal Deposit Insurance Corporation, and the Comptroller of the Currency. These supervisory authorities after a series of conferences unanimously agreed on a program which for the first time brought about uniformity in the treatment of loans and securities by Federal agencies in their administration of bank examinations.

For details of the revised investment securities regulation, see Comptroller's Regulation.

INVESTMENT STOCKS

Stocks suitable for purchase because of their stability of earnings and income, and relative stability of market value. Even the high grade common stocks, however, do not have as great stability of market value over a period of years as bonds, as shown by the tabulation of average annual fluctuation over a 9-year recent period in Fluctuating Principle (q.v.). Nevertheless, for income and growth, even the most defensive investment programs should include a selection of high-grade and good-grade common stocks for diversification. (See Investment, Speculation.)

INVESTMENT TRUST

The term formerly indiscriminately applied to the Investment Company, regardless of whether or not the form of organization was the technical business trust. Investment Companies themselves years ago officially eliminated the term "investment trust" from their designation and literature, because of the negative connotation and implication of rigidity in the word "trust". Federal regulation (Investment Company Act of 1940) and state regulation ("blue sky" laws and regulations) have also eliminated the now obsolete term "investment trust".

See Investment Company.

INVESTMENT VALUE

The intrinsic value of a security, as measured generally by the basic yardsticks of earnings, income, and asset value. Appraisal of investment values is one of the functions of Investment (q.v.).

INVESTMENTS FOR SAVINGS BANKS

See Legal Investments for Savings Banks.

INVESTMENTS FOR TRUST FUNDS

See Legal Investments for Trust Funds.

INVESTOR

A person who buys securities for investment, as contrasted with the trader or speculator, who is primarily interested in short-term turnover at a profit.

See Investment, Speculation.

INVISIBLE IMPORTS

According to Say's Law, the values passing between two nations are equal, i. e., exports and imports are equivalent values. This does not mean that the merchandise exports of any one country may not exceed its merchandise imports, or vice versa. Suppose that one country exports $10,000,000 of merchandise to another and imports $8,000,000 of merchandise. The balance of $2,000,000 may be paid for in gold, by what are known as the invisible imports, which consist of items that escape the records of the Customs officials, or by loans. The normal invisible imports consist of: (1) securities

purchased in foreign countries; (2) loans made to foreign borrowers by private investors and bankers; (3) expenditures by travelers and tourists abroad; (4) remittances on account of interest and dividends upon securities held abroad; (5) remittances on account of ocean freight charges; (6) remittances on account of marine insurance premiums; (7) remittances on account of bankers' commissions; (8) remittances by immigrants to friends and relatives abroad; (9) payment of matured loans made by foreign banks to American bankers.

Refer to International Balance of Payment for detailed statement of balance of payments items in recent years and the totals of invisible imports. Normally, the principal invisible imports of the United States are shipping, travel and remittances. During both World Wars, the United States was a heavy contributor of capital abroad, reflecting wartime loans, Lend-Lease and military expenditures abroad. During the years 1919-1933, the United States was also on balance a net contributor of capital abroad, the movement reaching a peak in 1927 and 1928, when foreign bond flotations in the United States reached a large total. Beginning in 1934, however, this normal peacetime invisible import gave way to large net capital inflow to the United States, which although interrupted by World War II, was traceable to the flight of foreign capital to the United States. Postwar resumption of net capital movement abroad will be aided by the large foreign aid planned under the European Recovery Program (q.v.). Interest and dividends (investment income on current account) has been consistently a receipt item for the United States, reflecting return flow of capital invested abroad in the form of interest and dividend payments.

(See also Balance of Trade, Foreign Trade.)

INVISIBLE SUPPLY

A term used to indicate the amount of a commodity—grain, cotton, or other agricultural product—in the possession of farmers and which has not yet reached the primary markets. (See Visible Supply.)

INVOICE

A sales slip; an itemized bill given by a seller to a purchaser of goods showing all the particulars of the sale, e. g., date, name of buyer and seller, salesman's number, quantity and description of articles, unit prices, extensions, discounts, if any, total footing, etc. The invoice is in reality an original entry record and since the billing system has come into general use, a duplicate of each invoice frequently is retained by the seller from which the monthly statement is prepared.

INVOLUNTARY BANKRUPTCY

See Bankruptcy.

IRISH DIVIDEND

A stock market expression humorously denoting an assessment upon stock, i. e., instead of the stockholder receiving a dividend, he is called upon to pay an assessment.

IRREDEEMABLE BONDS

Bonds with a fixed maturity, but not subject to prior redemption; bonds which cannot be called for redemption by the issuer (payer or obligor) before maturity. They should not be confused with Perpetual Bonds or Intermediate Bonds (q.v.)

IRREDEEMABLE DEBENTURE

A perpetual type of debenture, called Debenture Stock, characteristically issued by the British railroads, which had no fixed date of maturity or other provision for repayment of the principal, except in case of liquidation. Debenture Stock of the British railroads was issued in both redeemable and irredeemable types, with interest rates ranging from 2 1/2% to 5%. The British Government took over the British railroads in 1939 as a War measure at a fixed annual rental, and under the terms of the Transport Act of 1947, approved August 6, 1947, the British railroads were nationalized as of January 1, 1948. Security holders, including holders of irredeemable Debenture Stock, received 3% Guaranteed British Transport Stock, with maturities of 1978-88 and 1968-73. (See Debenture Stock.)

IRREDEEMABLE PAPER MONEY

Money which a Government has made legal tender in payment of debts, but which is not redeemable in standard money, i. e., gold or silver, the metals commonly used as a basis for currency in all commercial countries.

Irredeemable paper money usually becomes the standard money and tends to drive metallic money out of circulation, or places it at a premium through the operation of Gresham's Law (q.v.). It is usually subject to wide fluctuations in value and causes similar fluctuations, though in inverse ratio, in commodity prices. In the United States, paper and metallic money in circulation are irredeemable in gold, the country being on an international gold bullion standard of the restricted type since the Gold Reserve Act of 1934 (q.v.).

IRREGULAR

An expression used to indicate unevenness or variation in prices on a stock market; prices moving in opposite directions, some stocks advancing and others declining.

IRREGULARITIES

Informalities or infirmities which make a negotiable instrument technically invalid. A small percentage of the checks and other items presented to a bank, especially through a clearing house, contain some formal irregularity. This necessitates their return to the presenting bank or firm for correction or re-issue. Banks usually provide themselves with printed forms to be attached to such checks explaining the reason for their return.

The chief formal irregularities which require the return of checks are: alteration, counter signature missing, date, dated ahead, drawn against uncollected funds, duplicate paid, indorse exactly as drawn, indorsement illegible, indorsement incorrect, indorsement missing, filling (words and figures differ), guarantee of amount, guarantee of indorsement, insufficient funds, no account, no advise to pay, no instructions to pay, not due, not handled through exchange, original paid, past due, payment stopped, recalled, sent wrong, signature incorrect, signature missing, signature unknown, two signatures required, etc.

IRREVOCABLE CREDIT

See Letters of Credit.

IRREVOCABLE STOCK POWER

See Stock Power.

IRREVOCABLE TRUST

See Trusts.

IRRIGATION BONDS

Bonds issued to finance irrigation projects. Many sections of the West, especially Oregon, California, Idaho, Montana, Wyoming, Colorado, Nevada, Utah, Arizona, North and South Dakota, must resort to artificial irrigation in order to carry on successful agriculture. Projects to irrigate certain portions of these arid lands have been undertaken by three different agencies; irrigation districts, private corporations, State Governments under the provisions of the Carey Act, and the Federal Government through the Bureau of Reclamation of the Department of the Interior, which since 1902 has constructed thousands of engineering structures, and as of June 30, 1947 had in operation, under construction or authorized, 109 irrigation and multiple purpose projects in 17 Western states.

Irrigation bonds as a class have proved to be the least desirable type of municipal issue.

(See Carey Act Bonds.)

IRRIGATION DISTRICT BONDS

Irrigation Bonds (q. v.) issued by an irrigation district as distinguished from Carey Act irrigation bonds or irrigation bonds issued by a private corporation. Irrigation district bonds belong to the quasi-municipal class.

ISSUE

As a verb, to give out, emit, pass for delivery, or distribute. A Government issues currency, bonds, etc.; a bank issues notes, cashier's checks, money orders, letters of credit, etc.; a corporation issues checks, notes, bonds, stocks, etc.

As a noun, in underwriting and investment finance, the term means a new flotation of securities placed on the market for distribution to the investing public.

ISSUE OF MONEY

See Mint, Money, Redemption of Money.

ISSUE PRICE

The price at which a new flotation or issue of stock or bonds is offered to the public.

Under the underwriting procedure prescribed by the Securities and Exchange Commission under the Securities Act of 1933, the proposed maximum aggregate offering price and offering price per unit are stated in the Registration Statement (Page 1, facing sheet of Form S-1, the Registration Statement). The price to the public, underwriting discounts and commissions, and proceeds to the registrant issuer, both per unit and total, are also required to be shown in tabular form on the first page of the prospectus as to all securities being registered which are to be offered for cash (estimated if necessary).

Registration Statement becomes effective 20 days, normally, after its filing. Within 10 days after the registered securities have been initially offered to the public, a statement of actual offering price is required to be filed, setting forth also the date on which the securities were so offered. If such price differs from the proposed price set forth in the Registration Statement, a brief explanation of such difference shall be made (Rule 460, Regulation C). Where the securities were to be offered first to existing security holders and then to the general public, a statement as required by this rule is required to be filed with respect to each of such offerings if made at different prices. Within 5 days after the commencement of the public offering, 20 copies of each form of prospectus used in connection with the offering shall be filed, in the exact form used, with the office of the Commission with which the Registration Statement was filed.

In 1941, the Securities and Exchange Commission adopted Rule U-50, requiring competitive bidding for most securities issued by public utility companies under SEC jurisdiction. Competitive bidding procedure is more complex, involving official invitation for bids on the part of the issuer; awarding of the successful bid; determination of the offering price by the successful bidders; filing of the post-effective amendment as to actual offering price, underwriting discounts, and commissions, etc.

Any security issued by a common carrier subject to the supervision of the Interstate Commerce Commission is exempt from the requirements of the Securities Act of 1933. The ICC on July 1, 1944 ordered competitive bidding for certain types of railroad securities.

(See Syndicate, Underwriting.)

ISSUED CAPITAL STOCK

That portion of the stock of a corporation which is outstanding in the hands of the stockholders or repurchased and held by a corporation as Treasury Stock (q. v.). It is not required that all of the authorized stock of a corporation be immediately issued. Issued capital stock is the difference between the authorized and unissued capital stock. (See Capital Stock.)

ITEMS

A general term used in banking practice to denote such negotiable instruments as are payable upon presentation and includes checks, money orders, and matured drafts, acceptances, and notes. The term is usually employed in combination with a qualifying word, e. g., "cash items," "collection items," "clearing house items," "city items," "out-of-town items," etc.

JETTISON

The act of throwing overboard a ship's cargo in order to lighten the vessel when there is danger of sinking. An ocean carrier, as usually indicated by the ocean bill of lading, does not assume liability for jettison. This risk should therefore be covered in the Marine Insurance Certificate (q. v.).

JOB LOT TRADING

In commodity exchange trading, contracts for lesser units of trading than the regular contract unit are called job lots. On the grain exchanges, 5,000 bushels is the regular or standard contract unit. Commissions on job lot trades are proportionately higher than the commissions on regular contracts. Job lots are usually 1,000 bushels, except for barley and oats on the Chicago Board of Trade, on which the minimum trading amount is 2,000 bushels. The table at foot of page summarizes current job lot units and commissions in comparison with regular contracts and commissions on leading American grain exchanges.

JOBBER (OF SECURITIES)

See Stock Jobber.

JOINT ACCOUNT

This term has three meanings:

(1) A joint business venture, or temporary partnership.

(2) A bank account owned jointly by two or more persons. (See Joint Deposits.)

(3) The simplified form of the syndicate in security underwriting operations, combining both purchasing and selling operations by the members. The joint account involves two firms on a particular deal, whereas the syndicate involves three or more houses and usually many more, separately organized into purchase and selling groups. Even in the joint account, however, one of the houses is designated as manager of the account, to keep the records and confirm all sales. The joint account agreement, usually informal, specifies the interest of each house in the transaction, usually 50%, the details of the purchase from the issuing company, the offering price to the public, the concession to purchasing dealers, and the period of duration of the account. At the end of the period, the account is closed out, and each firm is credited with its share in the net profits, after deduction of expenses. Any bonds remaining unsold are charged to each member of the joint account in proportion to its interest.

Member banks of the Federal Reserve System were required to divorce their underwriting affiliates and discontinue their underwriting activities by the Banking Act of 1933 (as amended by the Banking Act of 1935), except for dealing in and underwriting obligations of the United States, general obligations of any State or of any political subdivision thereof, obligations issued under authority of the Federal Farm Loan Act as amended or issued by the Federal Home Loan Banks, or obligations which are insured by the Federal Housing Administrator pursuant to Section 207 of the National Housing Act if the debentures to be issued in payment of such insured

	Contract Unit		Non-Member Commission	
	Regular	Job Lot	Regular Unit	Job Lot
Barley:				
Minneapolis Grain Exchange	5,000 bu.	1,000 bu.	$12.50	$3.50
Chicago Board of Trade	5,000 bu.	2,000 bu.	15.00	$6.00 or $8.00 (a)
Corn:				
Chicago Board of Trade	5,000 bu.	1,000 bu.	15.00	$3.00 or $4.00 (b)
Kansas City Board of Trade	5,000 bu.	1,000 bu.	12.50	$3.50
Oats:				
Chicago Board of Trade	5,000 bu.	2,000 bu.	15.00	$6.00 or $8.00 (a).
Minneapolis Grain Exchange	5,000 bu.	1,000 bu.	12.50	$3.50
Kansas City Board of Trade	5,000 bu.	1,000 bu.	12.50	$3.50
Rye:				
Chicago Board of Trade	5,000 bu.	1,000 bu.	15.00	$3.00 or $4.00 (b)
Minneapolis Grain Exchange	5,000 bu.	1,000 bu.	12.50	$3.50
Wheat:				
Chicago Board of Trade	5,000 bu.	1,000 bu.	15.00	$3.00 or $4.00 (b)
Kansas City Board of Trade	5,000 bu.	1,000 bu.	12.50	$3.50
Minneapolis Grain Exchange	5,000 bu.	1,000 bu.	12.50	$3.50

(a) Minimum trading amount is 2,000 bushels, on which commission is $3.00 per 1,000 bushels when order is received in Chicago, and $4.00 when order is received from outside Chicago.

(b) Commission is $3.00 when order is received in Chicago, and $4.00 when order is received from outside Chicago.

(See Commodity Exchanges.)

obligations are guaranteed as to principal and interest by the United States.
(See Syndicate.)

JOINT AND SEVERAL NOTE

See Jointly and Severally.

JOINT BONDS

Bonds, whether of the mortgage, collateral trust, or debenture variety, which are the joint obligations of two or more issuing debtor organizations. The Great Northern-Northern Pacific joint collateral trust 6 1/2s (no longer outstanding) were an example of this class of bonds. This issue was secured by stock of the Chicago, Burlington Quincy Railroad owned jointly by the obligor railroads. In modern railroad finance, terminal bonds are secured by mortgage on the terminal and also by joint and several guarantee of principal and interest by the using railroads. For example, the Chicago Union Station First Mortgage 2 7/8s and 3 1/8s, due 1963, are secured by first mortgage on the Chicago Union Station, and by joint and several guarantee of principal and interest by the Pennsylvania, the Burlington, and the Chicago, Milwaukee, St. Paul & Pacific railroads.

JOINT DEPOSITS

In banking parlance, the term "joint accounts" refers indiscriminately to checking, savings or thrift accounts opened in the names of two people, whether as tenants in common or as joint tenants. The deposit agreement as well as the designation of the account should be specific, however, as the legal incidents are different.

In the case of tenants in common, there is no right of survivorship, so that in the event of death of one of the co-depositors, there is no right in the survivor to the entire balance of the account. Instead, the survivor shares the account equally with the estate of the deceased. During the lifetime of the co-depositors, deposits may be made by either party, but withdrawals are required to be jointly made.

Joint tenant accounts entitle the survivor of the co-depositors to the entire balance in the account upon the death of one of the co-depositors by operation of the right of survivorship. During the lifetime of the co-depositors, either party may deposit or withdraw freely. The New York Banking Law protects banks in this connection by providing that prior to notification received by the bank in writing and signed by one of the joint tenants not to pay, payment and receipt or acquittance by a joint tenant entitled to withdraw under the terms of the deposit agreement shall constitute a valid and sufficient release and discharge to the bank. Banks also protect themselves on withdrawals upon death by requiring proof of death, tax waivers, or surrogate's certificate in the case of withdrawal by estate of the deceased co-tenant in common.
(See Alternate Deposits.)

JOINT INDORSEMENT

An indorsement made by two or more payees or indorsees. Where an instrument is made payable to the order of two or more payees or indorsees who are not partners, all must indorse unless the one indorsing has authority to indorse for the other (Sec. 41, Uniform Negotiable Instruments Law; Sec. 71 New York Negotiable Instruments Law). (See Indorsement.)

JOINT MORTGAGE

A mortgage signed by two or more mortgagors, being the joint obligation of the signing parties. (See Mortgage.)

JOINT NOTE

A note which is signed by two or more makers, containing the unconditional promise: "We promise to pay", the words "jointly and severally" being omitted. (See Jointly and Severally.)

In case a joint note is not met at maturity, the holder in order to recover, must sue all the makers jointly. A note of a partnership, e. g., Brown & Smith, is a joint note, in the same manner as a note signed by two or more individuals.

JOINT OWNERSHIP OF PROPERTY

Ownership of property, real or personal, in Joint Tenancy (q. v.). Advantages of such type of ownership are: (1) There is right of survivorship, so that if one joint tenant dies, the entire property belongs to the survivor. This legal incident is of such substantial importance that in the absence of express language creating a joint tenancy, statutes and the courts are disposed to treat the tenancy as a tenancy in common, without right of survivorship. To create the joint tenancy, the express language, for example, "Harry A. Jones and Mary E. Jones, as joint tenants with right of survivorship and not as tenants in common", is necessary. Use of the word "jointly" merely is not enough. Where the property is held in a valid joint tenancy, it will pass to the survivor upon death of the other joint tenant, without necessity of a will and without invoking the laws of descent.

(2) Joint tenancy eliminates the necessity of administration for real property not subject to estate and inheritance taxes. In the case of personal property, however, tax waivers or clearances are necessary, as statutes impose penalties upon transfer agents, depositories, etc. who permit transfers or withdrawals without such clearances.

(3) Except in unusual circumstances, creditors may not reach the property in the survivor for the deceased joint tenant's debts.

(4) A joint tenant cannot devise his interest, but alienation of his interest during his lifetime would destroy the joint tenancy and make it a tenancy in common.

(5) Curtesy and dower do not attach.

(6) A joint tenant cannot create an easement on land which is binding against himself and his joint tenant.

Taxwise, however, the joint tenancy is not as advantageous as the tenancy in common. A joint tenancy does not affect income taxes, as the income is divisible. Joint tenancy property is taxable in the estate of the joint tenant who furnished the consideration (Sec. 811 (e) (1), Internal Revenue Code). Also, all of the property is subject to lien for Federal taxes, including estate and gift taxes, on the decedent's estate, so that if the estate's assets are insufficient to cover taxes, the surviving tenant's property by survivorship, even though it did not become part of the estate, is subject to payment of the tax lien. A transfer from severable interests into joint tenancy constitutes a gift to the extent of the interest involved in the joint tenancy. However, a joint tenancy can be converted into a tenancy in common without liability for gift tax if equivalent interests are involved.

A special kind of joint tenancy, the tenancy by the entirety, is still recognized in some States, applying to

real property only, and having particular legal incidents of its own.

In husband and wife joint tenancies, the Commissioner of Internal Revenue has been strict in the application of Sec. 811 (e) (1) of the Code, and required the husband's estate to pay estate tax on all the jointly held property unless the surviving spouse could show that part was the result of her contribution in property or earnings. For community property states, the Federal estate tax law also required since 1942 that the taxable estate of the spouse who dies first shall include all community property except such part as was derived from the surviving spouse's separate property or earnings. Under the Revenue Act of 1948, permitting the marital deduction for the first time, up to half the net estate, for property left to the surviving spouse, the estate of the spouse first dying now has this very important reduction in estate taxes, which is what the community property States had been doing in taxing the estate of the first spouse to die for only half the community property. The 1948 Revenue Act revision of the gift tax is also based on the assumption that half the property of a married couple is owned by each spouse, so that a gift by one spouse to another would involve gift tax on only the half interest in theory conveyed. Thus, husband and wife relationships now have a substantial tax advantage not formerly enjoyed under the Federal estate and gift taxes.

(See Joint Tenancy, Tenancy by the Entirety, Tenancy in Common.)

JOINT-STOCK BANKS

The name given to the incorporated commercial banks of England as distinguished from the Bank of England and the private banks, banking partnerships, foreign banks, etc.

The leading commercial banks of the United Kingdom are the 11 London clearing banks, which as of the close of 1947 reported the following comparative deposits and significant asset items (source--London Economist):

London Clearing Banks
(£ millions)

	December 31 1946	December 31 1947
Deposits	5,685.4	5,934.5
Net Deposits (after deducting items in course of collection)	5,438.7	5,682.1
Cash	499.4	501.8
Money Market Assets	1,042.3	1,272.9
Call Money	431.9	479.6
Bills	610.4	793.3
*Treasury Deposit Receipts	1,559.5	1,288.0
Investments and Advances	2,407.2	2,688.4
Investments	1,427.0	1,482.8
Advances	980.2	1,205.6

*This type of asset did not appear in the banks' statements until July, 1940. They represent 6-month loans to the Treasury, and may be tendered by the banks in payment for long-term Treasury securities subscribed by the banks or their customers. In an emergency, they may be redeemed by the banks at a discount equal to the Bank of England rate (explanation by Board of Governors of the Federal Reserve System).

Since September, 1939, when World War II broke out, the 11 London clearing banks' deposits have expanded more than 2 1/2 times, reflecting the process of credit inflation generated by War financing.

(See Bank of England.)

Bibliography

Crick, W. F., and Wadsworth, J. F.: One Hundred Years of Joint Stock Banking, 1936.

JOINT STOCK COMPANY

A form of business organization having characteristics of both the partnership and the corporation, and sometimes called a "partnership with transferable shares".

Advantages over the partnership are; (1) continuity of existence unaffected by death of stockholders or transfer of shares; (2) centralization of management in a board of directors and officers. Advantages over the corporation are: (1) freedom from formal incorporation procedure; (2) exemption from State corporation taxes except franchise taxes in some States. Disadvantages compared with the corporation are: (1) lack of legal entity, so that taking and conveyance of real property unless specifically authorized has to be done in the name of the president, directors or trustees for the benefit of the company; (2) inability to sue and be sued in its own name; (3) unlimited liability of individual stockholders for the obligations incurred by the joint stock company.

In New York, the General Associations Law, formerly known as the Joint-Stock Associations Law, governs the legal incidents of joint stock associations, which are defined as including every unincorporated joint stock association, company or enterprise having written articles of association and capital stock divided into shares, but do not include a corporation or a business trust. The New York law requires every joint stock association transacting business within New York State to file a certificate within 60 days after formation and annually thereafter. This certificate, filed with the Secretary of State and with the clerk of the county of principal business, is to be signed and verified by the president and treasurer, and states the name and date of organization of the association, the number of its stockholders, the names and places of residence of the officers, and its principal place of business. Officers of a joint stock association who fail to comply with this requirement are jointly and severally liable to the State for a penalty of $50 for each day of failure to file. Associations doing business in New York State are also required to file with the department of state a certificate designating the Secretary of State as an agent for service of process.

The joint stock company has not been a popular form of business organization in the United States, although it has been characteristic of the old time railway express companies.

(See Corporation, Partnership.)

JOINT STOCK LAND BANK BONDS

All Joint Stock Land Bank bonds have matured or called for redemption, and all but 5 of the 88 chartered Joint Stock Land Banks (q.v.) had completed liquidation as of the close of 1947.

JOINT STOCK LAND BANKS

These agricultural credit institutions were privately organized and owned under the provisions of the Federal Farm Loan Act of 1916 (q.v.). The Emergency Farm Mortgage Act of 1933 provided that as of the date of en-

actment of the Act (May 12, 1933), no joint stock land bank shall issue any tax-exempt bonds or make any farm loans except such as are necessary and incidental to the refinancing of existing loans or bond issues or to the sale of any real estate then owned or thereafter acquired by the joint stock land banks. This Act in effect prohibited joint stock land banks from acquiring new business and restricted them to orderly liquidation of existing assets.

The Farm Credit Administration has had supervision over remaining operation and liquidation of the joint stock land banks. As of December 31, 1947, all but 5 of the 88 chartered joint stock land banks had completed liquidation.

JOINTLY AND SEVERALLY

When a note, mortgage, or bond is signed by several makers, who "jointly and severally promise to pay", each maker is individually liable for the full amount. This differs from the liability of each separate maker when the wording is "we jointly promise to pay". In this case the makers are liable as a whole and not individually.

JOINT TENANCY

A type of estate in real or personal property in which two or more persons, by virtue of grant or devise, never by laws of descent or operation of law, are associated in joint ownership. Joint tenancies have the four "unities" attaching, as follows: (1) Title. The joint tenancy arises by virtue of the same deed, conveyance or will; (2) Interest. Each joint tenant must have the same interest and estate in the property; (3) Time. The estate of each joint tenant must arise at the same time; and (4) Possession. Each joint tenant holds by the fractional interest specified and by the whole undivided possession.

In order to create a joint tenancy, the language of the grant or devise must be express and must clearly indicate that a joint tenancy is intended, as otherwise, statutes and courts rule generally that a tenancy in common is created. This disinclination to find joint tenancies by implication arises because of the important legal incident of survivorship. If one joint tenant should die, the estate passes to the survivors as joint tenants. The interest of the deceased joint tenant does not descend to his heirs, nor can he devise his interest. A joint tenant can mortgage or convey his interest during his lifetime, but if he does so, the joint tenancy is destroyed as to the interest mortgaged or conveyed. Partition will also dissolve the joint tenancy. Death of all the joint tenants but one will likewise terminate the joint tenancy.

(See Tenancy in Common, Tenancy by the Entirety.)

JOURNAL

In bookkeeping, a book of original entry; a record in which transactions are entered chronologically, i. e., in the order in which they occur, and from which they are posted to a ledger. Original entry records are also sometimes known as registers and blotters. Frequently, moreover, the original entry record is not made in a book but on various forms of posting mediums, e. g., deposit slip, debit and credit tickets

Judgment Debtor (q.v.), and should accordingly appear upon his books. Likewise the award from the viewpoint of the judgment creditor is an asset, or contingent asset, since although awarded may be uncollectible.

JUDGMENT CREDITOR

A creditor whose claim has been validated in a court of law and has been reduced to a judgment against the debtor.

JUDGMENT DEBT

A debt which has been contested in a law-suit, and found to be due; a debt validated and against which an award has been made by a court.

JUDGMENT DEBTOR

A debtor against whom a creditor has secured a judgment, which has been placed on record. (See Judgment Debt.)

JUDGMENT

A pecuniary award ordered by a court as the result of a law suit. A judgment constitutes a liability of the

JUDGMENT NOTE

An ordinary promissory note given by a debtor to a creditor to avoid legal action by the latter. It is an acknowledgment of a debt due the creditor and usually contains a power of attorney permitting the creditor to appear in court and confess judgment for the debtor.

JUNIOR BONDS

Bonds which are preceded by another issue or issues in their claim against the property pledged as security therefor. In the case of foreclosure they constitute a claim against the property pledged as security only after all prior claims have been satisfied. Junior bonds may be any kind of bonds except first mortgage bonds, e. g., second mortgage bonds, general mortgage bonds, debenture bonds. They are the opposite of Senior Bonds (q. v.).

JUNIOR ISSUE

Junior Bonds (q. v.); or junior stock which usually refers to common stock as distinguished from preferred stock.

JUNIOR LIEN

See Junior Bonds, Junior Issue, Junior Mortgage, Lien.

JUNIOR MORTGAGE

A low-ranking mortgage; a mortgage which is preceded by another or others in its claim against the mortgaged property, and which in case of foreclosure, would not be satisfied until all prior mortgages have been satisfied. A junior mortgage constitutes a junior lien upon the mortgaged property and is any mortgage other than the first, e. g., second, third, general, etc. (See Junior Bonds, Mortgage.)

KERN AMENDMENT

One of the amendments to the Clayton Anti-Trust Act, originally passed October 15, 1914. Sections 8 and 11 of the Act, relating to interlocking bank directorates, have been amended seven times. The Banking Act of 1935, passed August 23, 1935, completely revised Section 8 of the Act (See Clayton Act, Federal Reserve Regulations (Regulation L), Interlocking Directors.)

KILLING

An expression used among stock or produce exchange speculators to denote an unusually large and unexpected trading profit.

KITING CHECKS

A term used in banking to denote a method sometimes used by depositors to make use of fictitious balances by drawing against uncollected funds. Depositors are not entitled to draw against uncollected funds, but banks are not always careful in guarding against paying against funds deposited but not collected. Where this is true, it is possible for two persons living in different localities to exchange checks with one another and by depositing them with their respective banks, to have use of the funds until the day of collection, when funds may be deposited to make good the amount.

Kiting may also be practiced by a single individual having two bank accounts. By depositing a check drawn on bank "A" to the credit of his account in bank "B", and depositing a check drawn on bank "B" to the credit of his account in bank "A", a person may draw against the fictitious balances thus credited, expecting to "cover" before the checks are presented.

In the long run, banks are able to detect individuals who make a practice of kiting. This practice injures the depositor's credit standing and may result in his losing his account.

KITING STOCKS

A stock market expression used to denote the forcing of stock prices to unwarranted high levels; inflating or ballooning the prices of stocks.

KOPECK

See Foreign Moneys—Russia.

KORUNA

The crown of Czechoslovakia. (See Foreign Moneys--Czechoslovakia.)

KRAN

A currency unit of Iran, consisting of 1,000 dinars, as compared with the rial, the international currency unit, which consists of 100 dinars. (See Foreign Moneys--Iran.)

KRONA

See Foreign Moneys--Iceland, Sweden.

KRONE

See Foreign Moneys—Denmark, Norway.

LABOR BANKS

A name given to banks which have been organized, and the stock owned, by labor unions and their members. Except for the fact that they are operated under the auspices of labor unions primarily (although dealings are in no sense restricted to union members), they differ in no essential respects from other banks. The pioneer of these banks was the Locomotive Brotherhood Bank in Cleveland, Ohio, which was opened in November, 1920. Of the total stock of this bank, 51 per cent, was owned by the Locomotive Brotherhood as an organization, the remainder being held by members of the brotherhood individually. Stockholders were to receive no more than 10 per cent, in dividends, and any surplus that accrued was to be distributed to depositors in an increased interest rate. But with the adversities of the banking crisis in the United States during 1931-33, this experiment in co-operative banking came to an end.

Not all the labor banks have been organized under the National banking laws. The Brotherhood of Locomotive Engineers' Co-operative Trust Company of New York City, which opened for business on December 29, 1923, was organized under the banking laws of the State of New York.

The Brotherhood of Locomotive Engineers' Co-operative Trust Company of Philadelphia, organized in February, 1924, was also a state institution. Both the brotherhood banks in New York and Philadelphia were equipped to do a trust business, while all performed savings bank functions.

In May, 1920, the Mount Vernon Savings Bank was established in Washington with a capital of $160,000. From then on the movement developed rapidly. Even in the depression year 1921 the American Federation of Labor unions entered the movement, and ten labor banks were established by the end of 1922. Four years later there were 36 such banks in existence, with aggregate resources of more than $126,500,000. Furthermore, deposits had increased from $697,243 on June 30, 1920, to $109,000,000 on June 30, 1926.

Beginning with 1926 terminations began to exceed initiations of labor banks, and a gradual downward trend became evident.

By June 30, 1930, there were 14 labor banks, and at the present time, there are four: the Amalgemated Trust & Savings Bank of Chicago (established 1922); Brotherhood State Bank of Kansas City (established 1924) Union National Bank of Newark, N. J. (established 1925); and the Amalgamated Bank of New York, established in 1923. As of the close of 1947, these banks reported on the table appended on this page.

	----000 omitted---- Capital, Surplus and Undivided Profits	Deposits
Amalgamated Trust & Savings Bank, Chicago	$1,787	$34,289
Brotherhood State Bank, Kansas City	482	10,090
Union National Bank, Newark	528	13,234
Amalgamated Bank of New York	2,100	35,923
Totals	$4,897	$93,536

Since 1920, the development of labor banks in the United States, by 5-year periods from 1920 to 1946, has compared as follows:

	Number of Banks	Capital, Surplus and Undivided Earnings	Deposits	Total Assets
Dec. 31:				
1920	2	$1,154,446	$2,258,561	$3,628,867
1925	36	12,536,901	98,392,592	115,015,273
June 30:				
1930	14	7,217,836	59,817,392	68,953,855
1935	4	2,051,943	17,262,281	19,692,385
1940	4	2,684,911	23,847,294	26,931,651
1945	4	3,428,078	72,776,529	76,509,121
1946	4	4,353,648	86,651,036	91,544,888

Bibliography

Industrial Relations Section of Economics Department, Princeton University: The Labor Banking Movement in the United States, 1929.

LAC (OR LAKH)

A money of account in India, equivalent to 100,000 rupees. The international currency unit of India is the rupee (see Foreign Moneys--India).

LAISSEZ-FAIRE

Literally, let be, or let alone. A term used in classic economics, beginning with Adam Smith, meaning business and industrial freedom, and a minimum of intervention by government in business affairs. This implies: (1) freedom of competition; (2) freedom of contract; (3) freedom of initiative and vocation; and (4) freedom of bequest and inheritance.

LAMB

An expression which signifies an inexperienced speculator who "plays the market", i. e., speculates blindly. Such a person is called a lamb because he follows the herd, buying or selling because others do so, and, therefore, likely to be easy "prey" to losses. His transactions are not based on a knowledge of fundamental conditions, or of intrinsic values, equities, or earning power, but upon "tips" or hazy impressions. He trusts largely on chance, betting on the rise and fall of quotations. Whenever a lamb makes a profit it is more accidental than otherwise. The Securities Act of 1933, the Securities and Exchange Act of 1934, the Commodity Exchange Act, and similar protective legislation aimed at fraud and manipulative practices cannot guarantee, of course, successful speculative operations or prudent investment by the lamb.

LAME DUCK

An expression to denote a person who has become

financially embarrassed—especially used with reference to speculators.

LAND BANK COMMISSIONER

One of the top level supervisory officials in the Farm Credit Administration (q.v.). The Farm Credit Administration is headed by its Governor, and further consists of a Deputy Governor and four Commissioners, each supervising his specialty: the Land Bank Commissioner, Intermediate Credit Commissioner, Cooperative Bank Commissioner, and Production Credit Commissioner. The Land Bank Commissioner, acting through the Federal Land Banks as agents, directly participated in lending operations through extension of Land Bank Commissioner loans (q. v.).

LAND BANK COMMISSIONER LOANS

From May 13, 1933, to March 17, 1934, Land Bank Commissioner loans to farmers were made from the $200,000,000 fund which was made available to the Land Bank Commissioner by Section 32 of the Emergency Farm Mortgage Act of 1933. Beginning March 17, 1934, the loans were made from the $2,000,000,000 bond authorization of the Federal Farm Mortgage Corporation, as provided in Section 9 of the Federal Farm Mortgage Corporation Act, of which $600,000,000 could be used for this purpose. Authority to make Land Bank Commissioner loans expired July 1, 1947. Advances from these funds were to be used for refinancing indebtedness, for providing working capital for farm operations, and for enabling farmers to redeem or repurchase property which had been lost through foreclosure. The loans were granted upon the security of first or second mortgages upon real estate and personal farm property in contrast with Federal Land Bank mortgages which can be made only on the security of first mortgages on land and permanent improvements. The amount of a Commissioner loan, together with all prior mortgages or other evidences of indebtedness against the property mortgaged, could not exceed 75 per cent. of the appraised normal value of the property. However, not more than $7,500 could be loaned to any one farmer. Interest rate could not exceed 5% or by more than 1% the current rate on Land Bank loans through national farm mortgage associations.

The Land Bank Commissioner was, therefore, empowered to make loans in cases which were ineligible for Federal Land Bank financing and also to supplement the credit extended by the Land Banks. It was the policy of the Commissioner to make loans only to the extent that Federal Land Bank Credit could not be granted. In many instances, farmers seeking to refinance their indebtedness were enabled to do so by means of a first mortgage loan from a Federal Land Bank supplemented by a second mortgage loan from the Commissioner. The total credit from the two sources could amount to as much as 75 per cent. of the appraised normal value of the property mortgaged.

From May 1, 1933 through December 31, 1947, a total of $1,217,782,212 in loans were made by the Land Bank Commissioner to 679,656 borrowers, of which $103,194,909 in loans, to 104,760 borrowers, were outstanding December 31, 1947.

(See Federal Farm Mortgage Corporation.)

LAND BANKS

This term refers to three types of institutions:

(1) Several experiments in so-called land banking were made in American colonial history. The earliest, established in 1681, was known as "The Fund at Boston in New England." In 1714 a more elaborate land bank was established, known as "A Projection for Erecting a Bank of Credit in Boston, New England, founded on Land Security." Following these two projects were the New London Bank in 1732, and the Land Bank of 1740. Each of these banks was founded on the principle that land could be made the basis of credit and currency, being the ultimate security and redemption value therefor. It was believed that paper currency could be collateraled by landed security, and that current redemption would be unnecessary. As a corollary of this belief, no capital was required in starting operations, but merely confidence. All the land bank experiments failed. It was not fully understood in this early period that credit or paper currency must be backed by actual specie, and that it must be redeemed in specie and not merely be a promise to pay based upon land as security.

(2) Some of the states have organized what are known as land banks for the purpose of assisting building and loan associations is raising capital to finance the building of homes. The Land Bank of the State of New York, for instance, is a non-stock cooperative corporation, the membership of which is composed of "savings and loan associations", "for the purpose of issuing and redeeming debenture bonds secured by first mortgages pledged by its members, and for otherwise promoting their interests."

Federal institutions supplying long term agricultural credit. (See Farm Credit Administration, Federal Land Banks, Federal Farm Loan System.

LAND BONDS

See Federal Farm Loan Bonds, Joint Stock Land Bank Bonds, Mortgage Certificates, Mortgage Loans, Real Estate Bonds.

LAND GRANT BONDS

A type of railroad bond secured by tracts of land granted to railroads by the Federal Government as well as by States and local governments. Federal land grants to railroads were discontinued after 1871, but States and local governments continued to give aid in land grants. As of 1930, total value of all aid to Class I railroads, as estimated by the National Transportation Committee, totaled $1,070 million, consisting of land grants of $876 million ($376 million sold and $500 million on hand), and $194 million in other aid. Land grants were utilized in bond financing by the railroads, sinking funds for retirement being created by sales of such lands to homesteaders. A non-callable issue still outstanding are the Northern Pacific Prior Lien and Land Grant 4s of 1997. (See Railroad Bonds.)

LAPSE

A term used in connection with insurance. An insurance policy is said to lapse when the policyholder fails to pay the premium when due or within the period of grace which is usually one month. Reinstatement of a lapsed policy is provided for by most companies upon the payment of a small sum, although in some cases, re-examination is required. Under most policies the holder is entitled to a "paid up" or "extended" insurance policy in case of lapse.

Ratio of ordinary life insurance lapses to total policies in force was 3.5% in 1947, compared with 2.8% in 1946 and 2.2% in 1944, and 8.3% average for the 1930s. Lapses on industrial policies have followed the same

approximate trend. Aggregate lapses have increased substantially since 1944, and the ratio to insurance in force has risen despite the large expansion in total life insurance outstanding. (See Insurance.)

LaSALLE STREET

The street in Chicago where most of the financial institutions are located; hence, by extension, a popular name for the Chicago financial district, as Wall Street is for New York, State Street is for Boston, and Lombard Street for London. LaSalle Street is another name for financial Chicago.

LATIN MONETARY UNION

See Latin Union.

LATIN UNION

A union formed in December, 1865, consisting of France, Belgium, Italy and Switzerland, which adopted a common decimal coinage system based upon the French franc equivalent to $0.193 in United States money, as the unit of value. Greece joined the Union in 1868. These five nations agreed to accept without distinction, and to use as interchangeable, gold pieces not reduced in weight by natural abrasion more than 1/2 per cent. Five franc silver pieces conforming to certain conditions were also acceptable without distinction and were interchangeable. While the unit of value was the same in each country, it is known by different names; franc in France, Belgium and Switzerland, lira in Italy, and drachma in Greece. Other countries which adopted the system without joining the Union were Spain (peseta), Finland (finmark or markka), and Venezuela (bolivar).

The Latin Monetary Union definitely passed away with the end of 1926 after over 60 years of existence. In effect it had ceased to operate since the outbreak of World War I, and as early as 1921 its members signed a convention regulating the terms of its dissolution. But it was only in December, 1926, that Switzerland addressed a note to her partners informing them that she would consider the union terminated both in name and fact on December 31, and, none of the partners having raised opposition, the union terminated on that date.

The original treaty of 1865 made uniform the content, weight and form of the gold and silver currencies of the four countries signing it. Each was entitled to mint gold pieces of 100, 50, 10 and 5 francs and silver pieces of 5 francs without limit and each undertook to accept these coins indiscriminately, so that the treaty sanctioned bimetallism. The depreciation of silver caused much difficulty from almost the outset of the union, however, and in 1879 the principle of bimetallism was partly abandoned, it being agreed to stop the minting of silver coins, though the coins already existing continued to rank as legal currency with gold. This system, which has been called "lame bimetallism," prevailed up to the outbreak of World War I.

The war witnessed the practical disappearance of all gold coins in the countries of the Latin Union and even the silver ones vanished, except in Switzerland. With the depreciation of the French, Italian, Belgian and Greek currencies after the war, Switzerland found silver pouring into her territory from all sides, the tendency being accentuated by the fall in the price of silver. She had finally to prohibit the import of crowns emanating from the mints of the other partners to the union, but the crowns continued to come in secretly and in 1920 all but Swiss crowns were declared illegal currency.

After the retirement of the forbidden crowns, for which a period of three months was allowed, Switzerland found herself possessed of 225,000,000 francs in French, Italian, Belgian and Greek silver pieces, in addition to the silver already in the national bank. The countries concerned got together in 1921 and framed a convention for the solution of the problem, which involved the ultimate termination of the Latin Union. It was arranged with France that the 130,000,000 French silver francs in the possession of Switzerland should be held until January 15, 1927, after which they would be returned in instalments over a period of five years against 20,000,000 francs gold plus the balance in Swiss francs or in gold or in drafts on Switzerland. A similar arrangement was made with Italy and Belgium, except that Switzerland was given the right to melt down and transform into Swiss silver coins about half the Italian total of 65,000,000 francs and three-fourths of the Belgian total of 29,000,000. As for the Greek silver pieces, the amount was so small that it was arranged that the whole should be transformed into Swiss coins.

LAW, JOHN

See Mississippi Bubble.

LAWFUL MONEY

As defined in an opinion of the Attorney General of the United States, "The term Lawful Money is understood to apply to every form of money which is endowed by law with legal tender quality."

The Joint Resolution of Congress dated June 5, 1933 amended the AAA Farm Relief and Inflation Act of May 12, 1933 to provide as follows: "All coins and currencies of the United States (including Federal Reserve notes and circulating notes of Federal Reserve banks and National banking associations) heretofore or hereafter coined or issued, shall be legal tender for all debts, public and private, public charges, taxes, duties, and dues, except that gold coins, when below the standard weight and limit of tolerance provided by law for the single piece, shall be legal tender only at valuation in proportion to their actual weight." Gold coins no longer circulate in accordance with the Gold Reserve Act of 1934 and Treasury orders.

Every Federal Reserve Bank is required to maintain reserves in gold certificates or lawful money of not less than 35% against deposits and reserves in gold certificates of not less than 40% against its Federal Reserve Notes in actual circulation. Present type of gold certificates outstanding are permitted to be held by Federal Reserve Banks only, representing in effect the gold credits which the Treasury gave the Federal Reserve Banks when it took over all monetary gold in the United States in accordance with the Gold Reserve Act of 1934.

Federal Reserve Notes, the largest type of paper currency outstanding, are now specifically legal tender, in accordance with Joint Resolution of June 5, 1933. Section 16 of the Federal Reserve Act still provides that Federal Reserve Notes shall be redeemed in lawful money on demand at the Treasury Department of the United States, in the city of Washington, District of Columbia, or at any Federal Reserve Bank. Silver certificates are the next largest type of paper currency in circulation, and like all other coins and currencies, are legal tender in accordance with the Joint Resolution of June 5, 1933.

Accordingly, the former distinction between lawful money and non-legal tender has been eliminated by the Joint Resolution of June 5, 1933. (See Legal Tender.)

LEAD FUTURES

Contracts in lead futures were until recently traded on the Commodity Exchange, Inc., New York City, but trading has been suspended. The trading unit was 60,000 lbs., constituting one contract. Price changes were registered in multiples of 1/100th of 1¢ per pound, with the daily trading limit being 3/4¢ above or below previous close, or maximum range of 1 1/2¢. The seller had the option of delivering any one of the brands or markings included in the official list of the Exchange, in one of the following grades: Corroding Lead, Chemical Lead, and Common Lead (Desilverized and Soft or Prime Soft). Premiums and discounts depended upon the place of delivery. (See Commodity Exchange, Inc.)

LEASE

A contract granting or letting the possession of lands, buildings, tenements, offices, machinery, or other chattels for a specified fixed or indeterminate period, for a stated consideration, usually a periodical payment known as rent, or, in the case of land, as ground rent. After the expiration of a lease, the property reverts to the original owner. Lease contracts are usually in writing and in most states are required to be in writing, if for more than one year's duration. The contract usually sets up the relationship of landlord and tenant or owner and renter. Business properties, especially railroads, are frequently leased as a method of securing control over subsidiary lines, or to effect a combination; thus the Boston & Albany Railroad is leased to the New York Central Railroad for 99 years. Railroad equipment is also, to a very large extent, leased by railroad companies from equipment companies, the transaction being financed by equipment trust obligations which are paid off by rental payments.

The term lease is applied both to the property which is leased and the contract granting possession of the leased property. The person granting the lease is the lessor and the person taking the lease (possession of the property) is the lessee.

LEASEHOLD

The legal estate of the lessee under a lease, also known as an estate for years. Generally speaking, leasehold bonds among real estate bonds are not well regarded, because of the fixed duration of the term of the lease, unless supplemented by options to renew in the lessee, and because of the vulnerability of the leasehold which is the security to default on the part of the lessee under the varied provisions of the lease. Leasehold bonds are in effect junior to rental payments under the lease. (See Real Estate Bonds.)

LEGACY

A gift of money or other personal property made by the will of a Testator (q.v.). Legacies are of three kinds, specific, demonstrative, and general. A specific legacy is a gift of some specific article or particular part of the estate, which can be identified and distinguished from all others of the same nature, and is to be satisfied only by the delivery of such specific gift, e. g., a painting, ring, etc. A demonstrative legacy is a gift of a stated sum of money or of securities, payable out of a particular fund or security, e. g., a gift of $5,000 payable out of the proceeds of a certain described bond. It differs from a specific legacy because if the fund out of which the legacy is to be paid fails, recourse may be had to the general assets of the estate. A general legacy is a gift payable out of the general assets of the estate without reference to any particular fund or property. It does not call for the delivery of any particular piece of property and money gifts are usually construed to be general legacies. That portion of the estate remaining after the specific, demonstrative, and general legacies have been paid is known as the residuary estate.

The recipient of a legacy is known as a legatee, but a legacy may be void if the legatee dies before the testator, depending upon the wording of the will. In many cases the will leaves no doubt that the deceased legatee's gift is to pass on to the residuary.

Unless there is provision in the will to the contrary, if the assets of the estate are insufficient to pay all the debts there must be an abatement of the legacies. The deficiency will fall first upon the residuary estate and when this is exhausted the burden of the deficiency will rest pro rata on the general legacies. Specific legacies do not abate until the residuary estate and the amount equal to the sum of the general legacies has been exhausted. General legacies abate prior to demonstrative legacies, except when the fund out of which the demonstrative legacy is to be paid is insufficient, in which case the demonstrative legacy abates with the general legacies. In case, however, this fund is sufficient for the payment of the demonstrative legacy, the latter abates with the specific legacies. (See Will.)

LEGAL BONDS

A general term to denote bonds which are legal for investment by (1) savings banks; (2) insurance companies; (3) trust funds, or (4) to secure Government or other deposits. The term is indefinite because relative, since bonds may be legal for one purpose, but not for another, for investment by savings banks, but not for trust funds, or as collateral to secure State deposits, but not for Federal Government deposits. A bond, moreover, may be a legal investment for savings banks in one state but not in another. (See Legal Investment for Savings Banks, Legal Investments for Trust Funds, Legality of Securities.)

LEGAL HOLIDAYS

Days declared by law (statutes or proclamations) as being exempt from legal incidents, such as judicial proceedings; service of process; demand, payment or protest of negotiable instruments, etc. Also termed public holidays.

Each State has jurisdiction as to the declaration of legal holidays to be observed within its borders. The President of the United States and Congress proclaim or legislate legal holidays for the District of Columbia and Federal Government offices throughout the country.

Besides Sunday, the following legal holidays are observed by all the States as well as the District of Columbia: January 1 (New Year's Day); February 22 (Washington's Birthday); July 4 (Independence Day); first Monday in September (Labor Day); fourth Thursday in November (Thanksgiving Day); December 25 (Christmas).

For a detailed list of legal holidays in the United States and elsewhere in the world, see:

Guaranty Trust Co. of N. Y.: Bank and Public Holidays Throughout the World, 1947.

(See Bank Holidays.)

LEGAL INVESTMENTS FOR SAVINGS BANKS

Savings banks are restricted by State laws in the in-

vestment of deposits to certain types of securities, largely fixed income producing and of conservative quality. The chief reason for such supervision is to prevent speculation with savings deposits and to enforce conservatism, and thus to make savings banks as "fool-proof" as possible. Even in States which prescribe a legal list of investments, however, the selection of particular securities which appear on the legal list is still a function and responsibility of savings bank management.

First mortgage loans are made legal investments in all States, as well as investment in Government, State and municipal bonds. Railroad bonds and equipment trust obligations, and public utility (electric, artificial gas, natural gas and telephone companies) obligations are generally eligible. Bank stocks are permitted investments in New England States, but stocks in general are not legal investments for savings banks except in some financially less important States. Loans secured by mortgages and securities themselves eligible for investment are generally legal, as are bankers acceptances, bills of exchange, and loans secured by pass book. Direct investment in real estate is generally not permitted except for real estate acquired as a place of business for the savings bank.

In New York, a legal list State, Section 35 of the Banking Law prescribes that in each year the Superintendent of Banks shall mail to each savings bank a list of securities which in his judgment conform to the requirements of the Banking Law relating to legal investments for savings banks. In addition, the Superintendent lists those investments which have been made legal by Banking Board authorization as provided by subdivision 1 (f) of Section 14 of the Banking Law. Under that subdivision of Section 14, the Banking Board can authorize savings banks to invest in corporate interest bearing obligations not otherwise eligible for investment, provided application for such authorization shall have been made by not less than 20 savings banks or by a trust company (see Savings Bank Trust Company) all of the capital stock of which is owned by not less than 20 savings banks. Any authorization made pursuant to this subdivision may be revoked upon a majority vote of all of the members of the Banking Board. This extra-legal list is designed to afford relief from the rigidity which is characteristic of legal list requirements.

Under Section 235 of the New York Banking Law, the following investments are specified as legal for savings banks:

1. Obligations of the United States, or those for which the faith of the United States is pledged to provide for the payment of interest and principal.

2. All legally issued full faith and credit obligations of New York State.

3. All legally issued full faith and credit obligations of the other 47 States and the Territory of Hawaii.

4. All legally issued full faith and credit obligations of any city, county, town, village, school district, poor district or fire district in New York State.

5a. Obligations (excluding non-negotiable warrants) of counties, cities and school districts in adjoining States, such cities or counties having a minimum population of 10,000; having had no default within 25 years preceding investment; and having a maximum net debt of 12% of real property valuation. Under this statutory provision, the Superintendent lists certain legally issued full faith and credit obligations (excluding non-negotiable warrants) of cities, counties and school districts in the States of Connecticut, Massachusetts, New Jersey, Pennsylvania, Rhode Island and Vermont.

5b. Obligations (excluding non-negotiable warrants) of counties, cities and school districts in non-adjoining States; such cities having been incorporated at least 25 years and having had no default within 25 years preceding investment; having population of not less than 30,000, provided, that cities with population of less than 45,000, or school district or county, shall have power to levy taxes on taxable real property without limitation of rate or amount; having a maximum net debt of 12% of real property valuation.

5c, 5d, 5e, and 5f qualify further the requirements of 5a and 5b. Indebtedness of any county shall not exceed 5% of real property valuation. Where there is no county wholly or in part within a city, or if the county wholly or in part within a city has neither any indebtedness nor power to incur indebtedness, such a city or adjoining school district may have a maximum net debt of 15% of real property valuation.

Obligations of any city which has taxable real property valuation in excess of $200,000,000, and minimum population of 150,000; and any school district or county including or adjoining such city, are not subject to the above debt limits, provided such city, county or school district has power to levy taxes on taxable real property without limitation of rate or amount.

Obligations of all places under subdivision 5 of Section 235 issued after the year 1938 shall be legal for purchase only if the issuing municipality has power to levy taxes on the taxable real property therein for the payment of such obligations without limitation of rate or amount. However, the investment status of any limited tax obligations issued prior to January 1, 1939 was not affected by this requirement. Obligations of certain places designated by the Superintendent, regardless of date of issue, shall be legal for purchase only if the issuing municipality has such power to levy taxes on the taxable real property therein for the payment of such obligations without limitation of rate or amount.

6a. Bonds and mortgages on improved unencumbered real property situated in New York State, issuable up to 60% of appraised value of such improved real property, and up to 66 2/3% of appraised value if such real property is improved for residential, business, manufacturing or agricultural purposes.

6aa. Bonds and mortgages up to 80% of the first $10,000 of appraised value and 50% of remainder if any of appraised value, amortized on a 20-year basis, of real property located not more than 50 miles from principal office, improved by single family residence constructed not more than 2 years before making of the loan and occupied by owner.

6b. No restrictions apply to investment in bonds and mortgages on real property in New York State or in any adjoining State insured by the Federal Housing Commissioner.

6h. Notwithstanding the above limitations, any savings bank may invest in bonds and mortgages on real estate situated in an adjoining State located within 25 miles of principal place of business, made on the bases specified in 6a.

7a. First mortgage bonds upon terminal, depot or tunnel property, and fixed interest bearing bonds secured by direct mortgage, of railroads located in the United States, direct or assumed, including equipment trusts; having at least 500 miles of line; annual revenues of at least $10,000,000; shall have earned fixed

charges at least 1 1/2 times in previous year and in 5 out of 6 previous years; shall have paid cash dividends equal to 1/ 4th of fixed charges, or earned fixed charges at least 1 1/2 times in previous year and in 9 out of the 10 previous years; shall have had no default in the past 6 years.

Other obligations (income mortgage bonds, collateral trust bonds, other secured obligations, or unsecured bonds or obligations issued, assumed or guaranteed) of railroads, provided that in at least 5 of the preceding 6 years and in the last fiscal year next preceding investment, amount available for fixed charges shall have been not less than 2 times the sum of fixed charges and full interest on such income mortgage bonds; net income of which after such deductions shall have made, has been not less than $10,000,000.

Under Section 7a, the obligations of any railroad corporation which failed to earn its fixed charges as required above in any or all of the fiscal years beginning in the years 1931, to 1939, inclusive, were not made ineligible, provided income available for fixed charges has been at least equal to such fixed charges in each year for at least 5 of the 6 fiscal years and in the last fiscal year next preceding the date of investment.

Also, Section 7b provides that any savings bank which prior to April 1, 1938 acquired any railroad obligations eligible at the date of acquisition could continue to hold such obligations as though the same continued to be eligible for new investment.

8. Promissory notes payable to the order of the savings bank within 90 days from date, secured by mortgages or investments legal for investment, or savings bank deposits, provided the amount of the loan is not over 90% of principal sum of the mortgages or of the market value of the securities, and not in excess of the amount on deposits; or made to a savings and loan association incorporated at least 3 years and having accumulated capital of at least $50,000.

9. Real estate for the transaction of business by the savings bank.

10. Bonds of the Savings and Loan Bank of the State of New York.

11. Fram loan bonds, including consolidated bonds, issued by Federal Land Banks and Federal Intermediate Credit Bank debentures, including consolidated debentures, issued by Federal Intermediate Credit Banks.

12. Bankers acceptances and bills of exchange eligible for purchase in the open market by Federal Reserve Banks which have been accepted by a bank, a trust company, a national bank having its principal office in New York State, or by an investment company.

13. Mortgage bonds of electric, artificial gas and natural gas companies, incorporated under United States or State laws; deriving at least 75% of gross revenues under franchise from such electric or gas business and not over 15% of gross from any other business, which have 5-year average operating revenues of at least $1,000,000; which have earned interest charges at least 2 times in previous year and on an average for 5 previous years; which show income available for dividends of at least 4% on two-thirds of the funded debt; having capital stock equal to at least two-thirds of the total debt secured by mortgage lien on any part or all of the property; shall have been in existence at least 8 years, next preceding date of investment; such bonds to be part of a minimum issue of $1,000,000, represent a first or refunding mortgage, not exceeding 60% of the value of physical property pledged.

14. Mortgage bonds of telephone companies incorporated under United States or State laws; in existence for at least 8 years, and having had no default for at least within 8 years; having capital stock equal to at least two-thirds of the total debt secured by mortgage liens on any part or all of its property; having annual operating revenues of at least $5,000,000; shall have earned fixed charges at least 2 times for a period of 5 years next preceding investment and for last fiscal year preceding investment; shall leave earned for each of 5 preceding years, an amount available for dividends or paid in dividends equal to 4% of outstanding capital stock; such bonds to be part of a minimum issue of $5,000,000, and represent a first or refunding mortgage not in excess of 60% of the value of physical property pledged.

15. Bonds, debentures, consolidated debentures or other obligations of any Federal Home Loan Bank or banks.

16. Stock of a Federal Reserve Bank in the amount necessary to qualify for membership in such bank.

17. Stock of a Federal Home Loan Bank in the amount necessary to qualify for membership in such bank and in such additional amounts as are approved by the Banking Board.

18. Stock, capital notes and debentures of any trust company and of any other corporation organized under the laws of New York State, to the extent and upon such conditions as are or have been authorized by the Banking Board, provided all of the stock of such trust company or corporation is or is to be owned by not less than 20 savings banks; and any participation certificates or any other form of participation, though junior in interest, issued by any such trust company in its individual capacity or as trustee, or by any such corporation, and representing participations in first mortgages assigned by savings banks in payment of stock, capital notes or debentures of any such trust company or any such corporation, or assigned in connection with the sale of mortgages by such savings bank to such trust company or such corporation.

19. Securities of corporations whose securities are made eligible for investment by savings banks by the Banking Board.

20. Any part interest in bonds and mortgages held by, or any bonds or notes secured by mortgage to, any trust company or any other corporation all of the capital stock of which is held by not less than 20 savings banks of New York State, and insured by the Federal Housing Commissioner. A savings bank may receive and hold such debentures as are issued in payment of such insurance, and the restrictions of subdivision 6 of Section 235 shall not apply to investments made pursuant to this subdivision, but such investments shall be limited to mortgages on real property located in New York State or in any State adjoining the State of New York.

21. Stock or obligations of any corporation organized under any law of New York State for the purpose of acquiring, constructing or maintaining, operating, selling or conveying, a housing project, not including hotels but including accommodations for retail stores, shops, offices and other community services reasonably incident to such project, located within New York State, to the extent and upon such conditions as may be prescribed by the Banking Board, provided that all such stock and obligations of any such corporation have been or are originally issued to savings banks of New York State or to a corporation organized under the laws of New York State and all of the stock of which is owned by not less than

20 savings banks and which is subject to the supervision of the Banking Department.

22. Certificates of investment in savings bank life insurance fund.

23. Certificates representing advances to the surplus fund of the life insurance department of the savings bank.

24. Obligations issued or guaranteed by the International Bank for Reconstruction and Development.

Under Section 235a of the Banking Law, New York State savings banks could at any time prior to July 1, 1947 make loans to owners of real estate for the purpose of rehabilitating or modernizing buildings located thereon, the major portion of which buildings is to be used for non-transient residential purposes. Such loans must be secured by mortgage upon such real estate, and the amount of such loan, when added to the amount unpaid on all prior mortgages, liens and encumbrances, must not exceed 66 2/3% of the appraised value of such real estate. Such loans must be made for the purpose of rehabilitating or modernizing income producing real estate, and must be fully repaid, both as to principal and interest, within a period not exceeding 5 years from the date of such loan. Further, a committee of at least two trustees of the savings bank must certify that in its opinion, the income from such real estate is, or as a result of the allocation of the loan will be sufficient to pay all costs of operation of such real estate, all taxes thereon, and all interest and other carrying charges on any indebtedness secured by such real estate, and to pay all interest on, and effect full repayment of the principal of such loan within 5 years from the date that such loan is made. The buildings must be located within the State of New York and not more than 50 miles from the principal office of the savings bank. In addition to direct loans, a savings bank could invest in stock and obligations of a corporation all of the stock of which is owned by such savings bank or by such savings bank and one or more other savings banks of New York State, to such extent and upon such conditions as the Banking Board shall prescribe.

Maximum proportions of total assets that may be invested in by savings banks in the various types of legal investments are:

Bonds and mortgages (not applicable to FHA insured mortgages)	65%
Railroad obligations	25%
Electric and gas obligations	10%
Telephone obligations	10%
Real estate (for transaction of business)	25%(of surplus fund)
Housing projects (or 50% of surplus fund, whichever is less)	5%
Modernization and rehabilitation loans	1%

Acceptance and deposit liability of any bank, trust company or national bank, or acceptance liability of any investment company, in connection with bankers acceptances and bills of exchange invested in by a savings bank, may not exceed 25% of capital and surplus of such bank, trust company, national bank or investment company, or 5% of aggregate amount of deposits of the savings bank, whichever is smaller.

In addition to the above legal investments under Sections 235 and 235a of the Banking Law, New York State savings banks are authorized to invest in obligations of various public authorities, many of the provisions of law authorizing such investments having been consolidated in the New York Public Authorities Law.

(See Institutional Securities Corporation, Savings Banks, Savings Bank Trust Company.)

LEGAL INVESTMENTS FOR TRUST FUNDS

Statutes of nearly all States prescribe the investments that shall be legal for a trustee. The trustee's investing duty may be primarily controlled by instructions of the settlor (creator of the trust) contained in the trust instrument: (1) the instructions may specifically name the investments in which the trustee shall invest; (2) retention of the investments made by the settlor and conveyed in trust may be directed; or (3) the trustee may be given full discretion to invest. In following directions of the settlor, the trustee is required by the courts to exercise ordinary care and skill. Courts also may intervene to authorize trustees to take different action if following the settlor's directions would be of disadvantage to the beneficiaries. Also, the courts hold trustees to a strict construction of the settlor's directions which deviate from usual trustee investments.

Where there are no settlor's instructions or Court directions otherwise, the State statutes may govern, depending on whether they are mandatory or permissive. If mandatory, the State statutes govern. If permissive, the Statutes may be followed by the trustee, but even if he does so, he must still show exercise of reasonable care. The trustee may choose to invest outside the statutes, but if so, he must show exercise of reasonable care and skill. Besides trustees under formal trust instruments, executors, administrators and other persons holding trust funds for investment are subject to State statutes.

Executors, administrators and testamentary trustees in New York are governed by Section 111 of the Decedent Estate Law; and other trustees or persons holding trust funds for investment, by Section 21 of the Personal Property Law, both similar statutes. Legal investments for trust funds under these permissive statutes are:

1. Except investments as authorized by Subdivision 21 of Section 235 of the Banking Law (housing project corporations), the same kind of securities as those in which savings banks of New York State are authorized to invest, including mortgage bonds and notes insured by the Federal Housing Administrator or any part of an issue thereof.

2. Deposits in the special interest or thrift department of National banks located in New York State, or of banks or trust companies organized under New York State laws, or with savings banks incorporated under New York State laws.

No such investment, however, of the funds of any one estate or fund in any one national bank, bank, or trust company shall exceed $5,000.

3. Shares of a Federal savings and loan association organized under the Home Owners Loan Act of 1933 and having an accumulated capital of $100,000 or more; and shares of a savings and loan association having an accumulated capital of $100,000 or more, organized under New York State laws.

No such investment, however, of the funds of any one estate or trust in any one association shall exceed $10,000 .

4. Bonds and mortgages on unencumbered real property in New York State worth 50% more than the amount loaned thereon.

Such restrictions as to location and percentage of value of the real property shall not apply to bonds and mortgages insured by the Federal Housing Administrator.

New York State further authorized trustees to require such personal bonds or guaranties of payment of principal and/or interest to accompany investments as may seem prudent, and in this connection, the trustee is given power to modify or release such guaranties, and to charge to income all premiums paid for such guaranties or fees for servicing mortgages, provided such charge is not more than 1/2 of 1% per annum of par value of the investments. Such guaranteed whole mortgages were actively offered by title and mortgage companies in New York prior to the real estate phase of the depression.

Trustees are also authorized, when holding a share or part of a bond and mortgage whose underlying property is bid in at foreclosure sale or acquired by voluntary conveyance, to join with other holders in conveying their undivided interest to a corporation formed to take over the property, and accept pro rata share of stocks and bonds of the corporation. Such corporation shall be a business corporation, but shall be prohibited by its certificate of incorporation from investing in bonds, stocks or other securities, other than real estate, which are not under New York laws legal investments for trust funds. Upon sale of the real property by the corporation, it shall be dissolved and final liquidation be effected in cash.

The statute, however, no longer permits the purchase of mortgage participations by trustees, although trustees are permitted all the powers heretofore had with respect to parts of bonds and mortgages for the protection and preservation of the trust property. A 1936 amendment stated that "It is the intention of this act to prohibit any future investments in parts of bonds and mortgages for any estate or fund, for which such executor, administrator, trustee or other person may hold trust funds to invest."

Finally, a 1938 amendment, effective April 1, 1938, states that no fiduciary shall be liable for any loss incurred with respect to any investment not eligible by law for the investment of trust funds: (1) if such ineligible investment was received by the trustee under the terms of the instrument creating the trust; (2) if such ineligible investment was eligible when received, or when made by the trustee; provided the trustee exercises due care in the disposition or retention of any such ineligible investment.

The New York statutes may be taken as representative of the "strict" States, as compared with States at the other extreme which merely require trustees to use good faith, diligence and care in the investment of trust funds.

The Board of Governors of the Federal Reserve System has the power to grant by special permit to National banks applying therefor, when not in contravention of State or local law, the right to act as trustee, executor, administrator and other fiduciary capacities in which State banks, trust companies or other corporations which come into competition with National banks are permitted to act under the laws of the State in which the National bank is located. Whenever the laws of such State authorize or permit the exercise of any or all of these powers by State banks, trust companies or other corporations which compete with National banks, Section 11 (k) of the Federal Reserve Act provides that the granting to and the exercise of such powers by National banks shall not be deemed to be in contravention of State or local law within the meaning of the Act.

(See Legal Investments for Savings Banks; Trust Department.)

LEGAL OPINION

One of the risks which a bond buyer assumes concerns the legality or validity of the issue he contemplates purchasing. The legality of bonds is extremely important, because without it there may be no legal means by which investors' money may be recovered. To avoid further difficulties, whenever a corporation bond issue is underwritten, the legal phases are examined by the corporation's counsel or by outside attorneys, and in the case of municipal bonds, by the attorney for the underwriting bond house.

In addition to the legal work done by the issuer's attorney, the underwriting house, as the purchaser of an issue of bonds, usually selects a special bond attorney, whose fees are paid by the issuer, to render a final approving opinion. This final opinion is secured because the nationally known attorney's opinion forms the basis for bank loans and trustee investments. The dealer and investor should also distinguish between the "preliminary" and "final" attorney opinion which is acceptable to a bank when these bonds are to be used as collateral for a loan. Some law firms make a specialty of giving legal opinions upon bond issues, consequently on bond circulars very often appears the phrase, "We have the legal opinion of ——", or "legality approved by ——". The legal opinion is related to the engineer's report and both are necessary features in the successful marketing of a bond issue. The first is a statement of legality, the second a statement of the technological condition of the corporation's property. (See Legality of Securities.)

LEGAL RATE OF INTEREST

The maximum rate of interest fixed by the laws of the various States, which a lender may charge a borrower for the use of money. Interest charged in excess of the legal rate is called Usury (q.v.), which is penalized in varying degree by the laws of the various States.

Nominally, National banks are restricted by the Revised Statutes to a maximum rate of 7%, but State interest and usury laws are applicable to National banks in fixing the legal rate of interest for the particular State wherein the National bank operates, and since all States prescribe legal rates of interest, National banks are required to conform therewith. However, the penalty prescribed by Section 5198 of the Revised Statutes for National banks taking usurious interest is exclusive and controlling over State laws.

Section 5198 of the Revised Statutes prescribes that the taking, receiving, reserving or charging of a rate of interest greater than is allowed, when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill or other evidence of debt carries with it, or which has been agreed to be paid thereon. In case the greater rate of interest has been paid, the person by whom it has been paid or his legal representative may recover back, in an action in the nature of an action of debt, twice the amount of the interest thus paid, from the National bank taking or receiving same. Such action,

however, must be commenced within 2 years from the date the usurious transaction occurred.

Because of the diversity of State laws and their provision for exceptions and qualifications, tabulation of maximum State legal and contract rates of interest can only be indicative of nominally stated rates, and reference must be made to the basic laws of each State for complete details. The following tabulation, nevertheless, lists the nominally stated legal rates and contract rates of interest for the various States and territories:

State of Territory	Legal Rate	Contract Rate
Alabama	6%	8%
Alaska	6	10
Arizona	6	8
Arkansas	6	10
California	7	10
Colorado	6	Unlimited(a)
Connecticut	6	12
Delaware	6	6
District of Columbia	6	8
Florida	6	10(b)
Georgia	7	8
Hawaii	6	12
Idaho	6	8
Illinois	5	7
Indiana	6	8
Iowa	5	7
Kansas	6	10
Kentucky	6	6
Louisiana	5	8
Maine	6	Unlimited(a)
Maryland	6	6
Massachusetts	6	Unlimited
Michigan	5	7
Minnesota	6	8
Mississippi	6	8
Missouri	6	8
Montana	6	10
Nebraska	6	9
Nevada	7	12
New Hampshire	6	Unlimited
New Jersey	6	6
New Mexico	6	10(c)
New York	6	6
North Carolina	6	6
North Dakota	4(d)	7
Ohio	6	8
Oklahoma	6	10
Oregon	6	10
Pennsylvania	6	7(e)
Rhode Island	6	30
South Carolina	6	7
South Dakota	6	8
Tennessee	6	6
Texas	6	10
Utah	6	10
Vermont	6	6
Virginia	6	6
Washington	6	12
West Virginia	6	6
Wisconsin	5	10
Wyoming	7	10

(a) If over $300.
(b) Bank or trust company loans under $1,500--6%, regardless of whether or not paid in instalments.
(c) 12% if no collateral.
(d) On judgments, 2% not compounded.
(e) Banks, 6%.

Source--National Association of Credit Men: Credit Manual of Commercial Laws, 1948.

Incidents of usury statutes for the various States may be summarized as follows:

Alabama--Penalty for usury, all interest is forfeited. Usurious interest paid is deducted from principal.

Alaska--Forfeiture of all interest; double the amount of usurious interest may be recovered if action is brought within 2 years.

Arizona--Forfeiture of all interest.

Arkansas--Maximum contract rate is prescribed in the State Constitution. Usury forfeits principal and interest.

California--Maximum contract rate is prescribed in the State Constitution. Forfeiture of all interest if over the contract rate of 10%, and treble amount of interest if over 12%.

Colorado--No provision for usury laws, except as applied to loans of $300 or less, under Small Loans Act.

Connecticut--Forfeiture of principal and interest; banks and trust companies and holders in due course exempted.

Delaware--Forfeiture of excess over 6% interest. No limit on demand loans of $5,000 and over secured by warehouse receipts, bills of lading, certificates of stock, certificates of deposit, bills of exchange, bonds or other negotiable instruments pledged as collateral security for such repayment.

District of Columbia--Forfeiture of all interest.

Florida--Forfeiture of all interest; forfeiture of all interest and principal when interest rate is over 25%.

Georgia--Forfeiture of all interest.

Hawaii--Forfeiture of all interest.

Idaho--Forfeiture of all interest, plus twice the amount of such interest.

Illinois--Forfeiture of all interest. No limit on demand loans of over $5,000, collateralized by certain securities.

Indiana--Forfeiture of excess over 6% on contracts calling for usurious interest.

Iowa--Forfeiture of all interest and 8% of amount of principal unpaid at time of judgment, latter for the school fund.

Kansas--Penalty is double the excess interest paid over 10%. Usury does not affect bona fide holders of negotiable paper without notice.

Kentucky--Forfeiture of excess over 6% (on loans over $300). All usurious contracts are void to the extent of the usury.

Louisiana--Forfeiture of entire usurious interest.

Maine--Any rate is legal if loan is over $300 and if agreed to in writing. No provisions for usury penalty.

Maryland--Forfeiture of excess over 6%, with interest thereon.

Massachusetts--No usury law. Any rate may be contracted for in writing, except: loans of $1,000 or less, rate not in excess of 18%; loans of $300 or less, rate not in excess of 12%, except as licensed.

Michigan--Forfeiture of all interest.

Minnesota--Entire usurious interest may be recovered in civil action brought within 2 years, half to plaintiff and half to public schools.

Mississippi--Forfeiture of all interest; all interest and principal when rate exceeds 20%.

Missouri--Recovery of excess over principal and legal rate, plus costs.

Montana--Forfeiture of double amount of interest charged.

Nebraska--Forfeiture of all interest and costs of action to recover.

Nevada--Agreement to pay more than 1% per month is void as to excess.

New Hampshire--No usury law. Small Loans Law applies to loans of $300 or less.

New Jersey--Penalty for usury is loss of all interest, plus costs of recovery.

New Mexico--Forfeiture of double amount of interest charged, if interest exceeds 12%, upon action brought within 3 years.

New York--No limit on collateral call loans of over $5,000. Usurious bonds, bills, notes, etc. are absolutely void; neither principal nor interest may be recovered. Interest in excess of legal rate which has been paid may be recovered in action brought within 1 year after payment. Borrower of money, goods or things taken under usurious contract is not required to pay or offer to pay any interest or principal on the sum or thing loaned. If lender is a bank, borrower may recover double the entire interest paid in action brought within 2 years. Banks charging usurious interest forfeit all interest but not principal.

North Carolina--Forfeiture of all interest due, if not paid; twice the amount of interest, if paid, in action brought within 2 years.

North Dakota--Penalty for usury is forfeiture of all interest paid and 25% of principal of the debt. Any person paying usurious rate may recover twice the amount of interest paid plus 25% of the principal, if action is commenced within 4 years from date of usurious transaction.

Ohio--Forfeiture of excess over 6%.

Oklahoma--Maximum contract rate is prescribed in the State Constitution. Forfeiture of twice amount of interest paid, if action is brought within 2 years after maturing of contract.

Oregon--Forfeiture of entire interest and of principal of debt to the county school fund.

Pennsylvania--Forfeiture of excess over 6%. Usurious interest can be recovered if suit is brought therefor in 6 months.

Rhode Island--Forfeiture of all interest and principal. Usurious contracts are void.

South Carolina--Forfeiture of all interest, plus costs of action. Lender is also liable for double the sum usuriously received.

South Dakota--Forfeiture of all interest.

Tennessee--Maximum contract rate is prescribed in the State Constitution. Forfeiture of excess over 6%.

Texas--All interest is forfeited. Double the amount of usury paid may be recovered in action brought within 2 years.

Utah--Usurious contracts are void as to both principal and interest. Payments made on usurious contract may be recovered if action is brought within 1 year.

Vermont--Forfeiture of excess over 6%.

Virginia--Forfeiture of excess over 6%. Usurious interest may be recovered if action is brought within 1 year.

Washington--Forfeiture of all interest, if not paid; double the amount of interest may be recovered if paid.

West Virginia--Forfeiture of excess over 6%. Usurious interest paid may be recovered, or may be credited to the amount due.

Wisconsin--Forfeiture of all interest. If interest is more than 10%, treble the amount of interest so paid above legal rate may be recovered if action is brought within 1 year.

Wyoming--Forfeiture of entire interest.

In all States except California, where specified classes of corporations may do so, corporations may not plead the defense of usury. Some 40 States have also enacted Small Loan statutes authorizing the lending of $300 or less at rates in excess of the legal or contract rates, but imposing licensing, regulation or supervision over such lenders. In addition, special legislation in many States exempts from provisions of the usury laws in varying degree such lenders as banks, pawnbrokers, credit unions, building and loan associations and other specified types of lenders.

LEGAL RESERVE

See Bank Reserve, Reserve.

LEGAL TENDER

Money of the character which by law a debtor may require a creditor to receive in payment of the debt, when tendered in the correct amount, and at the proper time and place.

The last sentence of paragraph (1) of subsection (b) of Section 43 of the AAA Farm Relief and Inflation Act of May 12, 1933, which section was popularly known as the Thomas Amendment, read as follows: "Such notes (United States Notes provided for) and all other coins and currencies heretofore or hereafter coined or issued by or under the authority of the United States shall be legal tender for all debts public and private."

This sentence was completely revised by Section 2 of the Joint Resolution of Congress of June 5, 1933, reading as follows: "All coins and currencies of the United States (including Federal Reserve notes and circulating notes of Federal Reserve banks and national banking associations) heretofore or hereafter coined or issued, shall be legal tender for all debts, public and private, public charges, taxes, duties, and dues, except that gold coins, when below the standard weight and limit of tolerance provided by law for the single piece, shall be legal tender only at valuation in proportion to their actual weight."

The Gold Reserve Act of 1934, approved January 30, 1934, declared the coinage of gold at an end, and vested title to all of the monetary gold stock in the Treasury of the United States. Gold coins were required to be turned in to the Treasury in accordance with this Act, and hence no gold coin is either coined or circulates domestically at the present time. Federal Reserve Bank notes and National bank notes are in process of retirement.

In addition to conferring legal tender power upon all coins and currencies, the Joint Resolution of June 5, 1933 also provided that "every provision contained in or made with respect to any obligation which purports to give the obligee a right to require payment in gold or a particular kind of coin or currency, or in an amount in money of the United States measured thereby, is declared to be against public policy; and no such provision shall be contained in or made with respect to any obli-

gation hereafter incurred." The Joint Resolution went on to specify that every obligation, theretofore or thereafter incurred, whether or not, such provision was contained therein or made with respect thereto shall be discharged upon payment, dollar for dollar, in any coin or currency which at the time of payment is legal tender for public and private debts. Then followed the "gold clause repeal", stating that "Any such provision contained in any law authorizing obligations to be issued by or under authority of the United States, is hereby repealed, but the repeal of any such provision shall not invalidate any other provision or authority contained in such law."

Constitutionality of the Joint Resolution of June 5, 1933 was upheld in the Gold Clause Cases (q. v.).

(See Lawful Money.)

LEGAL TENDER BONDS

Same as Currency Bonds (q. v.).

LEGAL TENDER NOTES

See United States Notes.

LEGAL TENDERS

See United States Notes.

LEGALITY OF SECURITIES

In civil issues (except Federal Government bonds), legality depends upon the following conditions:

1. Authority of issue. State and municipal bond issues must be authorized by the constitution or statutory law. Some issues require a legislative or popular vote.

2. Purpose of issue. Municipal bond issues must be for a public purpose.

3. Process of issue. Municipal bond issues must be sufficiently advertised; usually bid for competitively; sold at par or above; and not above a maximum interest rate.

4. Conformity to tax and debt restrictions. Municipal bond issues must conform to any constitutional or statutory restrictions on the debt limit for the obligor municipality, and taxes above a certain amount cannot be levied for the purpose of paying the interest or principal.

In corporation bond issues, authority of the stockholders is required in some states and notice of the stockholders' meeting in which the proposed bond issue is to be voted upon must be given. Corporation bonds may be issued for value only, and the statutes of some states provide for limiting the amount of a corporation's indebtedness. Charter and by-law provisions must be complied with, and mortgage provisions should be carefully drawn.

Railroad bond issues must be approved by the Interstate Commerce Commission, and public utility bonds must usually be approved by the Public Service Commission of the state in which the utility is located.

Government, municipal and railroad issues are exempt from the provisions of the Securities Act of 1933, but non-exempt new issues must conform with its requirements.

(See Legal Bonds, Legal Opinion.)

LEGATEE

See Legacy.

LEI

The plural of Leu (q. v.).

LEND LEASE

The Lend Lease Program was established March 11, 1941, pursuant to an act entitled "An Act to Promote the Defense of the United States", which authorized the President of the United States to aid Allied nations by permitting any agency of the Government to sell, transfer, exchange, lease, lend, etc. goods and supplies, both military and civilian, necessary for prosecution of the War. Departments and agencies which served as procurement agencies for the Program were the War Department, Navy Department, Maritime Commission, Procurement Division of the Treasury Department, and the Department of Agriculture.

The Program was carried on beyond the end of the War, and to July 31, 1946, an aggregate of $50,442 million was reported appropriated since inception for Lend Lease, including $2,017 million after V-J Day (September 2, 1945). Principal recipients of Lend Lease were the British Empire, $31,267 million, compared with $6,320 million in reverse Lend Lease to the United States; and Russia, $11,260 million, compared with $2 million in reverse Lend Lease. Total reverse Lend Lease since inception to July 31, 1946 aggregated $7,387 million, consisting of credits for shipping, railroad transportation and other services, foodstuffs, petroleum, and building of capital installations for the United States.

Lend Lease was one of the principal capital items during the War in the International Balance of Payments (q. v.).

LENDING FLAT

See Lending Rates.

LENDING RATE

This term is used in two connections:

(1) The rate at which money is loaned by banks as distinguished from the rate of interest paid on time and savings deposits. The lending rate is what the bank receives on its loans, while the deposit interest rate is an item of cost of the money which is loaned.

(2) The rate of interest paid by the lender of stock to the borrower who has sold it for short account for use of the money deposited with the lender of the stock as collateral for the stock loan. When stock is sold for short account (see Short Sale), that is, by a speculator who does not own it, such stock must be delivered to the buyer just as in the case of long stock. To do so, however, the broker who executes the sale must borrow such stock (either from a customer who owns it, from his own holdings, or from another broker or banker). The lender of the stock is willing to make the loan only upon cash security in an amount equal to the current market value of the stock. The incentive for lending the stock is that the lender is enabled to borrow funds in this way for the full market value of the stock whereas its collateral value would be not more than the current authorized "margin". But for the use of the money which is deposited with the lender of the stock by the borrower, the borrower receives interest.

The interest rates paid upon sums deposited with lenders of stock depend upon the current call money rates, but also depend upon the floating supply of the stock currently available. Of the active speculative stocks of corporations with large amounts of stock outstanding, there is normally a large floating supply so that no difficulty is experienced by short sellers in borrowing the stock. In such cases, lending rates are

normal. However, when short selling is active and vigorous (as, for example, in bear markets) it sometimes happens that the demand for certain stocks by short sellers is so great that there is difficulty in supplying their demands. In this case, owners of such stocks will take advantage of the situation by adjusting the rate of interest paid on the cash security for the loan of the stock to a lower rate. This is particularly true when the stock in question is in short supply and has an upward price tendency. If it is particularly difficult to locate stock to borrow against short sales, those who possess the stock may loan it without paying anything at all on the cash security which they receive. In extreme cases, the lender of stock may charge a premium over and above the free use of the cash security. When this is true, the stock is said to be lending at a premium, and occurs when the price of a stock has risen considerably above the level at the time the sale was made so that the lender of the stock would be able to borrow a larger amount on it.

The lending rates for important stocks are quoted in the financial newspapers from time to time, and are ascertainable at the brokers. The lending rate is indicative of the size of the short interest in a particular stock, and relative lending rates reflect the extent of the short interest in the market as a whole. When the short interest is small, the lending rates are large; when it is fairly large, stocks may lend "flat," i. e., no interest will be paid on the cash security deposited by the borrower of stock to the lender; and when the short interest is extremely large, stocks may lend at a premium, i.e., instead of paying interest on the cash security deposited with the lender, the lender may exact interest from the borrower for the loan of the stock.

A lending rate of 4 per cent. for a stock means that the lender of the stock pays the borrower (who has sold it short) the rate of 4 per cent. per annum on the cash security deposited with the lender of the stock which will be equal to the market value of the stock in question A "flat" rate means that the lender of the stock gets the use of the cash deposited as security for the loan of the stock without payment of any interest. One-eighth of one per cent. premium means that the lender of the stock receives one-eighth of one per cent. per day on the market value of the stock loaned in addition to the use of the funds deposited as security without interest. (See Borrowed Stocks, Short Sale.)

LENDING STOCKS

See Borrowed Stocks, Lending Rate, Short Sale.

LEPTA

The plural of Lepton (q. v.).

LEPTON

A Greek coin. (See Foreign Moneys, table 2.)

LESSEE

See Lease.

LESSOR

See Lease.

LETTER OF ADVICE

This term has two applications:

(1) A general term used in banking practice which refers to a letter of instructions written by one bank to a customer (bank, firm, or individual) concerning some transaction mutually affecting them, e. g., a letter requesting a correspondent bank to honor the checks of the former's customer, enclosing therein the customer's specimen signature, or letter to a foreign correspondent notifying it that a bill (fully described) has been drawn against it.

(2) A special class of remittance, whereby funds deposited by a first party are transferred (credited) to a second party for the use of a third. To illustrate the situation out of which a letter of advice might arise, suppose A. B. Company, brokers in New York City, have a branch office in Boston which keeps an account with the "Q" Bank of Boston, the latter being a correspondent of the "R" Bank of New York. The A. B. Company, however, does not have an account with the "R" Bank of New York. The most rapid, convenient, and economical method for the A. B. Company of New York to remit funds to its branch office in Boston is to deposit in cash, or by certified check, with the "R" Bank in New York the amount it wishes to make available with its branch office in Boston.

Two copies of letters of advice are made; the first entitled, "Letter of Advice" is addressed to the "Q" Bank in Boston in which the A. B. Company, Boston Branch, has an account. This states, "We credit your account for $..... which has been received from A. B. Company, New York, for the use of A. B. Company, Boston Branch." The second copy is a receipt containing the same information as the original, and is delivered to the A. B. Company, New York, the remitter. The funds may be made available the same day by a telegraphic advice, the letter of advice being forwarded by mail as a confirmation.

LETTER OF ALLOTMENT

See Allotment Notice.

LETTER OF CREDIT

See Letters of Credit.

LETTER OF HYPOTHECATION

See Hypothecation Certificate.

LETTER OF IDENTIFICATION

A letter given by the selling bank to a purchaser of a traveler's letter of credit which introduces him to the banks abroad which have agreed with the selling bank to honor all drafts drawn against the letter of credit. (See Identification, Traveler's Letter of Credit.)

LETTERS

A name given to deposit slips accompanying remittances (checks, matured drafts and notes, coupons, cash, etc.), for deposit forwarded by an out-of-town depositor by mail. Letters are of two sorts—cash and collection. Cash letters are those for which the depositor receives credit for the amount of the total footing upon receipt. This amount is subject to reduction for such amounts as may be subsequently unpaid when presented. Collection letters are those for which the depositor instructs the bank to postpone crediting his account therefor until such items have been reported paid.

Cash letters can be distinguished from collection letters by the difference in their wording and by the fact that in the case of cash letters the list of items is footed, whereas, in collection letters, they are not. Cash letters are usually worded as follows: "We enclose for credit",

or "We enclose for collection and credit." Collection letters are phrased, "We enclose for collection", "We enclose for collection and credit when paid", "Please report by number", "We enclose herewith for collection and credit items entered below. Please do not advise credit of items until actually paid." The majority of items forwarded for collection bear collection numbers by which they are always referred to when their payment is advised.

LETTERS OF ADMINISTRATION

An instrument in writing granted by a Probate (or Surrogate) Court to a person appointed as Administrator to settle the estate of a decedent who has left no will. These letters constitute the Administrator's legal authority to act. In case the deceased person was a testator, but the person named in the will as Executor is dead, incapable of acting, or declines to act "Letters of Administration with the Will Annexed" are granted. (See Administrator.)

LETTERS OF CREDIT

In the broadest sense, letters of credit are instruments by which a bank substitutes its own credit for that of individuals, firms, or corporations, to the end that domestic and foreign trade may be more safely, economically, and expeditiously conducted. In the case, American Steel Company vs. Irving National Bank (266 Fed. 41), the court defined a letter of credit as follows: "A letter requesting one person to make advances to a third person on the credit of the writer is a letter of credit. These letters are general or special. They are general if directed to the writer's correspondents generally . They are special if addressed to some particular person."

From a functional standpoint, banks recognize two classes of letters of credit, viz., commercial and travelers', and the above definition comprehends both classes. Since Traveler's Letters of Credit (q. v.) are treated under that subject only additional definitions of commercial letters of credit are given below.

A commercial letter of credit has been defined as "an instrument by which a banker, for account of a buyer, gives formal evidence to a seller of its willingness to permit him to draw on certain terms and stipulates in legal form that all such bills will be honored, is what has come to be known as a commercial letter of credit" (definition by the Board of Governors of the Federal Reserve System, in the Federal Reserve Bulletin).

The following is a somewhat more complete definition: an instrument drawn by a bank, known as the credit-issuing bank (and eventually the drawee bank), in behalf of one of its customers (or in behalf of a customer of one of its domestic correspondents), known as the principal (who guarantees payment to the credit-issuing bank), authorizing another bank at home or abroad, known as the credit-notifying or negotiating bank (and usually the payer bank), to make payments or accept drafts drawn by a fourth party, known as the beneficiary, when such beneficiary has complied with the stipulations contained in the letter.

A common form of commercial letter of credit is appended on this page.

Letter of Credit No. ....

$..... New York, ... , 19...

To the A. B. C. Company,
Paris, France.

Gentlemen:

Please note that under instructions from our principals .....
.....
and for account of .....
.....
we hereby open a revocable (irrevocable) Credit in favor of .....
to the extent of $..... available in .....
.....
draft(s) on .....
when accompanied by BILLS OF LADING for Merchandise .....
.....
INVOICE TO READ: .....
.....
and (other documents, if any) .....
.....

We hereby agree with bona fide holders that all drafts issued by virtue of this credit and in accordance with the above stipulated terms, shall meet with due honor upon presentation at the office of this bank if drawn and negotiated before ..... 19.....

It is a condition of the Credit that all shipments made herewith must fully meet all requirements, present and future, of our Government.

If the terms of the Credit are unsatisfactory to you in any detail, please communicate with your customers and have amended instructions sent to us.

This Credit will remain in force until .....
.....
unless previously revoked.

When drawing drafts against this Credit, or referring to it, please quote our number as above, and return this letter with the documents.

Terms of this Credit shall be interpreted in accordance with the regulations shown on the reverse side. (Generally, these are general rules adopted by the Seventh Congress of the International Chamber of Commerce, entitled "Uniform Customs and Practice for Commercial Documentary Credits.")

Yours respectfully,
Manager Foreign Department,
.....Bank.

Analyzed into its component elements it will be seen that a commercial letter of credit consists of (1) heading (2) address to the beneficiary, (3) promise to honor drafts, (4) tenor of drafts, (5) amount, (6) description of required documents, (7) nature of shipment, (8) expiration date, (9) privilege of cancellation, and (10) supplementary details, e. g., issue date, number, disposition of letter, and interpretation.

Commercial letters of credit are classified as to:

1. Direction of shipment.
   - a. Export
   - b. Import.
   - c. Domestic.
2. Security.
   - a. Documentary.
   - b. Clean.
3. Tenor of drafts drawn thereunder.
   - a. Sight.
   - b. Time.

4. Form of Letter.
   a. Straight.
   b. Revolving.
5. Form of Currency.
   a. Dollars.
   b. Sterling.
   c. Continental currency.
   d. Asiatic currency.
6. Privilege of Cancellation.
   a. Irrevocable-confirmed.
   b. Irrevocable - unconfirmed
   c. Revocable - unconfirmed
7. Payment of Principal.
   a. Paid.
   b. Guaranteed.

None of the above classifications is mutually exclusive. A letter of credit may, for instance, arise out of an import transaction, and be straight, documentary, 60 days sight, guaranteed, revocable-unconfirmed, and payable in dollars.

An export letter of credit is one arranged to finance the export of merchandise, while an import letter of credit finances the import of merchandise, etc.

A documentary letter of credit is supported by a bill of lading and relative papers, while a clean credit is not.

A sight letter of credit is one in which the draft drawn thereagainst is payable on presentation, while a time or acceptance credit is one in which the draft is payable only when the stipulated number of days after presentation for acceptance has elapsed.

A straight letter of credit is one issued to finance the shipment of specified merchandise and thereupon becomes void, while a revolving letter of credit automatically renews itself for the original stipulated amount each time a draft is drawn thereagainst, and does not exhaust itself until the expiry date.

A dollar letter of credit is one in which the amount is specified in dollars and in which the draft drawn thereagainst must be drawn in dollars, while a sterling letter of credit is one in which the draft drawn thereagainst is in sterling currency, etc.

A revocable letter of credit is one in which the credit-issuing bank reserves the right to rescind its obligation to honor drafts drawn by the beneficiary by the phrase "good till cancelled" or other similar expression. An irrevocable letter of credit is one in which the credit-issuing bank waives the right to revoke the credit prior to the expiry date, unless the consent of the beneficiary is obtained. The irrevocable letter of credit may be strengthened by having the notifying bank in the exporter's country add its own unqualified assurance that the credit-issuing bank's obligation will be performed, and that if the latter refused to honor the draft drawn against the credit, the notifying bank will pay or accept in any event. Such a letter of credit is known as irrecovable-confirmed. But if the notifying bank merely transmits the issuing bank's obligation to the beneficiary without confirming the latter's undertaking, thereby not making the issuing bank's commitment its own, then the letter of credit is called irrevocable-unconfirmed.

A paid letter of credit is one in which funds are deposited by the principal (buyer) with the credit-issuing bank at the time of issue, but this is of rare occurrence. A guaranteed letter of credit, which is the usual type, is one in which the principal guarantees payment of the amount of the draft to the credit-issuing bank at its maturity. (See Guaranty.)

In issuing letters of credit a bank is not called upon to part with cash, unless it discounts its own acceptances drawn under the terms thereof. The liability created in the issue of letters of credit is not restricted, but the Federal Reserve Act places a definite limitation upon the amount which a member bank may accept under such credits. (See Limitations on Acceptance Credits.)

From a review of decisions on commercial letters of credit the following principles may be deducted:

1. A letter of credit is not a negotiable instrument.
2. It does not create a trust fund in favor of the beneficiary.
3. An issuer of a letter of credit may not dishonor drafts presented by a negotiating bank under a clean irrevocable letter of credit if all the terms of the credit are fulfilled.
4. An issuer may dishonor bills drawn in violation of the conditions specified in a documentary letter of credit.
5. The negotiator is not liable for the genuineness either of goods or documents.
6. The issuer is responsible to the party requesting the credit for the observance of the conditions by the beneficiary.
7. The contract between the issuer and the beneficiary is entirely independent of the contract of sale between the buyer and seller, and the issuer can not, because of the seller's breach of contract of sale, refuse to honor drafts which comply with the terms of the letter of credit. (See Acceptance Credit, Traveler's Letter of Credit.)

LETTERS TESTAMENTARY

An instrument in writing granted by a Probate (or Surrogate) Court, or other official authority having jurisdiction over the probate of wills, empowering the Executor named in a will to dispose of the estate in accordance with its terms. Letters testamentary make it known that the will in question has been properly proved and that the estate is in order to be settled. (See Executor, Will.)

LEU

A Roumanian coin. (See Foreign Moneys, table 2.)

LEV

A Bulgarian coin. (See Foreign Moneys, table 2.)

LEVA

The plural of Lev (q. v.).

LEVEE BONDS

Bonds issued by a municipality or levee district, usually the latter, the proceeds of which are used for the purpose of constructing or maintaining levees for the reclamation or protection of land from submergence by water. Levee bonds belong to the general class of bonds known as reclamation issues, e. g., drainage bonds, re-

clamation bonds, irrigation bonds, etc. Wherever they are the direct obligation of a city or town, they rank in investment value with the other issues of such municipality. When issued by a levee district, their investment status is similar to that of any other type of district bond. The investor should investigate the wealth of the issuing jurisdiction, the necessity for the construction, the property values added and the technological feasibility of the levee. As a class, levee bonds have proved fairly satisfactory, and yield a high rate of return. Most of these bonds have been issued by levee districts in the South, and particularly in the Mississippi Valley.

(See Municipal Bonds.)

LEVERAGE

A financial term used to designate the effect of "trading on the equity", i.e., use of senior capital in capitalizations, in the form of borrowed funds, bonds, or preferred stock, ranking ahead of the junior equity, the common stock. In addition to such capitalization leverage, there is operating leverage, provided by relatively fixed operating expenses relative to expanding or contracting sales or revenues; and also leverage provided by invested assets (for investment companies, insurance companies), and earnings assets or deposits (for banks), relative to stockholders' equity or book value.

In periods of rising earnings, leverage works very advantageously for the junior equity, but conversely, works very adversely in periods of declining earnings. Thus, highly leveraged situations are quite speculative. Capitalization leverage, for example, works as follows:

1. Capitalization: $20,000,000 4% bonds; 100,000 shares of $5 Preferred; and 10,000 shares of Common Stock.
2. With earnings available of $2,000,000: after bond interest of $800,000 and $500,000 Preferred dividends, the Common Stock's equity in earnings is $700,000.
3. Should earnings increase 50%, the increase in Common Stock's earnings would be 143%, as follows:

Earnings available, $3,000,000; less bond interest of $800,000 and $500,000 Preferred dividends; Common Stock's equity in earnings, $1,700,000.

4. But should earnings decline 25%, the decline in Common Stock's earnings would be 71%, as follows:

Earnings available, $1,500,000; less bond interest of $800,000 and $500,000 Preferred dividends; Common Stock's equity in earnings would be $200,000.

5. Should earnings decline 35%, there would be no Common Stock earnings, as follows:

Earnings available, $1,300,000; less bond interest of $800,000 and $500,000 Preferred dividends; Common Stock's earnings, none.

LEY

Another spelling for Lei (q. v.).

LIABILITIES

In law, the term liability is comprehensive, and embraces all obligations which a person is bound to discharge or meet either in law or in equity. In accounting, liabilities are any obligations by which an individual proprietor, partnership, corporation or other form of business organization is bound to pay a sum expressed in money, or to give up some asset having a money value.

General classification of liabilities includes: (1) accrued, (2) contingent, (3) current or floating, (4) deferred (deferred charges), and (5) fixed or capital liabilities. As to order of preference, liabilities may be classified in the following order: (1) liabilities to preferred creditors; (2) liabilities to secured creditors; (3) liabilities to unsecured or general creditors; (4) contingent liabilities; and (5) liability (or accountability) to stockholders or other owners.

The chief liabilities of a bank are: deposits, borrowings from the Federal Reserve Bank or other banks, liabilities on account of letters of credit and acceptances, and capital accounts. (See Capital Liabilities, Contingent Liabilities, Current Liabilities, Fixed Liabilities, Limitation on Total Indebtedness of National Banks.)

LIABILITY INSURANCE

In its general sense, this term covers all the various forms of property risks which are insurable. Specifically, it usually refers to the insurance lines carried by casualty and surety companies, which include: Accident, health, group accident and health, non-cancellable accident and health, automobile liability, liability other than automobile, workmen's compensation (employers' liability), fidelity, surety, glass, burglary and theft, boiler and machinery, automobile property damage, automobile collision, property damage and collision other than automobile, credit, etc.

(See Insurance.)

LIABILITY LEDGER

A subsidiary ledger maintained in the loan and discount department of a bank in which the notes, acceptances, and bills of exchange discounted for, and purchased from, each borrower are recorded. Accounts are classified alphabetically, and from this record it is possible to ascertain by reference to the balance column, the net liability of each borrower (1) on his own paper; (2) on paper which he has indorsed for value; (3) on paper which he has made and has been indorsed for value by others; and (4) on paper which he has indorsed as guarantor.

LIBEL

In civil law, a libel is an untrue and malicious publication, expressed in printing, writing, or pictures which tends to injure the reputation of a person, or to hold him up to scorn or ridicule, or to injure him in his office, profession or trade.

The avoidance of libel suits by banks expressing credit opinion unfavorable to a subject is highly important because the libel law places the burden on the defendant to prove absence of malice and plead the defenses. For this reason credit communications expressing opinions of financial responsibility should be given very carefully: (1) facts or knowledge, not mere belief, should be cited; (2) opinion or conclusions should be substantiated by facts and knowledge. In addition to giving credit information on a confidential basis, banks also use the "disclaimer clause" in credit information letters, such as: "All statements on the part of the bank, or any of its officers, as to the responsibility or standing of any person, firm or corporation, or as to the value of any securities, is a matter of opinion, given as such in answer to an inquiry, and solely as a matter of courtesy, for which no responsibility, in any way, is to attach to this bank or to any of its officers." Such a

clause, however, does not protect the bank if in fact the statements were libelous. Generally, there are two defenses which are open to such a defendant in a civil libel suit: first, that the publication is true; and second, that the circumstances surrounding the writing of the letter were such as to make it a "conditionally privileged" communication.

LIBERTY BONDS

A name given to bonds issued by the United States in 1917, 1918, and 1919, to finance our participation in World War I, and to raise funds to lend to the Allied Powers. Four Liberty Bond issues and one Victory Loan issue were brought out between May 14, 1917, and April 21, 1919, the five issues (ten issues including the converted issues) aggregating approximately $21,478,-357,000.

As of June 15, 1935, all the original issues of Liberty Bonds had been retired or converted into Treasury bonds or notes. (See United States Government Securities.

LIBRA

A gold coin of Peru, equivalent to ten soles. The international currency unit of Peru is the sol (see Foreign Moneys--Peru).

LICENSE

In real property law, permission to do acts upon the land of another which but for the permit granted would constitute a trespass. Licenses are personal to the licensee, are generally not assignable except by express agreement, and are generally revocable at will at any time, except for certain technical exceptions.

In securities regulation, State blue-sky laws of the preventive type require dealers and brokers seeking to offer securities in the State concerned to obtain a license to do so from the securities commissioner or similar officer. In addition, licensed brokers and dealers are required to "qualify" the specific securities to be sold within the State. (See Blue-Sky Laws.)

In administrative law, licenses are permits granted by the sovereign or administrative bodies to which the sovereign power has been delegated, in the exercise of the police power, to persons to carry on a profession, business, calling or activity, or engage in other relations vested with a public interest. Revenues from license fees constitute a particularly fruitful source of taxes in State tax systems.

LIEN

The right to hold any property given as a pledge or security until the debt which it secures is paid. To constitute a lien the debt must be enforcible in equity or law, e. g., a mortgage.

Liens are specific and general. A general lien comprises all the property belonging to the debtor. A specific lien comprises only the particular property subject to the lien, as specified in the instrument acknowledging the debt. A mechanic's lien is a specific lien, because it affects only the property upon which the laborer has expended material and labor.

A prior lien is not necessarily a first lien; it is simply one that takes precedence over others. A junior lien is not necessarily a second lien; it may be any lien other than the first.

LIENOR

One who holds a Lien (q. v.).

LIFE ANNUITY

See Annuity.

LIFE ESTATE

A life estate created by act of the parties is legally defined as a freehold estate not of inheritance, giving the life tenant the right to possession of the estate and to the income therefrom for the duration of his life or for the duration of the life or lives of another person or persons if so limited thereon.

Upon death of the life tenant or other person whose life determines the duration of the life estate, the property and income may, in accordance with the terms of the original grant, either revert to the grantor or his estate, or become the possession of the Remainder Man (q.v.). Under modern statutes, not more than two successive life estates can be created where a remainder is limited thereon.

Life estates arising by operation of law are Curtesy and Dower.

(See Descent, Laws of; Remainder Man.)

LIFE INSURANCE

See Insurance.

LIFE INSURANCE COMPANY INVESTMENTS

Life insurance companies are particularly vested with a high degree of public interest and concern, because of their commitments with millions of policyholders to insure lives or provide investment features for accumulated insurance premiums. Accordingly, State laws throughout the United States regulate the investments of life insurance companies in varying degrees of strictness. Most life insurance companies, however, write business not only in the State of domicile but in other States as well, and thus the most stringent of these States will determine the level of quality of investments for the particular company. Companies domociled in New York alone account for about 40% of total life insurance company assets, and in addition, other companies admitted to do business in New York bring the total life insurance assets controlled by New York State laws to well over half of total life insurance assets.

New York laws regulate the investment of life insurance companies in three general respects: (1) most stringently, although governing a minor portion of funds, the investment of minimum capital required for domiciled companies; (2) for foreign companies admitted to do business within the State, the deposit of securities of similar type; and (3), for the bulk of funds, namely reserves plus any balance over minimum capital requirements and surplus, the generally applicable restrictions on investments, which on the whole, are less stringent than for savings banks.

Paraphrased or abridged, the New York State laws regulating life insurance company investments, which are contained in the Insurance Law, are as follows:

Section 79: Every domestic insurer to the extent of the minimum capital required by law for a common stock corporation authorized to transact the same kinds of insurance, shall invest its funds only in securities of the following classes which are not in default as to principal or interest, to be kept free and clear from any lien or pledge. Not less than 60% of the total amount of re-

quired minimum capital investments shall consist of the classes specified in (a) or (b) following:

(a) Bonds or other evidences of indebtedness of the United States or of any of its agencies, when such obligations are guaranteed as to principal and interest.

(b) Bonds or other evidences of indebtedness which are direct obligations of the State of New York or of any county, district, or municipality of New York.

(c) Bonds or other evidences of indebtedness which are direct obligations of any State of the United States.

(d) Mortgage loans or deeds of trust as specified in paragraphs (a) or (c) of subdivision 6 of Section 81 (shown below) on property located in New York State.

Section 81: Investments for reserves of domestic insurers shall consist of the following:

Subdivision 1. Government, State and municipal obligations. Not in default as to principal or interest. Valid and legally authorized obligations issued, assumed or guaranteed. Payable, as to both principal and interest, from taxes levied upon all taxable property or all taxable income within the jurisdiction, or upon adequate special revenues pledged or appropriated. Not including any obligations payable solely out of special assessments on properties benefited by local improvements.

Subdivision 2. Corporate obligations. Obligations other than those eligible for investment under subdivision 6 (below), issued, assumed or guaranteed by any solvent institution created under U. S. laws or any State, district or territory, not in default as to principal or interest, and qualified under any of the following paragraphs:

(a) Obligations secured by adequate collateral security, bearing fixed interest, and if during each of any 3 years, including the last 2 years, of the 5 fiscal years next preceding date of investment, the net earnings of the issuing, assuming or guaranteeing institution available for its fixed charges shall have been not less than 1 1/4 times its total fixed charges for such year. Obligations which at the time of investment are adequately secured and have investment qualities and characteristics wherein the speculative elements are not predominant. In determining adequacy of collateral security, not more than 1/3rd of the total value of such required collateral shall consist of stock other than stock meeting the requirements of subdivision 3 (below).

(b) Fixed interest bearing obligations, other than those specified in paragraph (a) above, if the net earnings of the issuing, assuming or guaranteeing institution available for its fixed charges for a period of 5 fiscal years next preceding date of investment shall have averaged per year not less than 1 1/2 times its average annual fixed charges applicable to such period; and if during the last year of such period, such net earnings shall have been not less than 1 1/2 times its fixed charges for such year.

(c) Adjustment, income or contingent interest obligations, if the net earnings of the issuing, assuming or guaranteeing institution available for its fixed charges for a period of 5 fiscal years next preceding the date of investment shall have averaged per year not less than 1 1/2 times the sum of its average annual fixed charges and its average annual maximum contingent interest applicable to such period, and if during each of the last 2 years of such period, such net earnings shall have been not less than 1 1/2 times the sum of its fixed charges and maximum contingent interest for such year.

Subdivision 3. Preferred or guaranteed stocks or shares. Of any solvent institution created under the laws of the U. S. or of any State, district or territory. If all of the prior obligations and prior preferred stocks, if any, at date of investment be eligible as investments, and if qualified under paragraphs (a) or (b) following:

(a) Preferred stocks or shares shall be qualified if both of the following requirements are met: (1) Net earnings of such institution available for its fixed charges for a period of 5 fiscal years next preceding date of investment shall have averaged per year not less than 1 1/2 times the sum of its average annual fixed charges, if any, its average annual maximum contingent interest, if any, and its average annual preferred dividend requirements applicable to such period; and (2) During each of the last 2 years of such period, net earnings shall have been not less than 1 1/2 times the sum of its fixed charges, contingent interest and preferred dividend requirements for such year. "Preferred dividend requirements" means cumulative or non-cumulative dividends, whether paid or not.

(b) Guaranteed stocks or shares qualify if the assuming, or guaranteeing institution meets the requirements of paragraph (b) of subdivision 2 (above), construed so as to include as a fixed charge the amount of guaranteed dividends of such issue or the rental covering the guarantee of such dividends.

No life insurance company shall invest in or loan upon any preferred stock or shares of any institution an amount in excess of 10% of the total issued and outstanding preferred stock or shares of such institution; or in excess of 2% of the admitted assets of such life insurance company.

Subdivision 4. (a) Trustees' or receivers' obligations. If such obligations are adequately secured as to principal and interest.

(b) Equipment trust obligations or certificates, which are adequately secured. Or other adequately secured instruments evidencing an interest in transportation equipment wholly or in part within the U. S. and right to receive determined portions of rental, purchase or other fixed obligatory payments for the use or purchase of such transportation equipment.

Subdivision 5. Bankers' acceptances and other bills of exchange, of the kind and maturities made eligible for purchase in the open market by Federal Reserve Banks.

Subdivision 6. Mortgage loans.

(a) Bonds, notes or evidences of indebtedness, other than those described in subdivision 2 (above), which are secured by first mortgages or deeds of trust upon improved, unencumbered real property, located in the U. S. No such mortgage loan made or acquired on any one property shall at time of investment exceed 2/3rds of the value of the real property security, except on loans guaranteed by the Administrator of Veterans' Affairs under Title III of the Servicemen's Readjustment Act of 1944. No such loan shall be made or acquired except after appraisal made by an appraiser for the purpose of such investment. No participation or part of a series or issue secured by the same mortgage or deed of trust shall be a lawful investment, unless the entire series or issue is held by the investing life insurance company, or unless it holds a senior participation giving it substantially the rights of a first mortgagee.

Except as otherwise provided, no domestic insurer shall invest in or loan upon the security of any one property more than $25,000, or not more than 2% of its

total admitted assets, whichever is the greater.

In no event shall the total investments of any such insurer in the kinds permitted under this paragraph exceed 40% of its total admitted assets.

(b) Purchase money mortgages or like securities received upon the sale or exchange of real property acquired pursuant to subdivision 7 (below).

(c) Bonds or mortgages secured by mortgage or trust deed guaranteed or insured by the Federal Housing Administrator.

(d) Bonds or mortgages secured by mortgage or trust deed guaranteed as to principal by the Administrator of Veterans' Affairs under Title III of the Servicemens' Readjustment Act of 1944.

(e) Bonds and mortgages, or first mortgage and collateral trust bonds issued by a housing project corporation on housing projects located in New York State; constituting a first lien upon all of the real property of the project or upon all of the real property or a separate unit thereof; upon completion of which, guaranteed to at least 40% of principal amount either directly or indirectly through pledge of obligations as security therefor, under Title III of the Servicemens' Readjustment Act of 1944. In no event shall the aggregate amount of the bonds and mortgages or first mortgage or collateral trust bonds exceed the value of the real property security as appraised by or on behalf of the Administrator of Veterans' Affairs or other instrumentality of the Federal Government.

Where the bond and mortgage or such first mortgage and collateral trust bond constitute a building and construction loan, such building and construction loan shall be eligible investment provided it shall be guaranteed directly or indirectly under the Servicemen's Readjustment Act of 1944 to the extent of at least 30%.

Where the funds received from the sale of bonds or notes by such housing project corporation are held by a corporate trustee having its principal office in New York State, such bonds or notes shall be eligible, provided that under such indenture, no such funds may be advanced by such trustee for the housing project unless the bonds or notes will be guaranteed directly or indirectly under the Servicemen's Readjustment Act of 1944 to the extent of at least 30% of said advances.

Subdivision 7. Real estate.

Real estate only if acquired or used for the following purposes and in the following manner:

(a) The land and the building thereon constructed in which it has its principal office.

(b) Such as shall be requisite for its convenient accommodation in the transaction of its business.

(c) Such as shall have been acquired in satisfaction of loans, mortgages, liens, judgments, decrees or other debts previously owing to the insurer in the course of its business.

(d) Such as shall have been acquired in part payment of the consideration on the sale of real property owned by it, if each such transaction shall have effected a net reduction in the company's investment in real property.

(e) Additional real property and equipment incident to real property, if necessary or convenient for the purpose of enhancing the sale value of real property previously acquired by it, pursuant to paragraphs (c), (d), (f) or (g) of this subdivision 7.

(f) Such as has been acquired as emergency housing (pursuant to Chapter 658 of the laws of 1922 and Chapter 284 of the laws of 1924).

(g) Such as has been acquired pursuant to Chapter 25 of the laws of 1938 or as may be acquired pursuant to Section 84 of the Insurance Law (low and moderate income housing projects).

(h) Such real property, other than property to be used primarily for agricultural, horticultural, ranch, mining, recreational, amusement or club purposes, as may be acquired as an investment for the production of income, or as may be acquired to be improved or developed for such investment purpose pursuant to an existing program therefor, subject to the following conditions and limitations:

(1) The cost of each parcel of real property so acquired, including the estimated cost of improvement or development, when added to book value of all other real property then held pursuant to paragraph (h), shall not exceed 3% of admitted assets as of the 31st day of December next preceding, and (2) the cost of each parcel of real property under authority of this paragraph (h), including estimated cost of improvement or development, shall not exceed as of the 31st day of December next preceding the sum of: (1) 1/2 of 1% of the admitted assets up to and including $250,000,000; and (2) 1/4 of 1% of admitted assets in excess of $250,000,000.

Except as may be otherwise required by the Superintendent pursuant to subsection 2 of Section 91 of the Insurance Law:

(1) Each parcel of real property held by an insurer under this paragraph (h) shall be valued on its books as of the 31st day of December of each year at an amount that will include a write-down of the cost of such property, including all improvement or development costs, at a rate that will average not less than 2% per annum of such cost for each year or part thereof that the property has been held; and

(2) If as of the 31st day of December in any year, the aggregate net income before depreciation from all the properties held by an insurer under this paragraph (h), less the sum of all previous write-downs applied to such properties, shall exceed 4% per annum on the total book value of all such properties for the entire period during which such properties have been so held, the amount of such excess shall be applied, in such amounts and to such properties as the insurer shall determine, as a further write-down of such total book value.

In order to enable the Superintendent to obtain comparable information from all insurers with respect to their operations under this paragraph (h) and to determine compliance therewith, the Superintendent may by regulation prescribe a uniform classification of all items of investment, income and expenses and a uniform method of reporting such operations.

(i) Such real property has may be acquired pursuant to Section 25 of Chapter 234 of the Laws of 1943 or subdivision 9 below (housing projects).

All real property acquired pursuant to paragraphs (a) and (b) of this subdivision 7 shall be disposed of within 5 years after it shall have ceased to be necessary for the convenient accommodation of the company in the transaction of its business. All real property acquired pursuant to paragraphs (c), (d) and (e) of this subdivision 7 shall be disposed of within 5 years after the date of acquisition, unless in any case the Superintendent

certifies that the interests of the company will suffer materially by the forced sale thereof, in which event the time for disposal may be extended for such time as the Superintendent shall prescribe in such certificate, or unless in any case the company shall elect to hold such property pursuant to paragraph (h) of this subdivision 7, in which event such property thereafter shall be deemed to have been acquired at a cost equal to its book value at the time of such election, and to be held pursuant to and subject to the provisions of paragraph (h).

No real property shall be acquired by any domestic insurer pursuant to paragraphs (a), (b), (d) or (e) of this subdivision 7 except with the approval of the Superintendent.

No domestic life insurance company shall acquire any real property, including improvements thereon, pursuant to Section 84 of the Insurance Law (low and moderate income housing), if the value of the real property to be acquired, including the estimated cost of improvements to be made thereon, together with the value of all real property then held by it pursuant to paragraphs (f) and (g) of this subdivision 7, exceeds 10% of admitted assets as of December 31st next preceding.

Subdivision 8. Foreign investments.

(a) Any domestic insurer may invest in, or otherwise acquire or loan upon, bonds, notes or other evidences of indebtedness which are valid and legally authorized obligations issued, assumed or guaranteed by the Dominion of Canada or any Province thereof, but which are not in default as to principal and interest. The aggregate amount of such investments which are held at any time by such insurer, together with all Canadian investments held by it pursuant to paragraph (b) below, shall not exceed 10% of admitted assets, except where a greater amount is permitted pursuant to paragraph (b) below, in which case the provisions of this paragraph shall not be applicable.

(b) Any domestic insurer which is authorized to do business in a foreign country or possession of the United States or which has outstanding insurance, annuity or reinsurance contracts on lives or risks resident or located in a foreign country or possession of the United States, may invest in, or otherwise acquire or loan upon securities and investments in such foreign country or possession of the United States, which are substantially of the same kinds, classes and investment grades as those eligible for investment under the foregoing provisions of Section 81.

The aggregate amount of such investments in a foreign country or possession of the United States and of cash in the currency of such country or possession which is at any time held by such insurer, shall not, except as provided in paragraph (a) above, exceed 1 1/2 times the amount of its reserves and other obligations under such contracts or the amount which such insurer is required by law to invest in such country or possession, whichever shall be greater.

Subdivision 9. Stock and evidences of indebtedness of housing companies.

Stock and evidences of indebtedness, or either, of any housing company or redevelopment company organized under the Public Housing Law or Redevelopment Companies Law of this or any other State, or of any corporation organized for the purpose of owning and operating any housing project of the kind authorized under Section 84 of the Insurance Law whether or not located in the State of New York, to the extent and upon such conditions as may be authorized by the Superintendent. All of the stock (other than directors' qualifying shares) of such housing company redevelopment company or corporation shall be originally issued to one or more insurance companies.

Any domestic insurer may exercise, with respect to any redevelopment company organized or redevelopment project undertaken, pursuant to the laws of any other State, investment and other powers substantially similar to those which such insurer is authorized by Section 25 of Chapter 234 of the Laws of 1943 to exercise with respect to redevelopment companies and projects organized or undertaken under that Chapter 234.

Subdivision 10. Stock of a Federal Home Loan Bank.

A domestic life insurance company incorporated under the laws of New York State may become a member of a Federal Home Loan Bank, and may have and exercise all powers not in conflict with the laws of New York State, which are conferred upon any such member by the Federal Home Loan Bank Act, including but not by way of limitation, the power to invest in capital stock of a Federal Home Loan Bank in the amount necessary to qualify for membership in such Bank and in such additional amounts as are approved by the Superintendent.

Such domestic life insurance company and its directors and officers shall continue to be subject, however, to all liabilities and duties imposed upon them by any law of New York State and to all applicable provisions of this chapter relating to domestic life insurance companies.

Subdivision 11. Obligations issued or guaranteed by the International Bank for Reconstruction and Development, provided, however, that the aggregate amount of such investments which are held at any time by any domestic insurer shall not exceed 5% of its total admitted assets as of the 31st day of December next preceding.

Other investment sections of the New York Insurance Law provide:

Section 83. Any life insurance company may lend to any of its policyholders upon the security of the value of his policy a sum not exceeding the legal reserve which it is required to maintain thereon.

Section 84. Housing.

To promote and supplement public and private efforts to provide an adequate supply of decent, safe and sanitary dwelling accommodations for persons of low and moderate income, and to assist in relieving the housing situation, any domestic life insurance company may wherever it is actively doing the business of life insurance, acquire or construct housing projects, consisting of apartment, tenement or other dwelling houses, exclusive of hotels. In connection with any such project, it may acquire land or any interest therein by purchase, lease or otherwise, or use land acquired pursuant to any other provisions of this chapter, and may provide accommodations for retail stores, shops, offices and other community services reasonably incident thereto. Such companies may hereafter own, maintain, manage, collect or receive income from, or sell or convey, any land or interest therein so acquired and any improvement thereon.

The aggregate book value of the investments of any such company in all such projects and in stock and evidences of indebtedness held under subdivision 9 of Section 81, to the extent that such stock and evidences of indebtedness are not eligible for investment by domestic life insurance companies under any other pro-

visions of law, shall not exceed at any time 10% of total admitted assets of such company on the 31st day of December next preceding.

Restrictions on life insurance company investments are found also in the following sections of the New York Insurance Law:

Section 82. 1. No domestic life insurance corporation (or fraternal benefit society) shall invest in or loan upon any stocks or shares of any corporation or institution other than as specified in Section 81 or in Section 199 (which provides for authority to acquire own capital stock upon mutualization).

2. If any securities received by any such insurer in accordance with subsection 4 of Section 80 (reorganizations, or bulk reinsurance, or consolidations) shall consist in whole or in part of stock or shares of any institution or of bonds or other obligations which do not meet the requirements specified in Section 81, then any such stock or shares and any such bonds or obligations so received shall be disposed of within 5 years from the date of acquisition, or before the expiration of such further period of time as may be prescribed in writing by the Superintendent, unless at any time after such acquisition, such securities shall have met such requirements and the insurer has notified the Superintendent thereof.

3. Every domestic life insurance corporation which on June 1, 1906 owned any shares of stock or any bonds or evidences of indebtedness of the kinds prohibited under Chapter 326 of the Laws of 1906 (the statute enacted following the Armstrong investigation and report in New York State), which has not disposed of such securities, shall dispose of all of them on or before the expiration of 5 years from the effective date of this chapter.

Section 87. Except as more specifically provided in this chapter, no domestic insurer shall have more than 10% of its total admitted assets invested in or loaned upon, the security of any one institution; but this restriction shall not apply to the classes of Governmental obligations (including those eligible under paragraph (c), subdivision 6, of Section 81) eligible for minimum capital requirements of such insurer, nor those investments in stocks of other insurance companies under the provisions of Section 86 (that section does not apply to life insurance companies or fraternal benefit societies.

No domestic insurer shall hereafter acquire any real property of the kinds specified in paragraphs (a) and (b) of subdivision 7 of Section 81 if the value of such real property together with the value of all such real property then held by it, exceeds 10% of its total admitted assets.

Section 90 of the New York Insurance Law gives the Superintendent of Insurance the power to refuse a new or renewal license to any non-domiciled company if he finds that its investments do not comply in substance with the investment requirements and limitations imposed upon domiciled companies.
